Within reasonable limits, this process may occur with no apparent ill effects. However, whether we like it or not, sooner or later a basic economic law will come into operation. That law is the law of supply and demand.

As the manufacturer is forced to increase gradually the selling price of an article, the demand for that article decreases. As the demand for the article decreases, the manufacturer must decrease production. As production decreases, unit cost increases because of fixed charges of the manufacturing plant. This process continues until the manufacturer is either forced out of business or is able to reduce cost to bring the selling price of the product down to the point where there is again a demand for it.

It is my opinion that by reducing the corporate-tax burden substantially at the present time, the inflationary spiral will be broken. A manufacturer, because of decreased cost, will then be able to lower selling prices and consequently increase his production and distribution.

Would reduction of tax rates tend to increase, or at least hold constant our national debt which, for sound economy, should be decreased? The law of supply and demand is not limited to products, but applies equally to money. By increasing production, we would provide more employment, and in providing more employment pay out more dollars which would be subject to Federal tax based on income.

In all probability, although the rate of taxation would be lower, we would actually receive more dollars in taxes than under the present high rate of taxation. This basic law of supply and demand is recognized throughout industry. Experience shows that when we reduce the rate of income for each product we sell, we take in more dollars of income through increasing volume. Present high rates, on the other hand, set the law of diminishing returns into motion.

MUST NOT CONFUSE TAX RATES WITH TAX DOLLARS

What I am attempting to point out is that, at present, we are confusing rates of taxes with dollars of taxes. It has been proven in industry and applies equally well to taxes that a reduction in rate increases rather than decreases the actual dollar return.

I should like to reiterate that I feel the solution to the present reconversion difficulties faced by industry and the reduction of the national debt will be hastened by reduced tax rates. Both as an industrial manager and as as an American vitally interested in the sound future of our country, I should then look to the future more confidently in the knowledge that industry did not have an excessive cash hurdle to jump every 3 months, and that we could offer incentives to attract top-grade men without whom our industry must decline.

Now I realize that you gentlemen would like, finally, some concrete suggestions for improving tax rates in the field of industry, so that you can arrive at the most practicable solution of helping industry and, in turn, collect the amount of money under such rates that is required to sustain the expenses of the Government. I have already commented upon the corporate rates.

INCENTIVE FOR EXECUTIVES

I should like to suggest that in this problem of providing incentives for industrial executives, the tax rates be set generally on the common-sense presumption that it is not fair to ask any man to work over half of his time for the Government. In other words, although of course I am not qualified to prescribe rates and schedules, I can give you one basic principle which must be applied, namely: That every worker must be able to earn enough after taxes to maintain his family and to encourage him to increase his earning ability. If you were to provide that earned income should in no case be subjected to a higher rate than 50 percent, I am confident that executive positions would hold and attract that type and caliber of man which industry must have if we are to meet its present and future problems.

PRINCIPLES FOR FINANCING INDUSTRY

Now let me make a final suggestion with respect to the actual financial problems which industry faces in maintaining its everyday job of maintenance and replacement, and in expanding its plant and facilities to meet future demands. Again, I can give you one controlling principle: In order to attract capital from private sources, the private investor must be assured of a return on his capital in the course of time, and of a return upon his investment commensurate with the risk we ask him to take. After all, there are only three sources from which a business enterprise can obtain funds: (1) from private sources, such as individual investors and financial houses; (2) from its own accumulated earnings and profits—and it is, of course, accountable to its stockholders for their use; and (3) from the Government. Unless the return after taxes is sufficiently attractive to keep sources (1) and (2) open and available—and I am confident that this Congress and our country will insist that this be true—then industry, bit by bit, slowly but surely, must turn to the Government.

Let me give you an example. As an executive planning to construct a new plant—which, in the course of 2 or 3 or 4 years, will be employing thousands of men and presumably making profits—I must convince each owner of the funds I wish to use that the amount of my proposed expenditure will be returned through profits in a reasonable period of time; that he will be able to obtain his capital back within a reasonable period of time; and that I can pay him for the use of his capital. I point out to you that as a practical business executive I must now convince that private owner that all three of these things can be done after taxes. I need not add that this is an exceedingly difficult, if not impossible, task for me at the present time. In fact, we are now making capital expenditures, expanding our plant, improving our product, increasing the efficiency of our production, and seeking new markets today, solely in the hope that tax rates tomorrow will be at levels which will justify our expenditures.

Again, it is quite impossible for me personally to suggest tax rates and tax schedules which will produce this result. I merely present to you the very practical principle. I am confident that no one will take serious issue with this principle. You gentlemen are far better prepared than I to formulate the definite, specific tax policies, and to fix the rates so that industrial management can

provide an assurance to investors that we can repay their capital and give them an attractive return after taxes.

CONCLUSION

In conclusion, I trust that my practical approach as an industrial executive will assist you in the tasks that now confront you. I am confident that the tax policies you establish for the next few years will have a tremendous and continuing effect upon the future of American industry, upon employers and employees, upon buyers and sellers, and upon the entire country. It has been a real pleasure to be with you.

Vivisection as a Business

EXTENSION OF REMARKS

OF

HON. WILLIAM LEMKE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 30, 1947

Mr. LEMKE. Mr. Speaker, vivisection of dogs, the torturing of dogs—man's best friend—is still going on. It is still practiced in every State. Hearings were held on my bill, H. R. 5572, during the last Congress. Hearings have been held on my bill, H. R. 462, in this session. The evidence submitted on H. R. 5572, if carefully examined, I am sure will convince any person that vivisection of dogs is no longer necessary or even beneficial to the medical profession.

All that can be learned from cutting up dogs—from torturing dogs—has been learned long ago. If anything further remains to be learned, it can be learned from a fox, a wolf, or any other member of the dog family, or from a dead dog, or any other dead animal. The only reason the dog has been used so extensively is because he trusts his master. It is the betrayal of the confidence of the dog that makes him an easy subject for vivisection.

I hope that every Member of Congress will sign Petition No. 3 at the Speaker's desk so that we may bring H. R. 462 up for discussion and disposition on its merits. Full hearings have been held. There is no reason for longer delay. In signing Petition No. 3 you will help to make the human race at least humane as far as man's best friend—the dog—is concerned.

It is with pleasure that I insert in these remarks an article, Vivisection as a Business, by Dr. A. V. Allen, of Chicago. Dr. Allen was for many years chief surgeon of the Commonwealth Edison Co. He is a fellow of the American Medical Association and a member of the Chicago Medical Society. Until his semiretirement a few years ago he was a member of the National Conference Board of Physicians in Industry. Dr. Allen is a graduate of the Chicago College of Medicine and Surgery (1909) and is a life member of the National Anti-Vivisection Society.

Here is the article:

VIVISECTION AS A BUSINESS

Few persons seem to realize that vivisection is a business. Men enter this business for the same reason they enter any other business—to make money and to further their own interests. Some critics have advanced the theory that men practice vivisection because of idle curiosity, or that they are sadists who enjoy seeing animals suffer. Except in rare cases, that is not true. The chief incentive for this type of work is self-advancement—making money by cruelty to animals.

It is not only the large salaries received by directors of laboratories or the fees for testing various products that make this business attractive; it is also the publicity—the self-advertising through newspaper stories, magazine articles, and radio talks. Without this publicity, stemming directly from vivisectional experiments, many a well-known vivisector would have remained engulfed in the great sea of professional and financial mediocrity.

PHONY RESEARCH IS KEY

Under the pretense of being engaged in research vivisectors have been able to establish expensive laboratories in our schools, where our dumb animals suffer the tortures of hell so that a few men may hold themselves up as great scientists. The leaders in this business must know that it is a phony; but there are, no doubt, many people under them who conscientiously believe they are cogs in a scientific machine, and as such are aids to science. I have known such doctors personally, and they were fine fellows except for their willingness to be cruel to animals. This they had learned from callous teachers. The responsibility lies with us for allowing our schools to feature such instruction.

Perhaps the best way to puncture the vivisection balloon is to tip off the public to some of the tricks regularly employed by the vivisectors and to expose the sharp practices by which they continue to fool the public year after year.

HOW VIVISECTION PAYS OFF

One of the most common tricks is to give press releases to the newspapers. These releases usually tell in glowing terms about how the vivisector involved is about to solve the mystery of some disease, or about a wonderful discovery he has just made thanks to animal research. They nearly always make the front page of the newspaper—when, in reality, they should be in the paid advertising column. Whenever you encounter articles of this nature, please remember two things: First—the medical profession is not supposed to advertise, and, second—true scientists do not issue statements boasting about their accomplishments for public consumption. Further, a careful check will usually show that the great discovery has been known for years.

Take for example a story which has appeared in various forms every so often for a decade or more. It runs about like this: "Dr. So and So sees cure of angina pectoris by surgical operation. The method was discovered in the Blank laboratory, and was worked out on dogs. Dr. So and So is professor of Hokum in Blah University." There you have the technique of this cunning system of advertising. It means publicity for the vivisector, an advertisement for the school, a boost for vivisection, and a kick in the teeth for the dog.

USELESS AND MISLEADING

Let us consider the reaction of the reader of this surreptitious advertisement. If he is a sufferer from tuberculosis, cancer, ulcer, angina, high blood pressure, or colds (for all of these have recently been the subjects of news releases) he will say "Thank God for Dr. So and So. Thank God for the Blah University. I certainly am in favor of using dogs for experimental purposes." To these poor sufferers the statements are like zephyrs from heaven. But also—the cures never come.

Another form of deception is the frequent appearance of magazine articles lauding vivisection and claiming that practically everything worth while in medicine was due to animal experimentation. I would grant research men the right to defend the practice in this manner if they would stick somewhere near to the truth. But nearly all of these articles are full of unsupported statements such as "If it were not for vivisection, millions of babies would die annually." This is the sheerest nonsense and every such claim can be easily disproved by anyone who takes the time to check the facts. Comparable logic runs about as follows: "We tested Army blankets by wrapping 20 dogs in them and then throwing them into the refrigerator to see if they would freeze. Therefore, if it were not for animal experimentation, all of our boys in the Army would have frozen to death." Such statements are an insult to the intelligence of any thoughtful man.

FALSE CLAIMS ABOUT PENICILLIN

One of the more recent contentions of the vivisectors is this: "If it were not for vivisection we would not have penicillin or the sulfa drugs." When they are reminded that the sulfa drugs were discovered by a chemist and penicillin by a biologist making studies under a microscope, they said: "Well, the uses and dosages were worked out on dogs." In order to determine how much truth there was in that statement, I personally studied the briefs of every article published about penicillin from the time of its discovery to the present—and what did I find? Nine out of every ten articles dealt with trials on humans. Arranged chonologically, nearly everything tried on dogs had been determined previously through human experience. In the long list of diseases for which penicillin is recommended, there are only a meager handful which can even be simulated in dogs.

Then who did work out the uses and doses of penicillin? The answer is that it was the internists in our great hospitals, and the doctors in active practice, who, through their combined experiences and judgments, did the work. No small group—especially not the vivisectors—should get the credit.

The basest and probably the most despicable of all the vivisectors' tricks is the giving of interviews by these champions of cruelty during dog week, or at some other time when the dog is being honored for his faithfulness to man. These interviews purport to show the vivisectors' great love for the dog, and usually stress (with a cunning that outrivals that of the fox) that the dog "deserves to be honored for his great service to the people through his use in the vivisection laboratory." Every reader with one beat of kindness in his heart should write the papers that publish these interviews and protest such use of the news columns.

ARE WE GUILTY?

We have all heard and read with great indignation about the terrible experiments performed by the Germans on helpless civilion prisoners during the recent war. But do you know that practically every experiment thus performed on humans in Germany is today being done in our own country? The only difference is that these atrocities are being perpetrated on animals in this Nation. It is accepted that the German people are equally as guilty as their doctors for permitting such barbarism. By the same token, are not we Americans equally guilty if we do not loudly and consistently protest what is going on in our own vivisection laboratories every day? I think we are.

Let us work and pray for the abolition of this cruel business.

A. V. ALLEN, M. D.

Warning to Newsprint Industry

EXTENSION OF REMARKS
OF
HON. NORRIS POULSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. POULSON. Mr. Speaker, I concur with what has been said here by Representative KING, and I should like to join in his warning to the newsprint industry.

There is probably not a Member of this House who has not received complaints from one or more publishers in his own community about the current lack of newsprint. I have not only received complaints, I have received specific complaints from publishers who tell me that, while they cannot secure enough newsprint to keep in normal operation at the recognized price of $90 a ton, they can go into the gray market and receive print at anywhere from $230 to $300 a ton.

Our House committee now investigating that situation has found many reasons for this, which will doubtless appear in its report, and I will not attempt to list them all now. But I will say that just horse sense will tell us that when newsprint production is at an all-time high, and when newsprint is unavailable at market prices, but can be secured on the gray market, something is fishy, to say the least.

At a time like this we are faced, as Representative KING has previously pointed out, by an open defiance of United States laws by a corporation which protects its head in the United States and waggles its tail in Canada. We can feed the face, but we cannot pull the tail.

I join in this protest, because I believe that every Congressman should make it his business to be on the side of the Department of Justice in this investigation. If this scheme of American ownership and subterfuge is successful in newsprint, it will be used as a basis for new and terrifying monopolies and cartels to prey upon the American people.

But principally I am up in arms at the extent to which this dodging corporation, defying the laws of the United States, is actually meddling with the freedom of the American press. It is dictating to all intents and purposes what American readers shall read, for it is making it impossible for new papers to be established, and it is making it impossible for old, established newspapers to continue publication.

There have been few cases of newspapers closing because of complete lack of newsprint, but as the situation becomes worse, more and more of them are threatening to close, and may be forced to. Those which will go first are the little fellows, who operate on small profits, in small communities, and have never been able to build up huge fortunes which they can now tap to meet gray market prices. The readers of those newspapers are going to be forced to read the newspapers which are big and powerful and rich and fat with profits—or read none at all.

And this newsprint monopoly, with its production in Canada and its ownership in the United States, will fatten on that kind of misfortune.

If we are to protect a free press in this country we will have to start by letting these newsprint people know that we will not sit idly by and have them flaunt the laws of our country. The Department of Justice in this fight must know that it has the backing of this Congress to the extent of legislation, if that is necessary.

I, too, would like to see a report from our special committee on this subject before we adjourn. I know that this committee is planning a long-range program which will remove the press of the United States from dependence upon foreign newsprint, and I believe that in encouraging this American industry our committee is doing a tremendous and worthwhile job.

But I should further like to suggest that our committee investigate this corporate phase of the newsprint industry—this international monkey business which allows Americans to do business in America while defying American justice with Canadian corporate identities.

I hope our committee will find out one thing—are these people Americans, or international cartel operators who, with immunity, can play a grey-market game with one of our most cherished freedoms?

Resolution of Mahaska County (Iowa) Bar Association

EXTENSION OF REMARKS
OF
HON. KARL M. LeCOMPTE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. LECOMPTE. Mr. Speaker, the Mahaska County (Iowa) Bar Association is very much interested in favorable consideration being given H. R. 1639 to limit venue. This bill was favorably reported to the House from the Committee on the Judiciary on June 19, 1947, and is now on the House Calendar. Under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to include the resolution adopted by the Mahaska County Bar Association:

A regular meeting of the Mahaska County Bar Association was held on the 29th day of May 1947 at the Blue Mill Cafe. President Ned P. Gilbert presided.

The matter of pending legislation in the Congress of the United States, commonly referred to as House Resolution 1639, introduced by Mr. JENNINGS in the House of Representatives on the 13th day of February 1947 was brought up at the instance of President Gilbert.

It was moved by Harold J. Fleck, seconded by James L. Devitt, and after a full and complete discussion of all matters pertaining thereto, that the following resolution be adopted:

"That Mahaska County Bar Association go on record as approving the provisions of House Resolution 1639 introduced by Mr. Jennings on the 13th day of February 1947; and further,

"That a copy of this resolution be mailed to each Senator and Representative of the State of Iowa."

Passed unanimously.

Thereafter the meeting on motion adjourned.

NED P. GILBERT,
President.

Attested to by:

JOHN S. SPROATT,
Secretary-Treasurer, Mahaska County Bar Association.

MAY 29, 1947.

Uncertainties Concerning Reduction and Equalization of Income Taxes Should Be Settled at This Session of Congress

EXTENSION OF REMARKS
OF
HON. ALBERT L. REEVES, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. REEVES. Mr. Speaker, the Congress should not delay a determination as to when and by how much individual income taxes should be reduced. It is my view that during the present session a new tax bill, effective January 1, 1948, should be enacted.

The new tax bill ought to include a substantial percentage reduction in the lowest income brackets and extend to all married taxpayers the "income splitting" privilege now enjoyed solely by citizens of the community-property States. Even before H. R. 1 was reported to the House I urged the Ways and Means Committee to incorporate this combination of tax reduction and tax equalization into a single bill. Sentiment now strongly favors this proposal.

It is especially important that the "income splitting" privilege be incorporated into a reduction bill rather than a revision bill. In this connection, under leave heretofore granted, I incorporate into my remarks a statement made to the Ways and Means Committee of the House of Representatives on June 19, 1947:

STATEMENT OF ALBERT L. REEVES, JR., BEFORE THE HOUSE WAYS AND MEANS COMMITTEE, THURSDAY, JUNE 19, 1947

Mr. Chairman and gentlemen of the committee, the purpose of my appearance before the Ways and Means Committee today is to urge the enactment of appropriate legislation to correct the discriminatory application of the Federal income tax laws against citizens of the 36 remaining noncommunity-property States.

That such discrimination exists is not seriously questioned by anyone. The Federal Government recognizes the community-property system and permits husband and wife in the community-property States, of which there are now 12, to divide their income, each reporting and paying the income tax upon one-half of the community income. In this period of extremely high surtaxes the result is that incomes in the community-property States pay substantially less in income taxes than identical incomes in the 36 noncommunity-property States. The inequalities of this situation are recognized by the Treasury Department. Stanley S. Surrey, tax legislative counsel for the Department, who has favored universal application

of the split income principle is the source of tables which clearly illustrate the tremendous tax advantages enjoyed by taxpayers in the community-property States. The tables are as follows:

TABLE No. 1.—*Comparison of tax liabilities of married couples (with no dependents) in community-property and in non-community-property States*

Net income before exemption	Total tax on married couples		Tax saving in community-property States	Tax saving in community-property States as a percentage of tax liability in non-community-property States
	Non-community-property State (only 1 spouse has income)	Community-property State (income divided equally between spouses)		
				Percent
$5,000	$798	$760	$38	4.8
$10,000	2,185	1,843	342	15.7
$15,000	4,047	3,154	893	22.1
$25,000	9,082	6,460	2,622	28.9
$50,000	24,795	18,725	6,070	24.5
$100,000	63,128	50,274	12,854	20.4

TABLE No. 2.—*Aggregate tax savings of married couples (with no dependents) in community-property States in the income years 1937 through 1946* [1]

Combined net income before exemption	Aggregate amount of tax savings
$5,000	$320
$10,000	2,864
$25,000	20,633
$50,000	53,144
$100,000	132,187

[1] Tax for non-community-property States is computed on the assumption that only 1 spouse has income, and in community-property States that income and exemptions are divided equally between the spouses.

Various State legislatures, the American Bar Association, and many other organizations have urged the Congress to enact legislation to rectify this manifest inequity.

Under the existing situation most of the non-community-property States are experiencing a loss of capital, business, and income to the community-property States. It is common for an individual of means to carry on his business or profession in a non-community-property State, where he earns his income, and to maintain his domicile in a community-property State in order to enjoy a more favorable tax status. In self-defense, several States, such as Oklahoma, have very recently adopted the community-property system, although with considerable reluctance because it creates problems affecting estates, domestic relations, and commercial credit. Congress should not, by failing to take action on the matter, compel other States to take so serious a step. Many are contemplating it as a last resort, if the Federal laws are not changed.

Sentiment in the Congress and throughout the country overwhelmingly favors extension of the right to split incomes for Federal tax purposes to all married taxpayers.

Early in this session of Congress I introduced H. R. 1759, which would accomplish this purpose. Under its provisions a husband and wife could elect to file a joint return of all their income. The tax would be computed upon one-half the aggregate income, and then multiplied by two. The result is exactly the same as though each filed a separate return on one-half the income, but the number of returns would be greatly reduced. The bill provides also necessary adjustments in the standard deduction. It seems to be agreed by many that a simple and effective approach to the problem is provided by this method, and a number of identical or similar bills have been subsequently introduced in both Houses of Congress.

But the change should be included in a tax reduction bill, not in a tax revision bill as the committee apparently contemplates. I shall endeavor to show why.

Extension of the privilege of splitting income to all married taxpayers is not actually a matter of revision of existing laws. The tax advantages now enjoyed by citizens of the community-property States does not arise from anything inherent in the internal-revenue code. It arises out of a situation altogether extraneous to the Federal tax laws—namely, the existence and characteristics of the community-property system in a limited group of States. In this respect it differs from matters which could be reached only by revision—such as the double taxation of dividends. I do not mean to take a position at this time on the question of double taxation of corporation income, but it is an excellent illustration of the kind of situation which inheres in existing law and is subject to revision, in contrast to the extraneous origin of split-income practice.

Moreover, extension of the split-income privilege would not affect all taxpayers in all States. With relatively minor exceptions, it would affect a geographical segment of the population—that is, taxpayers in the 36 non-community-property States only. In addition—and more important—the amounts involved are larger than ought to be included in a revision bill. As examination of table 1, above, will show that the split-income privilege would reduce the tax liability of a $25,000 income by 28.9 percent, or by $2,622. Such a reduction cannot properly be regarded as a revision; it is a substantial tax cut.

But there is a vastly more important reason for including the split-income privilege in a tax-reduction bill, rather than in a revision bill. It is reported that in consequence of the veto of H. R. 1 it is proposed to offer a new tax-reduction bill, providing percentage cuts, early in the next session, and to follow it with a revision bill which among other things would extend the split-income privilege to all married taxpayers. I submit that if a straight tax-reduction bill is passed, it will be impossible thereafter to extend the split-income privilege to the non-community-property States.

If a new tax-reduction bill were to provide, as did H. R. 1, a 30-percent reduction in the lowest brackets and a 20-percent reduction in the medium and higher brackets, extension of the split-income privilege would be effectively foreclosed by the fact that, taken in conjunction with the tax reduction, it would discriminate in favor of the surtax brackets. For example—referring again to table No. 1—the percentage reduction of 20 percent (assumed), coupled with the percentage tax savings realized from the split-income privilege, would give total reductions of more than 30 percent at the $10,000 income level, almost 40 percent on a $15,000 income, and 45 percent on a $25,000 income. At the $50,000 level the total tax reduction would be about 40 percent, and at $100,000 and above only slightly less. The result would be extraordinary tax relief in the middle and higher brackets, far exceeding the moderate reductions provided in the lowest income brackets. For this reason if the Congress first passes a straight tax-cut bill it will find itself unable to authorize universal application of the split-income privilege with its additional advantages to the surtax brackets only. Thus the inevitable effect of a straight tax reduction would be to perpetuate the existing tax discrimination against the 36 non-community-property States, and to enable the community-property States to continue to exploit their advantage by further siphoning off business and wealth from the non-community-property States.

It is, therefore, my conviction, and my urgent recommendation to the Ways and Means Committee, that a single bill be prepared which would combine a graduated percentage cut in the lower brackets with the "split income" provision, the latter being of benefit only in the surtax brackets. To illustrate: A substantial percentage cut, of 30 percent or perhaps more, should be provided in the lowest income brackets. The split-income privilege should be made of universal application. Income splitting alone would provide a reduction of 20 percent or more in all income brackets above about $12,500. In surtax brackets below $12,500 percentage reductions should be made which, in combination with the split-income feature, would provide an aggregate cut of 20 percent. At the $10,000 income level, for example, the split-income privilege would produce a reduction of only 15.7 percent. A total tax reduction of 20 percent could be accomplished by a percentage adjustment in the appropriate surtax bracket. The same formula would result in a uniform 20-percent reduction (if that percentage of reduction is agreed upon) in still lower surtax brackets where the benefits of income splitting are less—as at the $5,000 level, where income splitting reduces the tax liability by only 4.8 percent.

Preparation and passage of such a combination bill is still possible in the present session of Congress, even though the time remaining is short. I feel that in all justice we should not leave the people of this country without definite assurance of relief from the terrible burden of taxes they are now carrying. Uncertainty as to whether, and when, income-tax reductions will become effective is creating confusion and exerting a sharply depressing effect on business activity.

Strong equities support the kind of a bill I have proposed. It should be made effective January 1, 1948, which is the effective date of the "income splitting" bill I have already introduced. I do not think it would encounter a veto. If it did, sentiment for adoption of the "income splitting" proposal is sufficiently strong in both House of Congress to assure that it would be overridden.

This recommendation is not made lightly, or without encouragement from others in the House. I earnestly urge the committee to give immediate consideration to the introduction at this session of a tax-reduction bill, designed to accomplish the objectives I have outlined, and effective January 1, 1948.

We have an obligation to the American taxpayer to clarify the Federal tax situation and to tell him in advance how he may plan his affairs for next year.

Veteran Expresses Appreciation of Care Given Him

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, June 30, 1947

Mrs. BOLTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

PARKERSBURG, W. VA., *June 25, 1947.*

MRS BOLTON: I am a World War II veteran and want to congratulate you, the Veterans' Administration staff, and all concerned with all Veterans' Administration hospitals.

I have been a patient in three: Huntington, W. Va., Dayton, Ohio, but the best one in my opinion is at Oteen, N. C. They do everything possible there, and just a little bit more. They make you feel like you are one of the big generals.

I want to congratulate General Logan, Dr. Mathews, Dr. Kelly, Dr. Sneed, Nurse Adkinson and all of the staff.

Best regards,

JOSEPH B. RICE.

Wool Bill Veto

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Denver Post of June 27, 1947:

PROVING OUR GOOD FAITH IN A BIG WAY

President Truman's action in vetoing the wool bill was a victory for the State Department, the Boston wool trade, the wool-textile industry, and the wool producers of Britain and the dominions.

It was a defeat for the Department of Agriculture and the National Wool Growers Association.

There was little doubt where the President's affections would lie or that he would disapprove the bill. The best the wool growers can hope for is a new bill, as suggested by the President and already approved by the Senate, to support domestic wool prices at the 1946 level.

The vetoed bill would not have required the President to impose import quotas or import fees (tariffs), although it would have submitted him to numerous pressures to do so.

The President undoubtedly was right in saying that the approval of the wool bill would have been interpreted by other countries as indicating this country was returning to the principle of high tariffs and economic isolationism.

Such an interpretation would be false, of course, but it would have been made nevertheless, with all the stops of the British propaganda organs pulled out.

The significance of the President's veto as advocated by the State Department may be, but should not be, lost on the world in general. The State Department at the moment is trying to promote world trade by getting nations to agree to enter into an International Trade Organization.

That organization would have as its objectives the elimination of cartels, state monopolies which subsidize exports, restrictive tariffs, import and export quotas and other checks on free competition and the free flow of goods.

At the present time Britain and the dominions are dealing in wools, of which they produce by far the greater part of the world's supply, through a state monopoly, the Joint Organization. The JO, as it is known, probably constitutes a greater threat to free competitive world trade than the wool bill ever would have been if the President had signed it.

Apparently without even suggesting that the British disband the JO, the State Department went all out to defeat the bill. The Department is determined to prevent the building of any trade barriers at home regardless of how willing or unwilling other countries will be to go along with the Department's plan. No international trade organization has been formed as yet, and no one can foresee when it will be, but the State Department is acting as if firm commitments already had been made.

The world should be tremendously impressed with the sincerity of the State Department's trade policy. The Department might have used the wool bill for trading purposes to persuade other countries to abandon restrictive practices of their own but it did not do so.

The effect of the veto will be to give Australia, New Zealand, and other British wool-producing areas a definite assurance, not that they will be able to sell as much wool in the United States as they did before the war, but that they will continue to enjoy the greatly enlarged market opportunities in this country they acquired during the war.

The veto of the wool bill is a supreme example of disregarding the self-interest of a country for the sake of a world trade principle which other countries have not even indicated that they will accept.

Let us hope it has the effect the State Department believes it may produce.

Shipment of Gas, Oil, and Petroleum Products to Russia

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. BRADLEY. Mr. Speaker, in connection with the report of heavy shipments of oil and related products to the Soviet Union, I am pleased to introduce herewith in the RECORD a resolution adopted by the City Council of the City of South Gate, Calif., in which the council expresses its opposition to further shipments of "gas, oil, and petroleum products to the Soviet Union Republic or to any other country in the world not in sympathy with our American way of life."

It was moved by Councilman Beckley and seconded by Councilman Bunnett, that the following resolution be adopted:

"Whereas it has been recently reported in the public press that our gas and oil resources are rapidly being depleted and that this country may soon be faced with a gas and oil famine; and

"Whereas our gas and oil and petroleum resources are of vital interest to the people of South Gate and the United States generally; and

"Whereas the public press has recently reported that 12 Soviet oil tankers are presently in San Pedro harbor awaiting quantities of gas, oil, and petroleum products for shipment to the Soviet Union Republic; and

"Whereas in the years before the last war, one of the most costly in thousands of American dollars and American lives, the United States did build up the war machines of those countries with whom we later fought, and whose ideologies were even then inimical to the democratic ideals we nurtured, and shipped to such countries the goods and products so necessary to the creation of their war-making organization: Now, therefore, be it

"*Resolved*, That the city council of the city of South Gate, Calif., for and on behalf of its citizens, who will be among the first to suffer should we be unfortunate enough to be forced into another war in defense of our ideals, does strenuously oppose further shipments of gas, oil, and petroleum products to the Soviet Union Republic or to any other country in the world not in sympathy with our American way of life and that this policy be exercised to all other products of our economy including any and all resources which may be used in or conveyed to military use or used to propagate unholy ideologies through the democratic world."

The foregoing resolution was passed and adopted by the following vote: Ayes—Councilman Weaver, Grant, Beckley, Bunnett, and Mayor Olsen.

I, H. C. Peiffer, city clerk of the city of South Gate, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the city council at its regular meeting of June 16, 1947.

[SEAL] H. C. PEIFFER,
City Clerk of the City of South Gate, Calif.

Adequate Old-Age Pensions Needed Now

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. HAGEN. Mr. Speaker, I have on many occasions raised my voice on behalf of more adequate pensions for our aged. I have the feeling that those of us who stand for better treatment of our elderly citizens are receiving more and more support from our colleagues in the House of Representatives.

During the week of June 23 to 28 Washington was host to over 4,000 delegates of the national Townsend pension group. These delegates held meetings at which Members of Congress appeared and discussed the need for more adequate pensions.

On Friday most of the delegates visited the House of Representatives and formed delegations to call on their Congressmen. In almost every instance they were well received by the Representatives. I was very much impressed by the fact that the delegations were well informed on their subject. Their sincerity was unquestioned. I sincerely hope that their pilgrimage to Congress will have an activating effect on those Representatives in Congress who to this date have demonstrated a reluctance to provide more adequate pensions to the elderly people of this country.

There is a great deal of talk in recent weeks about an impending business recession. The Wall Street Journal has repeatedly pointed out that our export market will take a decided dip due to the lack of American dollars abroad. This means that our manufacturers and businessmen must depend more and more on domestic consumption.

There is already a great deal of talk about "loaning" funds to European countries for the purchase of American produced commodities. We all know that these loans are nothing more or less than outright gifts.

If we feel that we can afford these loans to foreign countries, then we should not hesitate to inaugurate a program whereby the elderly people of this Nation can live in reasonable security and comfort for the remainder of their lives. I contend that the passage of H. R. 16 will have a manifold effect on our whole econ-

omy. It may be the very cushion our economists are looking for in connection with the threatening recession.

Action now is imperative.

Pandora's Box of Labor Law Is Reopened

EXTENSION OF REMARKS

OF

HON. FRANK BUCHANAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 30, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Alfred Friendly, which appeared in the Washington Post of Sunday, June 29, entitled "Pandora's Box of Labor Law Is Reopened":

PANDORA'S BOX OF LABOR LAW IS REOPENED

(By Alfred Friendly)

For 5 months the debate on the Taft-Hartley Act has been so all absorbing that it has served to drive out of the public mind the fact that we have other labor laws, still on the books.

Of and by itself, the new law does not constitute an entire labor code, just as the Wagner Act before it was not the be-all and end-all of union law.

The Taft-Hartley Act is only the latest of a sizable series of legislative enactments and court decisions (which had the effect of law) setting out the ground rules of conduct for American labor.

Most of these previous laws and judicial rulings will be affected by the new statute—how fundamentally, only several years of Supreme Court rulings will disclose. And, by the same token, the Taft-Hartley Act itself is conditioned to some extent by the earlier laws and their interpretations. It takes on meaning, in a large degree, only in the perspective of the legislation and policy which have gone before.

Someone, some day, will write a summary of history of American labor law in such an unorthodox fashion that it will not begin with the story of the Philadelphia cordwainers. This is not it.

In 1806 a group of cordwainers (shoemakers, working particularly in cordovan leather) united in a club. They framed some piecework wage schedules and presented them to their employer with the demand that he adopt the new rates.

The employer went to court. Philadelphia Recorder Levy had no trouble with the case. He decided it on this basis:

"A combination of workmen to raise their wages may be considered from a twofold point of view; one is to benefit themselves, the other to injure those who do not join their society. The rule of law condemns both."

For 30 years these sentiments were more or less the law of the land, although they were not without challenge. They rested on two related premises in common law: That conspiracies and restraints of trade were illegal.

The basis of the first was that a number of persons acting together possess power to do wrong which is not possessed by each one acting as an individual. The basis of the second was that each person, and the public, has the right to have the course of trade kept free of unreasonable obstructions and to demand that no one, by agreements or other acts, unreasonably diminishes that trade.

These two premises, taken together, made effective union activity extremely difficult; the opposition needed only to go to court to get the union slapped down.

LOOPHOLES OPENED

Fortunately for the young labor organizations, the bland but absolute decision of Recorder Levy was not followed everywhere. With the famous cases of *Pennsylvania* v. *Carlisle*, in 1921, and *Commonwealth* v. *Hunt*, in 1942 in Massachusetts, some considerable refinements were added.

Combinations to raise wages were declared to be, in themselves, not necessarily unlawful. Tests of motives, and the means used to obtain those ends, were recognized as the controlling ones in cases of alleged conspiracy.

Workers' combinations were declared unlawful if the intent—as decided by the court—was to injure someone or to benefit themselves to the prejudice of the public.

Similarly, with respect to restraint of trade, a test of "reasonableness" came to be applied. The element that stamped a combination in restraint of trade as an unlawful conspiracy was the coercion that may have been used.

Finally, the concept of "just cause" came to be important. If the workers had "just cause" for seeking a certain objective, their combination could be considered lawful, even though in the course of their action they might have injured an employer.

These were very slim justifications for unionism. Subjective to the highest degree, the standards depended on the whim—and economic predilections—of the courts. Unions could never be certain of how their acts would be interpreted.

Yet these common law doctrines, variously interpreted at different times and places, modified and demodified, were the controlling law over unions for more than 100 years. Finally they were replaced by Federal statutes.

HIGH COURT UPSET

By the 1890's, unions thought they saw some hope for relief from the twilight land in which they dwelt. It was in the form of State laws guaranteeing the right to organize. But the hope was barren. The Supreme Court declared these State laws invalid.

The case which did it was *Coppage* v. *Kansas*, in 1915. The Court held invalid a Kansas law which had sought to prevent employers from discriminating against union workers. The Court declared that an employer had the right to discharge a worker because the latter refused to sign a pledge to quit his union.

Seven years earlier, in the Adair case, the Court had said the same thing with respect to a Federal law. It had declared unconstitutional a section of the Erdman Act which made it unlawful to fire an employee because of union membership. The Justices held that the Constitution guaranteed an employer the right to discharge or to refuse to hire a man because of union membership and that this right was unqualified.

These decisions simply validated "yellow dog" contracts. These, used as early as 1870, were pledges, written or oral, by which a worker obligated himself, as a condition of employment, not to join a labor union. They were used in plants employing a total of several hundred thousand workers. More important than their extent was that they were used at precisely those places where the unions were trying to gain footholds.

BOLSTERED BY INJUNCTION

In 1917, in the Hitchman decision, the Supreme Court added a further blessing to "yellow dog" contracts. Before that time they were legal, as mentioned above, but not enforceable in a court of equity. In the Hitchman decision, the Court said the employer not only had the right to exact a "yellow dog" contract but was also entitled to be protected in that right, as in any other legal right.

The value in this judicial gift to the employers lay not in the opportunity to sue a worker for breaking his pledge, but rather in the ability to slap an injunction on any union organizer who sought to sign up the workers. For in that very act the organizer was seeking to deprive the employer of a right guaranteed him by law.

From the foregoing, it can be seen that at this stage of American labor law—or rather judicial interpretation of the common law, for there were few specific Federal statutes yet—for the union, things were tough all over.

They got even tougher.

For a 50-year period, the age of government by injunction, there was an almost automatic employer response to a strike. The employer hied himself to the nearest injunction judge and received a tailor-made order to suit his purpose, stopping all overt strike acts—picketing, exhortation, paying strike benefits, urging workers to walk out, printing of any literature, etc. In one case, an injunction even forbade the singing of hymns by the striking workers.

Unions were entitled to conclude that there was nothing more under the sun that could be applied to them to thwart their aims. But they had another think coming.

LOST THEIR EYE TEETH

In 1890, Congress passed the Sherman act, declaring that every contract, combination and conspiracy in restraint of trade was unlawful, and that anyone injured by such acts could sue the perpetrators to recover his damages threefold.

It is doubtful that the law was meant to apply to trade unions, acting alone. But within a few years the courts ruled that labor organizations were indeed within its scope. The brutal payoff came in 1908 with a case which dragged through the courts for 7 years. It was *Loewe* v. *Lawlor*, better known as the Danbury Hatters.

Members of the United Hatters of North America attempted to organize the shop of one Loewe, in Danbury, Conn. Their organizing strike was ineffective, so they put Loewe on an "unfair list" and boycotted his products throughout the country.

The company went to court, alleging it had been injured in the amount of $80,000. The Supreme Court found the boycott an illegal combination under the Sherman act.

Triple damages were awarded. The homes and savings accounts of 197 union members were placed under attachment. They lost the latter and recovered the former only after 14 years. In all, the union and the AFL were stuck to the tune of $234,000. Only 2 of the 197 union members sued were prominent in the union; many had not attended a meeting in years and testified that they did not even know of the boycott.

THE CLAYTON "REPEAL"

From the union viewpoint, the Danbury Hatters doctrine, reinforced by a somewhat similar case involving the Coronado Coal Co., appeared to be the final nail in the lid of the labor organization coffin. But in 1914 there seemed to be a ray of hope, with the passage of the Clayton Act. It purported to say that legitimate union activities could not be construed as falling afoul of the prohibition in the Sherman Act.

The hope was illusory. For, in 1921, in the Duplex case, with Justices Holmes, Brandeis, and Clarke dissenting, the Supreme Court majority ruled in effect that Congress meant nothing at all when it passed the Clayton Act. It said that the Clayton Act was merely declaratory of what had been lawful and what had been unlawful theretofore.

The case involved a refusal of machinists to install printing machinery made by a nonunion company. There were three other

printing-machinery manufacturers in the country, all unionized. They were being driven out of business by Duplex's price undercutting, made possible by the lower wages it paid. From the viewpoint of the machinists, either they had to organize Duplex or see themselves driven out of the printing-machinery field.

The Court could not see it that way. Past, present, or prospective employees of the Duplex Co. might be able to strike against it legitimately, the decree said, but machinists working elsewhere (i. e., those who boycotted the products) did not have the privilege of concerted action. They were not proximately or substantially concerned.

The Clayton Act was thus construed until the end of the 1930's.

THE MAGNA CARTA

At this stage of the game a union man could conclude not only that he had no laws to protect him, but that such laws as there were, operated as weapons for the other side. Here was the darkness before the dawn. In itself, however, it held the seeds of light.

For an inescapable legal conflict was being evolved and its resolution could not be avoided. There was a right which no amount of court decisions or laws could suppress—the right of labor to organize and act in concert to promote its own economic and social welfare.

But this was in conflict with what the law held to be the employer's common-law right to hire and fire as he chose, to have his channels of trade held open for him against obstruction or diminution and to be freed from effective concerted action against him.

A large part of this conflict was resolved by the Norris-LaGuardia Act of 1932. It, more properly than even the Wagner Act, may be considered labor's magna carta. It was to be a guaranty of labor's right of self-help.

It specifically outlawed the yellow-dog contract. Most important, it defined a whole series of legitimate union activities against which no Federal court could issue a restraining order or injunction.

Significantly, in defining what was a labor dispute which could not be enjoined, the act specified that it could be a controversy between persons regardless of whether or not the disputants stand in the proximate relation of employer and employee. In other words, while this did not legalize the boycott it at least declared that boycotts could not be enjoined in Federal courts.

COURT COMES AROUND

With a series of baby acts patterned after it in the States, the Norris-LaGuardia Act ended the age of government by injunction.

In addition, the Supreme Court became obliged to read the other laws which had gone before, and the common law, together with the new act. In a series of three famous cases—Apex Hosiery (1940), Milk Wagon Drivers (1940), and Hutcheson (1941)—the Court looked at the Sherman, Clayton, Norris-LaGuardia, and new Wagner Acts all together.

The conclusion of the Court was far reaching. It was a new broom sweeping aside almost every major decision in the past.

Overruled were the Coppage, Adair, and Hitchman cases (validation of yellow-dog contracts and refusal to honor laws forbidding antiunion discrimination). There could not be another suit for treble damages under the Sherman Act, such as that in the Danbury Hatters situation. The boycott in the Duplex case could not be enjoined and the notion of limited interest in that case was tossed overboard.

The Wagner Act of 1935 can, like the Norris-LaGuardia Act, be seen as another aid to union self-help. It guaranteed workers the right to bargain collectively through representatives of their own choosing. It applied penalties against employers who sought to obstruct that right. It barred company spies and company-dominated unions.

But it was not merely a self-help law. As Senator WAGNER made clear in the debate on the bill, this was to be an act positively encouraging union organization, lending the Government's help to unions for a specific and distinct economic purpose—to raise wages and thereby create a more stable and healthy national economy.

For a development of this argument and the corollary one to the effect that the law was not one-sided, the reader is referred to the chapter by Leon Keyserling, Senator WAGNER'S aide and now a member of the President's Council of Economic Advisers, appearing in The Wagner Act: After 10 Years (the Bureau of National Affairs, Washington, 1945).

OLD CASES RESURRECTED

It is clear, although it has been largely overlooked, that the new Taft-Hartley Act is not merely a modification of the Wagner Act. Its outlaw of boycotts and jurisdictional strikes, its revival of certain types of injunctions against them and its new concept of what are legal and what are illegal kinds of union action also affect the Norris-LaGuardia Act.

It very definitely raises the question of a reexamination of the Sherman and Clayton Acts and such decisions under them as the Apex, Milk Wagon Drivers, and Hutcheson.

One example, that of the jurisdictional strike, will suffice to show how new problems are raised.

In the Hutcheson case, Justice Frankfurter argued that there was nothing in the Clayton Act which distinguished between a plain strike and a jurisdictional one. Both appeared to be nonenjoinable under the Clayton and Norris-LaGuardia Acts. Frankfurter observed of the jurisdictional strike:

"Such strife between competing unions has been an obdurate conflict in the evolution of so-called craft unionism and has undoubtedly been one of the most potent forces in the modern development of industrial unions. These conflicts have intensified industrial tension, but there is not the slightest warrant for saying that Congress has made (the protection in the law) inapplicable to trade-union conduct resulting from them."

The new law, however, changes all this. First, it provides a great stimulus to craft unionism, giving craft unions much greater leeway in "severing out" of industrial plant-wide organizations. But, on the other hand, it outlaws the jurisdictional disputes which may be intensified by this very severing out.

Once again, unions are back in a land of uncertainty. Only a long series of Supreme Court decisions over the next several years will dispel the doubt and tell them where they stand.

Redeem Terminal-Leave Bonds Now

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. TWYMAN. Mr. Speaker, surely the Republican leadership will carry through during the first session of the Eightieth Congress the proposal of redeeming the GI terminal-leave bonds. There is every reason for our taking prompt action on this. I appeared before the subcommittee of the House Committee on Armed Services to express my keen interest in this matter. Certainly no one could have any good reason for opposing this early action. Everyone agrees that we should reduce the national debt. The obligation to pay these bonds represents a part of the national debt and a part that is outstanding at a comparatively high rate of interest. I saw no reason why terminal-leave bonds should have been issued in the first place. The amounts were not sufficient to mean much to the individuals 5 years from the time they received them. The average amount of these bonds per man amounts to only about $250. Some of these men hold only a $50 bond. Many of these men have no facilities for safekeeping, and the chances are great that the bonds themselves may be lost or destroyed. Some of these men are carrying these bonds around on their persons and the chances are that they will be worn out before the time comes for them to cash them.

The program should provide that these bonds never become negotiable. They should become redeemable at national banks and post offices wherever these men may be and be able to provide suitable identification. If these bonds were made negotiable it would defeat the purpose, as the national deft would not be reduced, as the bonds would fall into the hands of people who would prefer to hold them to maturity. Furthermore, the men holding these bonds should not have to be placed in any position where they might be called upon to sell them at a discount or pay any service charges in connection with their redemption. The bonds should be redeemed at accrued interest.

The redemption of these bonds should be made voluntary so that those who desire to retain them may do so. There is nothing to the concern of some that the redemption of these bonds would be inflationary. Many of the holders of these bonds have borrowed money at higher rates of interest than the bonds themselves pay, and the money borrowed would be paid up by the proceeds obtained from the redemption of these bonds. Were it true that these bonds were held in any sizable amounts, there might be some advantage in their being held for future needs. That is not the case. The bonds are held in small amounts and their redemption now or at any time that a holder desires to redeem them may prove a great convenience. I therefore strongly urge that immediate action be taken, and I intend to support this action.

Signs of a Nation-Wide Republican Victory

EXTENSION OF REMARKS
OF
HON. ANGIER L. GOODWIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. GOODWIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a splendid address recently given by Hon. Arthur W. Coolidge, Lieutenant Governor of Massachusetts, at the forty-second anniversary ban-

quet, John Ericsson Republican Club, of Massachusetts:

SIGNS OF A NATION-WIDE REPUBLICAN VICTORY

The Republican Party is big enough to hold the widest variety of sincere views. But it also is united enough to face great issues and to solve them in the spirit of teamwork. Republican willingness to avoid extremes is the reason why our party today represents the overwhelming majority of Americans.

The problem of responsible government is to steer a middle course between the reactionary and the radical—between the skinflint and the spendthrift—between Scrooge and Santa Claus.

As the barbarians looted the temples of an ancient civilization, there are today swarms of political vandals who through inefficiency, laziness, and graft would pilfer the public purse.

You and I are sworn enemies of waste and corruption. But we must not overlook that at the other extremes are the Pontius Pilates who wash their hands of civic responsibility. So long as they can munch the fruits of inherited or acquired wealth, they have no concern about the plight of their unfortunate neighbors. With them the New England conscience has lost its pep. They have no more community spirit than a hermit in a remote Eskimo igloo.

Both extremes are bad because both stem from selfishness. In a modern-age government must be the guardian of all human rights. As such it must preserve and advance freedom, security, and opportunity, and that, as I see it, is the goal of the Republican Party of Massachusetts.

IRRESPONSIBLE OPPORTUNISTS

After years of sitting beside Democratic legislators in the Massachusetts House and Senate and observing the Democratic crazy-quilt pattern in other places, I am convinced that our political opponents are frequently irresponsible opportunists who seek partisan advantage more than public service.

Too often they peddle half-truths in order to bewilder and misrepresent. Too often they seem willing to sabotage any public benefit proposed by Republicans in the fear that Republicans might gain credit for its success.

Let me cite one example. For years the ailing Boston Elevated System has been unable to provide sufficient transportation to prevent the traffic strangulation which has brought partial economic paralysis to Boston. The railway has been financially unable to remove the eyesore elevated structures whose darkness dooms homes and whose noise is the death knell of business.

This year a Republican administration and a Republican legislature have tackled the problem, and we are well on the way to solving it.

The district blighted by the elevated's spiderweb of steel is inhabited by Democrats. The majority of the population in the cities and towns crushed by the elevated deficits are Democrats. Rank-and-file Democratic men and women stand to benefit if the Boston transit disease is cured.

But are the bulk of the Boston Democrats in the house and senate fighting for an improvement which will aid their constituents? It is not. These nearsighted solons are so afraid that Republicans will get the credit for a major improvement to Greater Boston that they are fighting us tooth and nail.

They are trying through the use of costly eminent-domain proceedings to postpone public ownership until a Democratic administration can come along and reap the credit for what Republicans started.

FORESEES GOP SWEEP

I think they are wrong on two counts. The bill will go through in spite of their road blocks, and no Democratic administration is going to win either in Massachusetts or in the Nation in 1948.

A second characteristic of our political opponents is the never-ending campaign of bunk to deceive working men and women into believing Democratic politicians are their only friends. During the past few weeks certain Democratic leaders have revived their smear campaign, trying to picture Governor Bradford and the Republican administration as the cold-blooded enemies of the poor and friendless.

Over their $25-a-plate banquets they have spilled their crocodile tears. From mouths stuffed with epicurean delicacies they have told how their hearts—their hearts alone—ache for the unfortunate. Again they are dragging out their perennial issue of class hatred. Once more they are demanding public services and yet vilifying everyone who suggests paying for public services. Their left wingers are plotting a new depression in order to blame it on business.

But I believe that an enlightened, modern public is fed up with old-fashioned demagogues and hypocrites. I have faith that the public will continue to support the Republican Party here in Massachusetts and in the Nation, for the Republican Party today speaks for most Americans.

MANDATE FOR WISE ECONOMY

The last election was a mandate to bring about wise economy and to curb the excesses by certain labor czars, who like Pied Pipers were leading labor over the precipice.

Under our own JOE MARTIN the Republicans in Congress have overcome Democratic stalling and have carried out that mandate. They have this week enacted what JOE MARTIN tells us is fair labor legislation which makes Uncle Sam the boss of John L. Lewis and all his imitators.

And they are about ready to slash the income tax. If President Truman in an effort to appease the Wallace wing of crypto-Communists, vetoes either measure, he might just as well buy a one-way ticket to Missouri. If he vetoes either measure, the Republicans will again sweep Massachusetts in a landslide.

The Republicans on Beacon Hill also are carrying out the national mandate to prevent waste and to enact laws that give both management and labor the chance to resume their partnership which did so much to produce the goods that won the war. The Slichter committee report and other progressive legislation are evidence that we believe in a square deal for both the employer and the employee. We do not believe in death-sentence legislation that kills business and therefore destroys the jobs which are made by business.

REDUCING GOVERNMENT COSTS

Governor Bradford's recent request for a recess commission to study intelligent and effective ways of reducing all kinds of government costs is only one further proof that Republicans are enlisted in an endless war against extravagance.

But in emphasizing thrift let us not be so unfair and so blind to realities as not to recognize that State government today is beset by certain postwar financial difficulties. The beans or prunes for which a State institution paid $1 before the war today cost $1.47. The price of nearly all other materials has gone up accordingly.

Without breaking the law and proving false to all principles of Christian charity, we cannot reduce the number of mental afflicted, cancer and tuberculosis patients, needy war veterans, homeless children, penniless blind and aged on our relief rolls.

Nor should we overlook certain factors which increase the amounts which the commonwealth and the municipalities pay for education. From 1870 to 1940 the population of the United States has tripled. In that same period the number of pupils attending American high school increased 90 times.

In 1870 there were 14,000 in Bay State high schools. In 1940 there were 168,000. With students returning from war work and war service, the rolls are going up today. The middle of the road is leading toward more universal education.

Democracy in an atomic age depends on a trained and skilled coming generation. Democracy in a world threated by communism depends on youth who are sufficiently educated to know the history, and appreciate the value of democratic institutions and the free enterprise system. We cannot afford to underpay teachers because the schoolhouse is the chief fortress of democracy.

I do not describe these conditions as a tear-jerking alibi for profligate spending. But no responsible party—and the Republican Party is a responsible party—can in honesty ignore these facts.

HATE BOTH CORRUPTION AND WASTE

As Republicans we advocate the proper services of government. But we as strenuously oppose the unnecessary burdens of government. We hate both corruption and waste because both rob the recipients of aid and both rob the taxpayer.

A system of overlapping jobs and pay rolls stuffed with unnecessary civil service, and other appointees, has grown up in the war years and lush days and has been handed down to the present administration.

In this era of rising prices your State administration had to take the rap for the boners and dreams of predecessors from away back. You can be sure that drastic economy moves are under way—and do not be surprised when you hear some of the patronage hold-overs squeal.

Expense accounts which in former days resembled a maharajah's spending allowance have been stopped. Employees are not allowed to commute by airplane anymore with the taxpayers footing the bill. Supplies are purchased for use and not for storage and possible spoilage. Drones and chiselers have been dropped from relief rolls. Santa Claus reindeer no longer are parked on the State house driveway.

Investigations are in process to find the best way to eliminate the fat in State services without injuring the vital parts which public need and public demand have created. Otherwise we should be false to our ideals of sound and economical government.

PARTY OF ABRAHAM LINCOLN

The majority of the Massachusetts House and Senate since the Civil War have been Republicans. That Republican-dominated general court again and again has led the entire Nation in initiating progressive laws on labor, education, health, welfare, and veterans' benefits.

We, as Republicans, can deny our heritage and spurn the example of our generous fathers. We can crawl shame-facedly to the rear of the procession of backward Bilbo States. But I know we will not revert to the days of the poorhouse, sweat shop, and snake pit.

I believe we will encourage business because the pay rolls of workers depend on prosperous industry. I believe we will encourage thrift because that saves the taxpayers from extra burdens. But I also believe that we will go forward, as fast as we are financially able, to greater advances in humanitarian government. I believe that the party of Abraham Lincoln will never retreat from the spirit of brotherhood in which the Republican Party was founded.

That is the path between extremes. That is the middle course. That is the road to both freedom and plenty. That is the will of America.

Address of Secretary George C. Marshall

EXTENSION OF REMARKS
OF
HON. PETE JARMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

REMARKS BY THE HONORABLE GEORGE C. MARSHALL, SECRETARY OF STATE, AT HARVARD UNIVERSITY ON JUNE 5, 1947

I need not tell you gentlemen that the world situation is very serious. That must be apparent to all intelligent people. I think one difficulty is that the problem is one of such enormous complexity that the very mass of facts presented to the public by press and radio make it exceedingly difficult for the man in the street to reach a clear appraisement of the situation. Furthermore, the people of this country are distant from the troubled areas of the earth and it is hard for them to comprehend the plight and consequent reactions of the long-suffering peoples, and the effect of those reactions on their governments in connection with our efforts to promote peace in the world.

In considering the requirements for the rehabilitation of Europe the physical loss of life, the visible destruction of cities, factories, mines, and railroads was correctly estimated, but it has become obvious during recent months that this visible destruction was probably less serious than the dislocation of the entire fabric of European economy. For the past 10 years conditions have been highly abnormal. The feverish preparation for war and the more feverish maintenance of the war effort engulfed all aspects of national economies. Machinery has fallen into disrepair or is entirely obsolete. Under the arbitrary and destructive Nazi rule, virtually every possible enterprise was geared into the German war machine. Long-standing commercial ties, private institutions, banks, insurance companies and shipping companies disappeared through loss of capital, absorption through nationalization or by simple destruction. In many countries, confidence in the local currency has been severely shaken. The breakdown of the business structure of Europe during the war was complete. Recovery has been seriously retarded by the fact that 2 years after the close of hostilities a peace settlement with Germany and Austria has not been agreed upon. But even given a more prompt solution of these difficult problems, the rehabilitation of the economic structure of Europe quite evidently will require a much ment with Germany and Austria has not been foreseen.

There is a phase of this matter which is both interesting and serious. The farmer has always produced the foodstuffs to exchange with the city dweller for the other necessities of life. This division of labor is the basis of modern civilization. At the present time it is threatened with breakdown. The town and city industries are not producing adequate goods to exchange with the food-producing farmer. Raw materials and fuel are in short supply. Machinery is lacking or worn out. The farmer or the peasant cannot find the goods for sale which he desires to purchase. So the sale of his farm produce for money which he cannot use seems to him an unprofitable transaction. He, therefore, has withdrawn many fields from crop cultivation and is using them for grazing. He feeds more grain to stock and finds for himself and his family an ample supply of food, however short he may be on clothing and the other ordinary gadgets of civilization. Meanwhile people in the cities are short of food and fuel. So the governments are forced to use their foreign money and credits to procure these necessities abroad. This process exhausts funds which are urgently needed for reconstruction. Thus a very serious situation is rapidly developing which bodes no good for the world. The modern system of the division of labor upon which the exchange of products is based is in danger of breaking down.

The truth of the matter is that Europe's requirements for the next 3 or 4 years of foreign food and other essential products—principally from America—are so much greater than her present ability to pay that she must have substantial additional help, or face economic, social, and political deterioration of a very grave character.

The remedy lies in breaking the vicious circle and restoring the confidence of the European people in the economic future of their own countries and of Europe as a whole. The manufacturer and the farmer throughout wide areas must be able and willing to exchange their products for currencies the continuing value of which is not open to question.

Aside from the demoralizing effect on the world at large and the possibilities of disturbances arising as a result of the desperation of the people concerned, the consequences to the economy of the United States should be apparent to all. It is logical that the United States should do whatever it is able to do to assist in the return of normal economic health in the world, without which there can be no political stability and no assured peace. Our policy is directed not against any country or doctrine but against hunger, poverty, desperation, and chaos. Its purpose should be the revival of a working economy in the world so as to permit the emergence of political and social conditions in which free institutions can exist. Such assistance, I am convinced, must not be on a piecemeal basis as various crises develop. Any assistance that this Government may render in the future should provide a cure rather than a mere palliative. Any government that is willing to assist in the task of recovery will find full cooperation, I am sure, on the part of the United States Government. Any government which maneuvers to block the recovery of other countries cannot expect help from us. Furthermore, governments, political parties, or groups which seek to perpetuate human misery in order to profit therefrom politically or otherwise will encounter the opposition of the United States.

It is already evident that, before the United States Government can proceed much further in its efforts to alleviate the situation and help start the European world on its way to recovery, there must be some agreement among the countries of Europe as to the requirements of the situation and the part those countries themselves will take in order to give proper effect to whatever action might be undertaken by this Government. It would be neither fitting nor efficacious for this Government to undertake to draw up unilaterally a program designed to place Europe on its feet economically. This is the business of the Europeans. The initiative, I think, must come from Europe. The role of this country should consist of friendly aid in the drafting of a European program and of later support of such a program so far as it may be practical for us to do so. The program should be a joint one, agreed to by a number, if not all European nations.

An essential part of any successsful action on the part of the United States is an understanding on the part of the people of America of the character of the problem and the remedies to be applied. Political passion and prejudice should have no part. With foresight, and a willingness on the part of our people to face up to the vast responsibility which history has clearly placed upon our country, the difficulties I have outlined can and will be overcome.

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address made by me over Station WNBF on June 21, 1947:

Dear friends of the Triple Cities and my congressional district, just as soon as Congress recesses for the summer my plans call for an extended speaking tour everywhere in our patriotic district. It will, therefore, be a most intriguing summer for me, because the pleasantest part of this job is getting home to meet with you folks personally.

Invitations already tendered me to speak this summer in the counties of Broome, Chenango, and Madison number over 50, with many more to come. I want to visit as many Legion, VFW, and DAV posts as I can, because to talk with you veterans is to gain much.

The granges of our section are as well organized as anywhere in the country. They speak for our farmers and dairymen. While time precludes my joining any other club or group, I have always been an enthusiastic member of Preston Grange in Chenango County. I will appear before nearly all of the 43 granges in my district before the summer is out.

It goes without saying that I welcome requests to speak before veterans' organizations. Several years ago, an undercover attempt was made to pour cold water on my appearances before these veterans' groups.

"Hall is playing politics," they shouted, "and trying to grab the veterans' vote!" That was a silly statement and it is sillier now because I am not a candidate for re-election this year.

As a matter of fact, you vets know it is of advantage to both you and me to have a meeting with your Congressman. It is to your advantage because you can tell me what you want Congress to do for you. However, it is to my advantage because knowing what you veterans want, I can try to get you what you want.

Therefore, I urge you to ask your Commander or his program committee to afford me the opportunity sometime this summer to speak to your post. It is of vital importance to me as well as to you that I be granted this courtesy. Since I visited your post before, a lot of water has gone over the dam, many new veterans have joined your patriotic body, and countless new problems have presented themselves to you. Further, you may have changed your opinions about certain things and will want to acquaint me with them.

So, remember, I look forward to meeting with you veterans, not only with posts that have already kindly invited me, but also with those from whom I have not yet heard.

A few days ago, our locality was distressed no end with the news of the sudden death of Mr. Charles Kirk, vice president of International Business Machines Corp. I believe a tribute to this gentleman's memory is timely on this program.

Much has been said in praise of Charlie Kirk by leaders here in the Triple Cities. What I would like to add is that on many occasions during my several years' knowing him, this gentleman was always cooperative with me for the good of our area in general.

Unlike a few executives I have met, Charlie Kirk was not arbitrary or pompous. I found him always to be friendly and democratic.

He was not afraid, like some I could mention, to be seen talking with his Congressman. In fact, he apparently believed that being friendly with me was not a sacrilege, but went for making a better Government.

I have been honored on at least two occasions in the past by being included as a speaker during ceremonies conducted by IBM at which thousands of people from Binghamton, Johnson City, and Endicott attended. Mr. Kirk, I am sure, heartily endorsed the idea of my being there as a speaker, because his respect for the will of the voters of our congressional district was sufficient to laud my appearance at these great mass meetings. I would be ungrateful if I did not point out this evidence of his defense and tolerance of our American form of Government.

One day several years ago, when I visited IBM, Mr. Kirk told me he wanted me to meet the workers. Refusing to delegate to one of his assistants the job of introducing me, he took me personally to the main entrance to the IBM plants on North Street in Endicott. Here we stood late that afternoon while thousands and thousands of IBM employees poured out of the plants. He didn't introduce me to all of them, but he certainly covered a lot of ground and we shook hands with a great many until my hand swelled.

Our valley of opportunity has lost a truly American leader with the passing of Mr. Kirk, a fine example of the free enterprise system if there ever was one. His active life was a factor in building the successful operations of a great company and he will be sorely missed.

Among the most important of my speaking engagements at home this summer are several before our Women's Republican Clubs.

This evening I am due in Endicott to meet with my loyal friends, the Women's Republican Club of Greater Endicott. I don't know of a finer, more public-spirited group than this one and I anticipate their picnic at the En-Joie Boathouse as I have many times in the past.

Next Wednesday evening, June 25, I will speak to the Broome County Women's Republican Club at Ross Park, Binghamton, and will certainly derive real pleasure seeing those dear friends once again. The same evening, I will address a large dance sponsored by the Kirkwood Republican Club at Benjamin's Pavillion in Kirkwood.

I certainly welcome the chance to be with you, dear friends, and will have messages of interest for you on all occasions.

Shades of Quisling

EXTENSION OF REMARKS

OF

HON. HERBERT A. MEYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 30, 1947

Mr. MEYER. Mr. Speaker, on June 11, 1947, I addressed the House in condemnation of the un-American activities of Henry Wallace and asked how much longer the American people had to tolerate his false preachments which incite human emotions toward riot and insurrection in violation of the spirit and intent of the laws of the United States. Since then I have been deluged with telegrams and letters from border to border and coast to coast, some in approval and others in denunciation of what I had to say about this evil tool of those who would destroy America.

The messages in approval have been heartening; those in criticism have been most revealing and some have served to acquaint me with many torrid and bitter invectives hitherto foreign to my vocabulary.

Once honored with the high office of Vice President of the United States and only a heartbeat removed from the Presidency; twice a member of Roosevelt's Cabinet and now the red stooge of Joe Stalin. Shades of Quisling, what a transition.

Mr. Speaker, what I have had to say about this menace to our American way of life has also been the subject of editorial comment and because of the fair spirit in which it is written I insert at this point, under leave granted me to extend my remarks in the RECORD, an editorial from the Arizcna Daily Star and letter in reply thereto, equally fair in spirit, from Paul R. Yewell, of Tucson, so that all members may have an opportunity to read and weigh them. The editorial and the letter follows:

[From the Arizona Daily Star]

ANGER SPEAKING, NOT REASON

Representative HERBERT A. MEYER, Republican, Kansas, speaking on the floor of the House of Representatives, demands that Henry Wallace be tried for treason.

The Congressman speaks in anger and, as is frequently the case in such instances, without reasoning well the full meaning of that which he recommends.

Henry Wallace is guilty of a number of things. In that we will concur. But treason is not one of them. Wallace has displayed an amazing lack of good taste in going abroad to criticize his own country and its Government, a Government of which he was recently a part. He has shown almost adolescent ineptitude in his inability to document with proof the many shortcomings he charges to the United States or the multitude of advantages he would have his listeners believe are available to his oft-mentioned "common man" under the benevolent regime of the Communist Party in the Soviet Republic.

He has been guilty of careless errors in fact in his attacks on the Truman doctrine, and has quoted baseless propaganda statements without checking their accuracy. He has been and still is guilty of preaching a fraudulent political doctrine which if it were to be saddled upon the Nation would lead to poverty and chaos.

All these things Wallace has done and more. He has been and still is guilty of these and other political sins of omission and commission. But he is not, even by Representative MEYER's own definition, guilty of treason.

Treason, according to the Constitution, which protects Henry Wallace in his folly the same as it protects any other American in his wisdom, presupposes giving peace and comfort to our enemies, adhering to them or making war against our own people. In his political attacks upon our Government, Wallace is merely enjoying that constitutional right of all Americans—the right to make a fool of himself in his own fashion. In his exaltation of things Russian he is not giving aid and comfort to an enemy as the term would be defined in court. Perhaps Congressman MEYER has forgotten, or would like to, but Russia at this time is still "our fighting Ally."

We bow to no one in our disgust with Wallace's campaign and the gospel which he is spreading. At a time when our Nation is striving to hold back the aggressive, acquisitive policies of Russia, it is shameful to see a man who has been more than once honored by the Nation permit himself to become a stalking horse for those same policies here at home.

But nothing Wallace has done could be termed treason. To accuse him of that is to clothe him in a martyr's cloak which he does not deserve, since the charge could not be substantiated.

YEWELL RESEARCH LABORATORY,
Tucson, Ariz., June 21, 1947.

EDITOR ARIZONA DAILY STAR,
Tucson, Ariz.

DEAR MR. EDITOR: This letter refers to your editorial of Friday, June 13, 1947, entitled "Anger Speaking, Not Reason," in which you accuse Representative HERBERT A. MEYER of speaking in anger and of not reasoning well when he recommends that Henry A. Wallace be tried for treason.

Just because the Representative spoke in anger is no proof whatsoever that he did not reason well on the subject of his anger. History and experience abound with cases where men have reasoned well, which reasoning produced not only anger but war.

To justify Representative MEYER's position, two things have to be proven: First, that Russia is our enemy; second, that Henry A. Wallace has given aid and comfort to that enemy. There is but one definition of treason which will apply in this case and that is the one set forth in the Constitution of the United States, which says that treason against the United States consists "only in levying war against them, or in adhering to their enemies, giving aid and comfort to them" (Constitution, art. 3, sec. 3). Please, Mr. Editor, note the grammatical conjunction "or" in this definition.

For a definition of enemy, let us go to Webster's Dictionary, which defines enemy as: "1—One hostile to another; one who seeks the overthrow or failure of that to which he is opposed; 2—A military foe." It has been a common error of most of our people to think of an enemy only as a "military foe." People are prone to think that, as a nation, we have no enemy unless we have a military foe. This is loose thinking and poor reasoning, for we have many people in the United States who are seeking the overthrow of our Government. Some of them are citizens.

You will note that our Constitution gives two definitions for treason against the United States and that our best authority gives two definitions of enemy. If we use these two definitions of treason and the two definitions of enemy, it is quite evident that the framers of our Constitution had both definitions of enemy in mind when they defined treason.

These definitions match up as follows:

Treason against the United States defined as: (1) in levying war against them; (2) in adhering to their enemies, giving aid and comfort to them.

Enemy defined as: (1) a military foe; (2) one hostile to another; one who seeks the overthrow or failure of that to which he is opposed.

Now that the definitions are clear, let us apply reason, which you suggested Representative MEYER did not use. Reason cannot be developed without knowledge, and knowledge cannot be had without study. In order to gain the knowledge on which to base our reasoning, I suggest a study of the following:

1. The writings of Marx, Engels, Lenin, including the so-called Communist Manifesto.
2. The Little Lenin Library, by V. I. Lenin.
3. The Manifesto of the Third International.
4. The writings and speeches of the more recent Russians who have expressed themselves on government and economic philosophy.

So much for the words we should study. Let us now briefly study the actions of Russia. Russia is hostile to any type of representative democracy and has not permitted that form of government to exist in any

country over which she has military control. Being hostile to representative democracy, Russia is doing everything within her power to overthrow the Government of the United States. (Definition No. 2 of enemy.) In doing this, Russia is following implicitly the dictates of Lenin, who quoted the following from Engels: "The great classic on the nature of the state capitalist democracy and proletarian revolution. * * * The replacement of the bourgeois by the proletarian state is impossible without violent revolution." Lenin writes further: "Revolution is undoubtedly the most authoritative thing possible. It is the act in which one section of the population imposes on the other, by means of rifles, bayonets, cannon, i. e., by highly authoritative means, its will, and the victorious party is inevitably forced to maintain its supremacy by means of that fear which arms inspire in the reactionaries. * * * In depicting the general phases of the development of the proletariat, we traced the more or less veiled civil war, raging within existing society, up to a point where war breaks out into open revolution and where the violent overthrow of the bourgeoisie lays the foundation for the sway of the proletariat."

The Russians have not deviated one iota from the theories and practices of the founders of their communistic state. Witness the situation in middle Europe today and the purges now taking place in Hungary. To argue that Russia is not hostile to our political and economic way of life, which they call bourgeoisie, that she does not seek the overthrow of our Constitution and the failure of our form of government is silly. The record on this point is abundantly clear. (Please read Trained To Raise Hell in America, by Junius B. Wood; Nation's Business, April 1947.)

By both writings and actions Russia has proven that she is hostile to our state and seeks to overthrow all other forms of government, ours included. Therefore, Mr. Editor, Russia, by definition and action, is our enemy, and it is about time the American people woke up to the fact. If further proof is needed that Russia is our enemy, please study the writings, speeches, and actions of the Russian agents and the American Communists in this country. When reasoning on this subject, please remember all the while that we are in that phase of the revolution which, to quote Lenin again, is "the most general phase * * * the more or less veiled civil war, raging within existing society." Russia knows that her work in this country is not far enough along to bring the revolution to the point where war breaks out.

One question remains, namely, Is Mr. Henry A. Wallace "adhering to our enemies, giving aid and comfort to them"? To a true American, with an understanding of what is happening in this "veiled civil war" the answer is "Yes." You will want reasons for so saying. Here they are. If you are a Republican do you secure an internationally known Democrat to speak at your sponsored rally or on your lecture platform? Conversely, if you are a Democrat do you secure the services of a prominent Republican to give aid and comfort to your party? The answers to these questions are your own, Mr. Editor. Your reasoning will be simple and your conclusions correct.

Again, if you are a Republican you adhere to the fundamental principles of that party and follow the leaders of that party. You give aid and comfort to that party when you can. If you are a Democrat, you follow the fundamental principles of that party and give aid and comfort to its leaders and help in the election of its candidates. In either case, you back the party which has the political and economic philosophy in which you believe. The Republican and Democratic Parties are both American parties. Neither one of them is hostile to the American form of government. They may seek to overthrow one another, but not our Constitution nor our representative republican form of government.

Mr. Henry A. Wallace is accepting the sponsorship of known Communist organizations. On every occasion offered him he has been hostile to the American Government's efforts in its foreign and domestic policies. He is exciting in the minds of our people an animosity toward our Government. He is not known to be even mildly critical of Russia or the Russian agents of American or foreign birth. One does not have to be a card-carrying Communist to give aid and comfort to that philosophy. There are few Russian agents that have done more for our enemy Russia than Henry A. Wallace. Mr. Wallace recently remarked, "Maybe the Communists follow my line." This remark does not indicate any difference in the "line," merely a difference as to its origin.

Representative HERBERT A. MEYER may have spoken in anger, as any American would do who had a knowledge and understanding of what is happening to our country. He was correct. Henry A. Wallace is a traitor.

Yours very truly, PAUL R. YEWELL.

Capitalism Has Freed More Slaves Than Communism Has Enslaved

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 30, 1947

Mr. MUNDT. Mr. Speaker, one of the great human tragedies of our modern world is the tremendous number of human slaves now enduring the miseries of life in concentration camps as the political prisoners of Communists overlords. As a gruesome corollary to the use of political prisoners in slave-labor camps, the Communist regimes of the world today must also shoulder the indictment of providing for their laboring classes far fewer of the benefits derived from their production systems than is true of capitalistic countries.

In the following newspaper article by former Congressman Samuel B. Pettengill, of Indiana, the great contributions of our free-enterprise system to the cause of human dignity and human happiness are dramatically portrayed. Its careful study is recommended to any who may be misguided into some credulous belief that under the fictitious promises of communism there may be some alluring benefits to be derived by the laboring men and women of the world.

WHO DOES THE WORK?

(By Samuel B. Pettengill, the gentleman from Indiana)

We swallow costly political patent medicines because we are ignorant of one basic fact. That fact is that the advance of civilization comes chiefly from shifting the hard work of the world from human backs to slaves of iron and steel. This has done more to raise wages, shorten hours, lower costs, reduce drudgery, and eliminate poverty than all the social welfare workers, labor leaders, and politicians put together.

A rough yardstick of the scale of living is the amount of mechanical horsepower available. It builds churches, colleges, and hospitals, as well as factories and electric refrigerators.

Let us look at this basic fact. The work of the world is done by three kinds of energy: human labor, animal power—horses, mules, and oxen—and mineral energy—coal, oil, natural gas, and water power. Add a few Arctic dog teams, windmills, and sailing ships and you have it.

In 1850 the world was reading the Communist Manifesto of Marx and Engels in which they charged that the drudgery and poverty of that time were due to human greed, and they, therefore, preached the gospel of class hate and socialism.

Consider what happened in the 90 years from 1850 to 1940. In 1850 the work done by human backs was two and a half times that done by mechanical energy. The work done by animal power was three and a half times that of human labor and mechanical energy combined. Only 7 percent of American work was done by mechanical power in 1850; today, 90 percent. Animal power has dropped from 79 to 6 percent; and human labor from 14 to 4 percent of the total, despite the vast increase of population. That is how the load has been lifted from human backs.

Believe it or not, as late as 1900 animals and men did more work in America than coal, oil, and water power. The horsecar was still in use. The famous Boraxo 20-mule team was the largest aggregation of animal power under the control of a single driver. Today, the frailest woman in an automobile controls three times as much power and may go 50 miles an hour, or faster, in place of 8.

The Consolidated Edison Co. in New York produces in a single day power equal to 3,000,000 horses, or 30,000,000 hard-working men. Electrical energy costs 1 to 4 cents, animal energy 50 cents, and human labor $10 per horsepower hour. Not only was the load shifted from human backs, but costs came down from $10 to from 1 to 4 cents per horsepower hour. These reduced costs brought the luxuries of kings into millions of homes.

In 1850 America produced only 1,000,000,000 horsepower hours of energy from mechanical power. Today, 261,000,000,000 horsepower hours. To help him do the work, in 1850, each worker on the average had .50 horsepower from animals and minerals. Today, 2.7 horsepower. If productivity per worker had remained the same as in 1850, it would have taken 290,000,000 men to have produced the goods we did produce in 1944 with only 60,000,000 men working 47 hours a week as against 70 hours in 1850.

This amazing progress of more wealth produced per man-hour has been due to invention, science, competitive enterprise, plowing back profits, and better tools. Factory wages have advanced from $1 a day to $1 an hour and higher. The great humanitarian has been business despite its faults. The only reason American wages are the highest in the world is that we have the best tools in the world.

All this is set forth in America's Needs and Resources, just published by the Twentieth Century Fund. It is optimistic of our future if we do not wander from this basic fact into the swamp of political nostrums, confiscatory taxation, and class war.

Address of Hon. Dean Acheson

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 1, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the fol-

lowing text of the address of Hon. Dean Acheson at Wesleyan University as published in the Washington Post of June 16, 1947:

TEXT OF ACHESON'S ADDRESS AT WESLEYAN UNIVERSITY

One who is bringing to an end a considerable period of service in the field of foreign affairs is naturally in a mood of appraisal and review. Have we conducted ourselves in the great world in these past 6 or 7 years true to the traditions of our Republic and to the interests of the American people? I am, of course, prejudiced, but the answer seems to me not difficult, I think it is, yes, we have.

To judge this answer, we have to ask, What are these traditions and these interests? They seem to me simple, even platitudinous. The basic, underlying, never-varying tradition of this republic is insistence upon the liberty of the individual, the worth of the individual, the ultimate test of truth by reference to the individual.

This has been our political, social, and moral mainspring. It has also been the motive power of our vast development. By unleashing the enormous power of individual effort, imagination, energy, this country has attained its material position. It seems true in society, as in nature, that the greatest energy is created by releasing the power of the smallest unit. In one case, the individual; in the other case, the atom.

History and philosophy gave us this doctrine. Geography and experience have confirmed it. One of the great achievements of statesmanship in this country has been to adapt government to the furtherance of this release of the individual and not to its limitation and frustration. An outstanding illustration has been the way in which, under Mr. Lilienthal's guidance, a great governmental project, the TVA, has made power available over a vast area, not to be used by bureaucratic direction, but vastly to enlarge the individual productiveness of millions of Americans.

This belief in the individual is in our blood. It is our most fundamental characteristic. It gives a certain typical disorderliness to our behavior which baffles some foreign observers. But it can no more be separated from us than our idea of humor, our generosity toward anyone in trouble, and our mobility—we are forever going somewhere. Even though this is so, we have no desire to force our behavior and ideas on other people. If, for reasons incomprehensible to us, they want to act differently and—to us—quite misguidedly, that is their affair. But we don't like them to push other peoples around—particularly when those other peoples are trying to live as we think all decent people should live.

With these traditions and interests the American people approach their relations with other countries. They have a sound and unshakable belief that liberty cannot exist here or anywhere, unless there is peace founded on freedom from aggression and unless there is ever-increasing productivity throughout the world. They know that while every people must attain and preserve their own liberty and free government, they can lose them from forces beyond their control when faced with fear of the attack of a foreign enemy, or with the loss of their means of livelihood.

This presents problems for those who work in our State Department. Americans want to be free and prosperous themselves. They want other people who wish to be free and prosperous to achieve those goals. But they sometimes believe that these ends can be reached by machinery or gadgets or through merely moral fervor, and without the pain of hard thinking, hard work, and some real risk and sacrifice.

Some, encouraged by eminent philosophers, have thought that liberty was the natural state of man and that its universal growth and acceptance was inevitable. I do not believe that for a minute. It seems to me that liberty has come to those whose stout hearts and hard heads have won it. Here, again, we must conclude with Justice Holmes that the mode by which the inevitable comes to pass is effort.

Certainly during the decade of the 1940's this country has devoted its supreme efforts toward the preservation of the liberty of nations and individuals. In the opening years of the decade we bent our efforts toward assisting those whom the Axis was attempting to subjugate, and toward impeding its bid to dominate the two most populous continents on the globe. This may have accelerated the attack upon us. But I think that few now doubt the necessity and rightness of our course, or the extreme danger in which any other course would have placed us. The war has now been won and the threats which caused it have been eliminated. But serious threats to the continued existence of liberty have not been eliminated. These come not only from the inevitable consequences of the war itself but also from the course pursued by certain governments.

During the war constructive foreign policy was not in abeyance. It followed two objectives closely related and mutually dependent—established the unity, mutual confidence, and cooperation of the great powers; and to create international organizations, necessarily based on the assumption of this unity and cooperation, in which all nations could together guarantee both freedom from aggression and the opportunity for both the devastated and the undeveloped countries of their own free choice. These, as you have seen, were historic American objectives. They were also the stated purposes of the Allies throughout the war beginning with the Atlantic Charter.

We did not pursue these objectives merely by exhortation or joint declaration and agreement. No people has ever given more tangible or extensive evidence of its good will and intention. Particularly is this true in our attitude toward the Soviet Union. One need mention only the most outstanding examples.

During the war we contributed to the Soviet Union $11,500,000,000 of the most vitally needed supplies. After the war, through UNRRA and governmental credits, we made available another half billion dollars worth of goods for relief and reconstruction.

In our military operations we pursued purely military objectives. The cross-channel invasion of Europe was directed solely toward the destruction of the German armies, not the occupation of territory. And when we overran our estimated and agreed objectives we withdrew to previously agreed zonal boundaries. These were acts, not words, based upon the premise of adherence to an agreement and of mutual confidence and loyalty.

Nor were these acts all. The whole series of arrangements for settlement in eastern Europe, Germany and the Far East recognized to the full Soviet fears and interests, and were based upon confidence in their intention to carry out the pledged purposes of cooperation in Germany, respect for the right of other nations to determine freely their own course of recovery and government, and the creation of a vigorous European and world recovery.

At the same time that these steps were being taken we pushed forward the establishment of international organization. This consisted not only of the United Nations Charter designed upon the foundation of Allied unity to guarantee international security, national liberty, and individual freedom, but of a whole series of special agencies which were to make sure that a favorable environment was created and maintained in which the broader purposes could be accomplished.

These were designed to provide relief in the early postwar period, to assure funds for reconstruction and development, and to stabilize currencies over the longer run, to raise the level of agriculture both as the source of food and as the activity of most of the world's population, to promote and safeguard trade between nations, to protect the health of nations against epidemics, to facilitate the exchange of ideas, knowledge and skills, to aid in the development of international transportation by air and sea—practically every activity which could encourage and make more safe, simple, and beneficial relations between nations.

Unhappily the whole course of recovery and the international pursuit of happiness has suffered deeply by the failure to attain or maintain great power unity. This has come about by the Soviet Union's pursuit of policies diametrically opposed to the very premises of international accord and recovery. In eastern Europe the Soviet Union, over American and British protests, has used its dominant military position, to carry on a unilateral policy, contrary to the Yalta agreements, by which free choice of their destiny has been denied those peoples. Even more important, the minority Communist regimes fastened upon those peoples have acted to cut them off economically from the community of Europe, curtail their productivity, and to bind them to exclusive economic relations with the Soviet Union.

In the Far East, the Soviet Union has dismantled the industries in Manchuria, has obstructed economic and political unification of Korea, and has not carried out its commitments for the return of Dairen to Chinese administration as a free port. These actions have seriously retarded economic recovery and political stability and have contributed vastly to a continuation of poverty and demoralizing uncertainty throughout the Far East.

In the Middle East, Persia has been for some years in turmoil, first through Soviet occupation of its northern territories and then through Soviet-sponsored local attempts to separate those areas from Persia.

In Greece, torn and destroyed by the war beyond any other area, the incalculably difficult task of rebuilding its plant, its production, its people's health and morale, and its governmental services, has been threatened with total defeat by Greece's northern, Communist-controlled neighbors.

Similar disappointment has followed attempts to establish a just and sound peace. It is unnecessary to recount the weary course of the Italian and Balkan peace treaties from London to Moscow to Paris to New York, or to describe the substance of those negotiations. We can note without surprise the cynical and barefaced coup d'etat in Hungary on the very eve of the Hungarian treaty's coming into effect. We note also, 2 years after Potsdam, that by reason of Soviet unwillingness we have not achieved German economic unification or written an Austrian treaty. As a result the recovery of Europe has been long delayed—tragically long.

This by no means exhausts the catalog but it is enough to outline the difficulty and to indicate why it is that the United Nations, founded as I have said on the premise of great power unity, has so often been unable to apply the principles set forth in its Charter and has instead had to furnish the forum for bitter, unprofitable, and inconclusive dialectics.

It would be quite wrong to leave the impression that the factors I have mentioned have been the sole cause of our present problems. It would have been serious enough that the great area east of the Stettin-Trieste line, which contributed so much to Hitler's European economy, has been exploited, disorganized and cut off from western Europe. Nature and man have added other problems. Disasters do not come singly.

Two years of crop failures in Europe and one in the Far East, the most severe winter in half a century which drained the meager coal supplies of England and Europe, and the inefficiency of the industrial plant, due to depreciation, failure of fuel and raw materials, lack of labor, and many other causes—all these have upset all calculations of recovery. Europe has had to use its resources of foreign money and credits, carefully husbanded to restore and improve equipment, merely to keep alive.

Billions of precious dollars saved for machinery, rails, locomotives, harbor equipment, etc., have been spent for wheat and coal, and the heavy shipping charges to carry them. Financially, Europe is bleeding to death, and the period of shock and crisis will come next year. Nor will the crisis be purely European. We are today selling twice the value of goods which our customers can pay for with their sales to us. This is not merely true of stricken Europe, but of our nearest neighbors, Mexico and Canada. The loss of these sales will have—as it has had in the past—a profound repercussion throughout this land.

This is a depressing but not overdrawn report. The outlook, as Secretary Marshall has recently said, is serious. But it has been blacker within the past few years. The winter of 1941–42 was such a period. The dangers of those years were overcome by determination, by courage, and by endless effort. Today's problems can also be surmounted. Tragic as it is that we cannot achieve the whole promise which once seemed almost within our grasp, that is no excuse for not doing what we can. If our power to help is limited, so is the power of others to impede. And upon our side are the great urges of individual spirits throughout the world to rebuild in some way and to push on to a better day.

We can do—and are doing—many things. We can expose for all to see the shams and frauds behind which peoples are deprived of their liberty by little groups supported by foreign power. The methods have not changed basically since the days of Maximilian in Mexico, merely improved in organization, and brutality and propaganda techniques. But they dislike exposure, and it remains to be seen whether they can survive much longer than Maximilian did the withdrawal of the foreign bayonets.

We also can, and should, help within the limits of our capacity those who wish to help themselves. It was such an action that President Truman proposed to the Congress on March 12 in connection with Greece and Turkey and to which the Congress so overwhelmingly responded. This was not a novel proposal or an invitation to a crusade. It was typically and traditionally American.

This country always has responded to people struggling to attain or maintain their freedom. We have done so because it is important to us that they shall succeed. Sometimes we can do much, sometimes little, but the response is always there. It was there in the case of Greece over a century ago, and in the case of Hungary and Poland and Italy. It was there throughout the nineteenth century in the struggle of the Latin-American states to obtain and keep their freedom from the encroachments of European powers. It underlay our efforts for decades to help China in her struggle against foreign subjugation.

So President Truman was acting and the Congress was acting in the truest and soundest American tradition. The case was an extreme one because Greece was near the abyss. But the principle was as old as our country. It is a sensible and hard-headed principle that where our help can be effective to enable people who are sincerely striving to remain free and to solve their own problems, that help will be given.

We should, and I hope will, continue to act in this way—not waiting for extreme crises to develop, not attempting to carry all the burdens of the world or to solve all its problems, but responding in a thoroughly realistic way to the proposals of those who are exhausting every possibility of their own efforts and powers of cooperation with others to maintain places where free men may remain free.

This, as I see it, has been the course of our foreign policy over these last few years. And it is our present course. It has not created the world of our dreams. But that is not our fault. It is the best course I know of, in the world as we find it, to preserve the possibility that a better world may some day eventuate. It is the best course to preserve all that we hold most valuable in life. It is a course that requires determination, intelligence, courage, and effort. It requires that Americans be made of good stuff.

"Citizens," said Milton, "it is of no small concern what manner of men ye be whether to acquire or to keep possession of your liberty."

Unification of the Armed Forces

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter which I have received from Claude J. Krieger, adjutant of the Mon Valley Detachment of the Marine Corps League of McKeesport, Pa., and copy of resolution adopted at their regular meeting on June 17, 1947, with reference to the proposed Armed Forces unification bill:

MARINE CORPS LEAGUE,
MON VALLEY DETACHMENT,
McKeesport, Pa., June 27, 1947.

HON. FRANK BUCHANAN,
House of Representatives,
House Office Building,
Washington, D. C.

DEAR SIR: Naturally a marine or a former marine is always interested in the United States Marine Corps. From information available to us and we believe our source of information to be reliable, it appears that there is a definite possibility of the sabotage of the Marine Corps in the proposed armed-forces unification.

As you know from your knowledge of the history of our country, the Marine Corps has always held up their end and in many instances have gone far beyond the ordinary call of duty to maintain the interests and the integrity of the United States whenever and wherever they are called upon.

The Mon Valley Detachment of the Marine Corps League and the individual members have no objection to a unified military service as the history of World War II has shown time and time again the importance and wisdom of unity, but we are, one and all, definitely opposed to the apparent present plan to practically deactivate the Marine Corps.

We would therefore request that you work to the end that when the armed forces unification bill comes before your Chamber of the Congress, the United States Marine Corps be given such a place in the unification as their past history in the service of this country justifies.

I therefore enclose herewith a copy of a resolution passed by the Mon Valley Detachment at their regular meeting held June 17, 1947 and would ask that this resolution and this letter be very seriously considered by you as representing the wishes, desires, and direction of more people than you know, when you vote on the proposed armed forces unification bill.

Very truly yours,

CLAUDE J. KRIEGER,
Adjutant.

Whereas there is now pending in the Congress of the United States a certain bill generally and commonly known as the Armed Services unification bill; and

Whereas under the terms of that bill, the United States Marine Corps is relegated to a very minor role in the defense of our country and there is a grave and definite possibility of the United States Marine Corps being totally deactivated and to exist in name only; and

Whereas the United States Marine Corps is the oldest fighting and military unit in the Armed Forces of the United States and during the more than 170 years of its proud history it has nobly defended this country and upheld the integrity of this Nation on many foreign soils, and it is the only armed force of this great Nation whose landing on foreign soil in pursuit of its normal duties does not constitute an act of war; and

Whereas it is not the will of the people of the United States that such a proud unit of their Armed Forces be divested of their outstanding position in the defense of this country to satisfy the whims and pleasures of any bloc or clique which places their own individual ambitions far above the welfare of this Nation; and

Whereas the valor of the individual marine and the outstanding exploits of the United States Marine Corps as recorded on the pages of history are too great to pass unnoticed and unrecognized when planning for the defense of our great Nation and the proper defense and welfare of this Nation requires and demands that such a military unit be granted a position of proper responsibility in keeping with their proven ability to properly defend the honor and integrity of the United States of America: Now, therefore, be it

Resolved, That the Mon Valley Detchment of the Marine Corps League, in regular meeting assembled at McKeesport, Pa., do hereby and herewith petition the Congress of the United States to amend the so-called Armed Forces unification bill to the extent that the identity of the United States Marine Corps be not lost in the unification of the Armed Forces and that the United States Marine Corps be given a place in the unification of the Armed Forces in keeping with their past achievements and record in the defense of the United States; and be it further

Resolved, That this resolution be spread upon the minutes of the Mon Valley Detachment, a copy of this resolution be forwarded to Hon. FRANCIS J. MYERS and Hon. EDWARD C. MARTIN, of the United States Senate, and Hon. FRANK BUCHANAN, of the House of Representatives, the Congress of the United States, now in session in Washington, D. C.; and be it further

Resolved, That their active interest in the Armed Forces unification bill be petitioned and prayed for to the end that the purpose of this resolution be achieved.

Witness the hands of the commandant and adjutant of Mon Valley Detachment of the Marine Corps League, at McKeesport, Pa., this 17th day of June, 1947.

MON VALLEY DETACHMENT,
MARINE CORPS LEAGUE, INC.
By JAY KACSAN, *Commandant.*

Attest:

CLAUDE J. KRIEGER,
Adjutant.

A Salute to the Solid South

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. BRYSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Mr. David Lawrence in this week's edition of the United States News:

A SALUTE TO THE SOLID SOUTH

(By David Lawrence)

The solid South holds the balance of power today in America.

Without the support of 20 Democrats in the Senate and 106 Democrats in the House—virtually all of them from the Southern States—the labor bill could not have been enacted last week over the Presidential veto.

Without the support of the southern delegation in Congress, there can be no tax reduction while Mr. Truman is President.

Without the preventive power of the southern Democrats, America today would be in the throes of industrial disintegration.

The solid South has kept the balance in America. It has saved America from radicalism of either the communistic or the fascistic sort.

"Left wingers" may ridicule the South on the radio and attack its Senators and Representatives in the public prints as "reactionary," but the true "reactionaries" are those who want special privileges for themselves and expenditures of public funds for their special projects.

The "liberals" are those who stand up for the traditional American principle of initiative and free enterprise and against State socialism.

To say that the southern Democrats fight "liberal" legislation is to overlook the fact that the Wagner labor-relations law was enacted in 1935 predominantly with the aid of the southern Democrats. These Democrats likewise supported nearly every New Deal measure in the prewar years from 1933 to 1941.

The truth is the southern Democrats are ready to accept "liberal" legislation in the economic field and give it a chance when it appears to be for the public good, but they are just as ready to vote for amendment or repeal when they see mistakes or abuses in the operation of any law.

AVERTING RADICALISM

The Democratic Party cannot be a radical party for any prolonged period as long as a substantial Republican minority and a substantial Democratic minority form a majority coalition in Congress, placing principle above petty political advantage or partisanship. Defeat in the congressional elections in 1946 was a blow only at the radical leadership of the Democratic Party in the North. It would be a mistake, therefore, to assume that the Democrats in the South see eye to eye with northern republicanism on everything.

The Democrats of the South, for instance, divided on the matter of tax reduction. They did not follow their Republican brethren who voted solidly for it. This did not mean, however, that the southern Democrats were opposed to all tax reduction. When they saw, after the veto, the true implications of the Truman message and began to weigh the consequences of such a radical program, there developed a desire to review the whole matter.

A TAX BILL FOR 1948

Last week House Republican leaders agreed that a tax bill effective January 1, 1948, would get a two-thirds vote. Southern Democrats indicated they would support a new measure. Senator BYRD, of Virginia, who had voted against the tax bill because he thought passage should wait till the Budget figures for appropriations were available, stated that he would support the same tax-reduction bill that was vetoed by the President, provided the Republicans agreed to a clause making it effective January 1, 1948, instead of July 1, 1947. Senator GEORGE, of Georgia, another able leader, concurred in that plan.

Inasmuch as the choice apparently is between some tax reduction now and no tax reduction for a long while, the Republicans should welcome the opportunity to clear up the situation and give the taxpayers of America notification of what their own budgets will be for the calendar year 1948.

When the pay-as-you go plan of tax collection was enacted, Congress changed a basic piece of timing in the finances of the individual. Previously, when a tax bill was passed, the taxpayer did not pay at the new rates on his current year's income until March 15 of the following year. He had some time to adjust himself to high rates, or, in the case of tax reduction, he knew several months in advance and could make plans for expenditures.

With the present pay-as-you-go plan, on the other hand, a damaging uncertainty can arise. Persons who do not know what the amounts available for disbursement will be next year hesitate to buy needed articles out of this year's income when they might have to set aside certain sums for other items next year. To promise that a tax-reduction bill will be passed next April or May and that it will be made retroactive effective January 1, 1948, is confusing and injurious to the planning of an individual's budget.

If there is to be a tax reduction for 1948 and every taxpayer can be told this summer what his tax rate will be for the coming year, there can be advance planning and even the disbursement of some sums now on articles that might require installment buying, such as automobiles or housing.

To know now that taxes will be reduced is to stabilize the flow of goods in America and to underpin the whole American economy—its wage levels and its capital uses—against the uncertainties that face us both in world trade and in a fluctuating domestic demand.

To divert three or four billions of dollars from Government spending to private spending is a healthy step, especially when the expenditures are for goods needed to maintain our normal standard of living.

COUPLING DEBT AND TAX REDUCTION

Senator BYRD, of Virgina, has wisely coupled his suggestion for a new bill on tax reduction to take effect next January with the requirement that a definite sum be set aside by Congress for debt reduction out of the surplus expected for the fiscal year beginning July 1, 1947, and ending June 30, 1948. Incidentally, the reduction in revenues affected by changes in tax rates would be related only to the second half of the coming fiscal year, in which a substantial surplus is expected.

There is no evidence, moreover, that a reduction in tax rates will cause as big a drop in revenues as the Treasury estimates indicate. Experience after World War I revealed that as the tax rates went down the total volume of receipts increased. This is because when business is brisk and profits are rising, the tax collector gets a higher return. While the percentage rate in a tax schedule may be lower, the same percentage applied to a larger and larger total volume of business and to a larger and larger individual income brings in larger gross receipts to the Government.

A SOUND FISCAL POLICY

Senator BYRD's proposals are the essence of economic statesmanship. The Southern Democrats have it in their power to stabilize the American economy by insistence that debt reduction and tax reduction go hand in hand in an orderly plan that will exhibit to all the world the soundest kind of fiscal policy.

The Southern Democrats did not uniformly support the tax reduction bill when it was last voted on because all the figures were not yet available on Government appropriations for the coming fiscal year. Before Congress adjourns this summer such figures will be available. Mr. BYRD hopes that the President would then sign a tax reduction bill but, in any event, the Virginia Senator says a two-thirds vote can be mobilized to override a veto.

The move made by Senator BYRD affords the President a way out of his dilemma. It enables the Republicans to make good on their promises, too. It helps the American taxpayer to plan his own 1948 budget and enables American business to be sure of a steady demand for goods which, in turn, will help toward a reduction in the price level.

It is the uncertainty of demand that has to a large extent kept prices from being reduced. If business men knew now that a larger and larger volume of goods could be bought by the public, they would be justified in taking a chance on a gradual reduction in prices.

A new tax reduction bill can underwrite American prosperity and overcome a business recession.

The solid South has been standing solidly for constructive legislation and can now save America from economic and political stagnation by using its influence to adjust our system of inequitable wartime tax rates.

The Nation owes a debt of gratitude to the innate statesmanship of the Southern leaders in Congress who place the public interest above special interest and principle above party. This is genuine Americanism.

Don't Fire the Cop

EXTENSION OF REMARKS
OF
HON. JOHN E. LYLE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. LYLE. Mr. Speaker, under leave to extend my remarks, I wish to include a very thought-provoking editorial written by one of the editors in my congressional district, Mr. Hugh V. Haddock, and published in the Rockport Pilot of Rockport, Tex.:

DON'T FIRE THE COP

President Truman's concern over the country's armed forces and the urgent recommendations of his advisory commission for universal military service have a sinisterly familiar sound.

For those who read their newspapers closely and with any degree of thoughtfulness, the significance is almost frightening. The President and his commission leave the distinct impression that they are pleading with the country to read between the lines of their messages. If that is so, then we should be thoroughly frightened, frightened badly enough that we will come to life and do something.

Twice before, within the memory of this writer, have Presidents of the United States sounded similar warnings. Twice before has the country ignored the warnings. Twice before have we been caught pitifully unprepared by savage wars and ruthless warmakers.

We are an optimistic people. We like to believe that everything will turn out for the best. Let some optimist with a peanut brain

and a silly smirk on his face come along and tell us everything is fine and dandy, and we'll believe him. We are more than optimistic. We are decidedly on the gullible side. We laugh at the yokels who buy Brooklyn Bridge from the city slicker, then turn around and do the same thing on an international scale.

Just now, the international Brooklyn Bridge which we are buying is Russian good will. For those who believe in its reality the editor recommends reading Patrick Henry's speech in the Virginia House of Burgesses. Substitute "Soviet Russia" for the name, "George III," especially in the passage which begins, if our memory serves after 35 years: "We have no light for our feet save the lamp of experience."

Henry Wallace, chief salesman of Russian good will in this country, admitted to this writer in press conference at Austin a few weeks ago that Russia is playing for a depression in the United States to gain its desires. Meantime, the steady Soviet push to grab off helpless small countries in Europe goes on relentlessly. Russia has already wrecked the effectiveness of the United Nations since Stalin has found that it cannot be made a tool. Every day's demand for the atom bomb and the accompanying refusal to permit international inspection add to the grim warning of the news.

Nevertheless, on the radio, from the platform and through print, propagandists scream almost daily that we have tried preparedness for war, tried being strong, then ended up in war.

They urge that we try brotherly love for a change.

These gentlemen either are woefully ignorant of the facts of current and recent history, or they willfully twist the truth.

We have not tried being strong. We have been temptingly weak, a Pollyanna nation, sprawling over a large and rich section of the globe and refusing to believe that the big bully across the way really means what he says when he tells us that he is going to beat the tar out of us when he gets around to it. We know that the big bully covets our marbles and yet we are naive enough to doubt that he intends to take them, even when he says so.

As for brotherly love, we know all about it. It's fine business. Just why else have we been playing Santa Claus to the rest of the world for a quarter of a century and more? It doesn't seem to have gotten us too far.

By all means lop off silly, boondoggling Government expenditures. Quit paying people to create shortages in commodities so that prices will stay up, so that strikes for higher wages will result, thus creating more shortages. Quit paying Government bureau chiefs according to the number of employees instead of by the importance of the work done.

But let's not cut the expenditures of our national insurance policy, the armed forces. Let's not fire the cop on the corner simply because the house was not burglarized last night.

Let's remember one thing, too. War certainly is destructive, but the maintenance of a strong peacetime force is a good thing for the Nation's employment and business situation. For every man in service, a half dozen others will have civilian jobs concerned with supplying that man.

Money which business pays out in taxes will return in profits. Two million men in service making jobs for themselves and 10,000,000 more is better depression insurance than 12,000,000 on WPA. And they're a lot better jobs for both workman and the country.

The Federal Government has made Army and Navy service at least equal to civilian employment in pay and opportunity. In many cases a young man can earn more money in service than out. Educational programs have been set up to supply college training that some young fellows couldn't possibly get outside the service. Add to that the beneficial effect of discipline and it is hard to conceive of a better break for a young man than universal military service can give.

By all means, Congress should work out such a program.

State Convention of Italian-American World War Veterans of the United States, Inc., Lynn, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the proposed platform for the 1947 State convention of the Italian-American World War Veterans of the United States, Inc., Hotel Edison, Lynn, Mass., June 27, 28, and 29, 1947:

PROPOSED PLATFORM FOR 1947 STATE CONVENTION OF THE ITALIAN-AMERICAN WORLD WAR VETERANS OF THE UNITED STATES, INC., HOTEL EDISON, LYNN, MASS., JUNE 27, 28, AND 29, 1947

In the year that has intervened since the last assembled convention of the Italian-American World War Veterans of the United States, Inc., the economic and social progress of this Nation has not been compatible with our democratic ideals, our unparalleled productive resources, and our wartime victory. We have not moved ahead on the domestic front toward the effective implementation of the ideals for which the war was fought and won. Today, an impoverished world looks to America as its sole source of economic assistance. The success or failure of our domestic economy is the difference between starvation and survival for the people of the world. We must fight the forces which are inconsistent with our fundamental freedoms whenever and wherever they arise.

There has been presented to your committee a great number of resolutions, and we therefore report for your approval as the consensus of those gathered at the State convention of the Italian-American World War Veterans of the United States, Inc., assembled on the 28th day of June 1947, the following measures stated below:

HOUSING PLATFORM

The No. 1 domestic issue in the United States today, as it was a year ago, is housing. We believe the country has failed in its obligation to house the veterans of World War II.

We urge that rent control be continued until the housing shortage is largely eliminated; we ask for the immediate passage of the Wagner-Ellender-Taft and Douglas bills; we ask for the continuation of a vigorous program to assist producers of new building materials and industrialized housing; and, finally, we ask for the development of a comprehensive financing program to encourage home purchasing and low-cost rental housing.

VETERANS' UNEMPLOYMENT

Inasmuch as there is a consistently increasing and abnormally high rate of unemployment among veterans, we urge appropriate Federal, State, and local government agencies to inquire into the cause of such unemployment and take prompt and effective corrective action to arrest this trend.

COMMUNITY TAX

We urge the passage in Massachusetts of the so-called community-tax bill, and we urge appropriate Federal Government action to provide for joint returns for taxpayers in all States as the best method for eliminating the discriminatory tax advantage now enjoyed by residents of community-property States.

IMMIGRATION AND NATURALIZATION

Our country is a Nation of many races and creeds, and no particular nationality, religious, or ethic group can take full credit for its achievements. When Congress enacted barriers to immigration and naturalization based upon race and color, it turned its back upon the lessons of our history. We call upon the Eightieth Congress to remove all barriers presently existing to the immigration and naturalization laws.

TERMINAL-LEAVE PAY

We urge immediate passage of legislation by Congress for the conversion of terminal-leave bonds to cash, and the extension of the September 1, 1947, dead line for terminal-leave benefits to September 1, 1948, in order to give ample opportunity to apply to all veterans who for one reason or another have been unable to submit their applications.

COMPENSATION, PENSIONS, AND REHABILITATION

1. Granting of a determination of service connection for cases of active tuberculosis where there was no evidence of tuberculosis noted at the time of induction or enlistment and it appears either during service or within 3 years of discharge.

2. Extension of the present 1-year statute of limitations for appeal from an adverse ruling of the Veterans' Administration on claims to a period of 3 years.

3. Extension of the period during which pension claims must be filed in order to have the award run from the date of discharge from 1 to 2 years after discharge.

4. Allowance of credit for the purpose of old-age pension and retirement under the social-security laws for time spent in military service.

5. Extension of the time limit allowed for certain veterans to apply for naturalization without the usual waiting period and elimination of the requirement of their having entered the country under a quota.

COURT MARTIAL (MILITARY AND NAVAL JUSTICE)

If we are to maintain an Army by volunteer recruitment and maintain our international commitments, it is absolutely necessary that some cure be found for the festering sore in the military and naval services which is most responsible for the poor morale and lack of interest. We recommend a complete overhauling of the court-martial system.

REVIEW OF CERTAIN COURT-MARTIAL CASES

We urge the further consideration and review of the cases of Michael DeBartolo, of Squantum, Mass., and Frank A. Barbato, of Tomkinsville, N. Y., with a view to ascertain with finality whether or not complete justice was one in their cases.

By virtue of the nature of the administration of the court-martial system, men were often tried, convicted, and sentenced because of the whim of a commanding officer. Courts martial were administered by nonprofessionals—people unskilled in judicial technique.

VETERANS' ADMINISTRATION

We endorse the conduct of the Veterans' Administration under Gen. Omar N. Bradley.

Committee on Resolutions: Henry Selvitella, Chairman; Albert Germano, Angelo Auricchio, Amato Mastrommattia, Joseph DiPrima, Paul A. Carbone, Pasquale Caggiano, Raymond Parise, Thomas Ciamma, Dr. Ezia N. Tesone, Alexander Buonammo and Domenic Cavallon.

Fifteen Percent Rent Boost Bill May Mean 25 Percent

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from PM, Sunday, June 29, 1947, by Sidney Margolius:

FIFTEEN PERCENT RENT BOOST BILL MAY MEAN TWENTY-FIVE PERCENT—RISE WILL BE ADDED TO "HARDSHIP" INCREASES

(By Sidney Margolius)

Rent hikes of around 25 percent instead of the anticipated 15 percent boosts are now in prospect as the result of the rent measure expected to become law Tuesday.

The likelihood many tenants will find themselves paying even higher rates than they feared was uncovered yesterday when it was learned the Federal Rent Control Office here has loosened its regulations governing hardship rent-hike petitions. It will now be possible for landlords to pyramid boosts by first securing a new easy-to-get "hardship" increase of as much as 10 percent and then negotiating with the tenant for a 15 percent increase with a lease through 1948, as provided for by the forthcoming law.

FIFTEEN PERCENT BOOST ON TOP

Negotiated 15-percent boosts will be possible on top of hardship increases already granted and also on those that may be allowed after June 30, rent experts here believe. The regional Rent Control Office here has called a conference of officials for Monday to establish an official interpretation.

A mandate from rent-control officials in Washington requiring quicker processing of landlord applications for rent raises under hardship provisions is responsible for the liberalization of these grants, it was learned. As a result, regional investigators have been instructed to discontinue audits of landlord's books and to sanction the request for a rent boost, if the landlord's own figures in support of his petition look "reasonable."

SAMPLE CHECK ONLY ONE MADE

The only check rent offices will now make will be a sample check of petitions already approved, much like the sample dipping to income-tax returns performed by the Bureau of Internal Revenue. In case this scattered checking does turn up any unjustified increases, the grants can be revoked retroactively.

Besides waiving the audit of the landlord's figures the rent control office now no longer notifies a tenant that his landlord has petitioned for a raise. Previously the tenant had been called in and asked for his side of the case. Under the new procedure, the only notice the tenant receives is the announcement that his rent has been raised.

Regional rent officials, however, will continue to grant tenants the right to ask for review of a rent increase sanctioned by a local rent office.

Hardship increases are granted landlords if they show their current financial operations compare unfavorably with the average of any 2 years since 1939.

Before the order came from Washington to keep current on landlord hardship petitions, rent officials had been granting these increases at an approximate rate of 400 dwelling units a week in New York City alone. The increases granted usually range from 5 to 10 percent and in some exceptional cases have been as high as 22 percent in this region.

Long Beach Federal Savings and Loan Association

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, recently there was brought to my attention certain correspondence from the group terming itself "the Shareholders Committee of Long Beach Federal Savings and Loan Association of Long Beach, Calif." This group, over the signature of its chairman, Mr. Paul L. Mallonee, alleged that Mr. John H. Fahey, Commissioner of the Federal Home Loan Bank Administration, had abused his authority in placing a conservator in charge of the Long Beach Federal Savings and Loan Association. At the time that this letter was being circulated to Members of Congress, this matter was before the Supreme Court of the United States.

On Monday, June 23, the United States Supreme Court, by unanimous decision, upheld the constitutionality of the law under which the Federal Home Loan Bank Administration is empowered, when necessary, to appoint a conservator for a federally chartered savings and loan association. The Court further sustained regulations of the Federal Home Loan Bank Administration, providing the grounds for which a conservator may be named, which had also been attacked.

Under leave to extend my remarks in the RECORD, I include a copy of the decision by the Supreme Court:

[Supreme Court of the United States—No. 687. October term, 1946—*John H. Fahey and A. V. Ammann, individually and respectively as Federal Land Bank Commissioner and conservator for the Long Beach Federal Savings and Loan Association, appellants* v. *Paul Mallonee, et al.*—Appeal from the District Court of the United States for the Southern District of California—June 23, 1947]

Mr. Justice Jackson delivered the opinion of the Court.

A specially constituted three-judge district court has summarily, without trial, entered final judgment ousting a conservator who, on orders of the Federal Home Loan Bank Commissioner, had taken possession of the Long Beach Federal Savings and Loan Association. It granted this and other relief on the principal ground that section 5 (d) of the Home Owners Loan Act of 1933, as amended, violates article I, sections 1 and 8 of the Constitution.

The Federal Home Loan Administration on May 20, 1946, without notice or hearing, appointed Ammann conservator for the association and he at once entered into possession. The grounds assigned were that the association was conducting its affairs in an unlawful, unauthorized, and unsafe manner, that its management was unfit and unsafe, that it was pursuing a course injurious to, and jeopardizing the interests of, its members, creditors, and the public. Plaintiffs at once commenced this class action in the right of the association against the conservator and Fahey, Chairman of the Federal Home Loan Bank Board, the association as a nominal defendant, and several others not important to the issue here. The complaint alleged that the conservator and the chairman had seized the property without due process of law, motivated by malice and ill will, and that the seizure for various reasons was in violation of the Constitution. It asked return of the association to its former management, permanent injunction against further interference, and other relief. Other parties in interest intervened. Temporary restraining orders issued and a three-judge court was duly convened.

Personal service was secured upon Ammann, the conservator, but Fahey, the Federal Home Loan Bank Commissioner, officially an inhabitant of the District of Columbia, could not be served in California. A motion for substituted service, therefore, was granted and process was served upon him in the District of Columbia. It was believed that this was authorized by Judicial Code (sec. 57, 28 U. S. C., sec 118). Ammann moved to dismiss the complaint on the ground that it failed to state a cause of action. Fahey appeared specially to move dismissal or quashing return of service on him upon the ground that he could not, in his official capacity, be sued in California and had not been served properly with process. Neither had answered the complaint, nor had their time to do so expired, when final judgment was granted against them.

The three-judge court set a variety of pending motions for argument; and after argument, mainly on the constitutionality of section 5 (d), with only pleadings and motion papers before it, held the section unconstitutional, ordered removal of the conservator, permanently enjoined the authorities from holding an administrative hearing on the matter, permanently enjoined an apprehended merger, restored the institution to its former management, ordered the conservator to account, and enjoined these authorities "from ever asserting any claims, right, title, or interest" in or to the association's property. The case is here on direct appeal (50 Stat. 752–753; 28 U. S. C., secs. 349a, 380a).

It is manifest that whatever merit there may be in various subsidiary and collateral questions, this drastic decree can stand only if the section, as applied here, is unconstitutional.

Its defect is said to consist of delegation of legislative functions to the supervising authority without adequate standards of action or guides to policy. Section 5 (d) of the act gives to the Board "full power to provide in the rules and regulations herein authorized for the reorganization, consolidation, merger, or liquidation of such associations, including the power to appoint a conservator or a receiver to take charge of the affairs of any such association, and to require an equitable readjustment of the capital structure of the same; and to release any such association from such control and permit its further operation" (48 Stat. 133, 12 U. S. C. sec. 1464 (d)). This, the District Court held, was unconstitutional delegation of the congressional function. It relied on *Panama Refining Co.* v. *Ryan* (293 U. S. 388), and *Schechter* v. *United States* (295 U. S. 495).

Both cited cases dealt with delegation of a power to make Federal crimes of acts that never had been such before and to devise novel rules of law in a field in which there had been no settled law or custom. The latter case also involved delegation to private groups as well as to public authorities. Chief Justice Hughes emphasized these features, saying that the act under examination was not merely to deal with practices "which offend against existing law, and could be the subject of judicial condemnation without further legislation, or to create administrative machinery for the application of established principles of law to particular instances of violations. Rather, the purpose is clearly disclosed to authorize new and controlling prohibitions through codes of laws

which would embrace what the formulators would propose, and what the President would approve, or prescribe, as wise and beneficent measures for the government of trades and industries in order to bring about their rehabilitation, correction, and development, according to the general declaration of policy in section 1." (*Schechter* v. *United States* (295 U. S. 495, 535).)

The savings and loan associations with which section 5 (d) deals, on the other hand, are created, insured and aided by the Federal Government. It may be that explicit standards in the Home Owners Loan Act would have been a desirable assurance of responsible administration. But the provisions of the statute under attack are not penal provisions as in the case of *Lanzetta* v. *New Jersey* (306 U. S. 451) or *United States* v. *Cohen Grocery Co.* (255 U. S. 81). The provisions are regulatory. They do not deal with unprecedented economic problems of varied industries. They deal with a single type of enterprise and with the problems of insecurity and mismanagement which are as old as banking enterprise. The remedies which are authorized are not new ones unknown to existing law to be invented by the Board in exercise of a lawless range of power. Banking is one of the longest regulated and most closely supervised of public callings. It is one in which accumulated experience of supervisors, acting for many States under various statutes, has established well-defined practices for the appointment of conservators, receivers and liquidators. Corporate management is a field, too, in which courts have experience and many precedents have crystallized into well-known and generally acceptable standards. A discretion to make regulations to guide supervisory action in such matters may be constitutionally permissible while it might not be allowable to authorize creation of new crimes in uncharted fields.

The Board adopted rules and regulations governing appointment of conservators.[1] They provided the grounds upon which a conservator might be named, and they are the usual and conventional grounds found in most State and Federal banking statutes.[2] They are sufficiently explicit, against the background of custom, to be adequate for proper administration and for judicial review if there should be a proper occasion for it.

It is complained that these regulations provide for hearing after the conservator takes possession instead of before. This is a drastic procedure. But the delicate nature of the institution and the impossibility of preserving credit during an investigation has made it an almost invariable custom to apply supervisory authority in this summary manner. It is a heavy responsibility to be exercised with disinterestedness and restraint, but in the light of the history and customs of banking we cannot say it is unconstitutional.[3]

In this case an administrative hearing was demanded and specifications were asked as to the charges against the management of the association. The hearing was granted and a statement of complaints against the management was furnished.

The causes for the appointment of a conservator as therein set forth by the Board included withdrawals by the president without proper voucher therefor; payment of salaries and fees not commensurate with services rendered; a director's unlawful removal of a cashier's check in the amount of $50,000 during an examination by Federal home-loan bank examiners; leasing properties of the association for a 20-year period on terms which would not provide adequate consideration to the association; use of the association for personal gain of one or more officers and directors; failure to maintain proper accounts and to make proper reports; and falsification of records. It also charged certain manipulations of the affairs of an-

---

[1] The rules and regulations for the Federal Savings and Loan System provide in part as follows:

PART 206. APPOINTMENT OF CONSERVATOR OR RECEIVER

Section 206.1. Receiver or conservator; appointment. (a) Whenever, in the opinion of the Federal Home Loan Bank Administration, any Federal savings and loan association—

(1) Is conducting its business in an unlawful, unauthorized, or unsafe manner;

(2) Is in an unsound or unsafe condition, or has a management which is unsafe or unfit to manage a Federal savings and loan association;

(3) Cannot with safety continue in business;

(4) Is impaired in that its assets do not have an aggregate value (in the judgment of the Federal Home Loan Bank Administration) at least equal to the aggregate amount of its liabilities to its creditors, members, and all other persons;

(5) Is in imminent danger of becoming impaired;

(6) Is pursuing a course that is jeopardizing or injurious to the interests of its members, creditors, or the public;

(7) Has suspended payment of its obligations;

(8) Has refused to submit its books, papers, records, or affairs for inspection to any examiner or lawful agent appointed by the Federal Home Loan Bank Administration;

(9) Has refused by the refusal of any of its officers, directors, or employees to be examined upon oath by the Federal Home Loan Bank Administration or its representative concerning its affairs; or

(10) Has refused or failed to observe a lawful order of the Federal Home Loan Bank Administration

the Federal Home Loan Bank Administration may appoint the Federal Savings and Loan Insurance Corporation receiver for such Federal association, which appointment shall be for the purpose of liquidation, or the Federal Home Loan Bank Administration may appoint a conservator for such Federal association to conserve the assets of the association pending further disposition of its affairs. The appointment shall be by order, which order shall state on which of the above causes the appointment is based. Any conservator so appointed shall furnish bond for himself and his employees, in form and amount and with surety acceptable to the Governor of the Federal Home Loan Bank System, or any Deputy or Assistant Governor, but no bond shall be required of the Federal Savings and Loan Insurance Corporation as receiver. The conservator or receiver shall forthwith upon appointment take possession of the association and, at the time such conservator or receiver shall demand possession, such conservator or receiver shall notify the officer or employee of the association, if any, who shall be in the home office of the association and appear to be in charge of such office, of the action of the Federal Home Loan Bank Administration. The Secretary of the Federal Home Loan Bank Administration shall, forthwith upon adoption thereof, mail a certified copy of the order of appointment to the address of the association as it shall appear on the records of the Federal Home Loan Bank Administration and to each director of the association, known by the Secretary to be such, at the last address of each as the same shall appear on the records of the Federal Home Loan Bank Administration. If such certified copy of the order appointing the conservator or receiver is received at the offices of the association after the taking of possession by the conservator or receiver, such conservator or receiver shall hand the same to any officer or director of the association who may make demand therefor.

Section 206.2. Hearing on appointment: Within 14 days (Sundays and holidays included) after the appointment of a conservator or receiver for a Federal association not at the time of such appointment in the hands of a conservator, such Federal association, which has not, by its board of directors, consented to or requested the appointment of a conservator or receiver, may file an answer and serve a written demand for a hearing, authorized by its board of directors, which demand shall state the address to which notice of hearing shall be sent. Upon receipt of such answer and written demand for a hearing the Federal Home Loan Bank Administration shall issue and serve a notice of hearing upon the institution by mailing a copy of the order of hearing to the address stated in the demand therefor and shall conduct a hearing, at which time and place the Federal association may appear and show cause why the conservator or receiver should not have been appointed and why an order should be entered by the Federal Home Loan Bank Administration discharging the conservator or receiver. Such hearing shall be held either in the district of the Federal Home Loan Bank of which such Federal association is a member or in Washington, D. C., as the Federal Home Loan Bank Administration shall determine, unless the association otherwise consents in writing. Such hearing may be held before the Federal Home Loan Bank Commissioner or before a trial examiner or hearing officer, as the Federal Home Loan Bank Administration shall determine. Such Federal association, which has not, by its board of directors, consented to or requested the appointment of a conservator or receiver, may, within 7 days (Sundays and holidays included) of such appointment, serve a written or telegraphic demand, authorized by its board of directors upon the Federal Home Loan Bank Administration for a more definite statement of the cause or causes for the action. The time of service upon the Federal Home Loan Bank Administration for the purposes of this section shall be the time of receipt by the Secretary of the Federal Home Loan Bank Administration.

Section 206.4 Discharge of conservator or receiver: An order of the Federal Home Loan Bank Administration discharging a conservator and returning the association to its management shall restore to such Federal association all its rights, powers and privileges and shall restore the rights, powers, and privileges of its officers and directors, all as of the time specified in such order, except as such order may otherwise provide. An order of the Federal Home Loan Bank Administration discharging a receiver and returning the association to its management shall by operation of law and without any conveyance or other instrument, act or deed, restore to such Federal association all its rights, powers, and privileges, revest in such Federal association the title to all its property, and restore the rights, powers, and privileges of its officers and directors, all as of the time specified in such order, except as such order may otherwise provide. Twenty-four C. F. R. Cum. Supp., sec. 206.1 et seq., as amended, 24 C. F. R. 1943, Supp. sec. 206.1.

[2] Bank Conservation Act of March 9, 1933 (sec. 203, 48 Stat. 2–3, 12 U. S. C. sec. 203); Banking Act of 1933 (sec. 31, 48 Stat. 194, 12 U. S. C. sec. 71a); National Housing Act (sec. 406, 48 Stat. 1259–60, 12 U. S. C. sec. 1729). E. g., New York Banking Law (sec. 606, 4 McKinney's Consolidated Laws of New York 708–709 (pocket part) 125–26); Page's Ohio General Code Annotated (sec. 687); 1 Deering's California General Laws (act 986, sec. 13.11); Massachusetts Laws Annotated (ch. 167, sec. 22; ch. 170B, sec. 4); Jones Illinois Statutes Annotated (sec. 14.40).

[3] See note 2.

other institution by the president of this institution.

The plaintiffs nevertheless demanded and obtained an injunction to prevent the administrative hearing and they have therefore cut off the making of a record as to whether these charges are well-founded. Nor did the trial court take evidence on the subject. We must assume that the supervising authorities would be able to sustain the statements of fact and to justify the conclusions in their charges for the purpose of determining the case without trial. We are therefore unable to agree with the court below that the section is invalid and hence that regardless of the charges the management was free to go on undisciplined and unchecked.

But even if the section were defective, which we think it is not in a constitutional sense, another obstacle stands in the way of ousting this conservator.

The Long Beach Federal Savings and Loan Association was organized in 1934 under section 5 of the Home Owners' Loan Act of 1933, subsection (d) of which is now sought to be declared unconstitutional. The present management obtained a charter which provided that the association "shall at all times be subject to the Home Owners' Loan Act of 1933, providing for Federal savings and loan associations, and to any amendments thereof, and to valid rules and regulations made thereunder as the same may be amended from time to time," and that it might be "liquidated, merged, consolidated, or reorganized, as is provided in the rules and regulations for Federal savings and loan associations." In 1937, upon the association's request, an amended charter was issued which likewise provided that the association was to exercise its powers subject to the Home Owners' Loan Act and regulations issued thereunder.

This is a stockholder's derivative action in which plaintiffs sue only in the right of the association. It is an elementary rule of constitutional law that one may not "retain the benefits of the act while attacking the constitutionality of one of its important conditions" (*United States* v. *San Francisco* (310 U. S. 16, 29)). As formulated by Mr. Justice Brandeis, concurring in *Ashwander* v. *Tennessee Valley Authority* (297 U. S. 288, 348), "The Court will not pass upon the constitutionality of a statute at the instance of one who has availed himself of its benefits."

In the name and right of the association, it is now being asked that the act under which it has its existence be struck down in important particulars, hardly severable from those provisions which grant its right to exist. Plaintiffs challenge the constitutional validity of the only provision under which proceedings may be taken to liquidate or conserve the association for the protection of its members and the public. If it can hold the charter that it obtained under this act and strike down the provision for terminating its powers or conserving its assets, it may perpetually go on, notwithstanding any abuses which its management may perpetrate. It would be intolerable that the Congress should endow an association with the right to conduct a public banking business on certain limitations and that the Court at the behest of those who took advantage from the privilege should remove the limitations intended for public protection. It would be difficult to imagine a more appropriate situation in which to apply the doctrine that one who utilizes an act to gain advantages of corporate existence is estopped from questioning the validity of its vital conditions. We hold that plaintiffs are estopped, as the association would be, from challenging the provisions of the act which authorize the Board to prescribe the terms and conditions upon which a conservator may be named.

There are other important and difficult questions raised in the case which it becomes unnecessary to decide.

Objection is made to the administrative hearing upon the ground that it is before the same authority which has preferred the charges and that it cannot be expected, therefore, to be fair and impartial and that the act does not provide for judicial review of the Board's determination on the hearing. We cannot agree that courts should assume in advance that an administrative hearing may not be fairly conducted. We do not now decide whether the determination of the Board in such proceeding is subject to any manner of judicial review. The absence from the statute of a provision for court review has sometimes been held not to foreclose review. *Stark* v. *Wickard* (321 U. S. 288); *Federal Reserve Board* v. *Agnew* (329 U. S. 441; Administrative Procedure Act (5 U. S. C. A. sec. 1009). Nor do we mean to be understood that if supervising authorities maliciously, wantonly, and without cause destroy the credit of a financial institution, there are not remedies.

One of the allegations of the complaint is that it was intended that this institution would be merged with other institutions to the injury of its shareholders. The allegation seems to be based on the fact that a different institution with which the management of the Long Beach institution was connected was merged by the authorities in a way that was highly objectionable to some of the shareholders and aroused concern of the public authorities. We find no explicit threat to merge the Long Beach institution and there is no such finding by the court below. The Government has assured us at the bar that there is no plan for such a merger in contemplation. Nevertheless, such a merger was enjoined. In view of the absence of a finding of the threat or of evidence to sustain one, we accept the Government's assurance that merger will not follow and, hence, we do not consider it necessary to discuss the legality of hypothetical mergers.

Since the judgment that has been rendered against the conservator, who was duly served with process, must be reversed, we find it unnecessary to decide whether Fahey was an indispensable party or was properly brought into the case by substituted service.

It is obvious that there is more to this litigation than meets the eye on the pleadings. The plaintiffs' charges that ill will and malice actuated the supervising authorities, as well as the charges of the defendants that the institution has been mismanaged and that the management is unfit, are alike undetermined by the courts below, and we make no determination or intimation concerning the merits of these issues or as to other remedies or relief than that in the judgment before us.

Our decision is that it was error in the court below to hold the section unconstitutional, to oust the conservator or to enjoin any of his proceedings or to enjoin the administrative hearing, and this without prejudice to any other administrative or judicial proceedings which may be warranted by law. The judgment is reversed.

Mr. Justice Douglas concurs in the result.

Mr. Justice Rutledge concurs in the result and in the Court's opinion insofar as it rests upon the ground that the controlling statute, section 5 (d) of the Home Owners' Loan Act of 1933, is not unconstitutional.

[Supreme Court of the United States—No. 133, miscellaneous, October term, 1946—*Ex parte John H. Fahey and A. V. Ammann, Individually and Respectively as Federal Home Loan Bank Commissioner and Conservator for the Long Beach Federal Savings and Loan Association*—June 23, 1947]

Mr. Justice Jackson delivered the opinion of the Court.

This petition by John H. Fahey, individually and as Federal Home Loan Bank Commissioner, and A. V. Ammann, individually and as conservator for the Long Beach Federal Savings and Loan Association, invokes the original jurisdiction of this Court. They ask leave to file petition for a writ of mandamus and/or prohibition and/or injunction against Judge Peirson M. Hall, of the United States District Court for the Southern District of California to vacate his order allowing fees to counsel in *Fahey* v. *Mallonnee*, decided today, to prohibit any further allowance therein, and to enjoin any payments heretofore allowed.

While an appeal in the principal case was pending in this court, application was made by various counsel for the plaintiffs and associated interests therein for allowance of fees aggregating some $125,000. The district court allowed counsel for plaintiffs $50,000 as a partial payment on account of services, but withheld action on other applications. Certain costs and expenses of the plaintiffs in the amount of $17,295.13 were also ordered reimbursed.

The petition involves serious questions of law and of fact. Whether, because of the pendency of the appeal and the stay order granted therein, the district court had power to entertain the application, whether before the final outcome of the case could be known an allowance was premature, whether the source of the fund on deposit with the court was so related to the services as to be subject to disbursement for their compensation, and whether one judge can make allowances in a case before a three-judge court are, with other questions, much contested. We do not decide any question as to the merits.

Mandamus, prohibition, and injunction against judges are drastic and extraordinary remedies. We do not doubt power in a proper case to issue such writs. But they have the unfortunate consequence of making the judge a litigant, obliged to obtain personal counsel, or to leave his defense to one of the litigants before him. These remedies should be resorted to only where appeal is a clearly inadequate remedy. We are unwilling to utilize them as a substitute for appeal. As extraordinary remedies, they are reserved for really extraordinary causes.

We find nothing in this case to warrant their use. An allowance of $50,000 will hardly destroy a $26,000,000 association during the time it would take to prosecute an appeal. The status of one of the applicants in the principal case is now settled so that he has standing to take all authorized appeals. We hold that the applicants' grievance is one to be pursued by appeal at the proper time and to the appropriate court, rather than by resort to our original jurisdiction for extraordinary writs.

The petition is denied.

Story of Jap Calamity Told by New Buildings

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith the following article by Mr. Ralph Donaldson of the Cleveland Plain Dealer:

STORY OF JAP CALAMITY TOLD BY NEW BUILDINGS

(Article 26)

Before concluding this series on Japan and tackling the problems of Korea, it might be

well to jot down a few additional notes and observations on life in an occupied country.

At first glance the bomb damage in the Japanese cities does not appear to be very extensive. There are no huge piles of rubble and masonry as in Europe and the gaunt shells of burned-out and bombed-out buildings are the exception rather than the rule.

Then you notice vast areas of vacant space, dotted by the framework of small, one-story buildings constructed of new yellow lumber, and you begin to appreciate what happened.

These areas were completely burned out by the fire bombs. And, since most of the buildings were made of wood, they were completely consumed, leaving no rubble to show where they had been.

ONLY FOUNDATIONS REMAIN

But the outlines of the former buildings are marked by the foundations on which they once rested. And where new buildings are not being erected the ground within these little squares has been made into garden plots in which hardy winter vegetables are growing.

The industrial sections of the cities were badly wrecked. Miles of twisted steel and shattered buildings testify to the accuracy and potency of our air raids. Thousands of persons are living in shacks and hovels patched together from pieces of iron sheeting and other waste material they have gathered in these desolate cities.

There is no street lighting in Tokyo and except for the Ginza, once the principal shopping center, the streets have no names. The occupation authorities have attempted to remedy this by assigning letters to the principal avenues, but a stranger could never find his way around at night and would have difficulty doing so in the daytime without a guide. Traffic keeps to the left in Japan, which is another cause of confusion to American drivers and pedestrians alike.

About every fourth or fifth Japanese you see on the streets wears a gauze mask over his or her nose and mouth, in the hope that this will afford protection from influenza and pneumonia.

HOSPITALS ARE REFORMED

One of the jobs of our military government teams is to inspect Japanese hospitals and see that they are kept in a sanitary condition and operated efficiently and in accordance with the best medical practices and equipment available. One of the reforms has been to discourage the practice of relatives sleeping and cooking in the rooms where patients are being treated.

There is no word in the Japanese language to convey the meaning of public assistance. But under our direction the Japanese Government has set up a relief program for the indigent. Originally this program consisted almost entirely of distributing surplus food and clothing from Japanese Army and Navy stores. It now includes a school-lunch program.

The Japanese railroad system was not damaged by the war to any extent. We had not gotten around to that before the surrender. If an invasion had been necessary, the rail system would have been smashed a few days before the landings to impede the movement of Japanese troops.

The Japanese Government operates 13,981 miles of main track and private railroads operate 4,702. Featherbedding has reached a high degree of perfection on the Japanese lines. They have 40.8 employees per mile of main track, as compared with 6.23 in the United States. But the unions will not permit any reduction in the number of employees and both the Government and the occupation authorities recognize this as a sort of subsidy or form of work relief.

Railroad traffic is heavy, but the hauls are short, averaging 15 miles in Japan, as compared with an average haul of 100 miles in the United States. Japanese railroad cars, streetcars, and busses are jammed, making sardine cans appear roomy by comparison. The last coach on most Japanese trains is reserved for Allied personnel.

The Japanese started the war with 6,000,000 tons of merchant shipping. During the war they built an additional 4,643,000 tons, making a total of 10,643,000. They ended the war with 1,791,000 tons, which means that they lost 8,831,000 tons during the war, or more than they started with. The submarine service disposed of a large part of it.

Of the remaining ships, all of steel construction over 5,000 tons are marked for reparations. Nine hundred locomotives and 30,000 freight cars also have been put on the reparations list. The rail equipment is of small gage, however, and could be used only in the Philippines, Formosa, or South Africa.

One of the problems of the occupation forces is to provide housing for dependents. By the end of January, 3,795 families of American officers, enlisted men and civilian personnel had been shipped to Japan and Korea and 5,269 were waiting for transportation and housing.

SCHOOL PROBLEMS TACKLED

The arrival of the families precipitates another problem, that of establishing schools for American children. No money has been appropriated for this purpose yet, so members of the American colonies in the various occupied areas get together, organize a school, select teachers and make arrangements for bus transportation for the children.

Even Kwajalein, a Pacific atoll which is just barely large enough to provide a landing strip for the big transport planes which cross the Pacific on their daily flights, has a school for 28 American children.

This report on Japan would not be complete without an attempt to describe the majestic view of Mount Fujiyama from the air. It appeared in the distance shortly after our plane took off from Haneda air base on Tokyo Bay.

As we approached, its perfectly symmetrical snow-capped cone seemed to pierce through the swirling layer of clouds which, part of the time, concealed the jagged mountain ridges, deep canyons and tree-covered slopes surrounding it. Our four-motored plane plowed steadily through the air toward it, but it was not a marker that one could flash by like a pylon at the air races.

For nearly 5 minutes it seemed as though the right wing tip was almost scraping the edge of the giant cone, but actually we were a quarter of a mile away from it.

That was our last view of Japan, a scene of glorious splendor never to be forgotten. Four and one-half hours later we landed at the American air base near Seoul, Korea.

How Strong Are China's Liberals?

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 30, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Century of June 18, 1947:

HOW STRONG ARE CHINA'S LIBERALS?

(By Frank Wilson Price)

In an earlier article I suggested that a new hour of opportunity has dawned for China's liberals. But where are those liberals to be found? And what hope have they of becoming a united and effective political force?

Liberals predominate in the new Chinese coalition government, in the left wing of the Kuomintang, in the non-Communist minor parties and in various socially-minded independent groups. Are there moderates in the Communist Party? General Marshall believes that there are some Communist liberals "who put the interest of the Chinese people above ruthless measures to establish a Communist ideology in the immediate future." The extremists are in the saddle now but when the Communists signify their readiness to reopen discussions with Nanking they will find the present liberalized government prepared to meet them halfway. "If the Chinese Communist Party abandons its policy of seizing power by force and cooperates to achieve the unity of the nation," President Chiang said, on April 18, "it still has an opportunity to join the Government and to participate in the work of national reconstruction."

A second source of liberal strength is public opinion and the press. The independent Ta Kung Pao was progressive and fearless during the war and has continued its outspoken policy since the war. Other newspapers, even Government organs, are offering more and more independent editorial comment. A highly critical Communist daily was published for many years in Chungking and has only recently been discontinued. Other papers and periodicals presenting a leftist point of view continue to circulate in nationalist China.

The people are becoming more vocal. Two Shanghai newspapers recently took a public-opinion poll, a new venture in China. While only a few thousand replies were received, yet they revealed strong opposition to the civil war, to certain features of the constitution, and to many Government policies. The great majority objected to interference by any foreign power in China's internal affairs and declared that China must settle her own disputes. Only 9.5 percent favored American-Soviet mediation (such as proposed by Theodore White) and only 7 percent United Nations mediation. One surprising result was the evidence of the continued prestige of Chiang Kai-shek in spite of criticisms of his Government. In one of the polls for the next elected President of China, Chiang won a 5-to-1 majority over the Communist leader, Mao Tse-tung, who was given the second largest number of votes. This indicates what Chiang's majority would probably be in a Nation-wide election.

Another liberal-minded group is the intellectuals—teachers, students, social workers, rural reconstruction leaders. University presidents and professors have been generally independent in their thinking and have at times shown great courage. A surprising number of men in the new Government have been educators at one time or another. Immature high-school and college students are easily swayed by demagogues and propaganda, but they are a force to reckon with and a source of liberal leadership in the future. Graduates of high-school level and above and returned students from abroad would not altogether make up more than one-half of 1 percent of the population, yet their influence is out of all proportion to their numbers. Some "intellectuals" are much more interested in political affairs than others, but the group as a whole is a dynamic force for democracy.

EDUCATIONAL MOVEMENTS

The People's Education Movement (comprising James Yen's Mass Education group, Liang Shu-ming's Village Government group, the late Heng-chih Tao's Education-for-all movement, and the new National College of Social Education) is a strong force making for liberalism. President Chiang's proposal for a 10-year Education-for-Democracy movement and a nation-wide literacy campaign is based to a large extent upon the notable experiments of these far-sighted

social workers who are now banded together in a National Association of Social Education.

China can well be proud of her diplomatic corps, which is one of the most capable and cultured in the world. Chinese ambassadors, consuls, and representatives in the United Nations have won high praise. The Chinese delegation at the UNO conference in San Francisco representing four political parties including the Communist, was outstanding. Most of these men who represent China abroad have received both Chinese and Western education and are favorably disposed to Western political liberalism. Their influence on political developments in China has been generally constructive. Few have ever been accused of exploitation of public office for private gain.

STIRRINGS AMONG THE MASSES

China's 80 percent of farmers and laborers are potential revoluntionists. Whether they will support a program of liberal reform and good government or participate in a radical social revolution depends on many unpredictable factors in the coming years. Intellectuals are coming from the masses and some are returning to guide the masses, either as liberal social reformers or as Communist revolutionists. Liberals agree that farmers and laborers need to develop their own educated and progressive leadership. This is certain: from now on no Chinese Government that exploits the common people, can hope to remain long in power. China's liberals know that.

Another growingly important liberal force in China is the Chinese Christian Church. Freed from its former connections with the unequal treaties and tested in the fires of wartime suffering and sacrifice it is displaying remarkable intellectual and spiritual vigor. Many church leaders, Protestant and Catholic, are familiar names throughout China. Christian laymen are serving in the government; 15 percent of the new state council and cabinet are Christians. The Catholics have been more conservative on social and political questions than the Protestants; they have taken a belligerent anti-Communist attitude and have been suspected of wanting to form a Catholic political party. Protestants, while opposing the materialistic philosophy and destructive tactics of the Communists, have tried to study the reasons for the Communist appeal and to propose a positive answer. They have also criticized the Government more freely and have at times made bold demands for reforms. Both Protestants and Catholics are preaching moral and spiritual regeneration through Christ and are active leaders in social service and reconstruction. The Christian Church is making a definite contribution to the moral fiber of the nation.

MESSAGE FROM NEW PREMIER

Thus in spite of the tragic civil war in the north, national China seems to be making a new start. Law and order have been largely restored in the four-fifths of China under national control. There are signs of slow economic convalescence. A constitution has been adopted and elections will be held this year for the National Assembly, which will choose a president, and for the 622 members of the Legislative Yuan, or Parliament. An interim coalition government has taken office. The liberals have another chance. They are aware of this and also of the rocks and shoals ahead. "The situation in China is extremely difficult," said Chang Chun, the new premier, in a letter to me written on April 15, "and the size of the new responsibility I am about to shoulder is enormous."

The liberals realize that in unity will be their strength. They must be a unified force even though serious disagreements on policy and method arise. Personal rivalries and selfish quarrels could easily wreck the movement. Their responsibilities are indeed enormous. China wants to be modernized and yet avoid the evils of too rapid westernization. China wants to be socialized and yet preserve the freedom of the individual and the independence of the nation. China needs to be industrialized and yet preserve the best in her rural culture and ancient skills and crafts. China seeks peace in a world that is not yet at peace. China, with Dr. Sun Fo, looks forward, but cannot and should not break completely with her rich heritage. All these problems are not new. But today new men are tackling them, the people are to be given more voice in their government, and hope is reviving in many hearts.

THE RIGHT KIND OF INVESTMENT

The implications of these recent trends in China for American policy in the Far East deserve our serious thought. We have a stake in China, a free and peaceful China, but we must avoid all suspicions of imperialism and exploitation. Relief and rehabilitation are still needed, especially as UNRRA withdraws. The total of lend-lease aid and sale of surplus supplies to China (both of which must be repaid) and of UNRRA relief has been less than $3,000,000,000. Through United Service to China, Americans have given through the war and postwar years nearly $50,000,000 for private relief and reconstruction projects—disaster relief, medical aid, industrial cooperatives, mass education, rebuilding of Christian colleges and the like. This year's campaign is lagging. Yet the needs are still appalling, for food, for tools, for cotton, for industrial and railway equipment, for libraries and laboratories. The new government has voted that all foreign loans shall be for economic recovery.

President Truman said in his March 12 address to Congress, "I believe that it must be the policy of the United States to support free people who are resisting subjugation by armed minorities or outside pressures." Does this apply to China? A liberal and democratic China could be a bulwark of peace in Asia. Certainly the American people will not fail in their sympathy and friendship for the people of China, who suffered from so devastating an invasion and are painfully reaching today toward a better life. There should be no objection to American aid in economic reconstruction and to continued relief for the Chinese people. This kind of investment will, I am sure, return large dividends of friendship and will strengthen our hopes for peace in Asia.

If China's liberals fail today I can see China turning back to one-party dictatorship or swinging over to communist totalitarianism. Either of these dangerous possibilities would hasten the outbreak of World War III.

Housing Legislation Needed

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 27, 1947

Mr. KEFAUVER. Mr. Speaker, under leave to extend my remarks, I wish to include a statement which has been sent me relative to the need for housing legislation at this time. The statement is as follows:

When we faced the electorate in 1946 we promised to rescue them from the throes of the present housing crisis. To the homeless veterans, to the veterans' families living a harassed, uncomfortable existence in trailers, furnished rooms, the squalor of slums, or crowded together with other families in a one-family apartment, we made a solemn pledge that we would take prompt action to get them into a decent home of their own.

We had better make good on that promise. When we face the people back home in 1948 are we going to run on a platform of more promises or on a record of accomplishment? If we hope to stand on our accomplishment we dare not delay action any further. The best housing bill in the world, if passed at the last minute before we adjourn, will still be only a promise—not actual houses.

Housing takes time to produce. The best measure introduced to stimulate housing production—the Taft-Ellender-Wagner National Housing Commission Act, which in the House is H. R. 2523—is an excellent bill but will not produce actual houses overnight. After the bill becomes law it will take time to get the housing push organized. Communities will have to perfect their plans, and make loan applications. Specifications will have to be redrawn in the light of needs and cost factors as of that time. Contracts will have to be sought and awarded. Even if the general housing bill were enacted by both houses this week, precious time would elapse before a single shovelful of dirt would be turned.

In the meantime the plight of the homeless and the badly housed grows more desperate. The grace period for making good on our campaign promises of last year is running out. Every day's delay means the loss of actual housing that would be started under this bill. Every day's delay increases the danger that, when we face the voters again, we will have to resort to worn-out promises.

But if we act now and pass the legislation that we know in our hearts is inevitable, we will be able to point to a great quantity of actual housing and rightfully say that our action made it possible.

Soviet Dilemma

EXTENSION OF REMARKS
OF
HON. J. HOWARD McGRATH
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES

Tuesday, July 1 (legislative day of Monday, April 21), 1947

Mr. McGRATH. Mr. President, on behalf of the senior Senator from Connecticut [Mr. McMAHON], I ask unanimous consent to have printed in the RECORD an article entitled "Soviet Dilemma," appearing in today's Washington Post.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOVIET DILEMMA

(By Barnet Nover)

MOLOTOV PHONES THE KREMLIN

In his 8 years as Soviet Foreign Minister, Viacheslav Molotov has been in many a tough spot. Private reports that have reached Washington from Paris indicate that he has never been in a tougher spot than now. What is more, he knows it.

That is why, insiders at the three-power conference are convinced, Molotov and his aides completely monopolized the telephone line from Paris to Moscow for many hours last Friday, following the first meeting of the Russian, British, and French foreign ministers.

Exactly what Molotov said to Stalin and the other members of the Politburo is, of course, a deep secret. There are reasons

to believe that in the course of his telephonic conversations with his bosses in the Kremlin, the Soviet Foreign Minister asked for new and more liberal instructions.

At the first meeting of the three Foreign Ministers, Molotov discovered, what he certainly must have known beforehand, that Russia's views regarding the carrying out of the Marshall proposal are wholly unsatisfactory to Great Britain and France.

More important, he also discovered that Great Britain and France could not be bluffed, browbeaten, or bludgeoned into accepting these Russian views.

The Soviet Foreign Minister learned that Ernest Bevin was speaking not only for himself but also for a determined if uneasy Bidault when he declared, as he did the eve of the Paris meeting, that the western powers would go ahead without Russia, if Russia took an obstructionist line on the Marshall plan.

The last thing the Kremlin desires is such independent action by Great Britain and France.

An economic arrangement designed to rehabilitate western Europe alone would not do the job that needs to be done in Europe.

Western Europe cannot thrive without eastern Europe, the great granary of the continent. But an economic federation of western Europe would, in British and French eyes, be infinitely preferable to the spreading chaos which is infecting almost every Old World nation today.

Great Britain and France are, in a very real sense, nearing the end of their financial rope. Aid must come quickly if they are to be saved from a catastrophe.

This mounting sense of an impending economic doom has blunted any political fears they may have had regarding the consequences of Russian abstention from and hostility to a European federation plan.

Molotov has to take into account more than the present mood of Great Britain and France. He also has to keep in mind that the Marshall plan has an enormous attraction for Russia's own satellite states.

They, too, are desperately eager to get on their feet.

Russia cannot help them in this regard at all. The United States can. So can a more closely integrated western Europe whose industrial plant has been put on its feet.

In his opening speech at the Paris conference, Molotov did not ignore the views of Russia's satellites.

On the contrary, his speech was designed to support the thesis that Russia is particularly solicitous not only of the economic needs of her satellites, but also of their political and economic independence.

Every nation, Molotov proposed, should draw up a bill of particulars regarding its own needs, with these demands pooled into one over-all budget. At the same time the United States, he demanded, should be asked to make known just how far it is willing to go and just how far Congress will permit the United States to go, in aiding Europe.

Russia's satellites will not be fooled by the Kremlin's apparent solicitude for their welfare. Molotov's cliches cannot fill the stomachs of their hungry people, warm them, clothe them, and give them employment.

What Poland and Czechoslovakia are interested in, no less than are Great Britain and France, is a real program of reconstruction.

The same is true in western Europe. The dyed-in-the-wool Communists in France and elsewhere can be expected to support the Russian line wherever it leads. But the fellow travelers may be antagonized by Russian obstructionism.

Molotov knows that too. That is why he has sought new instructions from the Kremlin. He knows that if Russia is saddled with the blame for a complete deadlock at Paris and for the postponement of whittling down on the Marshall plan which has given encouragement to millions of Europeans, it will be increasingly difficult for the Soviet Government to hold its satellites in check. Yet while he cannot afford to reject the Marshall plan outright he cannot, without new instructions from the Kremlin, make any real approach to the British and French views on the subject. It is up to the Kremlin to decide. It is not an easy decision for the Politburo to make.

States and United States School Aid

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Tuesday, July 1 (legislative day of Monday, April 21), 1947

Mr. PEPPER. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "States and United States School Aid," which appeared in the Jacksonville (Fla.) Journal under date of June 20, 1947.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

STATES AND UNITED STATES SCHOOL AID

Of 18 State governors who have replied to a questionnaire circulated by the National Education Association, 16 have stated that they favor Federal financial aid to State schools. We are happy to say that Florida's Gov. Millard F. Caldwell was one of the 16. Said Governor Caldwell:

"I would favor Federal aid to education without Federal control for those States which are financially unable to finance minimum standards."

Other southern States whose governors went on record in favor of Federal aid include Alabama, Arkansas, Georgia, South Carolina, Tennessee, and West Virginia. Virtually all of them stress their opposition to any direct Federal control of State school systems. But by that very emphasis they show their belief that aid without control is possible. This is a telling blow against the myth that the people in the Southern States oppose Federal aid on any terms whatever.

Senate bill 472 has been reported favorably by a subcommittee of the Senate Committee on Labor and Public Welfare. It carries an annual appropriation of $300,000,000 to be allotted to the States on the basis of effort as well as need, and in indirect proportion to State and local ability to finance the State and local public-school systems. Federal control of educational policies in the States is specifically prohibited in the act.

We have heard many pious words from every quarter regarding the plight of the teacher and the shortcomings of our schools. Let us now have some action in the form of passage of this bill.

Rent Control

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. FORAND. Mr. Speaker, under leave already granted me, I include as part of my remarks the following article by Robert L. Norton, which appeared in the Boston (Mass.) Post of June 9, 1947:

CONGRESSIONAL HYPOCRISY AND RENT CONTROL
(By Robert L. Norton)

WASHINGTON, June 8.—In the debate over the 15 percent voluntary increases in rentals, several Senators conceded that failing to sign a lease for their own apartments would subject them to possible eviction by their landlords. This was an admission that the present bill gives the tenant, as a practical matter, no other alternative, except to sign a lease boosting his rent 15 percent in return for a lease extending beyond December 31, 1948.

NO ALTERNATIVE

Entirely apart from the question of whether rent increases and abandonment of controls is justified the fact is that proponents of the present bill are attempting to give renters the impression that they have some say in the matter. This is not the fact. There is nothing voluntary whatsoever. Either the tenant accepts the 15 percent increase and the lease, or else with the expiration of the rental control he is subject to an immediate boost at any figure which the landlord decides upon.

It is sheer hypocrisy to contend otherwise. To quote the forthright Senator TOBEY, of New Hampshire:

BIG BOOST LATER

"It means that the landlord will say, 'Come across and agree, or else.' It will mean that the tenant will get it in the neck by an increase he will not like unless he comes across and agrees to an increase in his rent." This much was tacitly admitted by Senator HAWKES, of New Jersey, leading the fight for the increase and for abolition of rent controls. The Senator said the average tenant would rather strike such a good-faith bargain now than take a chance on a landlord's choice rent boost of 20 to 100 percent next spring.

Beyond doubt the Hawkes' amendment amounts to a 15-percent increase across the board which is what the real-estate lobby here has been fighting for. Any tenant who expects to live in a place after February 29 next year when the Rent Control Act expires must agree to a 15-percent increase in his rent immediately. If he does not agree he is likely to be evicted next winter, or at least his rent will be increased by the landlord to a much higher figure, in order to be sure that he receives the money he would have received if the tenant had voluntarily agreed to a 15-percent increase.

TAKES OFF CONTROLS

An attempt is being made to deceive people into believing that they still have rent control, when in reality there will be no rent control under the pending bill. For one thing, it would extend rent control only until February 29, 1948, a matter of approximately 8 months. There are other provisions in the bill, as for instance that which provides for the decontrol of all residential hotels and tourist camps. According to official estimates a number in excess of 300,000 married couples are now living in hotels, commercial rooming houses, trailers, and the like. Senator TAYLOR, of Idaho, offered evidence to show that when controls were taken off the rents, people who had been living for years in tourist camps were raised 2 to 300 percent.

The national fair-rent committee points out that further threats to tenant security lie in the bill's provisions exempting from controls housing accommodations created by breaking up a single dwelling unit into several smaller rental units. Anxious to obtain the unlimited rent allowed for these exempt units, many landlords will immediately give tenants eviction notices on the ground of alleged necessary remodeling. Many cases of psuedo remodeling are likely to appear.

SPECULATOR'S FIELD DAY

It is also held that the removal of strong eviction controls will undermine what remains of the rent-control program. Both the Senate and the House bills, it is maintained, will permit real-estate speculators to evict tenants from apartment houses by selling stock in phony cooperative building associations. The scheme works this way. The purchase of the stock entitles the buyer to a proprietory lease on a particular apartment from which the tenant thereof can then be evicted.

FALSE BILL OF GOODS

This racket became so bad that the OPA in 1945 was forced to amend its rent regulations to prohibit such evictions except where at least 80 percent of the tenants in an apartment building agreed to buy stock in the cooperative. This did not prevent tenants having a genuine desire to form housing cooperatives from doing so. By the time the OPA adopted this restriction in February, rent controls were seriously threatened in several large cities. Thousands of tenants had become alarmed and demoralized at the prospects of bidders paying outrageous prices for stocks, or being evicted.

The net of the present situation is that it appears Congress is selling the renters of the country a false bill of goods on the pretense that they are getting an even break, which is not the fact under some of the present amendments, and assuming that the bill finally becomes law.

Alaskan Shipping Contracts of Maritime Commission

EXTENSION OF REMARKS
OF

HON. ALVIN F. WEICHEL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, June 27, 1947

Mr. WEICHEL. Mr. Speaker, the Maritime Commission advised by make-believe experts is the classical example of mishandling Government money. As disclosed by the Appropriation Committee and the Comptroller General in the past few days, the Martime Commission again demonstrated what not to do with Government money. The same group seem to do equally well with what not to do with the Alaskans, according to a statement from the good people of Alaska which I include herewith:

STATEMENT ON THE ALASKA SHIPPING DISASTER

In November 1945 when Government operation of commercial vessels was drawing to a close and the ships were to be returned to private operation, the Alaska steamship operators demanded that their rates, already by far the highest of all coastal, intercoastal, and off-shore rates, be increased to 218 percent of the prewar level.

Alaskans, knowing that any increase would be ruinous, went to bat through the Governor, the Delegate, the Attorney General of Alaska, and the Alaska Development Board. They felt that all hope of developing and building up of Alaska was futile if the already excessive and burdensome rates were further increased. So they hired expert legal, accounting, and economic talent which completely riddled the carriers' fantastic estimate. That estimate, after a year's hearings was totally rejected by the Maritime Commission.

Congress meanwhile had interested itself in this national problem—wartime transportation to Alaska—and by joint resolution provided a subsidy for the Alaska shipping trade after its return to private operation. The subsidy included ships to be supplied at a nominal rate, with the insurance and depreciation to be borne by the Federal Government.

The operators, however, despite this generous subsidy, and the rejection of their rate increase demand, proposed to the Maritime Commission that their rates for this subsidized operation be increased 66 percent for freight and 22 percent for passenger above the prewar level. The subsidy is worth about $2,000,000 annually. The demanded increase would amount to another $4,000,000 levied wholly on the people of Alaska. The increases sought were not only excessive and unjustifiable, but grossly discriminatory against Alaskans, with proposed increases of $5 a ton on north-bound cannery supplies and on south-bound canned salmon but of $12 a ton on consumer goods. Thus the canned salmon industry which is chiefly owned in the State of Washington would continue to enjoy the preferential rates which it has hitherto enjoyed, while Alaskans would be charged more than double the increase for the necessities of life. Alaska therefore presented a strong factual brief asking for suspension of these rates until after a hearing. (The last Alaska Legislature meeting early in 1947 had, by a vote of 38 to 1 denounced and rejected the operators' proposal of any rate increase without previous hearing.)

Nevertheless the influence of the operators was sufficiently great that the Maritime Commission denied Alaska a hearing and put these rate increases into effect immediately, May 21. For good measure the Commission granted these Seattle operators' contention that only they would be granted the benefit of the congressional subsidy. No other operators either from Seattle or any other port such as Portland, San Francisco, Los Angeles, or Prince Rupert can qualify.

It was the intent of Congress that this subsidy would help the people of Alaska. As it turns out, by virtue of the Maritime Commission's action, Alaska is more heavily burdened than ever. The new rates are ruinous and the Alaska economy cannot stand them. Thus at one swoop the national policy to develop Alaska is dealt a crippling blow. Alaska has been set back incalculably and cannot move forward unless lower rates are ordered. These increases run directly counter to the President's announced policy of lowering prices since they will drive the already high cost of living in Alaska to further heights. They will inevitably incite strikes for higher wages both in the unstable Seattle shipping trade and in Alaska, thus further reviving the inflationary cycle.

The Federal subsidy and the profits of the rate increases go largely to one man, the principal owner of the two larger of the four subsidized carriers. These are Alaska Steamship Co., in which Mr. Gilbert Skinner is the majority stockholder, and the Northland Transportation Co., in which he and his son own two-thirds of the stock. The other two carriers, Alaska Transportation Co., and Santa Anna Steamship Co., are small and relatively unimportant.

No more crippling blow has been dealt to Alaska and Alaskans in a decade, and Alaska cannot and will not take it lying down.

TERRITORY OF ALASKA,
OFFICE OF ATTORNEY GENERAL,
Juneau, June 25, 1947.

Hon. ALVIN F. WEICHEL,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN WEICHEL: Governor Gruening has asked me to send you a copy of the Attorney General's release on the subject of freight rates to, from, and within Alaska. I am very glad to do so and hope that the material in question will be of interest.

As you know, Congress recently adopted House Joint Resolution 122 authorizing the Maritime Commission to allot Government-owned ships to carriers qualified to operate in the Alaska trade, with the Government to assume the hull risk upon such ships. The object of such indirect subsidy was to tide the Territory over the present postwar period of readjustment. Alaska is now so important to the national interest that its advancement and development is a matter of national concern.

It was thought that such indirect subsidy would enable the carrying out of the Alaska operation without a material increase in freight rates, and it was hoped that some ships would be allotted to a shipping concern operating out of Portland, Oreg., as well as some consideration for Briggs Steamship Co., an American flag company operating between Prince Rupert, British Columbia, and southeastern ports. However, the Maritime Commission not only inserted exclusive clauses in contracts with three Seattle-based carriers, but declined to suspend increased tariff schedules pending outcome of a hearing. The Territory is not only penalized with increased rates which are loaded largely on north-bound freight, making an approximate 50-percent increase on such freight over wartime rates, but is throttled by exorbitant handling charges at Seattle caused by inadequate dock facilities and resultant stand-by time for trucks whose drivers are endeavoring to unload at the dock.

Needless to say, all good Alaskans are trying their best to emancipate the Territory from such handicaps so that it may fulfill its local destiny as well as serve its purpose in the national interest.

Very truly yours,

RALPH J. RIVERS,
Attorney General.

RELEASE BY ATTORNEY GENERAL'S OFFICE RE FREIGHT RATES TO AND FROM ALASKA, MAY 20, 1947

The new tariff schedule covering passenger fares and freight rates to and from Alaska by the Seattle waterborne carriers deserves comment and analysis since the raise will increase revenues to the carriers in excess of $4,000,000 per year and the welfare of the Territory and its people is at stake. No effort should be spared to obtain equitable adjustments and fair play. For purposes of clarity, I wish to point out that there are three issues involved: (1) What level of freight rates should be justly allowed? (2) Are the freight tariffs (without respect to the over-all level of rates) uniform and nondiscriminatory? (3) Are the provisions in contracts entered into by the Maritime Commission with the Seattle carriers, which give said carriers the exclusive benefits of recent congressional legislation, compatible with the public interest?

In a previous release following my return from Washington, D. C., on May 12, I showed that restriction of the indirect Federal subsidy involved, in the form of free ships and hull coverage, exclusively in favor of carriers operating out of Seattle was monopolistic and conducive to inefficiencies and featherbedding practices on the part of operators and labor unions, with a consequent increased cost of shipping to Alaska and adverse to the public welfare. In said release I also indicated that a general 35 percent increase over existing rates, on top of free ships and hull coverage, was an exorbitant increase. To avoid repetition, I will limit this discussion to inequities and discriminations which are inherent in the new tariff schedule. In passing, I might say that the petition filed by the Territory with the Maritime Commission raised all three propositions, thereby forming the basis for a thorough study and analysis by the Commission at the hearing which has been set at Seattle for next September 8.

Regarding discriminations mentioned, I submit as follows:

(a) The new specific rates are prejudicial to year-around Alaska residents and tend not to correct but enhance the inequities which have existed in previous rate structures in said trade.

1. Passenger service to Alaska before the war was costly and at present the cost of such service by Seattle-based shipping companies has increased at a substantially greater rate than the cost of handling freight. However, the new tariff proposes only a 5 percent increase on passenger charges as against an average increase of 43 percent above present rates on freight. Our suggestion that passenger sailings be curtailed to lift the burden of an unsatisfactory and largely outmoded passenger service from the shippers and receivers of goods who are now obliged to pay freight charges based upon passenger losses, has so far been ignored. We contend that passenger fares should have either been raised in the same proportion as freight rates, as such fares strike largely at the itinerants instead of resident Alaskans, or said carriers should discontinue all uneconomical passenger operations except those absolutely necessary, such as for the Gulf of Alaska ports.

2. In the southeastern Alaska trade the carriers have submitted schedules calling for the operation of more vessels than the need justifies. A comparison of the cubic capacity of the combined Northland and Alaska Transportation fleets in 1939 (both of which companies serve only southeastern Alaska) and the fleets which are proposed for said companies under the contracts with the Maritime Commission now enjoyed by said carriers, illustrates the point. Combined vessel capacity in 1939 for reefer cargo (refrigerated cargo) was 121,000 cubic feet and for dry cargo, 661,000 cubic feet. The proposed fleet for these two companies to serve southeastern Alaska under said contracts would make available 1,044,000 cubic feet for refrigerated cargo and 1,033,000 for dry cargo. It may be conceded that reefer traffic to Southeastern Alaska has increased, but it has not increased 800 percent. Dry cargo needs have also increased, but not 50 percent. This is a notable example of over-tonnaging a trade, with resultant increased costs and higher rates than necessary. It is obvious that the carriers in question wish to administer as many ships as possible under the subsidy plan and run up tonnage costs thereunder as a foundation for later obtaining exorbitant rates when the private operators take over entirely on their own accounts.

Under the contracts approved by the Commission, capital costs are virtually eliminated. The Commission will charter all necessary vessels at $1 per year and will assume all risks and hull-insurance costs, both on the Government-owned ships and the few privately owned ships which are involved. It was the intention of Congress in permitting this arrangement to provide for the lowest possible freight charges by limiting the costs which the shippers of freight should bear to the carriers' out-of-pocket costs. On the basis of 1946 operating expense, which does not include the fourth quarter during which the ships were not running, private operation would have resulted in a net loss of $144,000. As to stoppages similar to the 1946 fourth-quarter maritime strike, some improvement could be postulated from the national labor legislation now pending in Congress. Notwithstanding stoppages in 1946, the new rates, had they been in effect, would have caused an increase of revenue during that year in an approximate amount of $4,331,000. Thus, on the basis of the new rates, the carriers would have received from the 1946 operation about $4,000,000 more than necessary for an efficient service. This fact alone would justify our strong objections even though the new rate structure were nondiscriminatory, which it isn't.

(b) Specific items in the new tariff showing discrimination against year-around Alaska residents are as follows:

1. Canned salmon moving from Kodiak to Seattle will pay $12 per ton or $5 more than in 1941, while general freight northbound will pay $27 per ton or $10.50 more than in 1941. No justification has ever been advanced by the carriers for such discrimination. There is no justification. It is simply a case of collusion between the Seattle transportation companies and the canned-salmon industry. The "ease of handling" argument does not explain a rate of $14.60 per ton in favor of seasonal shippers whose servicing requires the year-around capital costs of a freighter to be incurred for a movement extending over slightly more than one-third of the year. Neither does the "value of cargo" argument explain such spread. There are extremely few commodities subject to the general freight tariff which would equal even one-half the present value of canned fish, ton for ton.

(c) Throughout the new tariff the impact of rates is greater for town freight than for cannery freight. Illustrations are as follows:

Cannery items	Amount	Town freight	Amount	Percentage measure of discrimination
Box shooks	$10.40	Shingles	$13	25.0
Cordage, rope	12.00	Wire rope	17	41.7
Canned fish, south-bound	10.80	Dry groceries	15	38.9
Second-hand machinery, south-bound	7.00	Washing machines and typewriters	17	142.9
Labels	12.00	Newsprint	17	41.7
Wire, fish trap	10.00	Fence wire	17	70.0

Attention should be called to the so-called junk rate. This is a discrimination in favor of industries sending highly valuable iron chinks and can-forming machinery to Seattle for repair. Virtually no junk in its conventional meaning moves under this tariff to Seattle.

(d) The proposed rates are not only discriminatory as between commodities but also as between ports, as shown by the following rates between Seattle and the ports named:

	Ketchikan	Juneau	Cordova	Kodiak	Dillingham
Canned fish, south-bound	$10.00	$10.80	$12.00	$12.40	$13.60
Dry groceries, north-bound	12.00	15.00	23.00	25.00	27.00
Cans, fish, collapsed	11.20	12.00	13.20	13.60	15.00
Freight, n. o. s.	14.00	17.00	25.00	27.00	29.00

The proposal seeks $15 more per ton between Seattle and Dillingham than between Seattle and Ketchikan for groceries and n. o. s (not otherwise specified) freight, but only $3.60 more for southbound canned fish and only $3.80 more for unformed tin cans northbound. No such differences can be ascribed to handling costs. If running time explains the need of the spread indicated between Ketchikan and Cordova for town freight, why is there such a small differential between those two ports for cannery items? What justifies for town freight a charge in Kodiak double the charge for cannery freight in that area? What justifies a rate from Dillingham to Seattle for canned fish less than the n. o. s. freight rate from Seattle to Ketchikan? There is no justification; it is simply a case of the outside interests ganging up on Alaskans.

There was little justification for these discriminations before the war. There is absolutely no justification for their continuance and enhancement under the present circumstances, in violation of the spirit of the arrangements which Congress authorized providing subsidies to assure the Territory of steamship service at something less than exhorbitant rates. The carriers are about to resume private operation at the peak of the Alaska season. All the traffic they can carry awaits northbound service. All the economies of full-capacity operation are to be enjoyed. Primarily the business of the carriers is freighting, the cost of which to the carriers has been shown to have increased much less than passenger service since the prewar period.

I will conclude this discussion with a few cost-of-living items covered by the new tariff, as follows:

Percentage increases over 1941 for freight from and to Alaska

Article:	*Seattle to Juneau*
Autos, trucks	80.0
Beer, carbonated beverages	80.2
Building materials	32.7
Cement	73.3
Butter, ice-cream mix, refrigerated	63.6
Freight n. o. s	73.5
Fruits and vegetables, hardy	63.6
Furniture, wooden container, set up	71.4
Groceries	66.7
Lumber, common, not over 32'	77.8
Meat, refrigerated	74.2

Comparable increases are to be found for shipments to other ports.

The foregoing facts and figures so glaringly illustrate the inequities imposed upon Alaskans that you will inquire why the United States Maritime Commission allowed same to go into effect, even temporarily pending the outcome of a hearing. I believe the answer is this: The Seattle carriers months ago threatened that if the Territory, through its intervention, succeeded in suspending their proposed over-all 35-percent increase in rates, they would discontinue operation in the Alaska trade. With promise of some service by Briggs Steamship Co. from Prince Rupert and prospects of some service from Portland, the Territory, acting through the legislature and its administrative officers, challenged the carriers to carry out their threat on the grounds that we would rather suffer severely for a short time in order to achieve a long-range equitable solution of our problem than to be victimized indefinitely at the point of a pistol.

However, the Army and Navy have extensive construction projects in Alaska which are vital to national security and which require adequate shipping service. The Maritime Commission was aware of this, and, in my opinion, a majority of the members of the Commission were intimidated by the threat of a stoppage of service. It was easier to assure uninterrupted continuance of service by victimizing the Territory than to run the risk of being saddled with the responsibility of securing service from other ports. As an appeasement, the Commission, in its order, assured a fair hearing on the merits at the earliest possible date. This date has been set at September 8. In the light of economic study necessary, the time lag between now

and September 8 is not unreasonable. However, the good intentions of the Maritime Commission will be shown only by expediting a fair decision based on said hearing. Dilatory tactics could result in several months going by before the examiner would render a report, and many more months could be allowed to go by before the Commission made its decision. In other words, the Territory is in a position where it could be put off for the entire period of the subsidy operation. Time alone can tell whether Alaska will get just treatment on the merits.

Mr. Speaker, in order that inquiry might be made, I have appointed, from the Committee on Merchant Marine and Fisheries, the gentleman from California [Mr. ALLEN], the gentleman from California [Mr. BRADLEY], the gentleman from Washington [Mr. TOLLEFSON], the gentleman from Washington [Mr. JACKSON], and the gentleman from California [Mr. HAVENNER], with the gentleman from California [Mr. ALLEN] chairman, as a special committee to immediately investigate the dealings of the Maritime Commission covering Alaskan shipping contracts and other shipping relief requested by the people of Alaska.

There Are DP's Here, Too

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, there appeared a timely editorial in the Kenosha Evening Times on June 26 entitled "There Are DP's Here, Too." It raises the important question as to just how we would handle the DP's in case the Stratton bill was passed.

Mr. Speaker, the heart of America goes out to these unfortunate people and we must admit that we have some responsibility to help solve the problem. It would seem, however, that our first obligation is to our own people and that is the tenor of the editorial.

I commend it, Mr. Speaker, to all Members who are interested in the Stratton bill. It follows:

THERE ARE DP'S HERE, TOO

In a meeting here this week, a group of thinking Kenoshans, who realize a world problem exists in Europe's 850,000 displaced persons, met to discuss local participation in a national movement for the formation of citizens' committees to aid the program.

Stimulus to the situation has been given by the fact that the Stratton bill now pending before Congress would provide for the bringing of 100,000 homeless Europeans to this country for each of 4 years until a total of 400,000 of the unfortunates abroad have been assimilated.

Opinion on the need of European DP's is practically unanimous on the point that something must be done and that the 850,000 persons who might well become paupers dependent upon the well-meaning nations of the world for their livelihood and a place to live are a cancerous plot on civilization.

Authorities have pointed out that the displaced persons, because of their discontent and the problems that they create as a large body of population unattached and unwanted, might easily become the source of another major world conflict.

It is a fact and a recognized one that all such persons should be aided in some way.

With that fact established, the meeting of Kenoshans was held to crystallize local feeling as to the manner in which the problem should be handled. In the meeting, two directly opposed views were revealed and a goodly number of middle grounders were disclosed.

Few laymen in the situation know what they want to do for the DP's.

A few who are well-meaning and in all probability have the best interests of those who are downtrodden at heart want the passage of the Stratton bill and the alien homeless admitted.

Representatives of several veterans' organizations of the city stood united in opposition to that plan for the control of the situation.

They point out that the war was fought on far-flung battlefronts not to assure the "four freedoms" in the United States, because those freedoms were already available here. The war, they declare, was fought to assure every man in the world the right of freedoms that are a part of the dignity of the individual. If those rights are not available to DP's of Europe, then the peace has not yet been formed, and if it is already recognized that the disinherited persons of the European nations can never return to their homelands without fear of reprisal and persecution, then it is already conceded that the peace has been lost.

Former servicemen feel that the diplomats of the world must meet the displaced persons situation in an honest and straightforward manner and that provisions for the well-being of those unfortunates must be made in their own homeland.

It is pointed out here that the war did not leave this Nation unscathed in spite of the fact that shooting was elsewhere. The United States is licking wounds of war that will take many years of economic endeavor to overcome.

Opponents to the plan to bring DP's to America point out that there is a housing shortage over the Nation that approaches the level of a scandal. Veterans who are home from the war and seeking a place for their families and employment for themselves have found jobs but in many instances have not found homes.

Kenosha itself has a DP problem. Homeless families here are living in the city and county jails, in emergency quarters of every kind and many are doubled up in an uncomfortably cramped situation. In the families living on an emergency basis in public buildings alone there are 59 children who are without proper home conditions.

The Kenosha situation is not unique. The housing shortage is general throughout the country. Shall we then bring in 400,000 more persons for housing here and for a further strain of the national resources?

Kenosha Post, No. 21, American Legion, Opposed to Stratton Bill Under Present Conditions

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. SMITH of Wisconsin. Mr. Speaker, H. R. 2910, known as the Stratton bill, has stirred up considerable controversy, for and against. In the city of Kenosha, Wis., a public meeting was held by prominent citizens who are interested in the problem of displaced persons. From all reports the group attending was fairly representative of a cross section of the citizenry of that city.

Subsequent to this meeting Commander Carl Gardner of Kenosha Post, No. 21, American Legion, issued a statement setting forth the opinion of his post on this legislation. It is clear and unequivocal. And Mr. Speaker, under leave previously granted, I include, as an extension of my remarks, the statement of Mr. Gardner:

LEGION STAND ON IMMIGRATION QUESTION GIVEN

Following a stormy session of the citizens' committee on displaced persons last night in which the controversial question of immigration laws was placed before Kenoshans, an official statement regarding the position of the American Legion in the dispute was released today by Carl M. Gardner, commander of Post 21.

The theme of the statement of the Kenosha post was, "When we have properly taken care of our own, then we can and should help the strangers at our door." Citing figures from the CONGRESSIONAL RECORD and other official sources, the Legion commander pointed out the possible detrimental effects of lowering immigration bars at the present time.

CITES LEGISLATION

"Residents of this community," the statement pointed out, "are considering a proposal to support a House resolution known as the Stratton bill, H. R. 2910. The purpose of this bill is to permit displaced persons in Germany, Austria, and Italy including relatives of citizens or members of our armed forces to be admitted to the United States.

"The American Legion is unalterably opposed to any change in our immigration laws. At the Chicago national convention, September 1944, the following was approved as a resolution: 'That all immigration be barred from the United States from the date of cessation of hostilities of the present war until such time as, (a) unemployment in this country shall have dropped to less than 1,000,000; (b) all veterans shall have been afforded the opportunity of gainful employment.'"

SEES HOUSING PROBLEM

"At our San Francisco convention in September 1946 a resolution was approved requesting the Congress or the President to take steps to restrict all quota immigration due to the severe housing shortage. This condition of housing has not improved and there is but faint hope that it will be corrected in the immediate future. The Legion is striving to correct this deplorable condition. There are today possibly as many as 3,500,000 of our people who are half-housed, ill-housed, or actually unhoused. Our veterans are in the unfortunate majority. At the present time under the guidance of the chamber of commerce, and the active assistance of all veterans' organizations of this city, a house-to-house survey is being conducted locally to alleviate this condition in Kenosha.

"As of this date there are 8 families with a total of 59 children without a home in Kenosha. Two of the families are residing in the city and county jail. A total of 42 children are living in the Gillette School and other city buildings.

"Proponents of this legislation are asking that we take our 'fair share' of displaced persons. They have set a starting figure at 400,000. Department of labor figures show that 2,330,000 Americans were out of work and looking for jobs of March 31 of this year, and of these 850,000 were veterans.

The influx of the proposed 400,000 will only add to this condition and it could well result in economic chaos.

"Legal immigrants are entering this country at the rate of 154,000 a year. That amounts to 425 per day. However, for every legal immigrant there are at least 10 illegal immigrants. Examples of this type of skullduggery can be cited. Seamen, many of them in name only, are jumping ship in American ports.

"Foreigners arriving in transit to other lands make a permanent 'sit' right here. Aliens dropping in on visitors visas, manage to get lost in our wide open spaces. Overseas students come here to study and make it life jobs. How many are crossing the Mexican and Canadian borders and over the Caribbean waters is unknown. We are determined to see that this abuse is stopped.

"Gerhard Eisler, alias Hans Berger, the No. 1 Communist in the United States, is product of this immigration flow, legal and illegal. Former Ambassador Bullitt testifying recently before the Committee on Un-American Activities said that 60 percent of the Communists in this country are immigrants."

NEEDED IN EUROPE

"For those who argue that immigrants would be an asset now to our economy, the American Legion says that if they are valuable workers and producers, as claimed, then no country needs them as much as their own. Half of Europe is in ruins. Skilled workers and men with trained minds are sorely needed for the reconstruction of war-devastated nations.

"Immigration means competition for American veterans and other citizens, for jobs, housing, and consumer goods.

"When we have properly taken care of our own, then we can and we should help the strangers at our door."

A Social-Science Comprehensive

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Tuesday, July 1 (legislative day of Monday, April 21), 1947

Mr. PEPPER. Mr. President, I commend to all Senators, since we are interested in the field of political science, the survey of a course given at the University of Florida, entitled "A Social-Science Comprehensive," by the Honorable William G. Carleton. I ask permission to insert it in the Appendix of the RECORD.

There being no objection, the survey was ordered to be printed in the RECORD, as follows:

A SOCIAL-SCIENCE COMPREHENSIVE

(By William G. Carleton)

A REPORT OF 12 YEARS' USE OF THIS COURSE AT THE UNIVERSITY OF FLORIDA

For 12 years now, the University of Florida has had a genuine social-science orientation course conceived in the philosophy of general education. It is required of all entering students, extends over the entire first year, meets four times a week, and gives 8 hours of credit for the year. Perhaps no institution of higher learning has had as much experience with such a course, with the exception of the University of Chicago, and our experience at Florida has been more significant for the ordinary college or university because our students are average students while those of the University of Chicago represent a selected group.

There are over 2,000 students now enrolled in our course, more than 60 sections are in operation, and about 25 instructors, some full time and others sharing time with upper-division courses, are engaged in teaching it. Scarcely a day passes that we do not receive inquiries about our course, requests for our syllabus and our tests, and offers to publish our syllabus. Thus far, we have resisted all offers of publication, for even at this late date we do not feel our task completed. Some areas of our syllabus are, perhaps, in almost definitive form, but in other areas we are still experimenting, questioning, altering, pruning, and expanding. As a result of our experiences of more than a decade, we have come to some rather definite conclusions about the nature of a general social-science course and what areas should and should not be emphasized.

Our course is composed of subject matter drawn from history, political science, economics, and sociology. These subjects are never studied per se, but material from all these areas is drawn on and combined in such a way as to analyze the significant economic, social, and political trends in the world, particularly in the United States, today.

The course differs from the conventional introductory course in history, for it demands of history a greater degree of relevance to the significant trends of the present. Conventional historians would feel compelled, for the sake of historical continuity and completeness, to include much that it regards as remote and relatively unimportant. It differs from the conventional introductory course in economics, since our emphasis is on institutional, rather than on theoretical or classical, economics. It differs from the conventional course in political science, because our instructors emphasize functional politics rather than the mere machinery and structure of government. Our course differs from the conventional introductory course in sociology in that it contains much less social theory and gives much less attention to such specific questions as divorce, crime, ameliorative institutions, and so forth, on the ground that such questions are marginal and peripheral, rather than central. In setting up criteria for an 8-hour comprehensive course in the social sciences, however, we naturally do not claim to give the student all the values he would get if he were to take additional work in history or political science or economics or sociology.

The University of Florida course differs somewhat from other comprehensive courses now being developed in other colleges and universities. In many institutions the comprehensive course consists of a broad survey of the history of civilization. We have some of the same objections to such a course that we have to the conventional introductory course in history. We believe that a survey of the history of civilization goes too far afield and contains too much that is relatively remote from the interests of the present day.

In some other institutions, the comprehensive course consists of a study of specific social and economic problems—the race problem, crime, marriage, divorce, labor, taxation, public finance, propaganda, international relations, and so forth. We object to a problem course on the grounds that it does not differentiate sufficiently between marginal problems and central problems, gives too much emphasis to the current by failing to provide enough historical background, runs the danger of giving the impression that society is static and its problems isolated, does not sufficiently reveal the dynamic, fluid, interdependent nature of society. In our opinion, a course which gives as much attention to propaganda as it does to the basic economic and social forces behind the New Deal or socialism or communism or fascism is guilty of a grotesque distortion of values. Moreover, whether consciously or unconsciously, a problem course is almost invariably nationalistic in outlook. Most of the problems treated are American problems, and they are treated almost exclusively from the American point of view. Incredible as it may seem, some of the problem courses of today do not even so much as make mention of fascism or socialism or communism. In fact, an examination of the indexes of some of the textbooks used in problem courses is most revealing. The parochial nature of these courses is not cured by tacking on a few chapters on foreign relations. These are almost invariably discussed with American preconceptions, sentiments, and biases. We Americans must learn to cooperate with the world as it is and not as we would wish it to be, and courses which treat foreign relations solely from the American point of view will not help us to make this adjustment.

Our course stands somewhere between a history of civilization course and a problem course. It is more specific, more concrete, more contemporary than a general survey of the history of civilization. On the other hand, it is broader than a mere problem course and makes much more use of historical material for purposes of background, causation, and integration. To repeat, our course is a study of the significant and central trends of the twentieth century, and an analysis of their nature, where they come from, where they seem to be going, how they are interconnected.

We are often asked, "Upon what basis do you determine what trends are important enough to be designated as the important trends of this century? What test do you use in selecting and discarding material?" Our test is a pragmatic one. It will surprise many academicians. It is this: We include and emphasize those materials which in our opinion would enable the student to classify, evaluate, and understand what Walter Lippmann, Dorothy Thompson, Samuel Grafton, and other columnists and publicists are talking about. If the time ever comes when Walter Lippmann and Dorothy Thompson devote most of their attention to such problems as crime, juvenile delinquency, and divorce, then we shall do so. But so long as our top-flight publicists emphasize business cycles, depressions, growing class conflict, the drive toward statism, war and peace, international organization—in short, so long as they emphasize the revolutionary forces of this mid-twentieth century, the struggle of classes and nations for position and power—then we shall do so. We feel that their sense of what is significant and important is essentially correct. For instance, we believe the depression of the thirties and the recent war have had a greater impact on the family than have all the combined problems usually studied as family problems.

The significant trends and questions of our century upon which the University of Florida course concentrates are:

1. Increasing material comforts and higher standards of living brought about in the Machine Age, and also, paradoxically enough, the increasing insecurity felt by all classes in this Machine Age.

2. The various answers to this problem of insecurity given by important schools of thought today—conservative capitalism, New Dealism, socialism, communism, fascism.

3. Why government has steadily increased its functions and become more centralized during the past 50 years.

4. What have been, and what are, the results of this increasing governmental centralization on civil liberties, representative government, democracy?

5. To what extent have the two great wars and the extreme tensions in international relations characteristic of our century been

produced by the feeling of insecurity at home and the failure to solve the problems created by the Machine Age?

These trends and questions are treated again and again and approached in various ways and from different points of view. How we actually make our approach may be seen from the following outline which includes most of the topics and units studied in the course:

1. The nature of culture, how culture changes, and theories of cultural changes.
2. How modern capitalism arose in western Europe from feudal and guild beginnings.
3. The rise of nationalism in western Europe.
4. The development of representative institutions in Britain and western Europe. How representative institutions were transferred to America. The development of representative institutions in the United States.
5. The industrial revolution in Great Britain.
6. The spread of the industrial revolution outside Great Britain. The development of the industrial revolution in France, Germany, the United States, Japan, and the Soviet Union.
7. Population trends and urbanization since the industrial revolution.
8. The factory system, specialization, large-scale and mass production, modern industrial capacity to produce.
9. The business revolution that came out of the industrial revolution: the corporation and business consolidation.
10. Free enterprise and monopoly.
11. Concentration of ownership and changing methods of control; methods of minority control in business.
12. The business revolution and agriculture.
13. The business revolution and the consumer.
14. The business cycle.
15. The distribution of wealth and income.
16. The business revolution and changing classes: The decline of the old middle class, the rise of the new middle class, the growth of labor and labor organizations.
17. Alternative solutions of the problem of an industrial economic order: A positive program of laissez faire, controlled capitalism, the democratic service state, socialism, communism, fascism.
18. The rise of political democracy.
19. How democracy functions through political parties.
20. The trend toward centralization in government.
21. Government and industry.
22. Government and financial agencies.
23. Government and labor.
24. Government and agriculture.
25. Government and social security.
26. The trend toward integration in government: the problems of modern administration.
27. The trend toward executive aggression.
28. Civil liberties.
29. The crisis in democracy.
30. Modern nationalism.
31. Imperialism and national conflict.
32. The European balance of power and the world balance of power; the United States and the balance of power.
33. Socialist and Communist revolutions in Europe; Fascist counterrevolutions; the Second World War.
34. The revolt against imperialism in Asia.
35. Postwar political trends in Europe.
36. Problems of reconversion and economic reconstruction.
37. World organization to keep the peace.
38. The future in international relations—world organization or the balance of power?

Many think that this is a rather formidable order for freshmen. We admit this. It is formidable. When we began this course and attempted to fit it within the framework of a program of general education, there were those who predicted that we would err on the side of superficiality. Old-fashioned educators prophesied we would "water down" education and give students vague generalizations, catchwords, canned conclusions, catechetical answers, pap. This criticism is heard no more. Mental wrestling with the baffling problems of the twentieth century, presented against the background of rich factual material, can be made as intellectually respectable as the old and traditional disciplines and manyfold more significant, relevant, useful. Indeed, many of our students now find that courses in the upper division are thin and anticlimactic by way of comparison. Mere mark seekers, those who expect to get by as the result of getting lessons from day to day and making an assiduous display of the right attitude, are frightened by a course like this. Not only is the subject-matter intrinsically fertile, but the teacher cannot be apple-polished into giving a good mark, because marks are set on the basis of achievement made in comprehensive examinations centrally administered. This has proved a Waterloo for many of our promising athletes; and many public-school teachers, attending the University of Florida summer session and accustomed to a system where daily lessons and attitude count, show a tendency to shy away from our course.

As it has turned out, then, if we have erred at all, we have erred in the direction of making the course too difficult rather than too easy. Few believe, however, that it is really too difficult. Real achievement is high. Marks are based upon scores and not upon percentiles. The rate of failure has steadily declined. In the beginning, failures were sometimes as high as 15 or 20 percent. Now failures rarely exceed 5 percent and, with the influx of the serious-minded and mature veteran student, they have declined to 2 percent and, in a single instance, to 1 percent. Veterans, more mature and experienced in the ways of the real world, naturally take to this course, as do those who genuinely want to understand this complicated world in which we live. There is no doubt of the impact of this course on students' thinking. Students gather in knots after the lectures to debate and argue. They spontaneously write themes in other courses about the questions raised in this one. Instructors in the upper division report that students are no longer satisfied with mere facts; they demand concepts, ideas, generalizations, points of view. No doubt, some students go too far in this direction and demand patterns of thought where none can honestly be drawn from the facts. During the war, many of our former students, in the armed services in all parts of the world, wrote back to tell us how much the course had aided them in clarifying their understanding of the world situation and making sense of the war. We have many such letters.

The heart of the course is to be found in the syllabus prepared by the staff, but assigned and recommended readings are made in a variety of books representing all points of view. The open shelves in the library devoted to our readings contain copies of almost every college textbook in the social sciences. But we do not stress textbooks. In addition to textbooks, we have numerous copies of such books as the Economic Basis of Politics, by Beard; the Modern Corporation and Private Property, by Berle and Means; the End of Economic Man, by Drucker; the Managerial Revolution, by Burnham; the Road to Serfdom, by Hayek; Reflections on the Revolution of Our Time, by Laski; the Good Society, by Walter Lippmann; and many others. This list is merely representative; we have multiple copies of literally scores of such books. These, and not textbooks, are the sort of books we encourage our students to read.

At the present time, each student enrolled in the course goes to his discussion class 3 days a week and to a large lecture section once a week. Lecture sections contain from 300 to 500 students. We have done considerable experimenting with the lecture-discussion method. In the beginning we had one lecture for every discussion period. This resulted in too many detailed and factual lectures and in insufficient time for discussion. Then, for a time, we abolished the lectures entirely and had only discussion classes. This, too, resulted in certain losses. We missed the sweeping vistas afforded by good interpretative lectures. Since the student did not come into contact with members of the staff other than his own discussion instructor, he missed the play and clash of personalities, the different points of view typified by the various lecturers. The present system of one lecture and three discussion periods seems best. The lectures always cover enough units to assure their being broad and interpretative. Students again see in action almost all the best-known and most dynamic members of the staff. Instructors of the various discussion classes are kept on their mettle; they feel themselves in intellectual competition with the lecturers.

Possibly one word of caution is in order here: There is nothing so damaging to morale as a poor lecture. Members of the staff who do not lecture effectively should not be asked to lecture at all, even though some susceptibilities are wounded thereby. The vitality of the course should never be allowed to suffer merely to bolster the supposed prestige of staff members.

Examinations are given each month and at the end of each semester. These examinations are objective, prepared by the staff, and centrally administered by the university board of examiners. One of our greatest difficulties has been in finding staff members who can write, and who like to write, pertinent objective questions. We have such instructors, but they are rare. The tendency of the average instructor is to write questions which are either too narrow and factual or too broad and obvious. Our aim in any test is to use a large number of questions which are broadly interpretative but which call for answers that require a fund of information.

Each instructor is free to have as many essay tests and as much other written work in his discussion sections as he may desire. However, no satisfactory way has been found of computing this written work in the final mark, and, up to this time, probably not enough written work is required of the student. To encourage all the written work desirable would require a much larger staff and much smaller classes than most institutions today can afford.

Certain difficulties and potential dangers inhere in any comprehensive course in the social sciences centrally directed and administered. Let us examine some of these.

One is the difficulty of securing competent instructors. Instructors must be thoroughly trained in at least one of the social sciences and must have a broad interest in, and some familiarity with, all the social sciences. They must be broadly gaged and equally at home in factual and interpretative material. They should have the thoroughness often associated with pedants, but they must not be pedants. They should have the facility often associated with superficiality, but they must not be superficial. They must, above all, be good teachers and genuinely interested in teaching. In our experience, good teachers have come from each of the social sciences, but we have discovered that sensitivity to social and political movements, the feel for trends, is to be found a little oftener, perhaps, in the historian than in men drawn from the other social sciences. We have experienced our greatest difficulty in finding good institutional economists; too many economists want to be classicists and theoreticians. Moreover, we have discovered that men who like to philosophize about educa-

tion and to write about teaching goals, instructional objectives, and classroom techniques too often do not know how to apply their theories to actual teaching conditions. The proof of the pudding is in the eating; effective execution is in the doing; one ounce of practical teaching is worth a pound of theory. Our best teachers, without a single exception, have been those primarily interested in content and subject matter and only secondarily interested in pedagogical devices. Also, general education should be wary of the "junior college" type of teacher. A man who does not know enough to teach in the upper division has no business in the lower division. Teaching comprehensive courses requires more information, more breadth, more insight, and more real wisdom than is generally required in the average upper-division course.

A potential danger involved in comprehensive social-science courses such as ours at the University of Florida is that the course may emphasize concepts and trends too much, that it may become too pat and even doctrinaire. Indoctrination must be avoided like the very plague, and it can be, by insisting that the course be rich in factual material, by appointing to the teaching staff men of various and even conflicting points of view, and by seeing that readings are widely representative of different schools of thought.

The greatest difficulty in teaching a comprehensive course in the social sciences consists in the subject matter itself. We cannot escape the very nature of our own materials. We cannot run away from the staggering problems of our century. In the social sciences we are dealing with vested interests and human emotions. We are dealing with economics, in which men fight over wealth. We are dealing with politics, in which men fight over power. Teaching the social sciences will always be an adventurous and a dangerous business, but it is especially so in this revolutionary century in which we live. After all we social scientists did not produce the troubled world of this century; we are only trying to account for it. In spite of the difficulties and the dangers, we specialists have a positive duty to help discover the basic trends of our time, to analyze them, to explain them.

The dangers inherent in raising the vital questions of our age are increased tenfold when these questions are raised in 60 different classrooms by 25 instructors—all at the same time. Timorous administrators may be deterred by this ever-present threat to a college's public relations, but real educators will be challenged and stimulated thereby.

The Retirement of Dean Acheson, a Distinguished and Outstanding Public Servant

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, on yesterday, June 30, Under Secretary of State, Dean Acheson, left the official service of the Government of the United States. I feel a deep sense of regret that this extremely capable and courteous public official is leaving us, but I am hopeful that we will continue to have the benefit of his sound and understanding counsel. That his going into private business will be a distinct loss to us, goes without saying. No official, in my 5 years in Congress, has been so courteous and sincere; no public official will be missed more.

Dean Acheson and I have not always agreed on policy, but we have been able to understand each other's point of view. He has fostered and perpetuated a close contact with the Congress and he has given of his great understanding unstintingly. A distinguished American, a great citizen, a believer in human rights are the attributes which have endeared him to all who knew him. I sincerely hope he, with his family, will be able to enjoy the rest he has so justly earned. I hope, also, in the difficult days ahead, that we will avail ourselves of his knowledge because I know, as always, that he will be willing to contribute to our Government his great ability toward the solving of our problems.

I should like to insert at this point in my remarks the text of a Washington Post article detailing his last day in Government service and the awarding to him of the Medal of Merit. No one has ever deserved this honor more because Dean Acheson has been, in the words of the citation, "One of the Architects of Victory and of the Struggle for Peace."

ACHESON GIVEN MEDAL OF MERIT AS HE ENDS FEDERAL SERVICE

(By Ferdinand Kuhn, Jr.)

Under Secretary of State Dean Acheson stepped back into private life yesterday with a Medal of Merit from President Truman and extraordinary tributes from all sections of the Government.

His retirement, taken at his own request for financial reasons, came after 6½ years in high office at the State Department. For many months of that time he had served as Acting Secretary while Secretaries Byrnes and Marshall were away at conferences abroad.

His Medal of Merit came as a surprise on his last day in public office. He was summoned to the White House shortly after noon to find Mrs. Acheson, Secretary Marshall, former Secretary Byrnes, and a group of official and personal friends waiting for him.

PRESIDENT READS CITATION

The citation read by the President commended him for "outstanding services to the United States." It summed up his recent career in these words:

"Mr. Acheson, as a private citizen in 1940, was among those who first saw clearly the Fascist threat to our national existence. He exerted his distinguished advocacy to rally his fellow citizens in favor of the delivery of American destroyers to beleaguered Britain.

"As Assistant Secretary of State from February 1, 1941, to August 16, 1945, and as Under Secretary of State until today, he has been one of the architects of victory and of the struggle for peace.

"In his relations with the Congress Mr. Acheson fostered a responsive relationship between the executive and legislative branches of the Government in the field of foreign affairs; and he brought to the councils of Government a long view and a genius for bold design typified by the Acheson-Lilienthal plan for international control of atomic energy."

HONORED BY CABINET LUNCHEON

Farewell tributes unusual in the Government occupied his last day at the Department. The Cabinet gave a luncheon in his honor after the medal ceremony at the White House.

In the afternoon, ranking officials at the Department trooped into the Under Secretary's high-ceiling office with an inscribed water carafe and tray as a good-by gift. Later there was open house in his office so that other officials and stenographers could shake hands with him and give him their good wishes.

In the evening Secretary Marshall gave him a farewell dinner at the Mayflower.

Official business also crowded into the last day's schedule. In the morning Acheson met for almost an hour and a half with the so-called "9:30 group" of top officials with whom he had met morning after morning during critical months and years in the Department.

CONFERS WITH CONNALLY

What was described as "routine business" took him to Capitol Hill in the afternoon for a talk with Senator TOM CONNALLY, ranking minority member of the Foreign Relations Committee. Late in the afternoon he had a visit from the Belgian Ambassador, Baron Silvercruys.

Acheson plans to spend a month at his farm at Sandy Springs, Md., and then have vacation in the Canadian Rockies before resuming private law practice with the Washington firm of Covington, Berling, Rublee, Acheson & Shorb.

His successor, Robert A. Lovett, New York banker and former Assistant Secretary of War for Air, will be sworn into office today as Under Secretary. Former Ambassador Norman Armour, who will be Assistant Secretary in charge of all four geographic offices at the Department, will also be sworn in today.

Prices of Rationed Articles in Russia

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. NORBLAD. Mr. Speaker, to those in our country who try to glorify conditions inside Russia, the following clipping from the current issue of United States News would be very interesting reading:

Just to show you the degree of strain in Russia, using official prices for rationed goods, a Russian worker can buy this with a week's income:

Of bread, a Russian worker can buy 22 loaves with a full week's income. Bread for the family may take almost all of his income. An average United States worker could buy 394 1-pound loaves of bread to the Russian's 22.

Of milk, a Russian worker can buy 7.55 quarts with a week's income. A United States worker can buy 276 quarts of milk with his week's income.

Of sugar, a Russian worker can buy 16.9 pounds with a full week's income. A United States worker can buy 503.7 pounds with his week's pay.

A suit of clothes of undisclosed quality costs a Russian 7 weeks' pay. A United States worker can buy a $50, high-quality suit for 1 week's pay.

A pair of shoes costs a Russian about 3 week's pay. A United States worker can buy six or eight pairs of shoes with 1 week's pay.

Actually, the Russian cannot even make his pay stretch as far as these figures suggest because there are rationed goods available for only 40 percent of his pay. He must pay unofficial prices, about four times as high as official prices, when he spends the remaining 60 percent of his income.

Workers in Russia are about half as well off as in prewar, when they had an extremely low living standard. United States workers are better off than in prewar.

Motion Picture Duel in the Sun

EXTENSION OF REMARKS
OF
HON. DONALD L. JACKSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter:

SOCIETY OF INDEPENDENT
MOTION PICTURE PRODUCERS,
Beverly Hills, Calif., June 25, 1947.

Hon. DONALD L. JACKSON,
House Office Building, Washington, D. C.

DEAR MR. JACKSON: My attention has been directed to the remarks of Congressman RANKIN on the subject of the motion picture, Duel in the Sun, as reported in the CONGRESSIONAL RECORD under date of June 19, 1947.

I feel Mr. RANKIN has done this motion picture and Mr. Selznick, its producer, a grave injustice, and, as president of the Society of Independent Motion Picture Producers of America, each of whose members feels as I do, I wish strongly to protest this injustice. I feel further that it is fitting that you, a fellow southern Californian, who has had an opportunity over a long period not only to observe but to appraise the sincerity, integrity, and responsibility with which Mr. Selznick and his colleagues approach the production of motion pictures, should gainsay Mr. RANKIN, for the RECORD.

Mr. Selznick is conceded to be one of the most outstanding and distinguished producers in the motion-picture business. He has a world-wide reputation, gained over many years, through his responsible and dignified effort as the producer of Gone With the Wind, Rebecca, Adventures of Tom Sawyer, David Copperfield, Tale of Two Cities, Dinner at Eight, Little Women, Little Lord Fauntleroy, Bill of Divorcement, A Star Is Born, and Intermezzo, as well as many other distinguished motion pictures.

For the record let me state that at the outset, as Mr. Selznick approached the production of Duel in the Sun, he had the assurance of the censorship division of the Motion Picture Producers Association (which is administered by Joseph I. Breen, under the leadership of Eric Johnston) that in producing Duel in the Sun he would be making a motion picture acceptable to Mr. Breen's office and fully in accordance with the motion-picture code, which for many years has been the official objective standard, compliance with which has heretofore justified a producer in believing that he moved with propriety and safety.

During the progress of the production of Duel in the Sun, Mr. Selznick continuously solicited the aid, as well as the advice and counsel of that office, and upon the completion of the picture received the certificate of approval of that office.

Thereafter, following the customary and almost traditional procedure, this motion picture was shown by Mr. Selznick to the Legion of Decency, which accorded it a B rating, which is the same rating as was received by the motion pictures Blue Skies, The Best Years of Our Lives, The Sign of the Cross, and many other outstanding and distinguished pictures of recent years.

The picture subsequently was submitted to the national board of review, and passed by that board, then to the New York State board of review, and in turn to the official censors of Massachusetts, Pennsylvania, Maryland, Ohio, Kansas, and Virginia, and was passed. It also has been approved and passed by many cities which has special censor bodies, including Boston, Atlanta, Detroit, Milwaukee, Chicago, and Portland, and it is to be noted that where any of these bodies made a reasonable suggestion for a cut or deletion it was entertained and followed by Mr. Selznick. In the whole United States only the city of Memphis, Tenn., saw fit not to pass it.

If Congressman RANKIN had taken the time to ascertain the facts before making so unfair a charge on Duel in the Sun and, consequently, on the character and reputation of Mr. Selznick, he would have found that Mr. Selznick approached the project of this production in good faith, and that throughout its production and release he has comported himself with propriety, having acted not only in accordance with the tenets of the code of the so-called Eric Johnston office (which is otherwise known as the Motion Picture Producers Association), but additionally, accepted and adopted the standards of all other duly constituted and responsible State, municipal, and religious censor bodies.

I trust that you will find an occasion to state for the record on the floor of the House the facts of this case in an endeavor to obviate the wrong done to Mr. Selznick and to his production, Duel in the Sun.

Sincerely,
DONALD M. NELSON, *President.*

Stop Oil and Steel Exports to Russia

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. VURSELL. Mr. Speaker, before this Congress goes home it is my opinion that we should pass the bill introduced by Representative WEICHEL, of Ohio, in an effort to conserve our petroleum and its products in this country against exportation to foreign countries, particularly to Russia. Even though you extend the power of the President to control this exportation of the oil and oil products for national defense and for the use of our people you cannot be certain that the power of the act will be carried out.

Mr. Speaker, may I point out that since January 1, 1946, while the President had this authority and power, the administration permitted the exportation of 191,000,000 barrels of gasoline and petroleum products? May I further point out that between January 1, 1947, and May 1, 1947, the administration has permitted the exportation of 600,000 barrels of gasoline and petroleum to Russia from the California coast? That vessels are being loaded and are there now for the continuance of the loading of this scarce product when the Standard Oil Co. of Indiana is now rationing its products in the Middle West.

Mr. Speaker, in the interest of maintaining sufficient gasoline and power for our farmers for greater production for food for our people and the world, and in order that we may have sufficient fuel oil to heat the homes of the people in this country, I believe the Weichel bill should be passed, which will prohibit the exportation of petroleum products unless it has been certified by the Secretary of Commerce and the Secretary of the Navy that such exportation can be made without endangering national defense or restricting the use of such petroleum products which are needed in the economy of this country.

Mr. Speaker, may I go further and say that we should stop the exportation of pipe for use in the production of oil to any country because we need more pipe for the production of oil in this country than it is possible for the producers to obtain. One of the reasons for the shortage of petroleum products which may cause rationing on a wide scale is the lack of steel tank cars for the transportation and for steel for oil-carrying pipe lines and steel for the casing of new wells. Oil is an absolute necessity for national defense and for the economy of our Nation and this administration should cooperate in every way possible with the Congress in an effort for greater production on the home front and less exportation of these products to other countries.

We should pass the Weichel bill to further tighten up and restrict the exportation of petroleum products. We should stop now all exportation of oil and oil products and all steel to Russia. Russia should not on her past record be furnished these products. They are vital to our national defense and to the welfare of our own people.

The Capital of the World Greets Its Older Citizens

EXTENSION OF REMARKS
OF
HON. JOHN PHILLIPS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. PHILLIPS of California. Mr. Speaker, for 4 days last week, Washington had the pleasure of entertaining the elder citizens of many of the States. It was the annual convention of the advocates of what is known as the Townsend plan, or annuity plan for the older citizens. Those Members of the Congress who have taken the time to study the proposals contained in it, are quite convinced the plan contains elements or principles which link it automatically to periods of prosperity or recession, and that such a program, while directly helping the aged, would at the same time improve the economic health of the Nation.

Many Members of the Congress attended the convention meetings, or spoke on the convention program. I have been requested to ask leave to put in the RECORD the few remarks I made the opening night. Under leave to extend my remarks I include my comments at that time:

It is a pleasure to meet with you this evening. It is an honor to be asked to take part in your program. This is the evening of the first day of your national convention; a meeting of men and women from all parts of the United States who believe that the economic welfare of the elder citizens of this great country has a direct relationship to the economic health of the Nation itself. It is a pleasure to have Dr. Francis E. Townsend with us, here in Washington. You come from the North and the

South and from the East and from the West and I am glad to see, looking over the room this evening, evidences that many of you come from my own State—California.

You who do not have the privilege of coming from California will pardon those of us who do if we seem to lack a little reticence when we speak of California, or of its people, or its climate, or its progressiveness on the subjects in which you are directly interested.

I am one of California's 23 Representatives in the Congress. I come from the Twenty-second District of California, which comprises the three counties—Orange, Riverside, and Imperial, all of which have been interested from the start in the Townsend movement. Another reapportionment will give us in Congress, in 1953, six or seven more Representatives than we have now. Every month, since the war, 20,000 new people are crossing the State line, to live in California. Twelve thousand of these are veterans of World War II. The problems of employment, and of social security, are not academic problems in my State; they are very real problems.

California has always been a leader in matters of the sort in which you are interested. We believe that increasing pensions, or aid, for older citizens are economically sound. We have increased the monthly amounts as the years have gone by. We have provided for increasing aid for the blind and for the deaf. We have tried to make it possible for people to take care of themselves. We prefer to have people live in homes, rather than in institutions, and we want them, as long as possible, to take an interest and an active part in the economic and the social life of the community. For years, before coming to the Congress, I was the chairman of the committee in the California Senate before which all such bills were heard, and I have had a personal part in many of the progressive steps which California has taken.

I said, something over a year ago, when I appeared on your behalf before the Committee on Ways and Means of the Congress, that I could remember a time, and it did not seem to me to be a very long time ago, when the subject of annuities for the older citizens of the United States was something very new. It was new when I was in college in Pennsylvania. I wrote an article, supporting the idea of pensions for older citizens. The generation before mine had inherited a custom by which the older members of families were cared for by the children, or perhaps they went into the limited number of homes for the aged. Just as we no longer drive horses and buggies, so we no longer have big houses in the country in which we can take care of our elderly relatives, and much more important, we no longer believe in the United States that this is the proper way to take care of our older citizens. In one generation, the thinking of the people of the United States has so changed that the idea of taking care of aged citizens through insurance payments or annuities is now an accepted and approved feature of our economic and social structure.

These problems naturally come before the Congress of the United States. That is why I think it is significant that you men and women are meeting in Washington this week. You have come not only to the Capital of the United States, but you have come to the Capital of the world. It is a great city, a beautiful city, a city of unending interests, and you have already discovered that it is not only a magnificent city in itself, but it is a city of magnificent distances. I suggest that you do not try to see it all in 1 day, nor to walk everywhere you want to go. After you have been here a few days you will have an increasing sympathy for our own "Senior Citizens" of the Congress, the Members of the Senate, who have provided themselves with a little railroad train, to get from the Senate Office Building to the Capitol. We of the younger and more virile House of Representatives tramp back and forth through the long summer days to convince some colleague that there is really a quorum still here in Washington, or perhaps to vote millions and more millions for the other nations of the world, while we talk of the need for economy at home. There is a little joke that has been going the rounds in Washington, about the school boy who was asked where the Capital of the United States was, and he replied that he thought a good deal of it had been loaned to the other nations.

As of a few weeks ago, when I made this calculation in preparation for a speech on the Greek and Turkish aid problem, which I made on the floor of the House, we had given away, without including the costs of war, the following amounts:

To UNRRA	$3,000,000,000
To Great Britain	3,750,000,000
To France	1,300,000,000
To China	500,000,000
To the International Bank	2,750,000,000
To the Monetary Fund	1,500,000,000
Total	12,800,000,000

I think I could add to this, with your approval, the sum of $31,000,000,000 spent on lend-lease, which gives us the staggering total of $43,800,000,000.

Since then we have voted:

To European relief	$350,000,000
To Greece	250,000,000
To Turkey	150,000,000
To IRO	73,000,000

and we are proposing additional loans and advances day by day.

The amount you asked for, under the Townsend program, to help stabilize the economy of the United States by removing people from the older-age groups, instead of permitting a repetition of the conditions of the early thirties, when boys coming out of school and college found themselves unable to get jobs, is no longer the startling figure it once was before we began to deal in astronomical figures, in a desire to support the world.

The United States, whether we want the job or not, is today the strongest and most influential nation in the world. It is my desire that we should remain strong. It is my belief that unless the United States does remain strong, it will be impossible for us to lead the world out of the slavery of its present governmental and economic ideas. I am convinced that the strength of the United States is not an accident. I am convinced that this Nation was founded for free people, and to lead the way for free peoples of all nations and all ages. I am convinced therefore that this Nation was founded and has been sustained under the guidance of divine providence. That is evident if anyone will read the records of the Continental Congress and of the early days of this Republic. In fact, the very form of government under which we operate, known as the Republic, has its Biblical foundation and background. Strong world leadership requires internal strength, in any nation. Internal strength requires economic and social security.

I would speak to you about the present foreign policies of the United States, if I could discover what those foreign policies were. That is one of our difficulties in Washington. I can only say that it is a fallacy to believe that in the United States, or for the world as a whole, the troubles and the catastrophies of this moment can all be solved by a beneficent Uncle Sam, carrying a check book in one hand, and with the other hand picking up the remnants of the imperialistic doctrines that once governed Europe or the Orient. I believe that those of you who come from the West will agree with me that the future of the United States looks more to the Orient than it ever has in the past and that the present unwillingness of the State Department, or of the Government, to accept that situation as of equal importance for the future, with the situation in old Europe, does not give us either happiness nor peace of mind in our part of the Nation.

We here in the Congress feel that the United States must seize the leadership which has been given it, that we must accept it as a privilege as well as an obligation. We must give examples of leadership, on foundations of integrity, and sound business, and good policy. We built this Nation on such foundations. Economic security, and particularly economic security for the aged citizens of the country, while perhaps not the cornerstone itself, is a very important stone in that foundation.

During your convention, other people will talk to you about the legislative situation in Congress, about the financial situation of the country, about the mechanical problems of putting bills through Congresses and through legislatures. I suspect you will get all kinds of advice.

The success of any measure, or of any principle, rarely if ever arrives as quickly as you want. We have a saying here in Washington, "It takes a little time." It is disturbing to us as individuals when we do not see the bills we want put through the Congress and made into laws in a few weeks. Then we remember that the slowness of the process, while adversely affecting the things we want, works to protect us against the things we do not want. Success here is a matter of careful analysis, of persistence, of endless patience, and of continuity. You have all of those characteristics.

Few groups have ever brought to the Congress so well prepared analyses as those of Dr. John Donaldson, supporting your bill of a year or so ago. You have displayed patience and persistence, and I hope you will continue to display continuity of organization and of action. I can say to you as a "mechanic" of legislation, speaking to those who require the services of similar mechanics if a bill is to become a law, that the simpler the bill, the more probable its success.

A united movement is always stronger than a divided movement. This has been so since the days of the Roman father who took the bundle of sticks and showed how difficult it was to break them as a bundle, but how easily they could be broken individually. It is true today. Group after group has been sent back to every State in the Union—and I could give illustrations from California this year—and told to work out their differences at home and bring a united recommendation to the Congress. The advocates of the Townsend plan have the respect and the confidence of the Congress. I know that you will maintain it.

Individuals, or groups, who attempt directly or indirectly, deliberately or thoughtlessly, to divide the strength built up by your group over a period of more than 13 years, not only do a disservice to the elderly citizens of the United States, but throw what could be an insurmountable handicap in the pathway of progressive legislation.

Your plan has the merit of being national rather than local. It has the merit of being financed and supported by a direct tax, as we support the highway system of California; it has the merit of offering a tax which is as painless as any tax could be. There is no such thing as a completely painless tax, any more than there is such a thing as a painless dentist. It has the advantage of providing features which increase the circulation of money at times of distress, and which are related definitely to the periods of economic recession. It is the only plan of that kind known to me. It has the further advantage of preventing the hoarding of money, to become part of an estate, and

it removes many of the difficulties of Government regulation and supervision which otherwise would be required.

I was a member of the California Assembly when the first Townsend resolution passed any legislature in the United States. I voted for it. I have been glad to be of help over the years. I do not think that you need much help; I think you are self-reliant and confident. You have a good program and a good organization. You have many friends in the Halls of the Congress.

I have seen your movement pass through its childhood and its adolescence, and come into its maturity. I am proud to have had a part in that progress. I think it is significant that this convention, this demonstration of your unity and your strength and your constancy, is being held in the Capital of the United States, which is today the capital of the world. Your presence and your resolution and your patience give us courage, here in the Congress. In turn, I look to the day when Congress, representing the people, may add to its laws an adequate recognition of the position of the older citizens in the economic structure of the Nation, by the passage of constructive legislation based on what we know and recognize today under the familiar name of the Townsend plan.

The Flood Menace

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch:

THE ANNUAL CURSE

The worst flood in 103 years is reaching its crest at St. Louis today. Some 30,000 people are homeless and 1,500,000 acres of farm land are under water. Volunteer workers are being recruited in a last-minute effort to prevent further damage. Millions of tons of precious topsoil are being washed from the Midwest to join other millions of tons in the Gulf of Mexico.

Every year this sorry business of floods confronts the Nation as a reproach to its energy and intelligence. If the proper management of a great river valley were an esoteric matter beyond the skill of man, the country could be excused. But it has already been demonstrated in the Tennessee Valley that floods can be controlled. Why isn't the same method used in the Missouri and Mississippi Valleys?

Senator MURRAY, of Montana, wants to know the answer to this question. The author of the MVA bill joins Chairman Strong, of the region committee for MVA, in requesting President Truman to appoint a commission to study the Missouri Valley's problems.

Such a commission should be composed of men who are capable of giving fair-minded consideration to what should be done about flood control and other elements of regional development, and whether it should be done through the Army engineers and the Reclamation Bureau or through an MVA.

The Commission would give the people of the valley every opportunity to be heard at a time when they must have a good deal to say.

Mr. Truman's record on Missouri Valley development thus far is not one in which he can take pride. As a candidate for Vice President he made speeches which meant, if they meant anything, that he would support an MVA. As Vice President, he went out of his way to refer MVA legislation to a viciously hostile committee of the Senate. As President, he has provided no leadership whatever in the Missouri Valley development.

Two subcommittees of the Senate headed by Senator OVERTON, a mouthpiece for the Army engineers, have gone through the motions of hearings on the MVA bill, and the bill is now in the hands of a committee headed by Senator REVERCOMB, one of the most extreme reactionaries in Congress. Neither Senator OVERTON nor Senator REVERCOMB could possibly give MVA a fair hearing.

Sham consideration of the subject isn't enough. The needless floods that are destroying crops and property in this region again this year, as they do almost every year, should serve stern warning on the President and Congress that they cannot permanently evade their full responsibility, either by hypocritically going through the motions as in the Overton hearings or by meeting only part of the responsibility as in the Pick-Sloan plan.

The needs of the valley, and the wishes of the people of the valley, should be consulted. And the time to do that is now, when the valley is suffering from its annual curse. Has it not by this time become crystal clear that the old methods of river control practiced by the Army engineers simply do not work? Has it not by this time become apparent that only by applying the principles and practices of the Tennessee Valley Authority can the Missouri Valley save itself from the recurring disaster of floods?

Investigation of Air-Line Accidents

EXTENSION OF REMARKS
OF
HON. HUGH A. MEADE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. MEADE of Maryland. Mr. Speaker, under leave to extend my remarks, I include the following editorial from the Air Line Pilot, by David L. Behncke:

NO BETTER REASONS

Glaring inefficiencies in the accident-investigation procedures of the Civil Aeronautics Administration and the Civil Aeronautics Board, both bitter bureaucratic opponents of an independent Air Safety Board which would take air-line-accident investigation away from their political hearth, were never more glaring than in the American crash at Stephenville, Newfoundland, on October 3, 1946.

The crash was one of the worst in history of the commercial air lines, surpassed only by the recent crashes at LaGuardia Field, Port Deposit, Md., Leesburg, Va., on May 29 and 30 and June 13, respectively. Thirty-nine persons were aboard the AOA plane as passengers and crew members. The fatalities numbered 39—39 of the best reasons on earth why accident investigation responsibility should be taken from the hands of the CAB and CAA and placed under the jurisdiction of an unbiased, unfavored, and nonsubservient independent air-safety board.

In a recent letter to the Aviation Subcommittee of the Interstate and Foreign Commerce Committee, Senator PAT MCCARRAN (Democrat, Nevada), who recently introduced bill S. 269 to create an independent Air Safety Board, said that the investigative procedures followed by the CAA and CAB in the Stephenville accident indicate that "the present investigations by the CAB and CAA leave something to be desired." The chief something, he said, is an independent agency which will point out specifically the ways in which CAB regulations can be improved and the ways in which the CAA under these regulations can be tightened up.

MCCARRAN said the facts disclosed that Capt. William Rogers Westerfield, of AOA, was making his first flight in full charge of an AOA passenger plane, and that although Stephenville was both a refueling and alternate airport, Westerfield in the course of his AOA training had not been required to land or take off at the Stephenville airport. However, it is understood that he landed and took off from this field as an Army pilot.

The plane, MCCARRAN pointed out, took off on a runway in direct line with a mountain and struck the mountain about 40 feet from its top—a runway, which, because of the mountain, was restricted for use by the Air Transport Command during the war. Why, he asked, had the CAA not likewise restricted the use of this runway?

MCCARRAN's letter also stated: "The CAB claims that due to the condition of the terrain, including the steepness of the slope, loose rocks and mud, it was considered extremely dangerous to move or thoroughly inspect individual parts, and it was also considered that nothing could be gained by a detailed inspection due to the almost complete demolition of the aircraft." This, then, was the CAA and the CAB making a thorough investigation of one of the worst accidents in the history of air transportation. Even though the terrain was bad and the difficulties great, it is rather hard to understand how the CAA and the CAB could have concluded their investigation at the scene of this accident on October 4. Surely, one of the worst crashes in history is entitled to thorough study at the scene and more of an examination than the perfunctory statements quoted indicate was made in this instance."

The air-line pilots, 7,000 strong, concur with Senator MCCARRAN'S stand that there are too many unanswered why's in the air-line accident investigation procedures today, in this case: Why was the investigation conducted with such glossed-over incompleteness? Why was the pilot not thoroughly route checked? Why was a civilian plane permitted to use a runway that even expendable military operations classed as hazardous?

This case is only one of the hundreds that will leave thousands of unanswered why's in air-line accident investigation—why's which will remain unanswered because they could conceivably have embarrassing effects—until there is revival of an independent air-safety board.

On the other side of the ledger, there is one why that has 1,107 irrefutable answers.

Why, weakly asked the opponents of an independent air-safety board, do we need such a board? The 1,107 answers are in the number of air-line fatalities which have cast a black mark on aviation safety—473 of them prior to the advent of the independent air-safety board, which established a world record for air-line safety with over 17 months without an accident, and up until January 12, 1947, 634 since its demise.

Within a 2-week period, from May 29 to June 13, 3 horrifying crashes added 145 more reasons to this already too long list of death and tragedy.

The question today is: Are we going to do something about it? Or, do we still need more good reasons? For thinking people there is but one answer: Reestablish the watchdog of air safety—the former independent air-safety board.

DAVID L. EEHNCKE.

Navy Using Nazi Wind Tunnel That Helped Develop V–2 Rocket

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. DORN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Ansel E. Talbert from the New York Herald Tribune of June 22, 1947:

NAVY USING NAZI WIND TUNNEL THAT HELPED DEVELOP V–2 ROCKET—DEVICE IMPROVED, REASSEMBLED AT WHITE OAK, MD., IS AT WORK ON PROBLEMS THAT WILL THROW LIGHT ON SPEEDS SO FAST AIR BECOMES A VIRTUAL SOLID

(By Ansel E. Talbert)

WHITE OAK, MD., June 21.—The United States Navy is preparing here to peer beyond the speed region between 600 and 800 miles an hour where the air becomes a virtual solid and conventional airplanes tend to disintegrate under tremendous forces not fully understood.

This insight is of prime importance to the Navy. Its top strategists are organizing the Navy into an instrument that keeps abreast of the most advanced scientific development, which can strike with speed and effectiveness to neutralize any danger to the United States at its source. These strategists foresee aircraft, rockets, and guided missles of supersonic speeds launched from both surface and undersea carriers as their spearhead of attack.

BRASS MODELS GO TO PIECES

The National Advisory Committee for Aeronautics recently pointed out in its annual report that rocket and jet power plants capable of exceeding the speed of sound are available, but that aircraft in which to install these power plants are not available, although several experimental models have been built. Tests with brass models of conventional planes disclosed that they often burst into bits when subjected to supersonic conditions.

Although missiles have been fired at more than the speed of sound, control surfaces to guide them in accurate courses over long trajectories are in the same category as aircraft.

In an effort to solve problems connected with designing new shapes for supersonic aircraft, the Navy has reassembled at its new ordnance laboratory at White Oak, the world's most advanced supersonic wind tunnel. This is the one located first at Peenemunde and later at Kochel in Germany on which German scientists completed all theoretical work for the V–2 rocket weapon.

Nine key German scientists who designed and operated the huge wind tunnel came to the United States a year ago to assist Navy engineers. They brought with them their charts and data sheets showing how measurements on the V–2 covered the entire range of supersonic speeds up to 4.4 times the velocity of sound.

Navy scientists believe that with the improvements incorporated during the reassembly of the wind tunnel, the Naval Ordnance Laboratory will have the world's finest facilities for supersonic research. The flexibility of the test section permits instant access to models under test and any special instrumentation from above, below, or from either side.

Changes for creating different supersonic velocities require less than 5 minutes, and the German tunnel can be operated with great efficiency on a fraction of the power required for other tunnels of comparable size. Optical instruments make it possible to photograph the air flow about supersonic projectiles under test while measuring devices record the pressure distribution on the projectile's surface.

NAVY ACCOMPLISHMENTS CITED

Although Navy scientists connected with the White Oak project admit freely that Germany was ahead of other nations in the field of supersonic aerodynamics, they also point out that this was a result of special emphasis during a period, rather than special ability. They note the Navy's impressive series of achievements, which include the first crossing of the Atlantic by air, the first employment of the radio compass in aircraft, the first use of observation of heavenly bodies for fixing aircraft position in flight, and the operation by a naval officer of the first wind tunnel in America at the Massachusetts Institute of Technology.

During the war years the Navy developed the rocket motor which will be used in the Bell SX–1 this summer to poke further into the trans-sonic region with the idea of learning more each flight about the unknowns of stress and loads

Since 1943, when Capt. LeRoy Simpler, commander of a Navy air squadron that shot down 77 Japanese planes, made the first take-off from a carrier with the aid of rocket booster units, the Navy has been using this development to assist heavily loaded planes of all types into the air in short take-off runs.

The Navy's Truculent Turtle, which broke the world's distance record by flying from Perth, Australia, to Columbus, Ohio, used these Jato rocket units in taking off with its heavy load of fuel. Last week this correspondent was permitted to take part in a series of tests at the naval air station and test center at Patuxent, Md., which demonstrated clearly that use of rocket booster charges reduced normal take-off runs from 33 to 60 percent and gave the pilot of an aircraft an ever-present extra source of power for use in emergencies, thereby adding to the safety of operations.

The Navy air arm's safety record with Jato has been almost perfect, and the Jato units manufactured by Aerojet Corp., of Azusa, Calif., with special fuels developed by the Texas Co., have been granted the first approved-type certificate for rocket engines ever issued by the Civil Aeronautics Administration for use as auxiliary power plants on passenger-carrying aircraft.

Jato motors resemble small compressed air bottles, each having a small orifice at one end from which the burning gases are released. Attached to the wings or fuselage of aircraft they are discharged electrically according to the wish of the pilot when he needs them.

One of the draw-backs to the use of rocket booster charges on carriers has been the smoke created, but development work on the creation of a smokeless unit is under way.

Safety of Airplane Travel

EXTENSION OF REMARKS
OF
HON. HUGH A. MEADE
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. MEADE of Maryland. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me June 27 over Station WBAL, Baltimore, Md.:

Ladies and gentlemen of the radio audience, because I have been so deeply concerned by the large number of serious air accidents in the past few weeks, I have introduced a bill in the House of Representatives which would provide for:

(1) Compulsory insurance of $10,000 for loss of life or permanent total disability with lesser amount of partial disability according to the degree of disability incurred, patterned along the lines of the Workman's Compensation Act.

(2) Registration of all persons to whom airplane tickets are sold, such registration showing the name and address of the traveler and the name of a person to be notified in case of accident.

(3) All passengers to be furnished with parachutes and to be instructed in the use of them and how to operate all emergency exits on planes, prior to the take-off.

It is a grim and terrible thing to contemplate that in a space of 2 weeks, from May 29 to June 14, 145 people lost their lives in airplane crashes. Most of those accidents could have been prevented had the Civil Aeronautics Board used the authority vested in them by the Congress.

The United States Government Manual gives the following résumé of the duties of the Civil Aeronutics Board in part as vested in the Board by the Civil Aeronautics Act of 1938 as:

(1) Economic regulations: The Board issues certificates of public convenience and necessity to air carriers and permits to foreign carriers; regulates the filing of tariffs; regulates rates for the carriage of persons and property; prescribes rates of compensation for the carriage of mail; and regulates accounts, records and reports, mergers, loans and financial aid, methods of competition, and interlocking relationships.

(2) Safety regulations: The Board prescribes safety standards, rules, and regulations and has the power to suspend and revoke safety certificates after hearing (including the disposition of any petition for the reconsideration of the denial by the Administrator of an application for the issuance or renewal of an airman certificate under Sec. 602 (b) of the act.

(3) Accident prevention: The Board makes rules on notification and report of accidents involving aircraft; investigates such accidents and reports the facts, circumstances, and probable causes; makes its reports and investigations public in such manner as it deems to be in the public interest; investigates complaints and conducts special studies and investigations to reduce aircraft accidents and prevent their recurrence.

That is very impressive language but let us examine the personnel of the Civil Aeronautics Board and their qualifications for the job they are doing:

Hon. James M. Landis, Chairman, was a former Harvard law professor and member of the Securities and Exchange Commission.

Hon. Oswald Ryan, whose entire background has been in the legal profession.

Hon. Josh Lee was head of the Speakers' Department in the University of Oklahoma, a lawyer, a United States Senator.

Hon. Harllee Branch was an outstanding newspaperman and former Second Assistant Postmaster General.

Hon. Clarence M. Young was a former vice president of the Pan American Airways but without technical experience.

I have no fault to find with these gentlemen as administrators but I am wondering if it might not be a little more to the point if at least a part of the Board were men with technical aviation background. Imagine sending a Harvard law professor to Bainbridge, Md., to investigate the horrible accident which occurred there on May 30, but that is just what was done. I was told by the Civil Aeronautics Board on June 24 in response to an inquiry as to what the findings on that accident were, that the report on that accident had not been written up. Eye witnesses of that accident said the plane exploded in the air. It will be interesting

to know, when the Civil Aeronautics Board gets around to writing up that report, just what they thought caused the accident, especially when they are technically responsible for issuing the certificate of airworthiness on that ship.

It will be argued by some that the Board has technical advisers. That may be true but with the top-notchers in aviation being gobbled up by the large airplane companies at fabulous salaries, the Government must of necessity take second-best advisers at the salaries they are allowed to offer.

The so-called Safety Board is solely responsible to and under the jurisdiction of the Civil Aeronautics Board. All investigations and reports are signed by the Board. The certificate of airworthiness given to each airship is made out under the authority Board. Minimum safety standards are also determined by the Board, and let me repeat, the members of this Board have no technical knowledge of aviation.

Would anyone be so foolish as to place a layman at the head of a surgical division of a hospital? Of course not, but the comparison is not any more ridiculous than to send a law professor out to make an investigation as to what caused an explosion in a ship for which he had issued a certificate of airworthiness.

On June 15 the President appointed the following board to make an investigation into air safety. The members of the board are Dr. Jerome C. Hunsaker, Chairman of the National Advisory Committee for Aeronautics; Brig. Gen. M. W. Arnold, vice president of the Air Transport Association; James M. Landis, Chairman of the Civil Aeronautics Board; H. B. Cox, American Air Lines pilot; and Theodore P. Wright, Civil Aeronautics Administrator.

It is a sad commentary that we must wait until 145 people lost their lives within a short space of time before we decide to make an investigation into air safety. It will be interesting to see what their recommendations will be.

In the House of Representatives on June 16, Hon. CHARLES A. WOLVERTON, chairman of the Interstate and Foreign Commerce Committee, had the following to say in reference to the President's Air Safety Board:

"As chairman of the Committee on Interstate and Foreign Commerce I should like to call the attention of the House to the fact that in the course of the committee's extensive hearings on air safety the committee has had occasion to hear the testimony of all of these men or representatives of the organizations which they represent. The committee heard both Mr. Landis and Mr. Wright, Chairman of the Civil Aeronautics Board and Administrator of the Civil Aeronautics Authority, respectively. Mr. John W. Crowley, Jr., acting director of research, appeared before the committee on behalf of the National Advisory Committee for Aeronautics. General Arnold, as well as Mr. Ramspeck, a former Member of this House, appeared on behalf of the Air Transport Association. Finally, the Air Line Pilots Association was represented by its president, David L. Behncke, and members of the association employed by different air lines appeared; Ernest A. Cutrell, American Airlines; Robert N. Buck, Transworld; J. E. Wood, Eastern Air Lines, in addition to John M. Dickinson and Brant W. Phillips, appeared before this committee and gave testimony.

"It will be the purpose of this committee to make available to the new investigating board appointed by the President all of the testimony and other information supplied to this committee by over a hundred witnesses who appeared in the course of the committee's air-safety investigation. It is my fervent hope that the new board will be able to further add to our knowledge as to how to prevent recurrences of these accidents.

"I assure the House that the Committee on Interstate and Foreign Commerce will continue its own investigation of all air accidents in recent months, and, of course, include those that have so recently happened."

Mr. WOLVERTON did not add, however, that his Republican-dominated committee had been procrastinating about air safety since the beginning of the Eightieth Congress in January and that up until this very day, no report has been forthcoming from the committee.

On June 16, 1947, Congressman BENDER, of Ohio, introduced a resolution in the House calling for the immediate installation of radar altimeter equipment in all licensed aircraft. The resolution also instructs the Civil Aeronautics Board to require immediately the installation of ground control approach equipment at all airports from which commercial aircraft are licensed to operate. The resolution also requires the Civil Aeronautics Board to order the immediate installation of omnidirectional systems of radio beams on all commercial airways and a complete report by the Board of their safety regulation service.

Without further legislative authority from Congress, the Civil Aeronautics Board had the authority to prevent the kind of air disaster which snuffed out 145 lives on May 29, May 30, and June 14. It has a moral and legal obligation to use that power and the House of Representatives should demand that they use that power at once.

Howard Hughes has voluntarily begun the installation of radar altimeter equipment in all the TWA planes. It is his statement that four of the six recent airplane disasters could have been prevented if the planes had been equipped with proper radar altimeter equipment. The Army Air Forces employed this equipment throughout the war. There is no reason whatsoever that this equipment cannot be installed. I am confident that the great electrical manufacturing industry would give priority to the manufacturing of such equipment. Why does not the Civil Aeronautics Board act?

Throughout the war the Army employed ground control approach equipment. It has been said that the installation of such equipment at airports would be expensive. This consideration dwindles into insignificance when we realize that human lives are at stake, that the airplane industry is a great and growing one, and before all else must guarantee the safety of its passengers. The Civil Aeronautics Board has the authority. It can refuse to license the operation of commercial aircraft from any field which does not have such equipment.

There were several plane crashes in southwest Virginia during the past few months in which the pilots were blown off their radio beam and were lost. These crashes occurred at night. The investigators of these crashes stated that if the proper radio-directional equipment, namely, the omnidirectional system, or radio beams had been in use, these plane crashes could have been averted.

More than 50 people lost their lives in the Eastern Air Lines crash in Maryland on May 30. Newspaper reports on that air crash indicated that some machinist had unwittingly filed a connecting bolt when he should not have done so. The Civil Aeronautics Board is also responsible for the adequacy of maintenance work. The air lines have expanded rapidly; they have introduced new equipment but they have failed to keep their ground-maintenance work up to proper standards. It is time that the Civil Aeronautics Board did something about correcting ground-crew maintenance work.

The pilot of the American Airlines which crashed at LaGuardia Airfield on May 29 stated that he could have used a longer runway but that the longer runway had undulations and many bumps in it and, in his opinion, should not be used. The Civil Aeronautics Board is responsible for the checking of airport conditions. When we remember that this experienced pilot chose to take a shorter runway rather than one which he knew to be of adequate length because the longer runway was in bad condition, when we remember that 40 people lost their lives because that runway was in such shape that the pilot chose to use another one—a shorter one—it fills me personally with intense rage. The Civil Aeronautics Board has got to be made to face its responsibilities.

In the past 10 years the aircraft industry received more aid from the Federal Government than any other industry probably in American history, with the exception of railroads. The Government has financed airports throughout the country. The Government has financed aircraft research and development work. An entire generation of Americans has been sold by the Government during the war on the romance and glamor of the aviation industry. During the war the Government trained 2,000,000 young men either as pilots, mechanics, ground crew, or service personnel. Equipment has been sold to the air lines. In every possible way the Government has assisted the aviation industry, actually with what amounts to billions of dollars either in terms of publicity, research, training of the labor supply, building of airports, transfer of equipment. There is no industry in the country today that has had so many of the things necessary to it underwritten by the Government or provided by the Government and probably there is no industry in the country which will make as much money or has such a tremendous future before it.

It is absolutely imperative that the Government exercise its authority and guarantee safety insofar as this is humanly possible within the aviation industry.

Surely from among that 2,000,000 trained aviators and aeronautical experts in this country we could find men highly trained in air safety to head the Civil Aeronautics Board. If I were a member of that Board, in the face of the recent air disasters, I would quit and ask the President to appoint someone in my place who might be able to do something to prevent future air catastrophes. But be that as it may, the Civil Aeronautics Board is charged with the responsibility of using every possible precaution to assure air safety, and there is no reason why further procrastination should lead to the loss of a single life in unnecessary aircraft disasters, but unless the President's committee tells the Civil Aeronautics Board what must be done to prevent future accidents, then it is high time the Congress did something about the matter.

Address by Gen. Omar Bradley

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. TEAGUE. Mr. Speaker, I was pleased to learn that Mr. Chat Paterson has recently been elected national chairman of the American Veterans' Committee at their recent convention in Milwaukee, Wis. From my association with him, I believe he possesses the good ideals and qualities of leadership which will guide and direct this veterans' organization properly.

General Bradley addressed the convention on June 20, 1947, and stressed a challenge to all veterans in solving the problems of our Nation. I believe his

remarks are worthy of careful consideration by all of us.

Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the full address of General Bradley before this recent convention:

Many years ago as a young officer, I learned that good judgment comes from experience and that experience grows out of mistakes. If your generation has salvaged anything from the wreckage of this last World War, I hope it is the wisdom to see how tragically those before you failed.

For there is no such thing as an inevitable war. If wars can be provoked, they can also be averted. But they can be averted only if the peace-loving peoples of this world love peace enough to oppose aggression in whatever form it may recur. We cannot ignore the kindling sparks if we hope to avoid a conflagration. We cannot halt imperialism with moral indignation. If the United States is to exercise its conscience in world affairs, it must be prepared to back its moral indignation with realism, resources, and credits.

Our chief enemies in the world today are fear, poverty, and chaos. Their threat to the nations that value freedom is greater than that of rival armies, more dangerous than that of rival doctrines. We dare not forget that starvation, joblessness, and despair can so agonize the minds of men that they would risk freedom in their hunger for security.

America's self-interest in this world is threatened by empty stomachs. Until the nations of Europe can build a sound economic basis for their own sound political life, time will work on the side of confusion and confusion on the side of eventful war.

It is not enough for you veterans simply to have won the war. Unless the American people learn that noninvolvement in peace means certain involvement in war, your victories shall be forgotten in another climactic struggle between the nations of this world. You dare not forget that there is nothing man can invent with his genius, nothing man can devise from his knowledge, nothing man can create from his science that war if it comes cannot destroy. Far more than the skills with which to make a living, youth is in need of a world in which to practice those skills in peace and security.

War is not only a tragic, stupid, and costly folly; it has became the actual threat of doom. There is not enough room in the world for both civilization and atomic conflict. If we once again risk disaster by turning our backs on the world, we shall not be given another chance. Twice the United States has snatched victory out of defeat as the arsenal of democracy. In the event of another war, we shall become the target.

We must recognize that it is even more difficult to avert wars than to win them. The achievement of peace in this shattered world is a task requiring greater intellect, more daring, and perhaps even sterner sacrifice than we showed in winning the war.

To meet this challenge, the American people must be prepared to sustain a bold foreign policy equal to our responsibilities in a world from which we cannot retreat.

We must strive for economic security, freed from the hazards of depression, and give those nations that look to us for guidance greater confidence in the wealth and productivity of our American system.

And we must contribute willingly to the maintenance of armed strength essential to the security and stability of this world in which we live.

Your organization has accepted as its creed the assertion that veterans shall find their best interests in the welfare of this Nation.

For all their bonds of comradeship, American veterans have no economic identity of their own. They have no political identity of their own. Their prosperity, their happiness will come from the prosperity and happiness of the Nation at large.

Despite its vast dollar resources, the Federal program of veteran readjustment is totally dependent upon the economic, social, and political forces which together guide and direct our Nation's life. The veteran with his billion-dollar benefits can recover no more quickly and progress no further than this Nation of which he is a part.

Despite the baleful warnings of other pressure groups, veterans of this conflict have demonstrated they will not employ their strength for special privilege at the expense of the Nation.

In their strident ambition to build a better life for themselves and their nation, veterans grow impatient at delay and their inability to find ready acceptance of new ideas, new methods, new programs. They resent the sometimes painfully slow processes through which changes must come in a democracy. And they become increasingly angry in the long-drawn-out search for the security and comfort which promised to be accessible in peacetime. But they must remember that the welfare of the Nation demands the happy adjustment of all interests in the common good rather than the satisfaction of any one group. The veteran will obtain the things he wants when those things are available to all citizens.

Many of those who seek additional benefits and special privilege through the expenditure of Federal funds fail to reckon the eventual cost to themselves of those aids. At a time when the prosperity of the Nation is at a record peacetime high, the opportunities for complete self-dependence cannot justifiably be wasted. If veterans are to call for more and more governmental help, we shall be compelled to admit that opportunity is not enough, that our economy does not have room for all our people. There is no such thing as a free ride on the Government for any taxpaying citizen. Veterans who demand unwarranted expenditures now are saddling themselves with an unreasonable tax burden in future years.

If the American people are to match the faith of their young veterans in the future of this country, they must grant them opportunity for job security. Where we were once compelled to defend democracy with the strength of these young men, we must now show that democracy can work for the enrichment of their lives.

For democratic government, to survive, must grant to its people continuing opportunities for greater economic security. These are the guarantees we must have for freedom. Only as long as freedom remains a force for human welfare, will men cherish freedom in their hearts and defend it with their lives.

We shall merit loyalty to democracy on the part of our young veterans only as long as we prove the superiority of democracy through its achievements. We cannot meet the challenge of other ideologies with labels and reaction. The American people must offer young veterans progress and the opportunity for constant self-betterment throughout their busy lives.

It is not enough to dedicate ourselves to the preservation of free initiative and the guarantee of free expression. These are rights—and if they are to be maintained they must be bulwarked with equal responsibilities. We shall safeguard those rights only as long as we can assure men protection of their opportunity for economic, social, and political progress.

Three weeks ago, on the third anniversary of D-day, I could not help but contrast the certainty we felt then with the uncertainty that troubles so many of us now. I thought it strange that soldiers could face the ordeal of invasion with confidence in their ability to complete the job, and now confess uncertainty in their ability to gain security.

I wonder if the people of the world—and if Americans in particular—are not badly in need of a stronger faith in themselves. I wonder if those who talk so glibly of another and inevitable war are not tragically in need of trust in the ability of nations to achieve a realistic peace. And I wonder if those defeatists who warn us that another depression is on the way, those doubters who tell us that America lacks the resources, the unity, the strength to create prosperity in peace as well as in war are not terribly in need of faith in the people of this Nation.

For sometime, I am afraid the doubters have taken hold, that we are sailing into this postwar world half convinced in our panicky minds we cannot make it work.

Democracy cannot lose if given the chance to work. But we must admit it can lose by default. It can lose through the fears of its people, through their failure to trust in its strength, through timidity in meeting problems at home and confusion in solving problems abroad.

We need the confidence that comes from youth, the assurance with which you fought the war. We need faith in ourselves, faith in our Nation, faith in our ability to build a lasting peace.

Romulo and Filipino Veterans

EXTENSION OF REMARKS
OF
HON. KARL STEFAN
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Tuesday July 1, 1947

Mr. STEFAN. Mr. Speaker, we are doing today an act of justice which is in accordance with the American tradition of fairness. The Filipino veterans, who fought for the American flag, and in defense of the American principles of freedom of democracy were our soldiers when they were fighting in Bataan and Corregidor. They took their oath of allegiance to the American Constitution and they fought under American officers. They have covered themselves with glory. In approving this act making the Missing Persons Act applicable to them, we are fulfilling an obligation that we owe them as much as we owe to our American soldiers.

I must mention in this connection how deeply I regret that today we do not have with us on the floor the former Resident Commissioner of the Philippines to the United States, Gen. Carlos P. Romulo, who during his term as the Filipino spokesman in the United States Congress tried to do all he could for his fellow Filipino veterans. I remember how he came to me and to other Members of Congress several times to oppose the Rescission Act and how he spoke on the floor against it inserting in the record a statement made by President Truman against the provision in said act which prevented the Missing Persons Act from being applied to Filipino veterans. Unfortunately he was at that time overruled. But he kept on exerting his best efforts to plead the case of the Filipino veterans.

Today when we approve this act, which does justice to the veterans of the Philippines, in all fairness mention must be made of General Romulo, who, since his return to the United States after the granting of Philippine independence, has conducted a one-man campaign on the platform, radio, and the press to get for

the heroic Filipino veterans the justice they deserve. I am happy to make this acknowledgment on the floor of this House in fairness to a man who at all times has fought for his Filipino comrades in arms.

Sound and Popular Veto

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following editorial which appeared in the Evening Tribune, Lawrence, Mass., on Saturday, June 28, 1947:

SOUND AND POPULAR VETO

Unlike his tax reduction and labor bill vetoes of last week, President Harry S. Truman's official disapproval Thursday of the wool price support measure that had been passed by both branches of Congress was overwhelmingly popular, because the bill's provisions were against the best interests of the Nation and most of its people and would have benefited only a relatively small number of wool growers, who already are receiving far greater Government aid than they merit.

The growers in this country produce only 50 percent or less of the wool used by American industry, yet to protect their prices they have persuaded Congress in the past to impose a tariff of 17 cents a pound on the other half of the necessary supply that must be imported from Australia and New Zealand. Furthermore, the American growers secured from Congress legislation whereby the Federal Government supports a price of 42.3 cents a pound to them by purchasing any and all wool offered for sale here below that figure. Not content with those rich benefits, the growers prevailed upon the current Congress to pass this latest bill authorizing even higher tariffs and trade barriers against foreign wool imports, which the President disapproved quite properly.

Taking a position in his veto message duplicating that of Secretary of State George C. Marshall and the United States State Department, President Truman objected to features of the measure he felt would have an adverse effect on international relations and said that enactment of the law would be a tragic mistake. The Chief Executive stated further that it would be a blow to American leadership in world affairs to pass a measure providing for additional barriers to the importation of wool into this country just at a time when the United States Government was taking a leading part in the United Nations conference at Geneva, Switzerland, which was called for the purpose of reducing trade barriers and to draft a charter for an international trade organization.

That argument alone justified President Truman's veto, but if further proof was needed he could have directed attention to the fact that the bill would have given the wool growers additional Government assistance that they do not need or deserve, at the expense of the rest of the American people. If successful, it would have had harmful effect upon the textile woolen manufacturing industry, which made the matter especially interesting to Greater Lawrence and its people, and would have added considerably to the prices paid by the public for all woolen goods. For more important reasons than one, the President's action was as sound and laudable as it was popular.

Civilian Board of Final Review of Armed Forces Discharges and Dismissals

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. BYRNES of Wisconsin. Mr. Speaker, yesterday I introduced in the House a bill, H. R. 4019, which would create the Civilian Board of Final Review of Armed Forces Discharges and Dismissals and grant it full authority to review any discharge or dismissal during World War II and to issue a new certificate if the facts show that an injustice has been done.

The purpose of this bill is to provide a final court of appeal, free from any charges of bias or prejudice, to any former member of the armed forces during World War II who feels that his discharge or dismissal is unjust. It would accomplish this by setting up a five-man board of civilians, appointed by the President and confirmed by the Senate, with full power to review any discharge or dismissal upon application by any former serviceman whose dismissal or discharge was adjudged or executed after the beginning of selective service and before the official termination of World War II. The board would be given power to review all records and decisions on the case, and by majority opinion to make any changes in the type of discharge or dismissal previously given. Jurisdiction could be assumed by the board on recommendation of two or more of its members following application by the former serviceman.

Prior to the enactment of the Legislative Reorganization Act of 1946, the final power to correct injustices in military records was vested in the Congress. The Reorganization Act, in an attempt to reduce the legislative work-load, banned the introduction of private bills of this character. As a substitute, the act empowered the Secretaries of War, Navy, and Treasury—with respect to the Coast Guard—to create boards of civilian officers or employees of their respective departments, and through them, to authorize the correction of any military or naval record where in their—the Secretary's—judgment such action was necessary to correct an error or to remove an injustice. In other words, the Secretaries of the various departments were given the same jurisdiction as had formerly been possessed by the Congress in this respect.

The effect of this provision of the Legislative Reorganization Act has been, in practice, to deny the veteran's right of appeal. By leaving the power of review at the discretion of secretaries of the departments. Congress has, in effect, asked the impossfble. It has asked that a fair and impartial review be granted by the same "judge" who has previously approved of the decision in the case. Thus, in the regulations governing the proceedings of the Secretary of War's Board, the Board is prohibited from reviewing any case "wherein final action has been taken by the President of the United States, the Secretary, the Under Secretary, or the Assistant Secretary of War." Not only does this provision of the act, therefore, vest final jurisdiction in the armed services, thereby breaking a historic precedent in the sequence of military appeal, but it seriously limits the granting of an opportunity to be heard. I do not believe that this was the intent of Congress.

I believe that the intent of Congress can best be carried out by the provisions of H. R. 4019. It divorces the services entirely from final review of discharges and dismissals. It removes any charge of prejudice or bias on the part of the reviewers. It insures finality of review, yet it attempts to prevent wholesale reexamination of military records by laying down strict but fair requirements for acceptance of jurisdiction. It will not interfere with the system of military or naval justice. I believe it will correct a legislative error which is causing a grave injustice to be done to many former servicemen.

The text of this bill follows:

H. R. 4019

A bill to amend the Servicemen's Readjustment Act of 1944 to create a civilian board to review discharges and dismissals from service in the armed forces, and for other purposes

Be it enacted, etc., That section 301 of the Servicemen's Readjustment Act of 1944, as amended, is amended to read as follows:

"SEC. 301. (a) There is hereby created a Civilian Board of Final Review of Armed Forces Discharges and Dismissals (hereafter in this section referred to as the "Board"), to be composed of five civilians appointed by the President, by and with the advice and consent of the Senate. The President shall designate one of the members of the Board as its Chairman. Each member of the Board shall receive a salary at the rate of $15,000 a year and shall hold office until such time as the Congress shall, by concurrent resolution, determine that the Board has fulfilled the duties placed upon it by subsection (c). Any vacancy in the Board shall be filled in the manner prescribed for original appointment to such Board.

"(b) The principal office of the Board shall be in the District of Columbia. The Board is authorized to appoint such personnel and to make such expenditures as may be necessary to carry out its functions.

"(c) It shall be the duty of the Board to review the type and nature of the discharge or dismissal from service in the armed forces of the United States of any former member of such forces who is not under sentence adjudged by a court martial where (1) such discharge or dismissal was executed, or was adjudged by a court martial, after September 15, 1940, and prior to the official termination date of World War II as designated by the Secretary of State; (2) such former member or, if such former member is deceased, the surviving spouse, next of kin, or legal representative of such former member files with the Board a request for such review (A) within 10 years after the date of the execution of such discharge or dismissal, or (B) within 2 years after the date of completion of the sentence adjudged by court martial or of death while serving such sentence, whichever of the dates determined according to (A) and

(B) is the later; and (3) after preliminary investigation by the Board, at least two members of the Board believe that the type or nature of such discharge or dismissal may be unjust. Review by the Board shall be based upon all available records relating to the service in the armed forces of such discharged or dismissed former member and such other evidence as may be presented by such former member or the surviving spouse, next of kin, or legal representative. Witnesses shall be permitted to present testimony, either in person or by affidavit, and such discharged or dismissed former member or the surviving spouse, next of kin, or legal representative shall be allowed to appear before the Board in person or by counsel: *Provided*, That the term 'counsel,' as used in this subsection, shall be construed to include, among others, accredited representatives of veterans' organizations recognized by the Veterans' Administration under section 200 of the act of June 29, 1936 (Public Law No. 844, 74th Cong.). The Board shall, on the concurrence of three or more of its members, have authority to change, correct, or modify any discharge or dismissal in accordance with the facts presented to it and to issue a new certificate with respect to the separation from the service of any former member of the armed forces. Where the Board has fully reviewed any discharge or dismissal, such review shall be final.

"(d) In the case of any certificate of separation issued pursuant to subsection (c), no bounty, back pay, pension, or allowance shall be held to have accrued prior to the date on which such certificate is issued.

"(e) The Secretary of War, the Secretary of the Navy, and the Secretary of the Treasury (with respect to the Coast Guard) are authorized and directed to furnish the Board with certified copies of such of the available records relating to any former member of the armed forces as the Board may, from time to time, request."

SEC. 2. Section 207 of the Legislative Reorganization Act of 1946 is amended by adding at the end thereof the following: "Nothing in this section shall authorize the correction of any discharge or dismissal which has previously been fully reviewed by the Civilian Board of Final Review of Armed Forces Discharges and Dismissals created by section 301 of the Servicemen's Readjustment Act of 1944, as amended."

In Answer to the Attack of W. W. Lynch on the Brazos River Transmission Electric Cooperative, Inc.

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. POAGE. Mr. Speaker, on June 26, 1947, Mr. W. W. Lynch, vice president of the Texas Power & Light Co., appeared before the Agricultural Subcommittee on Appropriations of another body. He presented in testimony some very skillfully worded statements and extended his remarks in opposition to the rural electrification program, and particularly to the generating plant now being built by the Brazos River Electric Transmission Cooperative, located between Temple and Belton, Tex. Mr. Lynch seeks to plant suspicion of the program's objectives and operations, and to promote restrictions which would cripple effective administration of the Rural Electrification Act.

So many misinterpretations and distortions are contained in the testimony of this Texas Power & Light Co. vice president that I feel that some record should reflect at least a partial answer. The following points illustrate some of the type of statements which are calculated, if not intended, to mislead the Members of this Congress:

First. He gave a very misleading picture of his company's ability to supply dependable service.

Mr. Lynch presented 13 voltmeter charts, most of which showed voltage regulation on the order of 1 or 2 percent, as "evidence of the high standard of service rendered." These charts mean nothing. First of all, there are 43 points of delivery. Mr. Lynch said nothing of what exists at the other 30 points. Moreover, each chart that Mr. Lynch did present gives the picture for a single day. The particular days used were selected by the company. Obviously, the company would not select days on which the poorest service was rendered. Mr. Lynch failed to present any charts at all for 12 out of the 20 cooperatives served by T. P. & L. and which, according to recent studies by independent consulting engineers, had instances of voltage regulation of as much as 14 percent.

Here is a picture of some of the other 30 points of delivery that Mr. Lynch did not mention and that open to question his entire presentation. The Houston County Electric Cooperative, for example, had a voltage regulation of 14 percent between April 21 and May 5, 1947. The Cooke County Electric Cooperative Association had a voltage regulation of 9.1 percent on May 28, 1946.

The Navarro County Electric Cooperative for which Mr. Lynch showed a 2.88 percent regulation on August 9 and 10 was found to have a voltage regulation three times as great or 8.5 percent on October 7, 1946.

The Comanche County Electric Cooperative Association reported on March 20, "We are having quite a number of complaints from our members on account of the almost daily outrages we are having at the present time, due to the overloaded Texas Power & Light equipment."

These actual cases of poor service demonstrate that Mr. Lynch's statement is certainly not representative.

Second. He attempted to cover up his company's record of poor service by discrediting the co-op facilities.

The cases of inadequate service reported to the company by distribution cooperatives—

Mr. Lynch stated—

were due to the loaded cooperative's facilities at delivery points and to the unduly long lines of the distribution cooperatives.

Every competent engineer knows, however, that it is impossible to have proper voltage regulation on any system unless good regulation exists at the source of power. As has already been shown, the member cooperatives of the Brazos River Transmission Electric Cooperative are not receiving dependable service at the Texas Power & Light Co.'s delivery points.

Mr. Lynch is undoubtedly aware of these facts; yet his only explanation of poor service is a statement the purpose of which is to confuse the problem of inadequate power at the delivery points with the problem of distributing power over the co-op systems. These are separate problems. It is a fact, however, that the Brazos cooperatives have distribution troubles because the power company transmission lines were designed primarily to transmit power between urban centers and as such are not an efficient source of power for the load centers of cooperatives serving rural territory.

Third. He attempted to explain away the serious problems of inadequate delivery points.

In his testimony, Mr. Lynch states that the Texas Power & Light Co. will furnish more points of delivery than the Brazos River Transmission Electric Cooperative to its member cooperatives. Yet, Mr. Lynch obviously knows that the number of points of delivery is in itself meaningless since it is the location and adequacy of the delivery points that make for dependable service.

Mr. Lynch alludes to an offer of his company to establish delivery points at the co-op load centers. But he neglects to say that for 10 years the cooperatives were not able to obtain bona fide discussion of the program designed to meet the power needs of the cooperatives. It must be noted that the company's proposal of February 22, 1947, came 9 months after the co-ops had obtained an REA loan to proceed with their own generation and transmission facilities—a fact which indicates that this offer, as has been the case with others, was advanced purely as a means of embarrassing and obstructing the co-op program.

Fourth. He disregarded history in order to claim rate leadership.

Mr. Lynch described his company as one which has been a leader in working out proper wholesale rates for cooperatives. Actually, his company has made no reductions, except as forced by circumstances. Here are the facts:

When the first REA financed co-op was put into operation at Bartlett, Tex., in 1936, the T. P. & L. refused to sell them power at all, except at the retail rate. The cooperative was forced to get its power from the Diesel-operated municipal plant at Bartlett.

A year or so later, the Bellfalls Electric Co-op was organized east of Temple. It was only able to get consideration at the hands of T. P. & L. after Mr. Carmody, then head of the REA, had suggested that he would loan it enough to build a steam-generating plant.

As soon as this suggestion was made by REA, the T. P. & L. agreed that it would sell this co-op, and, as required by State law, would sell all co-ops, wholesale power at 1.5 cents per kilowatt-hour.

The first general reduction in the T. P. & L.'s rates to farmer-owned cooperatives did not come until 1940, just after negotiations were commenced in regard to the organization of the Brazos River Electric Transmission Coopera-

tive, Inc. The T. P. & L. officials say that their rate reductions were not associated with competition.

Be that as it may, this first reduction occurred just a few weeks after the first negotiations between Members of Congress from the area and the officials of the R. E. A. with regard to the establishment of a generating and transmission system.

The second cut in rates was made shortly after the REA announced it would finance such a generating and transmission co-op.

The third cut was made on March 20, 1941, just 12 days after the initial REA allocation to the Transmission Cooperative when the company made a further reduction in its discount which brought the average rate down to approximately 65 cents per kilowatt hour, or a total reduction of approximately 60 percent during the formation of a competitive generation and transmission system.

In July 1945, just as the Transmission Cooperative was anticipating a resumption of construction work stopped by the war, the company placed in effect a rate purporting to be 56 cents per kilowatt hour. This rate, however, was restricted to rural loads of less than 50 kilowatts. To larger loads, a substantially higher rate was applied. In other words, the Company sought to put itself in a position where it could dictate the cooperatives' service policies.

Such is the background of this strange statement by Mr. Lynch:

> It took time to appraise and understand working with the cooperatives, and setting proper rates and charges.

Fifth. He gave a deceptive picture of his company's level of rates.

Mr. Lynch claims that the level of rates charges by Texas Power & Light Co. to rural cooperatives has been consistently below the national average of such rates and is presently one of the lowest in the country.

The facts of the case are quite the contrary. The rate which the company was charging when the Brazos area cooperatives began plans for their own generation plant was higher than the national average for wholesale power purchased at that time by REA cooperatives from all sources, and it was higher than the cost of power from private power companies.

What Mr. Lynch should have said is that since the Brazos River Cooperative came into existence, the rates of Texas Power & Light Co. have been lower than the national average.

The fact that the T. P. & L. rates are lower than the national average charged by power companies does not—Mr. Lynch to the contrary notwithstanding—reflect any credit upon the T. P. & L. It is a fact, revealed by a study of Brazos' own engineers, that the cost of generating power with fuel-burning plants in the Texas gas fields, because of the available low-cost fuel in Texas, is scarcely more than half what it is in some sections of the country.

Sixth. He attempted to make his rates look good by citing a Georgia rate study that had nothing to do with Texas power loads.

Mr. Lynch's claim that his company is a leader in low rates to cooperatives is based on a report compiled by the Georgia Public Service Commission. The Georgia Commission applied the rate schedules of 93 power suppliers to the power demand and energy consumption of 12 selected Georgia cooperatives. Consequently, the report shows what the 93 rate schedules would mean to those 12 Georgia co-ops. The experience of those cooperatives in other States who actually purchased power from the 93 suppliers shows quite another story.

The T. P. & L. average rate when applied to the load of the 12 Georgia cooperatives was 5.537 cents per kilowatt-hour. The cost to the Texas co-ops which actually bought power from T. P. & L. was 5.9 cents. Bonneville's rate applied to the Georgia co-ops was 4.1 cents. Actually the co-ops buying Bonneville power pay 3.6 cents.

The TVA rate applied to the Georgia co-ops was 6.688 per kilowatt-hour. Actually the co-ops buying power from TVA pay 5.4 cents. Accordingly, by using the Georgia report, Mr. Lynch was able to show his company lower than TVA whereas in actual experience co-ops buying power from TVA pay less than those buying power from T. P. & L.

Seventh. He made statements regarding Brazos costs and rates that betray his ignorance of the facts.

Mr. Lynch states, "The estimates of the costs of carrying out this unnecessary program are such as to indicate that more money must be allotted to finish the job. The 10,000-kilowatt steam power plant, for example, is estimated to cost $1,219,000, which is about 70 percent of the present cost of a plant of this size. The anticipated costs of wholesale electric power for resale to the farmers must be increased. The company's engineers are of the opinion that these costs will be nearly double the amount that the cooperatives are now paying for purchased wholesale electric power."

The facts are that the expenditure for the 10,000-kilowatt steam plant amounts to less than 20 percent of the expenditure for the Brazos system from presently available funds. Much of the Brazos system has already been constructed. Contracts have already been let for considerable additional construction and there is absolutely no indication at the present time that the cost of wholesale power to the member cooperatives will be even a tenth of a mill more than was estimated when the last loan was made for the development of Brazos. Moreover, changes in design and additional tie-ins with other power suppliers can be expected to result in cost of power to the Brazos cooperatives even lower than was estimated.

Eighth. He erroneously appraised the "advantage" to the member co-ops of buying wholesale power from his organizations.

Mr. Lynch claims that "the company's wholesale electric power rates to REA cooperatives are lower than the transmission cooperatives can make available to its member cooperatives."

Here are the facts: The T. P. & L. wholesale rate is 0.56 cent per kilowatt-hour for rural loads of less than 50 kilowatts and 0.91 cent per kilowatt-hour for larger loads at 50-percent load factor. The cost of power under this rate for enough power to meet the co-ops' needs including normal development of rural business, is higher than the price at which Brazos—as contemplated under present loans—will supply it. Furthermore the co-ops can look forward to further decreases when loads warrant further expansion. It is conservatively estimated that such Brazos rates will be 20 percent lower than the latest T. P. & L. offer made in an effort to destroy Brazos. What is more, when the farmers of the Brazos River area pay up the loan on their facilities they will own a substantial property instead of a stack of receipted bills.

Ninth. He claims that his company's rates are lower than a number of public power authority rates.

Let us see how the T. P. & L. rates compare with both public and private power rates in cities where they do not face competition.

In Belton and Cameron, the T. P. & L. charges $2.18 for 40 kilowatt-hours, but in San Marcos and/or in Lampasas the LCRA charges only 95 cents for this same 40 kilowatt-hours. If you use more current the T. P. & L. will charge you $7.44 for 250 kilowatt-hours in Cameron or Belton, while the LCRA will charge you only $4.25 in San Marcos or Lampasas.

In the larger towns we find the people of Temple still paying the T. P. & L. $2.18 for 40 kilowatt-hours just like the people of Belton, Cameron, or Hillsboro. If they use 250 kilowatt-hours, Temple citizens must likewise pay the power company $7.44 just like their smaller neighbors. On the other hand, Luling, with a municipal plant, pays $1.65 for 40 kilowatt-hours or $6.05 for 250 kilowatt-hours, and the people of Vernon pay their municipal system only $1.20 for 40-kilowatt-hours or $7.25 for 250 kilowatt-hours.

When we get into cities of a still larger population bracket, we find that the power company does reduce the rate, but certainly not in the same proportion that municipal plants do. Waco citizens pay $1.91 for the same 40 kilowatt-hours that Austin citizens buy for $1.71 through their municipally owned system from the LCRA, and in addition, the city of Austin received in 1945 $107,580 in lieu of the $63,528.56 taxes that the city of Waco received from the taxpaying T. P. & L.—but do not stop here—in addition to a lower rate, and more money in the city's general fund than Waco got in taxes, the city of Austin was paid an additional $935,000 in net profits for the year's operations. No wonder the power company can give anyone who threatens its monopoly a rate lower than TVA, but is it not plain that the power company gives these rates at the expense of the electrical users of the cities where they do not face any kind of competition?

Tenth. He suggests that the energy to be produced by the co-op plant is not needed in the area.

Mr. Lynch describes the power resources of his and associated companies in the area and says that they "should

without question insure a continuance of the company's ability to provide ample power for the REA distribution cooperatives in this area when needed." He forgot to mention that the plans for the generating facilities which he describes were made public after the Brazos Cooperative announced its plans to build 10,000 kilowatts of capacity.

All along, the T. P. & L. has said there was no need for this 10,000 kilowatt capacity, and yet at the same time the company and its affiliates have announced that they are going to build 160,000 kilowatts of capacity in the same area. How could their increased capacity be now needed if there were no need for the 10,000 kilowatts of co-op capacity all these years. And even more remarkable, Mr. Lynch has added 30,000 kilowatts to the capacity which he says his companies will build since January 1947. In that month he wrote the president of the Brazos Co-op and stated that his companies planned to construct 130,000 kilowatts. Now he says 160,000 kilowatts. The need for power in Texas must be growing very rapidly. As a matter of fact, Mr. Lynch has always insisted that the REA should be held to accountability planning in view of the acts that his company takes after REA action is likely to find that REA foresight was better than T. P. & L. hindsight.

Eleventh. He attempted to leave the impression that Brazos project is socialistic.

Throughout his testimony, Mr. Lynch, by subtle insinuation and direct statement, sought to imply that the Brazos Cooperative is a tax-free, subsidized, government-owned agency. This is completely false.

The Brazos River Electric Transmission Cooperative is owned by the Brazos area rural electric co-ops which in turn are owned by the farmers they serve. These farmers have borrowed money to finance the Transmission Cooperative and when they have paid off their loan, they will own their facilities.

The Brazos co-op pays interest on its loan. It pays taxes. It is free enterprise. It is local ownership. And if the T. P. & L. cannot—as Mr. Lynch sees as possible—"survive in the same area" it will simply be because T. P. & L. cannot furnish power as efficiently, as cheaply, and as dependably as the Brazos farmers. If this happens it would be strictly according to the rules of competition that have always prevailed in a free-enterprise system.

The entire attack presented by Mr. Lynch, upon cooperatively owned generation or transmission facilities directly and upon the entire rural electrification program through innuendo, adds one more chapter to the growing record of powerful interests who would willingly retard the Nation's welfare in order to advance their own private gain.

The electric cooperatives, financed by REA, are showing their worth everywhere you go across the country. They are doing a job that the private power companies at first said could not be done, and now that the co-ops have shown it can be done the private power companies are waging a concerted drive to regain that monopoly over rural power that they once had.

The guiding principle of the Rural Electrification Administration in its entire loan program, whether for cooperatively owned distribution systems or for the limited number of cooperatively owned generation and transmission facilities, is that farmers are entitled to have electric power at the lowest possible rates consistent with good business management of their electric systems. The private power companies in their dealings with farmers, as the record shows, have been motivated by a totally different principle: "Charge all the traffic will bear." And this, as the record shows further, has been the guiding principle of T. P. & L. in the past and, it may be deduced from Mr. Lynch's testimony, remains its guiding principle today.

Probe Bares Plight of Vets Under GI Bill

EXTENSION OF REMARKS
OF
HON. HOMER A. RAMEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. RAMEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor of June 27, 1947, and justification from the report to accompany H. R. 246:

[From the Christian Science Monitor]

PROBE BARES PLIGHT OF VETS UNDER GI BILL

NEW YORK.—Cases of hand-to-mouth existence on the part of veterans attending college under the GI bill of rights and a consequent rapid draining of their savings are reported by the social research laboratory of the City College of New York, department of sociology.

Incidents of financial hardship, inadequate housing, and resulting discouragement of student-veterans are cited by the research laboratory following a 6-month survey of living conditions of 267 married and single veterans and 25 nonveterans.

The sampling of veterans was taken from among those living at home, in Army Hall (a housing project located at One Hundred Thirty-eighth Street and Amsterdam Avenue for single veterans attending metropolitan colleges), and at the Camp Shanks housing projects for married veterans.

The survey was carried out in cooperation with the college's Veterans' Association.

EXPENSES CITED

The report showed that the average married veteran attending college is forced to spend $181.92 monthly and the average single ex-GI $84.95, in order to live with a minimum of comfort.

It pointed out that there is a considerable gap between these expenditures and subsistence allowances under the GI bill, which permits married veterans a monthly maximum of $90 and single veterans $65.

Acording to the report, the most important and consistent sources for meeting the deficit between expenditures and income are personal savings and cashing in of Government bonds. The average monthly withdrawal by married veterans was given as $35 and for single veterans, $30.25.

In the case of married veterans, some of the deficit is made up through income from wives' full- and part-time jobs.

SAVINGS NEARLY GONE

"It is apparent," the report continued, "that the average veteran's savings cannot last much longer. Also, the chief purpose for buying bonds is in itself being defeated by the very fact that the veterans who can benefit most from savings bonds are being forced of necessity not only to stop purchasing them, but to cash them in before their maturity value has been reached."

The report asserted that the student-veteran's financial hardship can be laid to the fact that the GI bill, which was passed before the end of the war, did not anticipate the inflationary rise in living costs.

Housing inadequacy was another problem revealed by the survey. Of 69 married veterans queried as to adequacy of quarters, 35 percent stated that their housing facilities were inadequate for study; 42.05 percent said that their homes were inadequate for entertainment; 15 percent maintained that facilities were inadequate for comfort; and 16 percent complained they did not have privacy.

The report concluded that, while veterans, both married and single, are not looking to the Government for total support, student-veterans feel that a minimum of $119.18 for married, and $92.60 for single veterans, is necessary to make ends meet even though the veterans themselves have no intention of asking their wives to stop working or of giving up their own part-time jobs should subsistence increases be granted.

[From H. Rept. No. 77 accompanying H. R. 246]

JUSTIFICATION

The committee had before it for study numerous bills on the subject under consideration. Extensive hearings were held at which representatives of the American Legion, the Veterans of Foreign Wars, the American Veterans of World War II, the Regular Veterans Association, Members of Congress, and the Administrator of Veterans' Affairs expressed their views on the subject.

The principle of a ceiling governing the payment of subsistence alowance was enacted into law by Public Law 679, Seventy-ninth Congress, approved August 8, 1946. Immediately after its enactment numerous complaints were received from on-the-job trainees, veterans' organizations, labor unions, and others to the effect that the ceiling had been set at a figure which tended to make the benefits of the Servicemen's Readjustment Act less appealing to the veterans for whom it was designed. The existing ceilings are considered so restrictive as to cause a great number of veterans to refrain from entering upon a course of education or on-the-job training, or to discontinue such courses as they had already undertaken.

Your committee believes that this objectionable situation can justifiably be relieved by this bill. A ceiling is deemed an effective administrative device for establishing the boundaries for the payment of subsistence allowances in the on-the-job training program. At some point Government subsistence is no longer warranted but, in the judgment of the committee, this point is not exceeded by the figures set out in H. R. 246, as amended.

In the proposal in section 2 of the bill, which would amend paragraph 11 (b) 2e of paragraph VIII of Veterans Regulation No. 1 (a) to require not more than 4 years of full-time training in lieu of the present 2-year limitation, your committee takes into consideration those bona fide job-training courses which, while not apprenticeable, nevertheless cannot be concluded in the space of the 2 years provided in the original standards. Certain of these courses had been embarked upon by veterans prior to introduction of the criteria contained in paragraph 11 (b) of Public Law 679, and it is felt

that the trainees should not be prejudiced by their curtailment. Moreover, the retention of the other standards will tend to stabilize the program and prevent the undue extension of courses beyond their legitimate objective point.

Blueprint for Total Labor Unity

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 1, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hon. Fiorello H. LaGuardia, from PM for June 29, 1947:

BLUEPRINT FOR TOTAL LABOR UNITY

(By Fiorello H. LaGuardia)

The passage of the Republican-Democratic labor law is not a political accident. It is not a legislative freak. It is symptomatic. The law typifies the present trend in our country. It is only a manifestation of a determined plan to revert to a small ownership class and obtain complete control of the very lives of the working class.

This plan is engineered by capable men and covers not only our own country, but has been injected into our foreign policy. The humane principles, the more equitable distribution and the economic leveling off of the New Deal was most contagious. An antidote has been provided in the form of economic pressure. The American people have been caught unaware. They have lost control of their Government. We are back to the old days of trusts, big money, and predatory wealth—a sordid period in our history halted by Theodore Roosevelt. The New Deal initiated by Frankling D. Roosevelt is for the moment dead. Nothing short of a sudden awakening of the American people and smashing the present political partnership between the leadership of the two parties can prevent a period of frenzied finance, legalized exploitation and return to power of concentrated wealth.

No one in the know, or in any position of responsibility, can honestly claim surprise at the final outcome of the bipartisan labor bill. It was all according to schedule. Shrewd political manipulators are shaping policies and guiding legislation.

Progressive forces, liberal groups, independents, and organized labor are routed. They have been busy fighting each other. This situation, too, is not accidental. The Democratic machine, no matter what happens, has absolute control of one group of progressives. This in and of itself will neutralize any action another group may take. Labor has been so cleverly maneuvered that—unless it comes to its senses—the labor vote will be split. Twelve inspiring years devoted to human rights and a better life for the people—12 long, lean years for the special interests—have made the reactionaries cagey, cautious, conniving, and cunning. There will be no boners pulled. Here is the last chance to regain all lost special privileges for the few and return to the laissez-faire system.

FOREIGN COUNTRIES HAVE NO CHOICE BUT TO KEEP IN LINE

There will be no rough stuff. There will be no sudden shock. Foreign countries will be kept in line—they have no choice. The present undisturbed and unhampered march of selective wealth and well-distributed poverty has had a good start and has sufficient momentum to keep going for some time.

There will be great solicitude for the individual. For some time yet there will be full freedom of speech. Anyone who has enough money to buy a press and start a newspaper will be free to do so. Of course, no labor organization is permitted to publish any political news out of its own money. There will be free and open elections as usual; yes, a two-party system with one control, two parties with a single thought. There will not be the slightest interference or even remote attempt to interfere with religious freedom. There will be plenty of organized sports for the recreation of the workers and plenty of good, wholesome, clean literature for their edification, and to keep the mind off such subversive and crazy ideas as a better and fuller and happier life. There will be no ruthlessness or shoving around; just a gradual and systematic reduction in the pay envelope. A plutocracy within a democracy. Individual liberty with economic limitations. Personal freedom but financially fenced. All this is in the making and will happen before we know it unless there is a quick awakening.

GENERAL GOOD MUST BE CONSIDERED OVER PERSONAL AMBITIONS

The situation is too serious to become angry. Calm, cool, deliberate planning is necessary. Personal ambitions must give way to the general good. Generosity and sportsmanship are necessary to bring about a united front. This present push backward might yet be stopped in 1948. It will be extremely difficult but not impossible if all progressive forces work together. Otherwise it will continue till 1952.

All this talk about resisting the provisions of the labor law does not make sense. It is playing right into the hands of the unified command of the forces of reaction. Strikes will not be suppressed by the use of force. They will be permitted to run along peacefully until the workers' credit at the bakers and grocers is exhausted. In the meantime, savings and Government securities will dwindle and interest rates will go up. Fits right into the picture.

Union lawyers must exercise great restraint. The mistake of the portal-to-portal pay claims should not be repeated. I would suggest a legal advisory board, composed of the best available legal talent.

Organized labor must remember that the stakes are enormous. Not only the existence of labor unions but the very well-being of every workingman's family is involved. There will be many provocations to get labor to start legal proceedings when and where it will best suit the "old dealers." Labor simply must get together. The strategy must be thoroughly studied and a definite plan adopted by all.

LABOR MUST PREPARE ITS DEFENSE OR LOSE EVERYTHING

There is much to be done. A great deal of organization from scratch must be started. Labor in the meantime must prepare to defend itself—or lose all.

Machinery for the avoidance or immediate settlement of jurisdictional strikes must be adopted at once by every labor organization. Labor must not be trapped into a test case of this provision of the law. It will surely be held valid. Organized labor must invite a test case on the prohibition against labor union political activity. This test should not wait until 1948. Such an established and recognized publication as Labor of the Railroad Brotherhoods should test the law in this respect. It should issue one of its special editions in behalf of a candidate and give notice that it is doing so from funds provided by the labor organizations. It is safe to predict that this part of the law will be declared invalid, null, and void.

It is well to realize now that the Labor Law is the natural result of a present trend toward reaction. Nothing short of a shift in public thinking and public opinion will change the law or prevent more regressive legislation. Agriculture is next. The farmers will soon see that the very forces that have been agitating against labor will turn against them. Labor should stand by the farmer, even though many of the farmers have been misinformed and misled in their attitude toward labor. It will all come out in time.

I shall continue pleading for unity. There are many public-spirited men and women who are making every effort to reconcile the various progressive and independent groups. This must be brought about.

THE WORKERS WILL SUFFER UNLESS ORGANIZED LABOR GETS TOGETHER

In the meantime, organized labor must get together. Unless it does, the workingmen and women of this country will suffer. A united labor front, with a consolidation of progressives, liberals, and independents, can break the present Republican-Democratic combination.

To start, what we need is one great national labor organization. I have in mind one parent organization, say, the American Congress of Labor, divided into four national departments under its jurisdiction:

A merger of the American Federation of Labor and the Congress of Industrial Organizations, taking in all trades and skills except those classified as belonging to other departments:

Transportation, which would include railroad, water, air, and land.

Mining, which would include coal, all minerals, and oil.

Professional and entertainment.

Each of these departments of the national parent body would have its own head and its own executive board. The executive boards of all four would constitute the American Congress of Labor. The heads or presidents of the four departments would consitute the executive committee of such congress.

All charters of locals would be issued by the national departments. The departments would have control over all locals and disciplinary power of their own. Nation-wide strikes would require the approval of the parent body, the American Congress of Labor. Industrial strikes involving more than one employer, not affecting the national economy, would require the approval of the department.

HOW TO ELIMINATE JURISDICTIONAL DISPUTES

Such an organization would eliminate entirely jurisdictional disputes, would be tremendously influential in removing local individual abuses. I want to make it clear that I am not suggesting that such an organization could be forced by legislation. It would require voluntary decision and willingness to cooperate. It would not be a governmental agency, but would remain entirely independent and under the control of labor itself.

We are fortunate in that leadership on the very top level of labor in our country is intelligent and honest. They have their troubles mostly, I believe, because of the weakness of the structure of the national organizations. It seems to me that labor has outlived its present system of national organizations, now archaic and not in keeping with the advancement made by large and powerful industrial and commercial organizations.

The proposal has many difficulties, yet they are not insurmountable. Vision, understanding, fairness and courage on the part of all would soon bring about a plan which would ensure industrial peace, increased production and more permanent employment for the next 50 years. It may be different after that.

Security As a Matter of Right

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 27, 1947

Mr. WEICHEL. Mr. Speaker, the aged people of this country are entitled to security as a matter of right. I am including the following petition of the aged from my district setting forth their views:

DEAR CONGRESSMAN: I believe in a national mutual insurance program on a pay as you go basis that will provide security for the aged, physically disabled, and widows with children. This security is proposed in the Townsend plan and I respectfully request your support of this bill.

H. H. Smith, C. N. Hakes, Fred Anderson, Mrs Ruth Anderson, New London; Mr. and Mrs. Owen M. Porter, Wakeman; Boyd Livingston, Jennie Livingston, S. J. Wilson, Leon Reed, Charles Kinion, I. G. Advocating Adoption of Title 28, United States Code, as Revised, and the Committee Amendment

EXTENSION OF REMARKS
OF

HON. SAM HOBBS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 30, 1947

Mr. HOBBS. Mr. Speaker, the pending measure, H. R. 3214, is by its title declared to be, "A bill to revise, codify, and enact into law title 28 of the United States Code, entitled 'Judicial Code and Judiciary.' "

I. HISTORY OF THIS PIECE OF LEGISLATION

Of course, it was introduced by the chairman of the subcommittee on Revision of the Laws of the Committee on the Judiciary. It is the product of 4 years of work under H. R. 3190 of the Seventy-eighth Congress, which became the act of June 28, 1943—Chapter 173, 57 Statutes, page 220—in and by which there was appropriated $100,000 for the complete revision and codification and enactment into law of title 18, the Criminal Code, and title 28, the Judicial Code. Of course, this bill was referred to the Committee on the Judiciary. The preliminary study was authorized and begun by the then Committee on the Revision of the Laws, with which the Committee on the Judiciary and the experts of the West Publishing Co. and the Edward Thompson Co. collaborated. Upon the enactment and approval of the Reorganization Act of 1946 the Committee on Revision of the Laws became a part of the Committee on the Judiciary, the work theretofore done in collaboration by the two committees was taken over, and is now done by the Committee on the Judiciary. The same staff of experts was continued. The work has now been completed. Title 18 has been reported by the Committee on the Judiciary and has been adopted by the House. Title 28 has also been reported by the Committee on the Judiciary, speaking through its distinguished chairman, the gentleman from Kentucky [Mr. ROBSION], of its Subcommittee on Revision of the Laws, in accordance with the order of the full Committee on the Judiciary by unanimous vote, with one committee amendment to be offered by the gentleman from Kentucky [Mr. ROBSION].

Twice, upon the calls of the Consent Calendar of the House, the consideration of H. R. 3214 has been passed over without prejudice at the request of members of the Ways and Means Committee.

II. THE ISSUE

This is not, in any sense, an attempt on the part of the Committee on the Judiciary to usurp any part of the jurisdiction of the Committee on Ways and Means.

Nor do we of the Judiciary Committee seek to increase our jurisdiction or take on any new duties.

Fifty-two percent of all the bills that have been introduced in the Eightieth Congress have been referred to our committee—more than we can possibly say

grace over. Our prayer to Congress is: Not more, but no more!

In fact, without shirking our duty or any part of it, we are seeking relief from as much of the disproportionate burden that has been placed upon us as may be consistent with logic and wise congressional policy.

The Committee on the Judiciary of the House is 134 years old. From its creation—as its name implied—one of its prime duties has been to study the judiciary and recommend its improvement.

The Committee on the Judiciary has never sought to intrude into the prime field of the Ways and Means Committee to study and improve tax law.

Whenever our attention has been brought to a needed reform of judicial procedure, proven by the evidence submitted, we have conceived it our jurisdiction and duty to recommend to the Congress a remedy. We have consistently sought to correct mistakes of the judiciary in interpreting congressional intent.

Here we are faced with a problem which we conceive to be clearly within our province since it involves erroneous interpretation of the law, or of procedure thereunder, although, incidentally, it also affects decisions and procedure in tax cases.

The Ways and Means Committee has unquestioned jurisdiction of the writing of tax law. It is expert in that field. We do not even claim to be. However, we respectfully submit that practically all the functioning of the judiciary relates to some subject within the jurisdiction of some other congressional committee. If the suggestion of improvement in the functioning of the judiciary is to be denied our committee merely because it would relate to some phase of the jurisdiction of some other committee, the Committee on the Judiciary might as well be abolished.

The issue here presented involves only two questions:

First. Shall the Tax Court of the United States be made a Court of Record?

Second. Shall the decisions of the Tax Court of the United States be subject to review as are the decisions of the district courts?

While this bill comprises 189 pages, some 173 chapters, or 3,000 sections, and revises and codifies the entire Judicial Code, these two questions are the only two as to which difference of opinion has arisen.

III. CHARACTER AND PROCEDURE OF THE TAX COURT

The Ways and Means Committee, as a part of the Revenue Act of 1924, created the Board of Tax Appeals. Review of the committee hearings, reports and the floor debates relating to the Revenue Acts of 1924 and 1926 will make it perfectly clear that the primary purpose the Ways and Means Committee sought to subserve was that the taxpayer could litigate his liability before having to pay, for many taxpayers were unable to pay the excess amount set up and declared due by the Commissioner of Internal Revenue and had been driven into bankruptcy as a result. The Secretary of the Treasury recommended in 1923 the creation of a Board of Tax Appeals. The taxpayers have always had the right to pay and then sue in the district court for refund of any wrongful exaction. This has been true since the 1924 Revenue Act, even though not paid under protest. If I recall correctly, either the request of the Secretary of the Treasury for the creation of the Board of Tax Appeals or the revenue bill of 1924 as passed by the House, or both, indicated that the proceedings before this Board should be "informal", but in the conference report which became the law of 1924, this provision for informal procedure was deleted and the Board was authorized to adopt and promulgate its own rules of procedure. This was done and the procedure thereunder has prevailed until the present time, a pertinent part for the purpose of this discussion being that each taxpayer's case should be tried before one member of the Board, and only one. By reason of this provision, the Board was enabled to try and dispose of an exceedingly large number of cases which would not have been possible had it been required that the Board as a whole, or a quorum thereof, sit in each case. Each of these one-man decisions is reviewed by one man and only one—the presiding Board member, or, since the name of the Board of Tax Appeals was changed to the Tax Court of the United States, by appropriate provisions of the Revenue Act of 1942, the presiding judge of that court. As a result of this simplified procedure the number of cases disposed of has been exceedingly large—an average of more than 5,000 cases for each of the years since its creation.

From the creation of the Board of Tax Appeals there has been no question but that it performed judicial service, but while it has been denominated as an independent agency in the executive department of our Government, its judicial characteristics have been frequently noted. For instance, President Coolidge, upon approving the Revenue Act of 1924, said:

> The provisions of the bill, however, with reference to the Board, make it in all its essentials a court of record.

The report of the Committee on Ways and Means of the revenue bill of 1926, dated December 7, 1925, said:

> No other court in the world tries cases which in the aggregate involve such great amounts.

And again:

> The procedure is made to conform as nearly as may be to the procedure in the case of an original action in a Federal district court.

And again:

> In the view of the committee the decisions of the board are judicial and not legislative or administrative determinations. Review of judicial decision may be had by direct appeal to the courts as well as by petitions to the courts for the enforcement of an administrative order, or by extraordinary remedy and suits for refunds. Further no rehearing may be provided before the reviewing court, and the review of the decision of the Board may be limited to the record made before the Board.

The report of the Finance Committee of the Senate on the same bill is in substance the same as that of the Ways and Means Committee and follows almost its exact language. Senator GEORGE, in the Senate debate, is quoted in the CONGRESSIONAL RECORD as having said:

> Mr. President, if the Senator will pardon me, I may suggest that every reasonable effort has been made to bring this Board out of the class of a mere administrative body into the status of a court; and I think the rules of evidence to which the Senator refers have been amply cared for in this provision.

Just before Chief Justice Harlan F. Stone passed on to his reward, while my bill, H. R. 2181, to fix the salaries of certain United States judges was being considered, the Chief Justice called me over the telephone and in our conference which he requested and which ensued, he said in substance, "Judge, I want you to understand that I am not lobbying. I am merely calling your attention to what I think must have been an oversight of yours. In your bill increasing judicial salaries you did not include the judges of the Tax Court." I replied, "Mr. Chief Justice, I thank you for the suggestion, but while this omission may have been an error of judgment, it was not an oversight. The reason that the judges of the Tax Court of the United States were not included in my bill was that this court has never been a title III court. It was created as the Board of Tax Appeals and has been always regarded as an independent agency in the executive department. Its name was changed to the Tax Court of the United States only a couple of years ago and while I have high regard for its judges, I did not think that they should be included among the beneficiaries of my bill." Chief Justice Stone replied, "For a long time we have been reviewing their decisions and I can tell you out of my experience and close scrutiny of their work that they not only perform judicial service but that they do it well. I hope that you will reconsider and amend your bill so that it will include them." My reply was, "Of course I would not for a moment set my opinion up against yours. I understand that such an amendment will be offered. I have no zeal for the position I have felt impelled to take, nor would I feel it my duty to fight such an amendment except to state my position and the reasons for it, but I cannot agree to offer such an amendment nor consent to its adoption."

By bills written by the Ways and Means Committee which have now become law, the name of this agency in the executive branch of the Government has been changed from Board of Tax Appeals to the Tax Court of the United States. The length of tenure of the judges thereon has been fixed at terms of 12 years and an amendment adopted in the Senate to the judicial salaries increase act fixed their salaries at the same fixed by the same act for judges of the United States district courts.

The manifest intent of the Ways and Means Committee in proposing the creation of the Board of Tax Appeals was to expedite the administration of justice in tax cases. The same procedure for judicial review of its decisions by the courts of appeals and the Supreme Court was provided as for the review of decisions of the district courts. After the

Board of Tax Appeals had performed most efficiently for some 18 years the great service it was created to render, its name was changed to the Tax Court of the United States. It continued to render the same service. The provisions for review of its decisions remained the same as had applied to the Board of Tax Appeals and to the district courts. The Ways and Means Committee from time to time wrote new tax laws, and no one has ever questioned their exclusive jurisdiction so to do.

IV. CONFUSION

The Supreme Court has rendered several upsetting decisions—*Dobson* v. *Commissioner*, in 1943 (320 U. S. 489), the *Bingham case* (325 U. S. 365), in which Chief Justice Stone sought, apparently, to cure the Dobson decision, but then the *Kelly case* (326 U. S. 521), which, while not expressly overruling the Bingham decision, wiped out its curative effectiveness, and left the Dobson doctrine again supreme. Then in 1947 the Sixth Circuit Court of Appeals handed down Lincoln Electric Co., 1947 Commerce Clearing House General Tax Service, paragraph 9282, June 11, 1947, holding that the Tax Court was an administrative agency in the executive branch of the Government and that its decisions were administrative, not judicial deliverances.

In 1946, the Administrative Procedure Act became law. Section 8 thereof provides that review of the decisions of administrative agencies when the initial decision was made by one man should be reviewed first in the agency by a majority of its top-ranking administrators. This act was never intended to affect decisions of the Tax Court.

Three untoward results have ensued. First. Rich taxpayers who can afford to pay their tax assessments may do so and file suit in the district courts for what they conceive to be excessive exactions and the decisions of the district courts may be reviewed both as to questions of law and fact by the courts of appeals, and, if certiorari be granted, may also be reviewed as to questions of law and fact by the Supreme Court, whereas the poor taxpayers who cannot afford to pay their tax assessments have no such recourse. Second. The poor taxpayer must apply to the Tax Court for review of his assessment and the expeditious one-man decision, reviewed only by the presiding judge of the Tax Court, is abolished and it must be heard by at least a majority of the 16 judges of the Tax Court. Under the former procedure, wherever a tax case may have originated, the court sent one of its judges there to try the case. So the 16 judges may be scattered widely over the Nation. The poor man's initial review then must be postponed until 9 of the 16 judges are free to be assembled in Washington to try his case on this initial review. Unless this is changed, this one fact alone makes it impossible for the Tax Court to function expeditiously enough to dispose of its average case load of more than 5,000 cases a year. Congress must, therefore, increase greatly the number of judges unless the court is to fall behind tragically in its disposition of cases, or else restore one-judge decisions and uniform review. Third. Even after the poor man has obtained initial review by at least nine members of the Tax Court, the decision in the Dobson case denies him the right which the length of his purse grants to the rich man. Judicial review of a judicial decision—as of a district court—differs from judicial review of an administrative decision in that such review of a judicial decision is considered on the merits of the case whereas such review of an administrative decision assigns to a decision of the Tax Court a special finality as to certain types of tax questions. Unless the Dobson decision is corrected both the Government and private litigants are denied a fair judicial review. Prior to the Dobson decision it was assumed by all the courts, including the Supreme Court, that on appeal from the Tax Court all questions of law were fully reviewable, and that questions of fact were subject, in general, to the same degree of limited review that prevails in appeals from district courts.

In the Dobson opinion, however, for the first time the Supreme Court thought that it found the congressional intention that the jurisdiction of certain courts of appeals to review decisions of the Tax Court should be narrower than their jurisdiction to review decisions of district courts. Under the rule which the Supreme Court there set forth, no question of law decided by the Tax Court is reviewable by the circuit courts of appeals except those questions of law which the Supreme Court termed "clear cut." The effect of such a holding is that as to questions of law considered to fall short of being clear cut, the Tax Court is held to have a final power of construction, subject to no judicial review. This gives to a body inferior to the appellate courts an unreviewable power of construing tax laws even greater than the regulation-making power given to the Treasury Department, inasmuch as the validity of a Treasury regulation is subject to review by the appellate courts. Considerable confusion has resulted in attempting to construe the Dobson decision, because it is hard to distinguish clear cut questions of law from other questions of law which involve congressional intent in the taxing statute. This confusion has been all the more evident because of an intimation in the Dobson opinion that if the problem of construction before the courts is a problem of accounting, in the sense that the Tax Court is charged with determining what the intent of Congress was with reference to an accounting question, the conclusion of the Tax Court as to such a question seems, under that decision, not reviewable. These confusions amply justify the Committee on the Judiciary in proposing the committee amendment, but even if there were no such confusion, the effects of the Dobson decision would be undesirable and should be eliminated.

The pending bill would simply make the Tax Court of the United States a court of record; and by the committee amendment, its decisions would be subject to judicial review on the merits of each case, exactly as is now the law with respect of the judicial review given decisions of every district court of the United States.

We respectfully submit that these are matters clearly within the jurisdiction of the Committee on the Judiciary and our actions seek no possible intrusion upon the jurisdiction of the Committee on Ways and Means. We have the highest respect and regard for the Ways and Means Committee, its jurisdiction, and each of its members, but the Committee on the Judiciary would have been recreant to its trust if it had not done its duty to present to the House this revision of Title 28 of the code including the necessary corrections recommended. This bill should be passed not only because of the importance and need of the code, but also of its vitally necessary improvement.

Needy War Widows and Fine Print

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 1, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following editorial which appeared in the Boston Daily Record, Monday, June 30, 1947, relative to national service life insurance:

NEEDY WAR WIDOWS AND FINE PRINT

It seems odd, indeed, to find the Veterans' Administration playing what amounts to a legal shell game in the disbursement of insurance funds to the widows of our fighting men in the last war.

There is nothing crooked in it, of course. The accounting is accurate and the procedure sanctioned by the signature of the widow herself upon a carefully guarded and technically worded choice of payment method.

The trouble is that unless the widow is an expert at reading the fine print of contracts, and unless she has the business training to read between the lines of fine print, the result is that she goes without her insurance money for months, or in far from isolated cases she finds that she owes the Government money for longer than a few months.

This is how it works:

According to the National Service Insurance Act of 1940, the beneficiary receives payment in 240 installments at the rate of $5.51 per $1,000 of insurance coverage.

Then, by a congressional amendment of August 1, 1946, the beneficiary is permitted to change the payment schedule to a smaller amount but a longer period if she outlives the 20-year payment interval.

The joker is that if the widow has already received under the first law payments in excess of what she would receive under the second, the difference is reckoned as a debt which must be repaid either in cash or by foregoing payments sufficient to make up the balance.

Furthermore, once the payment schedule is changed it may not be withdrawn to its original terms.

The result is that many veterans' widows and their families find themselves penniless for a period of time.

They are penalized when they can least afford it for taking advantage of what seems at face value a generous and advantageous offer.

There is nothing in the official communications of the Veterans' Administration, or in the forms to be filled out to change the method of payment, that would simply, clearly, and factually warn the veteran's beneficiary of the consequences.

Veterans insurance is pitifully small, but in a great many cases it represents the difference between subsistence and actual want.

Korean Partition Develops Touchy Fuze to New War

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith the following article by Mr. Ralph Donaldson of the Cleveland Plain Dealer:

KOREAN PARTITION DEVELOPS TOUCHY FUZE TO NEW WAR

(Article 27)

Korea is an unhappy land. It escaped the ravages of war, but it is an occupied country. It has been freed from Japanese control and exploitation, but it is now governed by two other foreign powers, the United States and Russia.

The Koreans think they are capable of governing themselves and they want immediate independence. But the big powers have ruled otherwise. They have decreed there must be a period of trusteeship, during which the Koreans are to be taught how to govern themselves.

The result is that the Koreans are confused and divided among themselves and many of them are resentful and bitter toward the United States and Russia and suspicious of their motives.

The manner in which this situation came about makes a long and complicated story. It begins with the Cairo declaration, which promised that, after the defeat of Japan, Korea would be granted its independence "in due course." The Koreans interpreted that phrase as meaning "in a few days."

JAP FALL BROUGHT PROBLEM

Then came the sudden collapse of Japan, bringing with it the problems of how to deal with the Japanese armed forces in Korea and how to administer the civil affairs of the country after the Japanese civilians were removed.

A hasty decision was made by the Allied Governments that Russia and the United States should share jointly in the occupation of Korea. The thirty-eighth parallel was arbitrarily fixed as the dividing line between the two occupation zones. The Russions took over the territory north of this line; the American forces moved into the south.

This decision is one that we have had cause to regret. The only excuse for it was that, in those days, Russia was regarded as an ally of the United States, not as a competitor in the political and economic sense.

The result of the divided occupation is that the thirty-eighth parallel has become a military frontier. This line is where the armed forces of the United States and the Soviet Union are in closest contact in the Far East. We patrol one side of it, the Russians patrol the other.

SHOOTING GROUND PROVIDED

If a shooting war should start, that is probably where the first shots would be fired. But just to make sure that one does not start spontaneously, the American outposts are a mile or so below the line, so that our soldiers do not come in actual contact with Russian troops.

There is one exception to this. A small peninsula in eastern Korea is in the American zone, but it can be reached only by going through the Russian lines. So once a week, by prearrangement, a convoy of American trucks, taking supplies to the American garrison on this peninsula, drives up to the border where it is met by armed Russian guards who escort it through their lines to its destination.

The thirty-eighth parallel is also a political and ideological frontier. The Russians have promoted communism in northern Korea and have succeeded to a marked degree, according to information we have been able to get from that area. They have established a police state in their territory and have raised and equipped a north Korean army 125,000 to 150,000 strong.

COMMUNISTS FIGHT DEMOCRACY

In contrast, we are attempting to promote democracy and a representative form of government in southern Korea, but our efforts are hampered by Communist activities, the utter irresponsibility of the Koreans themselves, and their irrational demands for immediate independence, despite their obvious inability to govern themselves at the present time.

Finally, the 38th parallel has become an economic frontier. The iron curtain prevents the exchange of any commodities between north and south Korea. Practically all the manufacturing facilities and mineral wealth of Korea are in the Russian zone. The American zone is largely agricultural, although much of the land is useless because of rugged mountain ranges which have been stripped of their timber and from which the soil has washed away through centuries of erosion.

COMMERCE IS HALTED

The Russians wanted to import grain from southern Korea into their zone. Although southern Korea has a crop deficiency and is not able to feed itself, we agreed to exchange grain for coal from the northern zone. But the Russians refused to permit any coal to be exported from their territory to the south. Consequently, there is no trade of any kind between the zones.

We have to import coal from Japan, which does not have enough for its own needs, in order to keep our troops in Korea warm, and they are not too warm at that.

The American zone comprises 36,700 miles of territory. At the beginning of the occupation it had a population of approximately 17,000,000. Since then, however, the population has increased to about 19,000,000, due to the repatriation of Koreans from Japan and the infiltration of Koreans from the north. The population of the Russian zone is thought to be about 10,000,000.

JAP INFLUENCE ELIMINATED

One of the first jobs of the occupation was the elimination of Japanese influence in Korea. A total of 179,277 members of the Japanese armed forces surrendered. They were disarmed and evacuated to Japan.

A registration of Japanese civilians disclosed there were 625,957 in southern Korea. These have all been sent back to Japan, in addition to 221,867 who streamed into the American zone from north of the thirty-eighth parellel in order to escape from the Russians.

We are policing southern Korea with one Army corps, the commander of which is Lt. Gen. John R. Hodge. He came into Korea with the first occupation army in September 1945, and is the only member of the original force left. All the rest have been replaced.

YANKS ROUGH IT

Occupation duty in Korea is not popular among American soldiers. The country is bleak and bare. The people are not too hospitable. Moreover, Korea is at the end of the line, as far as rations, fuel, post-exchange supplies, and recreation are concerned. Korea gets what is left over, or is neglected entirely.

Let there be a meat shortage in the United States, or a longshoremen's strike on the west coast, and 2 months later the American soldiers in Korea feel the effects of it.

Nevertheless, every effort is being made by the American officials to make the best of their meager resources. In spite of hardships, the morale of the soldiers is not bad, since most of them can look forward to leaving Korea after a comparatively short period of service.

Reasons Why Wool Bill, S. 1498, Should Not Become Law

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the reasons submitted by the Boston Wool Trade Association as to why the wool bill, S. 1498, should not become law:

I. THERE IS NO NEED OF LEGISLATION SUCH AS S. 1498 BECAUSE THE WOOL FARMERS ARE NOT IN FINANCIAL DISTRESS AS CLAIMED BY THEIR LEGISLATIVE AGENTS

A. Prices received by farmers (U. S. Department of Agriculture) for lambs have advanced in past year until they are now more than 250 percent of 1939 (20 cents versus 7 cents). Wool prices in open market are 170 percent of 1939 (38 cents versus 22 cents). Mutton prices are over 210 percent of 1939 (8.2 percent versus 3.9 cents).

B. Over 85 percent of the sheep product by weight is sheep (mutton) and lambs and less than 15 percent is wool (U. S. Department of Agriculture).

C. The cost of production of the wool was not taken as 15 percent by the statisticians of the United States Tariff Commission, but at around 45 percent of the whole sheep and lamb operation. Thus the figures used as proof of the cost of raising wool were highly inflated. The United States Department of Agriculture statistics were not used.

D. The sources of the basic figures used as proof by the United States Tariff Commission were certain farms under debt to the Farm Credit Administration and not representative of the wool farmers as a whole.

E. Not a single individual instance of sheep farmer financial distress was introduced at the hearings.

F. With reference to the assertion by the sponsors of S. 1498 that this bill is justified because the 1909–14 base for parity is unfair to wool by at least 25 percent, no evidence whatever was introduced regarding this contention. All the available statistics fail to support any such assertion.

G. There has occurred a decline in sheep population of almost 20 percent but higher prices will not stem this decline. The decline accelerated with the Government boosting of prices during the war. Curiously, sheep population seems to increase when prices decline (Example: 1926 to 1931 an increase of 40 percent while price declined 40 percent). The farmer evidently sells heav-

ily when the market is favorable, and vice versa.

II. THE HIGH SUPPORT LEVEL FOR DOMESTIC WOOL IN BILL S. 1498 NATIONALIZES A FREE-ENTERPRISE INDUSTRY AND PENALIZES THE TAXPAYER

(Definition: Government support of a commodity becomes nationalization when the level of support is higher than the level of the open market, since thereupon Government becomes sole buyer.)

A. The fixed-support level specified in S. 1498 for 1947–48 for wool is the wartime and 1946 level of 42.3 cents per greasy pound. The open-market competitive price of wool is 38 cents and has not been in excess of 38 cents for more than 20 years. Thus the Government must necessarily outbid free-enterprise buyers and monopolize the domestic raw-wool industry.

B. The fixed-support for wool in S. 1498 at 42.3 cents is higher than 100 percent of present parity. If parity recedes to its wartime level, then 42.3 cents will be 130 percent of parity. The Government support level for practically all major commodities is by the Steagall amendment 90 percent of parity. Wool does not warrant special treatment beyond the average and all supports should be based on parity.

C. The high support level of 42.3 cents of S. 1498 will increase prices to the consumer, who will pay indirectly as taxpayers since the substantial losses and costs involved must be met by the United States Treasury.

D. The high support level of 42.3 cents, because of being 10 percent above the open market, eliminates free enterprise from the domestic raw-wool business, and as a peacetime program will have a permanent and socialistic effect upon the entire industry.

United States production and sales of sheep and lambs and wool (as reported by the U. S. Bureau of Agricultural Economics, Division of Statistical and Historical Research, and published on p. 1415 of the printed hearings of the Special Committee to Investigate Wool, U. S. Senate, 79th Cong.)

Taft-Ellender-Wagner Housing Bill

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 2, 1947

Mr. KENNEDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters and also an editorial from today's Washington Post entitled "Lesser Evil":

MASSACHUSETTS INSTITUTE
OF TECHNOLOGY,
SCHOOL OF ARCHITECTURE
AND PLANNING,
Cambridge, Mass., June 25, 1947.

Hon. JOHN F. KENNEDY,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN KENNEDY: As dean of an architecture school and as a practicing architect in San Francisco, I have observed the need for an over-all Federal leadership and financial aid in a housing policy. The Taft-Ellender-Wagner bill is a good start in the right direction. This will urge immediate hearings on the companion bill, H. R. 2523.

Respectfully yours,
WILLIAM W. WURSTER,
Dean of Architecture and Planning.

MASSACHUSETTS MAYORS
ASSOCIATION, INC.,
Boston, Mass., June 27, 1947.

Hon. JOHN FITZGERALD KENNEDY,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN KENNEDY: At a recent meeting of the Massachusetts Mayors Association, the enclosed resolution was adopted.

The mayors of Massachusetts are deeply concerned at the complete lack of a Federal housing program. They feel that immediate action by Congress on the Taft-Ellender-Wagner bill is imperative.

This resolution attempts to express that feeling. It is hoped that you will give it careful and earnest consideration.

Sincerely yours,
DAVID G. NAGLE,
Secretary.

RESOLUTION OF MASSACHUSETTS MAYORS' ASSOCIATION, INC., ENDORSING TAFT-ELLENDER-WAGNER BILL

Whereas the Massachusetts Mayors' Association, Inc., whose membership includes all of the 39 mayors and the two city managers, in the 39 cities of the Commonwealth,

is of the opinion that the need for housing in Massachusetts for veterans and other citizens of the Commonwealth is rapidly approaching disastrous proportions; and

Whereas the General Court of the Commonwealth of Massachusetts has already taken notice of this critical situation and has enacted legislation authorizing cities and towns to take advantage of any Federal aid for low-rent housing and slum clearance and to borrow and expend money for their own locally financed veterans' housing programs, and has provided for State contributions toward any losses that cities and towns may incur; and

Whereas high costs of construction and other factors are making, and for some time will make, it impossible for either private enterprise or the cities and towns to meet adequately the demands without assistance in some form from the Federal Government; and

Whereas despite the fact that the Banking and Currency Committee of the United States Senate has reported favorably on S. 866 (the National Housing Commission Act), no further action by the Congress is scheduled for this term: Now, therefore, be it

Resolved, That the Massachusetts Mayor's Association, Inc., recommends:

1. That the immediate passage by both Houses of Congress of the Taft-Ellender-Wagner bill (S. 866 and H. R. 2523) is of utmost importance both to the immediate and long-range housing problems confronting Massachusetts.

2. That Hon. LEVERETT SALTONSTALL and Hon. HENRY CABOT LODGE, JR., Senators in Congress be urged to seek immediate consideration of S. 866 and that they bend their efforts to effect its passage.

3. That the Representatives in Congress from Massachusetts be urged to seek immediate hearings before the House Banking and Currency Committee on the companion bill to S. 866, H. R. 2523, and to request its consideration and passage in the House of Representatives prior to the adjournment of Congress.

4. That the secretary of the Mayors' Club of Massachusetts be authorized and directed to send copies of this resolve to all of the Senators and Representatives in Congress from Massachusetts and to President Harry S. Truman; Senator Robert A. Taft, of Ohio; Senator Charles W. Tobey, of New Hampshire; Representative Jesse P. Wolcott, of Michigan, chairman of the House Banking and Currency Committee; and Mr. Raymond Foley, Administrator of the NHA.

[From the Washington Post of July 2, 1947]

LESSER EVIL

The Housing and Rent Act of 1947 which the President signed with understandable indignation means the relinquishing of all control over a large segment of the rental dwellings available in the United States, a sharp relaxation of control over the remaining segment and repeal of almost all the aids to construction of new housing contained in the Veterans Emergency Housing Act of 1946. Whether this proves actually to be a lesser evil than the outright abandonment of rent control which would have resulted if the President had refused to sign the bill depends on the efforts which may be made to enforce its inadequate provisions. Unless Congress increases the funds it has made available for enforcement, the measure will be an unadulterated hoax.

Some of the conditions which impelled Congress to establish rent control originally still exist. There is a demand for homes, particularly for low-cost homes on the part of veterans, far in excess of the supply. The only way to eliminate the need for rent control is to increase home construction. But Congress has been as delinquent in affirmative action as it has been hasty in lifting of ceilings on the homes available. The President took occasion in connection with his message on the rent measure once more to urge action on the Taft-Ellender-Wagner bill. The urgency of such action is underscored by the rapid movement in the direction of decontrol. It ought to be taken before the current session ends. "One of the most stubborn obstacles in the way of any constructive housing program," Mr. Truman said forthrightly, "has been the opposition of the real-estate lobby." This lobby has now had its way in bringing about decontrol. It should not be allowed to impose upon the country a continued housing scarcity which effective governmental efforts could overcome.

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 2, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over Station WNBF on June 28, 1947:

Dear friends of the Triple Cities and my congressional district, this week I have attended and spoken before many Republican gatherings throughout our district.

The Women's Republican Club of Greater Endicott was most gracious to me, as were the Broome County Republican women at Ross Park. I was honored by the Kirwood Republican Club and spoke during an intermission at their large dance at Benjamin Hall.

An especially significant conclave was held at Greene Thursday evening, where I was the guest of the Chenango County Republican Committee. This was a successful occasion indeed.

These Republican meetings gave me a long-sought opportunity to tell about the accomplishments of the first Republican-controlled Congress in a dozen years.

Nothing is quite as irritating to me as to listen to some radio commentator or read in some columnist's remarks how lacking Congress has been this session in any activity whatsoever. That report is precisely what you are hearing, and I, for one, as your Congressman, deeply resent the inaccurate picture these propagandists are showing you.

To say that I am satisfied with the performance of Congress lately is not true. I have never been entirely satisfied with the record, whether Republicans or Democrats happened to be in the saddle. There is always much to be desired. Too many worthwhile bills are buried in committee and sometimes legislation is passed which is anything but good.

For example, I do not feel we have given enough time this session to the veteran. There is a haughty attitude on the part of some I know in Congress toward all veterans' bills. These men look down their noses whenever the subject of helping the veteran or his family comes up.

Of course, nothing makes me see red faster than hearing these reactionary gentlemen rant and rave about how much the Government has done for the soldier and what little gratitude he shows in return.

Such reasoning is an outrage, to my way of thinking. It is usually sprung from a selfish heart and ought to be treated with contempt and scorn. Those in Congress with such feeling toward the veteran are definitely small in number, but they have succeeded thus far in making a lot of noise. That noise hampers and blocks all honest efforts to get veterans' legislation out of committee for action.

The best demonstration of their blind opposition to measures benefiting our veterans is the shabby treatment they are giving the proposal of several—myself included—to pay off terminal-leave bonds to veterans in cash. Time and time again these short-sighted men have refused to give us standing room. They are not interested, they say, in helping the veteran to that extent.

Personally, I am amazed that such a miserable outlook on the part of an elected official can be tolerated by the folks back home. Yet, they seem to get away with it. But sooner or later they will surely be caught up with.

I started out tonight with the statement that the Republican Congress had not let the people down, and I want to enlarge on that point a little. When I say the veteran has not been aided as he deserves, I don't in any way mean the blame rests on any particular party. After all, the individuals who are responsible spring from both parties.

But I believe the American people can thank the majority in Congress for saving them from communism. What has been accomplished since January may not look spectacular or get newspaper headlines. But because of laws recently passed by Congress, the country has returned to constitutional government and direct representation is once again a fact.

At least a good start in the right direction has been made. It remains for the people to bombard their elected representatives with messages telling what they expect to be done. Only by hearing from you am I able to reflect the will of the majority. Only by your letting me know what you want can all of us prevail upon Congress to give us laws designed for the benefit of all Americans.

Thank you.

European Rehabilitation

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 2, 1947

Mrs. ST. GEORGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by George E. Sokolsky from the Washington Times-Herald of July 2, 1947:

THESE DAYS

(By George E. Sokolsky)

The President has appointed several committees here and in Europe to consider questions leading to conclusions with regard to our foreign policy, particularly the question as to how much we are to lend or give to the countries of Europe.

Secretary of State Marshall delivered an address at Harvard University which was completely misunderstood by most of the European countries except Soviet Russia.

Apparently the Russians grasped the fact that George Marshall could not, as Secretary of State, determine how much, if any, we are to give or lend the Europeans.

He would have to go to Congress for the money and it is not likely that Congress will provide a blank check.

This is a curiously muddled situation which reflects unfavorably upon the Secretary of State's capacity to organize in the field of international economics. It is not his field. Unfortunately, George Marshall walked into a frightful situation not of his making. But that would have been true of any man who became Secretary of State at the moment of the worst degeneration of our relationship with our former allies, both the Russians and the British.

The Greco-Turkish aid, called the Truman doctrine, was a domestic success, but the Hungarian coup d'etat and the inability to

get a loan for China from the Export-Import Bank were embarrassing.

Marshall apparently felt that he could save western Europe from communism by pouring huge exports of goods and machinery to countries that cannot ever repay. Neither President Truman nor Secretary of State Marshall seem to grasp the extremely simple fact in economics that not money but goods must be exported; not printed paper but wheat, iron, meat, steel, and all sorts of commodities, much of which is unavailable for export.

The appointment of various fact-finding committees by President Truman will solve no problem, as the Paris conference could solve no problem. The bare facts have always been available.

Those of us who for 2 years now have been demanding a survey of the economic condition of the United States, particularly in relationship to gifts and loans in Europe, never meant that a helter-skelter committee containing odds and ends of public men under the chairmanship of Averell Harriman could do more than pull together data available in the statistical abstract of the United States or the World Almanac.

More is needed than that. An over-all appraisal of this data; an analysis of its relationship to the future of this country; the projection of data, say to cover the next quarter of a century; a correlation of American with European data—this task requires extraordinary intelligence, knowledge, and experience far beyond the capacity of most of the personalities appointed to these various committees.

True, there are some fine persons on these committees and one hates to question their services for any reason except that the national welfare requires more.

Some time ago, I suggested that Herbert Hoover, Bernard Baruch, and Karl T. Compton could serve as such a board to analyze the data and to indicate a course. That suggestion apparently was unacceptable just as all suggestions, from whatever source, which could cut the Gordian knot of our extremely complicated situation, have proved unacceptable.

The reason is that no one dares to admit that a single error has been made in our foreign policy since 1937. These errors stand out like ugly peaks; the false Atlantic Charter, the Singapore conference, Tehran, Yalta, Potsdam, the Morgenthau plan, JCS 1067, the Spruille Braden policy following the wild Good Neighbor policy, the lack of clarification as to the use of the veto, and so much else.

This country is like a neurotic woman, all tangled up, who dares not confess. Each new step leads to further complications. Each misstep involves new schemes of deception.

If the entire picture were disclosed frankly, faithfully, unashamedly, the American people would not be more shocked than they are by the maddening shiftings and retreatings and sudden ejaculations which always end in a denser fog of confusion. It was hoped that George Marshall, the soldier, would do what politicians and diplomats avoid—hit straight to a bull's-eye. He has not done so.

Rent Controls

EXTENSION OF REMARKS

OF

HON. ANDREW L. SOMERS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 2, 1947

Mr. SOMERS. Mr. Speaker, under permission to extend my remarks in the RECORD, I include herewith my statement to the press on the presentation of petitions to the President urging his veto of the bill to lift rent controls:

Congressman ANDREW L. SOMERS, Democrat, of New York, presented to the President the names of more than 5,000 persons in the district he represents, petitioning against any change in the present rent-control law.

The petitions were obtained through the Committee for the Retention of the Present Rent Control Law of which the Honorable Irwin L. Steingut is chairman. Mr. Steingut, minority leader in the New York State Assembly, and former speaker of that body, obtained these petitions because he feels this legislation is not only inflationary but also it definitely destroys the veterans' housing program. New York State laws are inadequate and are not as effective as the people were led to believe. The lifting of controls at this time when New York City is facing the most desperate housing shortage in its history will bring about a condition chaotic beyond conception.

Through this act, such a large portion of the people's earnings will be extracted for housing that there will be little left for food and clothing and our people will be reduced to the pitiable condition of the low living standard of a great many of the foreign countries who are now appealing for aid. This law will create such a harrowing emergency that the safety of the Republic will require the President and the courts to use all the emergency powers of the Government to protect the people against this flagrantly defective legislation.

Congress, in order to put the President in a critical position, has struck a savage blow at the American home and the American way of life. The American people will consider the President an outstanding benefactor and conscientious public servant should he call the Congress into special session to restore the controls in housing.

This is a fine example of boomerang politics of which the Republicans are past masters.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 2, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony of Mayor deLesseps S. Morrison of New Orleans, before the United States Senate Foreign Relations Subcommittee regarding St. Lawrence seaway and power project Thursday, on June 12, 1947:

My name is deLesseps S. Morrison. As the mayor of the city of New Orleans, I appear before this committee on behalf of all of the citizens and all of the interests of our city.

Senator WILEY has directed that our testimony in opposition to the proposed St. Lawrence seaway and power project should be confined to the national defense and self-liquidating phases of Senate Joint Resolution 111. These are extremely broad subjects and although we feel that there are other phases equally deserving of consideration, we welcome the opportunity to testify on these grounds.

For many years, proponents of the St. Lawrence seaway have been coming to the Senate for approval of this highly questionable and expensive project. In 1934, when the late President Roosevelt called on the Senate to approve it as a treaty, the Senate decisively defeated the plan. Later it was embodied in an omnibus rivers and harbors bill. Again it was defeated. The many reasons in opposition to the St. Lawrence must be valid ones to have held up for so many years.

During the recent war it was my good fortune to serve with the Army Transportation Corps as a port commander on the channel and later in Belgium, Holland, and in Bremen, Germany. In the Bremen-Bremerhaven port area I served as chief of staff to the commanding general. Before going overseas, I was stationed at the Army's port of embarkation in New Orleans. I feel that this has given me an invaluable picture of the part played by port cities in time of war.

Because it is pertinent to the national defense of the Nation, I would like to say a few words about the Mississippi Valley and the port of New Orleans. The Mississippi River was described by Abraham Lincoln as "the greatest thing in America." If you look at a map on this hemisphere you can see the sound logic behind Lincoln's unqualified judgment. Spanning the Nation as its very backbone is the world's greatest river system and river valley—14,000 miles of navigable waterways serving 32 States, flowing out of the richest and most populous section of the Nation. It is the region of our greatest diversified agriculture and industry, where 51 percent of the population live and work. It is the very heart of the United States.

Strategically located as the gateway to this great midcontinent area of the country, New Orleans occupies an increasingly important position as a world transportation center. The greatest inland United States port is the natural funnel of travel and trade between the Americas. It also is inseparably linked with the national defense of the United States, as are many other ports of the Gulf and the eastern and western seaboards. In this time of international uncertainty our ports and harbors must be maintained in the interest of national security.

Without these ports we could not have transported in record time the men and materials so necessary to both the European and the Pacific theaters of war. New Orleans, I might add, was an embarkation port for both of these areas.

During the war we saw the construction of submarines, landing ships and cargo vessels in the upper Mississippi Valley and on the Great Lakes. The great majority of these craft were floated down the Mississippi. They were completed, outfitted, and sent out on their missions from the port of New Orleans.

Is it consistent, I ask you, for a nation blessed with the finest and most extensive system of natural waterways in the world to go over its borders into another country to spend funds for a seaway and power project whose need has not been properly established? Why not spend these millions improving what we already have—the harbors and port facilities from which the armed services of the United States operated so successfully?

Here in the United States we have done so much less to develop our God-given waterways resources than have other nations. In Great Britain and on the Continent I have directed and observed operations at the man-made ports of Avonmouth, Antwerp, Ghent, and Amsterdam. Here are artificial canals that have become great ports. I urge this committee to consider that here in the United States we have many vitally needed projects ahead for the perfection of our own harbors before making capital outlays in another country.

And that leads to this important point, which I commend for your most thoughtful

consideration. This proposed seaway would run over 1,000 miles through a foreign country. And friendly allies that we are today, let us not forget that Canada is a dominion in the British Commonwealth of Nations, united by allegiance with the British Crown.

You have already heard the testimony of Under Secretary of War Kenneth Royal that this project is not vital to the Nation's national defense. We believe there is ample evidence to prove that it is most questionable from this standpoint. For 5 months of the year the Great Lakes and the Upper St. Lawrence River are locked in ice. If we were attacked by an enemy at this period of nonfunctioning, the waterways and power facilities could easily be put out of action before they had a chance to make a single contribution to our national defense.

In the recent treason trial of Canadian scientists and Government officials who were convicted as agents of Soviet Russia one of the exhibits was a telegram from the Kremlin. This message asked about the natural resources that Canada could mobilize in case of war—her coal, oil, rare metals, water power, etc.

The interest of the Russians appears rather obvious. Canada lies on the forefront of the transpolar air route between the Soviet Union and the United States.

I am enough of a soldier to know that if attack should come to the United States it will probably be from the North. Why then, should the taxpayers of the United States spend hundreds of millions to build a seaway and power plant on Canadian soil which, in event of attack, would become one of the first casualties of such an attack? If the United States Congress has the funds for expensive navigation and power projects we earnestly urge that these funds be expended within the borders of our own Nation where our taxpayers will receive the full benefits and where United States citizens will receive employment on such projects.

If you polled the sentiment of the American people, I feel sure that you would find it to be this: Money for the national defense of the United States should be spent in a direct way—on the Army and Navy. It does not make sense that we should cripple our armed services on the one hand by denying them needed funds and at the same time throw millions into a project on foreign soil under the label of national defense.

The Mississippi Valley Association has estimated that if the seaway is completed and is used to the extent its proponents claim, a considerable percentage of present traffic now moving down the Mississippi River from the great midcontinent region of the Nation will be diverted away from its natural North-South trade route in our own river valley to the east-west St. Lawrence route. If this estimate is correct, then millions in commerce now being handled by the Port of New Orleans would flow out to the world through the Canadian port of Montreal. The New Orleans Board of Port Commissioners estimates that realization of the seaway's aims would mean a diversion of much of this natural Mississippi Valley traffic away from the United States ports to a Canadian river.

You will hear (have already heard) a representative of the Board of Port Commissioners of the Port of New Orleans testify in detail as to expected revenue losses and their adverse effect upon the port of New Orleans. So I will not go into detail on that. But let me stress that 79 cents of every dollar of income in New Orleans derives directly or indirectly from its port activities. The welfare of our entire community is at stake here.

It is not plausible for the Federal Government to spend tax moneys for a project which will damage the huge investments which State and municipal governments and private enterprise have in port facilities on the three coasts of the United States. This would mean the Federal Government using our tax funds to put us out of business. And if business suffers, we have unemployment, reduced buying power, and depression. It becomes a matter of our own Government competing with Louisiana and other coastal States of the United States, to our detriment.

Now a few words on the toll and self-liquidating feature of the proposed seaway.

We feel that the advocates of this project are advancing this feature as a smoke screen to cover the valid objection that the tremendous costs involved are out of all proportion to the benefits to be received by this Nation.

I have seen a number of cost estimates for this project. They usually vary, but all have one thing in common. They are constantly being revised upward. The United States Army Engineers estimate that construction will take four to six years and that the cost of the United States' portion will be in excess of $300,000,000.

In view of the recent actions by the Senate of the United States in favor of economy—for reduction of unnecessary governmental expenses—it is difficult for those of us in the lower Mississippi Valley to understand how this committee or this Senate can consistently approve the costly expenditures involved in this dubious project. It appears to us that the United States people, through their Government, would be shouldering a terrific tax burden for years to come—a tax burden that would help the few and hurt the many. And by the many I mean each and every taxpayer of the United States. In New Orleans, we who would directly suffer most from the seaway also would be contributing to support this maritime Frankenstein. Can you imagine anything more unfair or unjust?

What sound arguments can be advanced regarding the self-liquidation feature? The costs would be so great that no reputable engineer or economist can say when this cost would be amortized under the self-liquidation plan. The self-liquidation would have to run over such a long period of time that it will not be much relief. And who would the tolls benefit—the United States or Canada? It is all very vague. There is every reason to believe that the talk about self-liquidation is simply an attempt to explain away the legitimate criticism of high cost to the American taxpayer who must bear the burden of expense.

It has been suggested in some quarters that we of New Orleans and the lower Mississippi Valley are selfish in our attitude on this project. Gentlemen, may I say to you that if you consider it selfish to protect the position of the world's greatest river valley and its gateway port—if it be selfish to put the economic and military needs of this valley and its gateway port ahead of the interests of a Canadian river and a Canadian port of entry, then, gentlemen, we are indeed selfish—selfish in the same manner that any patriotic citizen places the welfare of his Nation before that of other nations, however friendly.

In summation, let me emphasize these points:

1. The St. Lawrence seaway and power project is neither economically sound nor in the interest of the taxpayers of this country. It is unfeasible and unsound.

2. Competent witnesses have said that the proposed seaway is not vital to the Nation's national defense. Moreover, because of its location in a foreign country and the fact that it would be ice-bound 5 months of the year, the positive value of the seaway from a national defense standpoint is most doubtful.

3. Its construction will adversely affect the economy of the Nation's greatest river valley and its gateway port of New Orleans.

4. Since the economic well-being of the Nation is extremely important in the overall national defense picture, the damage to the valley and port of New Orleans is far in excess of any material good this seaway might accomplish for the United States. Any damage to the port of New Orleans is per se harmful to the national defense of the United States.

5. If the United States Government has funds for waterways construction, we urge that such funds be expended in the improvement of ports and harbors on United States soil. Spend on developing what we have.

6. The excessive costs and long time required for amortization of these costs makes the self-liquidation claim of questionable justification.

I believe in a solid front among the nations of the Americas, in international cooperation. In New Orleans we heartily subscribe to the good-neighbor program. Our city government is the only one to my knowledge which maintains a department of international relations. We believe the United States should do all it can to assist other nations. But Canada does not appear to be among those nations which desperately need vast sums from the United States to remain stable and sound.

Your approval of this doubtful project can have only a harmful effect on the national defense of the Nation and on the economy of the great valley region our port serves, and it could well mean economic disaster for the city of New Orleans.

I thank you.

Address of C. M. Marino

EXTENSION OF REMARKS

OF

HON. THOMAS E. MORGAN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 2, 1947

Mr. MORGAN. Mr. Speaker, under leave to extend my remarks, I include in the Appendix of the RECORD the following address delivered by C. M. Marino before the graduating class of the Burgettstown-Smith Township High School, June 4, 1947:

I am grateful for this opportunity to be with you this evening at this inspiring and unforgettable moment in your lives. I am also grateful for the opportunity of presenting this diploma to you. It is a mark of distinction and the climax of at least 12 years of effort and sacrifice both on your part and on the part of your teachers and other members of the faculty. I want to congratulate you and your teachers as well as all others who have made it possible for you to attain this glorious graduation. I know you will remember this occasion for the remaining years of your lives.

This graduation comes at a time when the entire world is debating the future not only of the individual, but the future of modern and democratic civilization as we know it here in America. At this particular time when America is trying hard to lead the world in the making of a just and lasting peace, we must not lose sight of the fact that it is our duty to strengthen our prestige at home on the same measure that we enlarge our prestige with other people and other nations. And, with an eye to the future, we must give special attention to our young people.

We have all heard the old saying that "boys will be boys." However, it must be borne in mind that with time "boys will be men." These boys and girls will be the men and women of tomorrow, the pillars, the supporters, the mechanics, and the leaders of the world.

Many things go into the making of these future men and women. The home alone is not enough. The school alone is not enough. The church alone is not enough. It takes the entire community with all its institutions to make possible a clean, wholesome, safe background where our children can learn one of the most important lessons of their lives and that is to respect the rights and liberties of others. Playground, swimming pools, or recreation centers are not enough. We must have trained leaders in our schools, churches, and recreation centers who can give our boys and girls proper guidance consistent with the full responsibility of fellowship.

I do not believe that girls or boys are bad, but if they are, then there must be some factor or factors which have contributed to that condition. We all agree that there is something wrong and as a typical American, Will Rogers, once said talking about the weather "Nobody does anything about it." We all have a tendency to blame others for what is wrong, but we never blame ourselves when we are the ones that are responsible.

Our schools are not what they should be. I do not mean to be critical of this school, but I am referring to all schools throughout the Nation. I know, too, that some people are of the opinion that if the schools are not what they should be the board of school directors, teachers, principals, and supervisors must be at fault. Far from that, however, the fault lies on the shoulders of every citizen within the respective communities. All of us must become a little more school-minded. We should take more interest in school activities; we should watch more closely all movements within the school district and we should attend all or at least some of the school-board meetings. Remember that in so doing you are helping to build a better America and a better world, because this or any other nation cannot be any better than its citizens.

At this point I would like to quote from a good American the following statement: "The American people have entered the valley of decision. If the United States makes full use of the opportunity afforded by its position, its power, and its resources, it can determine the destinies of humanity. It can save western civilization."

Now, let us face some of the hard, cold facts regarding our school system. Today we have far less teachers in the Nation's schools than during any normal school year in the 1930's. More than one out of every eight teachers lacks the education or personal qualifications normally required of teachers.

During the year 1945, the American people spent about $55 per capita on drinks, while in the same year the per capita spent on schools was only $17. According to the 1940 census there were 3,000,000 adults with no schooling, 10,000,000 illiterates who could not even read or write as well as a child in the fourth grade. Among the young men who registered for the draft, there were 350,000 who could not even write their name. There were nearly 3,000,000 boys and girls between the ages of 7 and 17 years who were not in school.

There are States where many children go to school less than 5 months a year.

The average annual salary for classroom teachers and administrators in 1940 was only $1,441. More than 350,000—over one-third of the competent teachers employed in the school year of 1940–41—have left the profession. Only one-half of the teachers employed in 1940–41 are teaching today. Only 15 percent of all elementary and high school teachers are men. There are about 75,000 vacancies in the different schools as of today.

The February 15, 1946, edition of Business Week gave some estimates of the present average income of certain groups compared with 1939. Farmers have an increase in average spendable income in terms of 1939 dollars of 155 percent; coal miners, 61 percent; business and professional men 25 percent, and teachers at the bottom of the list with a 20 percent drop in real income. We all recognize the fact that neither the farmer nor the coal miner has too much income, but it is or should be a surprise to learn that the school teacher has suffered a 20-percent loss. Is it any wonder then if we continue paying our teachers less than the garbage collector or the common laborer that our teachers will leave the classroom in search of better paying positions. This is a very serious and dark picture for the future of America.

We all agree that the teaching profession is the most important of all the professions. Without teachers there cannot be any progress, there cannot be science or development in scientific research. The situation will be disastrous, the ultimate outcome tragic and dark. What can we do to prevent such a calamity? Here is the answer. We need more State and Federal aid for the Nation's schools. There is nothing new about State and Federal aid to schools. In the history of the United States Congress more than 150 bills have been passed to provide Federal aid for education.

There should be a minimum educational standard established by the State and Federal Government based on the principle that every boy and girl is entitled to a free education through high school, with advanced study for those of demonstrated ability. There should be an adequate minimum wage salary and proper security for teachers. In making these statements, I consider it to be the duty of our State and Federal Governments, as well as of the Nation, to see that every American has an opportunity to receive an adequate education, free from discrimination because of race, creed, or color. When we ask for more State and Federal aid to schools, we do not fear what some people believe to be too much control over the education of our children. That cannot happen as long as the local control system of education remains in effect.

American education is based upon the great public school system and recognizes the place for the home, church, and the private school. Public schools are functioning with great hardships and therefore need more aid. The church schools have found their place in the American system and are contributing to the evolution and development of their own objectives as well as to the growth and development of American democracy. They too, need aid. The private schools are too well established and are functioning too successfully for the benefit of America. However, it is not advisable to handicap their work. On the contrary, they also should be aided.

Now when there is much discussion and debate on the question of One World, let there be no disagreement on the question of One Nation. Our Nation, dedicated to a program of equal opportunity for all, must afford to the children of America equal opportunity in the field of education.

Of all the subsidy programs established by Congress, none is so important as the program of education. I believe the time has come for our State and Federal Governments to spend money where it will really do some good for everyone by raising the standard of our citizenship during the coming generation. The boys and girls of America are worth more than any other subsidy. These boys and girls are the future of America.

If freedom and equality are to be preserved, then it is time for the State and Federal Governments to spend some money in the direction of education where it will do concrete and lasting good to the people of present and future America. If freedom is to be preserved, let it not be only against foreign aggression, but also against home-grown ignorance.

Let us all do our share to preserve and to improve our ideals of democracy. Let us all do our share to assist these graduates here and all others throughout the land so that in time they will be able to make our ideals—the American way of life—a most realistic system over all other systems. Our system cannot and shall not be secondary to any. Let us save American democracy by improving the American school systems. Let us help to save America for this and future generations.

Tax Discrimination Against Non-Community-Property States

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 2, 1947

Mr. KEATING. Mr. Speaker, our thoughtful and able colleague from Missouri, Hon. ALBERT L. REEVES, JR., the author of the original measure providing in tax returns for income splitting between husband and wife, delivered an address to the New England Council at Manchester, Vt., on June 21, which deserves the careful study and serious consideration of the Members. Copies may be obtained from him, though, for reasons of economy, he has urged that it not be set forth here in full.

The existing inequity which permits a taxpayer residing in one of the 12 community-property States to report and pay a substantially smaller tax than one from the other 36 States on the identical income cries aloud for corrective treatment.

This is a matter seriously and unfairly affecting not only those directly involved as taxpayers but also all residents, workers and businessmen, large and small, who live in the States adversely affected, like New York and Missouri. Capital is being siphoned off, factories are being moved, employment sources are being eliminated from the noncommunity property states to the benefit of those states where this anomalous tax advantage can be enjoyed.

I share my colleague's view voiced in this address, that, despite the President's veto of the tax reduction measure, further efforts should be made before adjournment to enact legislation which will assure relief as of January 1, next. To that end, I have reintroduced, with modifications to give even greater consideration to the lower income groups who suffer most severely from the oppressing tax burden, a bill, similar to one I offered last March, providing for a graduated reduction. I am in thorough accord with Mr. REEVES' suggestion, if feasible, that the elimination of the discrimination against which his bill is directed be combined and meshed in with a general tax reduction measure.

I commend this illuminating address of the distinguished gentleman from Missouri to the earnest study of my colleagues.

Federal Aid for Education

EXTENSION OF REMARKS
OF
HON. EDWARD G. ROHRBOUGH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. ROHRBOUGH. Mr. Speaker, under leave to revise and extend my remarks, I include herein an editorial from the Pioneer Press, St. Paul, Minn., May 3, 1947, entitled, "Striving for Education," as follows:

STRIVING FOR EDUCATION

Deploring a "disparity of educational opportunity in different parts of the country (which) is so great as to be unbelievable," the National Education Association calls upon the Senate Labor and Public Welfare Committee to approve a Federal-aid program insuring a minimum annual expenditure of $50 on each pupil. And a spokesman for the Veterans of Foreign Wars, seconding this plea, stated Wednesday that "a large segment of our population is going to waste" for lack of schooling.

The Taft bill now before Congress would limit Federal aid to States that spend at least 2.5 percent of their own income on schools. In these cases, it would supplement local appropriations to bring the total spent to $40 a year for each pupil. Some object even to this modest Federal contribution as diverting the taxes collected in States that do their full duty toward their own children to be spent on other States which are delinquent in that respect

This objection, the New York Herald Tribune points out, is based on an erroneous assumption. When a State fails to provide adequate school support, it is very seldom due to lack of effort on the part of that State's citizens. The reason that Mississippi for example, spends the least on its schools is that it is the poorest State. In fact, it devoted 3.41 percent of its income to education in 1939, compared with New York's 2.6 percent. And even that contribution provided only $400 per classroom unit in Mississippi, against New York's $4,100.

Presidential Succession Discussion

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 27, 1947

Mr. KEFAUVER. Mr. Speaker, Members of Congress are greatly interested in pending proposal to change the Succession Act of 1886. A bill for this purpose has passed the Senate and is now pending in the Judiciary Committee of the House. The Honorable E. E. Patton, a prominent citizen and former public official of Knoxville, Tenn., wrote an interesting discussion of the Presidential Succession Act which recently appeared in the Knoxville Journal. Under leave to extend my remarks, I wish to include the article by Mr. Patton, as follows:

PRESIDENTIAL SUCCESSION IS PROVIDING SOLUTION OF WHAT MIGHT BE DANGEROUS NATIONAL SITUATION

(By E. E. Patton)

Many people believe that there is never any uncertainty about a successor in a monarchy but in this they are very much mistaken. The record shows that this is true of every nation in Europe which has had a monarchy, absolute or limited.

When our Constitutional Convention met in May of 1787 to revise the Articles of Confederation but really to frame a real Constitution, their task was no easy one.

There were precedents for everything that was put into the Constittuion except the electoral college, and it has given us more worry, more concern, than anything else in the Constitution. It provided that each State should have as many members in the electorial college as the State had Senators and Representatives. Each State had two Senators as they have now. But the representation in the House is based on population.

Until 1801 the electors met in their respective State capitals and voted for two men, one of whom should be designated as President and the other as Vice President. That worked very well until 1800 when Thomas Jefferson and Aaron Burr each received the same number of votes.

When the election goes to the House of Representatives the vote is taken by States and not by individual Members.

The contest between Burr and Jefferson was long-drawn out and bitter.

The method of electing then was changed and the electors voted for one man for President and a different person for Vice President, and the successful man must have a majority and not merely a plurality. This worked until 1824, when the candidates were Henry Clay, William C. Crawford, John Quincy Adams, and Andrew Jackson.

Jackson got a plurality, but not a majority. The act provided that the House might vote on the three highest. Since Henry Clay got fewer than anyone else, he was eliminated from the contest, and Adams was elected. He made Henry Clay Secretary of State and this raised the hue and cry of "bargain and corruption."

There was perhaps no truth in the charge but it got so hot that Clay and John Randolph fought a duel over it.

The Hayes-Tilden election is too well known to be rehearsed here.

There was another incident that might have eventuated into something embarassing in 1912. There were three candidates: Roosevelt (Theodore), William H. Taft, and Woodrow Wilson. Taft and Roosevelt split the Republican vote and Mr. Wilson overwhelmingly was elected. But let us suppose that no one had received a majority. The election would then have gone to the House of Representatives. Since there were 48 States, it would have required 25 States to elect. But four of the States were neutralized because their House membership was 50–50 Democrats and Republicans. That would have left 44 States to take part in the election. Of those 44 States, the Democrats controlled 22 and the Republicans 22. There would have been a tie. Mr. Taft was President and in this country an executive officer holds office until his successor is elected and qualified. Would Mr. Taft have held office for another 4 years or would the Vice President elected that year have become President?

The Constitution and the laws are silent on such a contingency. Until the election of Grover Cleveland in 1884, the President and Vice President would have been succeeded by the President pro tempore of the Senate. Mr. Thomas A. Hendricks, the Vice President, died, and the President pro tempore of the Senate was a Republican. Had Mr. Cleveland died, the political complexion of the Government would have changed. This would be the case today if Mr. Truman's wishes should be carried out; he wants the Speaker of the House to become Chief Executive.

The law was changed when Mr. Hendricks died, and it was provided that the Cabinet should succeed, beginning with the Secretary of State. But it still is nebulous, as I shall show.

The Senate is a continuous body; one-third of the Members are elected every 2 years. Why not provide, by law, that in the event of the death of the President and all of those who are in direct line to succeed him, the chairman of the following Senate committees shall meet and select a President: Judiciary, Foreign Relations, Finance, Appropriations, and Armed Services? The act could, and should, provide that the person selected by this committee should be of the same political faith as the deceased President; and that he should not be a member of this selecting committee.

If this law were enacted, there would be no possible chance of failure to have a President unless every person in line and every Member of the Senate should be killed. Think it over, and if you can devise a better method of guaranteeing a President under all circumstances, let it be known. The Journal editor is amenable to suggestions and he will print them.

Income-Tax Reduction

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. KEATING. Mr. Speaker, on March 11 I introduced a bill to give income-tax relief and increase the take-home pay of the overburdened taxpayers of this country. This measure approached the problem by a reduction in the rate of taxes by seven percentage points. The effect of adopting this plan would have been a graduated tax reduction from 35 percent for those in the lowest income brackets on net incomes under $2,000 to about 8 percent for those in the highest brackets with net incomes over $80,000 a year. I expressed my opposition at that time to the straight "across the board" principle of tax relief.

The bill which finally passed both Houses embraced this graduated plan to a certain extent in providing reductions ranging from 30 to 10½ percent. Now that a Presidential veto has thwarted our efforts for this year to relieve the harassed taxpayers, we naturally turn our thoughts to 1948 and must appraise the fiscal situation for that year to determine what we can and should do, with financial soundness, careful solicitude for the best interests of all our people, and due consideration of the wholesome furtherance of the national economy.

We are advised from all sources that there will be a Treasury surplus for fiscal 1947, although there are rather wide variations in the estimates given us regarding the amount of that surplus.

For fiscal 1948 we were told in the President's budget message that he anticipated revenues $1,500,000,000 in excess of expenditures. He gave us the figure of $37,500,000,000 as the rock-bottom amount required to operate the Federal Government for the coming year. Testimony, however, taken before the various appropriations subcommittees has disclosed countless instances of extravagance, waste, duplication, and

overstaffing embraced within the concept of a $37,500,000,000 budget. Although it is not yet determinable with certainty to what exact figure this budget will be reduced, it is conservative to estimate that $4,500,000,000 will be cut from the President's figure, thus yielding at least a total $6,000,000,000 surplus of receipts over disbursements for fiscal 1948.

Just this week, by unanimous action of the Committee on Veterans' Affairs, a bill has been reported favorably providing for the retirement of $1,800,000,000 of the national debt by permitting enlisted men to convert their terminal-leave bonds into cash. For those who actually have a pressing need, this is our first obligation. This money has actually been earned. It has been paid to officers in cash. There is no justification for the discrimination practiced on our enlisted men by requiring them to wait 5 years for their money. I quite agree that the terminal-leave bonds are a fine investment for those able to retain them. I shall urge all who can hang on to do so. But many of these young men need this money now, when they are trying to get started in business, or just getting married, or going through the readjustment period. I sincerely trust we will not delay further in settling with these creditors who, when their country called, responded unhesitatingly and unsparingly.

We are informed that the outstanding bonds are about $1,800,000,000. Undoubtedly the surplus for fiscal 1947 will be sufficient to meet this item in full, or nearly so. Assuming, however, the most pessimistic view that all of these men elect to cash their bonds and none of the national debt, thus liquidated, can be met from the 1947 surplus but must come from fiscal 1948 funds, that reduces the $6,000,000,000 figure to $4,200,000,000. This is the amount available, apart from any 1947 surplus, for tax reduction and further debt retirement in fiscal 1948, a figure which I emphasize again has been computed with extreme conservatism.

Today I am reintroducing a tax-reduction bill effective next January 1 which represents a modification of my previous bill in only one respect. It is recognized universally that there is a bare minimum of income which should not be subject to any charge upon it for a contribution to the cost of running the Government. That minimum is now fixed at $500 for a single man and $1,000 for a married man without children. I stated last March, and repeat now, it is my settled conviction that these amounts should eventually be raised to a more realistic figure.

I appreciate the force of the argument that the narrowing of the tax base and elimination of taxpayers from the rolls may create among them a certain undesirable apathy toward excess in governmental spending. For that reason, it is contended, the best interests of the country require that as many as possible of our citizens be rendered tax conscious, in order that they may never forget the fundamental principle that the money which the Government spends must come out of the pockets of the people. This argument, of course, carried to the ultimate, would preclude any exemptions and throw upon every earner, no matter how meager his wages, a certain share of the tax burden. Yet no one who accepts the principle of ability to pay as one of the fundamental criteria in fixation of tax liability seriously contends for such a proposition.

By this legislation I propose to raise the personal exemption $100 to $600 for a single man and $1,100 for a married man without children. Frankly, this is not as far as I would like to go, but represents, of course, a narrowing of the tax base which I realize will encounter opposition from some quarters. It is estimated that it will remove about 4,700,000 taxpayers from the rolls and will cause an annual loss in revenue of $1,500,000,000, or $750,000,000 for the half of fiscal 1948 here involved.

The effect in dollars and cents of this combination of increase in personal exemption with reduction of tax rates by seven percentage points can best be illustrated by example, that is, a man now earning $100 a year above existing personal exemptions who now pays $20 would pay nothing. One with a net income of $200, now paying $40, would pay $13—a reduction of 67½ percent. One with a net income of $1,000, now paying $200, would pay $117, at 41 percent reduction. The $2,000 net income man, now paying $400, would pay $247, a 38 percent reduction. The $4,000 net income man, now paying $840, would pay $545, a 35 percent reduction. The percentage reduction decreases as the income increases, with the result that in the highest brackets the reduction would amount to about 8 percent.

The cost to the Government in lessened revenue by the plan suggested is estimated at $4,900,000,000 for a full year, or one-half of that, $2,450,000,000, for the half fiscal year with which we are here concerned. The addition of this sum to the $750,000,000 reduction resulting from increase in the personal exemption makes a total of $3,200,000,000. Since there is still available $4,200,000,000 after provision for payment of terminal bonds, this indicates at least $1,000,000,000 additional for further debt reduction or such other purposes as may be determined.

We should not embark upon this course without a full realization of what it might entail for fiscal 1949, the budget for which will be the subject of intensive study after we reconvene next year. The $100 extra exemption and the seven-point reduction in tax rate would, we are told, cause an annual reduction in income of about $6,400,000,000, resulting, on the assumption of no change in other Federal income, in total revenues of $32,600,000,000 as against $39,000,000,000 anticipated for this year. Certainly if we can cut the budget this year to $33,000,000,000, everyone anticipates that it will be reduced next year to $30,000,000,000 or less, which would permit retirement of the national debt to the extent of $2,500,000,000 or more, based on the figures which I have set forth. It seems abundantly safe, therefore, to assume that, once having established this reduction, it should not under any normal circumstances be necessary for us to retrace our steps and again increase the tax in order to put or keep our financial house in order.

It is earnestly hoped that the Committee on Ways and Means, whether or not they conclude to report out before adjournment some tax reduction measure, will give serious and careful study to the plan embodied in this bill. Probably, like much of the legislation which comes before us, it may not receive the enthusiastic endorsement of many who vigorously contend for this or that method of approach to this big problem. It is offered in the hope, however, that it might set a possible pattern for reconciliation of the many divergent and conflicting views.

It is my firm belief that the American public would like to see this Congress, despite the President's rebuff, once again endeavor to adopt at this session a law which will assure them for next year, relief from the heavy burden of taxes which is now their lot. I am confident this bill merits and, upon favorable report from the Committee on Ways and Means, would receive from both parties in this House, overwhelming support, so emphatic in its unanimity that the Chief Executive would not be likely a second time to withhold his approval of a measure so eminently sound and fair, and that if he should decide to take that step, a veto would be promptly overridden.

Greece and the United Nations

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of July 1, 1947:

GREECE AND THE UN

A good deal of complaint was heard some weeks ago about the United States bypassing the United Nations in embarking upon its policy of aiding Greece and Turkey to maintain their independence. Whatever merit this criticism may have had at the time, it is now wholly overshadowed by the vigorous manner in which Warren R. Austin, the United States representative to the UN, is prosecuting the case for peaceful settlement of the Balkan dispute through the Security Council. His demand that the Security Council make use of its machinery to settle border disputes between Greece and her Communist-dominated neighbors is now meeting resistance from some of the very forces that were so recently chiding the United States for working outside the UN.

What Mr. Austin asks is that the Security Council establish a commission to aid in restoring normal conditions along the frontiers between Greece and her neighbors—Yugoslavia, Bulgaria, and Albania—thereby assisting in the establishment of good neighborly relations. The commission would investigate frontier incidents and complaints by any of the governments concerned. It would use its good offices to settle disputes, to secure the adoption of conventions for peaceful adjustment of controversies growing out of border incidents, and at the same

time keep the Security Council informed of developments in this trouble spot. With a commendable sense of restraint, Mr. Austin is asking the Security Council to act under Chapter VI of the United Nations Charter which gives it authority merely to make recommendations for the peaceful settlement of disputes.

If the encroachments upon Greece's independence should continue, it is clear that the United States will ask the Security Council to move against the nations responsible as aggressors. The findings of the UN Commission of Inquiry make it evident that Yugoslavia has already been guilty of surreptitious aggression. But all that Mr. Austin now asks is abandonment of these assaults and orderly settlement of any future disputes with the aid of a Security Council agency which can make objective findings on the spot. It is precisely this function that the United Nations was created to perform, and if it is permitted thus to cope with the threat to the independence of Greece, American aid can be devoted wholly to reconstruction in that war-torn land. Thus far, however, the reasonable Austin proposal has met with stiff resistance from the Russian and Polish representatives on the Council. If the UN is thus prevented from assuming its normal function in dealing with disputes of this sort, there will be no shadow of doubt as to where the responsibility lies.

New Haven Harbor

EXTENSION OF REMARKS
OF
HON. ELLSWORTH B. FOOTE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. FOOTE. Mr. Speaker, I wish to refer to the record of hearings on the War Department civil functions appropriation bill for 1948 insofar as it pertains to the New Haven, Conn., Harbor as appears on page 274 of the report. The authorized project provides for the deepening of the existing 25-foot main channel of the New Haven Harbor to 35 feet, and is a necessary step toward the proper development of the harbor and the surrounding areas. As conditions are now, the channel is not deep enough and cannot take the modern ships and tankers. The justification of the project is set up in the report, as follows:

Item No. 1—New Haven Harbor, Conn.

Total estimate Federal cost	$4,428,000
Allotments to date	1,503,000
Tentative allocation, fiscal year 1948	200,000
Additional to complete after fiscal year 1948	2,725,000

One reading the above schedule would get the impression that $1,503,000 had already been appropriated for this particular project. However, only $500,000 of that amount should be allocated to this project. The balance of $1,003,000 represents funds that have been spent on the harbor during the past 50 or 60 years. Therefore the correct recapitulation of this situation is as follows:

Item No. 1—New Haven Harbor, Conn.

Contract figure	$3,460,000
Appropriation for 1947	500,000
Proposed for 1948	200,000
Additional to complete after fiscal year 1948	2,760,000

The contract for the deepening of the existing 25-foot main channel to 35 feet has already been awarded and work will be commenced on the same in September 1947. Many witnesses testified before the Subcommittee on Appropriations as to the advisability of the immediate completion of this project. As a matter of fact, the consultant engineer of the American Marine Institute stated that the New Haven Harbor project was a very urgent one and entitled to completion. The Bureau of the Budget has cut the appropriation to $200,000. I had also understood that the Army engineers were in favor of the completion of this project. In view of the fact that the contract for this work has already been awarded and work will be started upon it in September, and the $700,000 now available will not carry through until the next fiscal year, it will mean that the contractor will have to abandon the work, remove all his equipment from the project, and return at a later date, which may result in greatly increased cost of the project to the Government. In my opinion, the action in recommending only $200,000 now in view of all the circumstances, is false economy.

Our Northwestern Corner

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. PATTERSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to apprise the House of the virtues of the State of Connecticut with particular reference to the scenic beauty of Litchfield County, and include the following article by Charles Pease of Salisbury, Conn., which appeared in the June 1947 issue of the Community Service Bulletin Board, Lakeville, Conn.:

OUR NORTHWESTERN CORNER—WHERE THE JOY OF LIVING AND THE "FOUR FREEDOMS" PREDOMINATE

(By Charles Pease)

We are living in the best country in the world, and the best part of this country is the New England States, and the best part of the New England States is Connecticut, and the best part of Connecticut is Litchfield County, and the best part of Litchfield County is its northwestern corner, and the best part of this northwestern corner is in the towns of Salisbury, North Canaan, Canaan, Cornwall and Sharon.

These northwestern-corner towns are blessed with a paradoxical combination of natural attractions—the finest scenery among our valleys and mountains (including the highest land in Connecticut—Bear Mountain), and the beautiful lakes and rivers where the followers of Izaak Walton enjoy their piscatorial hobby to their hearts' content. Yet, with all of these natural attractions, we are within a few minutes' drive over fine roads from any part of our country environment to several fine trading centers with the advantages enjoyed by city dwellers; in other words, we are literally so near and yet so far, because, even if many of these locations are so near to our business centers, they are yet so far that the commercial world is out of sight, and only the fine country scenery, invigorating atmosphere in our higher altitude, and the quiet of an ideal outing life are in evidence. Our residents enjoy a life of combining pleasure with business every day in the year.

It was of Twin Lakes, in the town of Salisbury that Henry Ward Beecher once said: "For more beautiful sheets of water and more beautiful sites upon which to look at them, one may search without finding." And of Sage's Ravine at the extreme north of Salisbury's boundary, Reverend Beecher again wrote: "It's worth a trip from New York every month in the year to visit this place."

Nor is this all. There is no more attractive and scenic drive in the famous Berkshires than on route 7 from Canaan down through the Cornwalls following the Housatonic River and winding around between the mountains and the river to Kent, where Kent Falls is another attraction.

The Cornwall Hills, in the midst of which is Cream Hill Lake, are attractions that are calling outside people who enjoy a really wild country life, and where, in some cases, the rocks are so generously distributed over some of the farmers' pastures that it was once a common saying that they had to file the sheep's noses so they could get the grass between the rocks.

Sharon has attractions common to the other corner towns and enjoys the reputation of being one of the finest residential villages in the State, surrounded by fine building sites and farming lands.

It's too long a story to enumerate all of the fine things here in our northwestern corner, but they are legion.

What is claimed to be the most extensive cave in New England has its entrance near the south shore of Lake Washinee (the southern of the Twin Lakes); it is so extensive that it has never been completely explored. The entire circuit of the cave is a walk of about 1,400 feet, and it is claimed to be possible to descend into it for a half mile. The entrance is somewhat obscure, and the cave is not attracting attention now, but it was quite famous in the 1870's and visited by hundreds of people. History tells us that this cave was discovered years ago by a fox hunter whose dog chased a fox into the entrance hole and the dog went in after it. As there is no record of the dog ever coming out it is surmised that it may have become lost in the labyrinth of chambers and passages—or perhaps it is still chasing the fox.

Every year more people who know a good thing when they see it are learning of the attractive features of this corner of our Nutmeg State and are buying property, establishing summer homes or camps, and in many cases, building fine residences or remodeling old farm houses for year-around permanent homes, but there are still many desirable sites available.

United States Aid to Schools

EXTENSION OF REMARKS
OF
HON. EDWARD G. ROHRBOUGH
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. ROHRBOUGH. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include therein an editorial from the Cincinnati Post, June 19, 1947, entitled "United States Aid to Schools":

UNITED STATES AID TO SCHOOLS

One of the questions certain to rise during and discussion of Federal financial aid for the public schools has been, Does this mean

that Washington eventually will run the schools?

The answer is "no," if one may judge fairly from the "preferred" Federal-aid bills now being considered by House and Senate committees of Congress. Both the Taft bill in the Senate and the McCowen bill in the House authorize the States to distribute the grants as they choose with the reasonable restrictions only that Federal money shall not be used to pay debts or erect buildings.

The serious interest in this legislation is due to the spreading conviction that the National Government shares responsibility with State and local governments to assure every American child a good education. This philosophy represents an evolutionary growth. Once an American child's education depended upon the parents' willingness and ability to pay a tutor. A century ago education became a community responsibility and a few decades ago the States began to bear a part of that load.

A good education is the birthright of every American boy and girl. This is the firm faith of virtually every citizen. Some children in the low-income States are not getting such an education today. The one practical solution appears to be help from the National Treasury.

Automobiles for Disabled Veterans

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. DEVITT. Mr. Speaker, I favor the enactment of H. R. 3583 authorizing the Administrator of Veterans' Affairs to pay for the purchase of automobiles for certain disabled veterans. This bill extends the present law so as to authorize the purchase of cars for veterans deprived of their sight.

In approaching all veteran legislation we should be guided by the fundamental principle that our first responsibility is to the disabled veteran. The enactment of H. R. 3583 would be a manifestation of our appreciation of the tremendous sacrifice made by our disabled veterans toward the winning of the war. I urge that the Rules Committee grant a rule providing for the early consideration of H. R. 3583.

I recently received an interesting letter from a constituent of mine dealing with the urgent need for the enactment of this legislation. I insert it here:

Hon. EDWARD J. DEVITT,
Member of Congress, Fourth Congressional District, Minnesota, House Office Building, Washington, D. C.

DEAR MR. DEVITT: It is very seldom that I ever write to a Member of Congress on any issue, but these are unusual times.

There is now before the House—in the Rules Committee to be exact—a measure which would give automobiles to blinded veterans. I ask your active interest in this measure because I feel that it is a measure which is definitely in the public interest. It is not only in the public interest in equity—it is a part of the public debt.

I am a veteran of the late war—fortunately able bodied—I ask nothing for myself. The Federal Government has been overgenerous in my case. But in the case of a veteran who has had his eyes shot out in direct combat with the enemy, there is no such concept as "overgenerous." Such a person lives in your district—my brother, to be exact. He was an active boy interested in athletic competition and now he stumbles in blindness over a chair in his own home. This is but one instance where an automobile would aid immeasurably in his mobility, self-confidence, and rehabilitation. His wife would be able to drive him around and to distant places where his handicap would cause him not to attempt use of the public common carrier.

He would buy his own car, but today in St. Paul the cash for a new car is prohibitive to anyone who is not wealthy.

This bill which I refer to is H. R. 3583; it is in the Rules Committee, which apparently will be its grave unless it is saved and brought out to a vote. It must be saved soon or it will perish in apathy. Surely the Congress is not made up of Members so hardened that such will be the case.

To assist you in your action on this measure, I will propose, fight for, and urge a resolution upon the Fourth District American Legion of which I am an active member. While I have no direct authority to do so, I feel that I can assure you of the support of all veterans' organizations in the district.

My brother, above referred to, is the chairman of the Minnesota regional group of the BVA and as such also assures you of the full support of this organization. If you are interested in the views of a local blinded veteran, I suggest you write to him at his home. He can speak with authority for every blinded veteran in the State.

Unification of the Armed Services

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of July 2, 1947:

UNIFICATION AT THIS SESSION

With the Senate scheduled to begin debate today on the bill to unify the armed services and a House committee ending its hearings today on a similar measure, there is every indication that a decision will be reached at this session of Congress. Opposition in both chambers is expected to be lively but not large.

Unification is a prerequisite to the formulation of any intelligent military policy for the United States. As long as it remains a disputed legislative matter no really long-range planning can be done. It has been almost two years since the guns were silenced in the Pacific and high time to be about molding the peacetime Military Establishment we need. The longer a decision is delayed the more frictions will develop among the services in their campaigns for appropriations and congressional preference and the longer costly duplications will continue.

In overriding some of its armed services committeemen in the House, who apparently favored an interminable continuance of hearings until every Navy officer who objected could be heard, the Republican leadership has shown political courage and statesmanship. Recent testimony by naval officers before the House committee had raised no new points of objection to the basic principle. Most of it has been along the pattern of "Yes, but" and the putting forward of alternatives that in many cases would be as weak as no unification at all.

Fortunately, unification has not been made a partisan issue. President Truman is vigorously in favor of it. So, apparently, is the leadership of both major parties. The Secretaries of War and Navy and the ranking commanders of Army, Navy, Air and the Marine Corps have all put their stamp of approval on the proposed legislation. There is a time for discussion and a time for decision. On unification the time for decision has arrived. Delaying tactics in either House should not be sanctioned by the leadership. The quicker unification can be put into practice the sooner we shall have that integration of policy and of services which was so obviously needed during the war and is just as necessary today.

Against Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. RALPH W. GWINN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. GWINN of New York. Mr. Speaker, here is a most scholarly presentation of the arguments against the Federal Government participating, influencing, controlling, or otherwise affecting education in the States by Robert A. Millikan:

THE MOST VITAL PROBLEM IN AMERICAN EDUCATION TODAY

(By Robert A. Millikan)

One of the elements of greatness of Anglo-Saxon civilization is that many of England's most inviolable laws are not found at all upon her statute books, but are rather the customs which because of the general intelligence and insight of her people have gained the force of law. Here is the finest flowering of the spirit of freedom.

Again, the American educational system, stemming originally from English ideals of freedom, is unique in two respects. First, the whole huge elementary and secondary school system, the greatest business in this great land, though tax supported and free to all, indeed in 42 of our 48 States, coupled with the required attendance of every boy and girl from age 5 to age 16 (in California and in at least 4 other States, to age 18) has been thus far practically wholly in the hands of the local communities, which not only tax themselves to support it but control it through their locally elected boards of education.

The second element of uniqueness is that the higher, or college and university, system consists of institutions about half of which are controlled by self-perpetuating boards of trustees and are privately supported through endowments, contributions, tuitions, and fees. The other half are locally tax-supported schools controlled by different municipalities in some instances and by the 48 States in others, but in no case as yet by the Federal Government.

This local self-government in education is one of our most priceless American heritages. According to the greatest thinkers of the past, Spinoza, Montesquieu, John Locke, and our founding fathers, it is the key to the maintenance of the freedom of a great republic. It is the great safeguard against the malignant disease politely called patronage, better called political corruption, which is the chief device through which the party in power in Washington can, and to no small extent already does, seek to indoctrinate the public in the interests of the maintenance of its own power. Local cancers in humans or in the States can be eliminated before they have spread throughout the whole body.

but when the whole system has become infected the patient dies, whether that patient be a man or a great federal republic.

Listen to the exact words of the great historian and political philosopher Montesquieu (1747) whose writings were carefully studied and were also very influential with our founding fathers:

"If a republic is small, it is destroyed by a foreign power; if it is large, it destroys itself by an inner vice. So it is very likely that men would have been forced to live always under the rule of one man (a despot) had they not imagined a constitution which combines the advantages of a republican government and the external force of a monarchy. I mean a federal republic. Made up of small republics it enjoys the high political quality of each (such small republic), and toward other powers it has by virtue of a federation all the advantages of monarchies."

No clearer statement of the menace to the freedom of a great federal republic that arises from the loss of local self-government through the unnecessary concentration of power in the Federal Government has ever been made. That is why the founding fathers, who have been said to have had greater wisdom, insight, and understanding as a group than any assembly ever brought together anywhere, so definitely limited the authority of our Federal Government and reserved all unallocated powers to the constituent States and local communities.

But I do not need to go back to Spinoza, Montesquieu, and the founding fathers for pointing out the menace which they all saw, particularly in the centralization of education in a great republic like the United States. A joint report was put out in March 1945 [1] by the Problems and Policies Committee of the American Council on Education and the Educational Policies Commission of the NEA. It states the views of some 20 of the most distinguished educators in the United States. The following quoted paragraphs are taken from this joint report, the first four of them from the section entitled "The Drift Toward the Federalization of Education in the United States." These paragraphs read as follows:

"The first purpose of this document is to warn the American people of an insidious and ominous trend in the control and management of education in the United States. Its second purpose is to propose policies and procedures by which citizens may resist and reverse this dangerous trend.

"For more than a quarter of a century and especially during the past decade, education in the United States, like a ship caught in a powerful tide, has drifted ever farther into the dangerous waters of Federal control and domination. This drift has continued at an accelerated rate during the war. Present signs indicate that, unless it is sharply checked by an alert citizenry, it will continue even more rapidly after the war.

"It is the deliberate and reasoned judgment of the two educational commissions who join in the appeal which this document makes to the people of the United States that the trend toward the federalizing of education is one of the most dangerous of the current American scene.

"How did this trend come about? Do the people of the United States really want to place their schools and colleges under the predominant control of the Federal Government? We are sure that they do not. It should be remembered that the control of education is reserved to the States under the tenth amendment to the Constitution. The people have shown repeatedly during more than a century that they want to keep education primarily under State and local control and administration. Furthermore, in a recent public-opinion poll, our citizens favored keeping the predominant control of public education in State, rather than in Federal, hands by more than 3 to 1.

"It is the mature conclusion of the commissions responsible for the issuance of this report that a continuance of recent and current trends in Federal and State relations in education will, within a measurable period of time, transfer predominant responsibility for the control of education in the United States from the States and localities to the National Government. Already we have traveled farther along that road than is generally realized.

"Recent decades have witnessed a mounting tide of centralization. It has swept into government and other spheres of life. It is world-wide as well as Nation-wide.

"Is this an irresistible trend, inherent in the industrial revolution and other momentous changes in the affairs of mankind? Have forces been released which are beyond human control—forces which are destined to place all phases of life under centralized domination—including the education of children and youth?

"The commissions responsible for this statement reject the gloomy conclusion that impersonal forces beyond the control of men are destined to submerge the individual, the home, and the local community in a rising tide of indiscriminate centralization. While it is recognized that new factors in contemporary civilization require closer organization and increased centralization of some areas of life, other areas can be permitted to come under central control only at our peril. The fact that the National Government must be the predominant authority in waging warfare and in determining the routes of transcontinental highways does not mean that it should similarly dominate such areas as the distribution of news and the education of the young.

"Education should be placed high on the list of services to be continued under State and local control. The ability to make distinctions as to what should be and what should not be centralized permits some nations to preserve their liberty. Those which cannot so distinguish succumb first to totalitarianism and then to despotism."

Nothing that I might be disposed to say could add any cogency to the foregoing warning issued as the collective judgment of a distinguished group of modern educators. The extremity of the peril could scarcely be more strongly stated.

I cannot, however, urge entire confidence in the soundness of the report merely because of the prominence of the signers, for I find myself in some disagreement with parts of the last half of this document. Here it seems to me to fail in providing the safeguards for which it sees so clearly the necessity. Indeed, I cannot myself see that this part of the report offers any practical suggestions that could be effective in staying the dangerous trend which the first part of the report states so clearly and deplores so strongly.

In trying to explain how this "Federal encroachment on education" (to use the report's own words) has come about its authors criticize and lay the blame upon the way, during the depression and the war, the relief measures for the schools were handled by the Federal agencies, the WPA (Works Progress Administration), the PWA (Public Works Administration), the NYA (National Youth Administration), the Lanham Act, the GI bill, the CCC (Civilian Conservation Corps). The latter part of the report implies that if these agencies had distributed the money to the States instead of disbursing it themselves as Federal agents all would have been well.

That suggestion seems to me quite unrealistic, even naive, for when Congress voted these funds does any informed person suppose that politics, i. e., votes and patronage, did not enter in any way into their distribution?

Here we are touching the altogether fundamental reason for Spinoza's advice to keep the central government as far as possible out of the field of education as such, for he was convinced that if this were not done the group or party in power would inevitably use its power to indoctrinate the public in the interest of the maintenance of that power. I may indicate later where I think the lines may be drawn to preserve liberty, but I suspect that Spinoza had analyzed the safe-guard end of the problem better than does the joint Educational Policies Commission and the Problems and Policies Committee.

In a word, if under the extreme exigencies of the 1932 depression and the 1942-46 war it was found necessary temporarily to pour Federal funds into American education I suspect that in practice it had to be done directly and about as it was done in order to meet the emergency, the danger lying in the fact that it became necessary to do it at all rather than in the precise way in which it was done.

Let me present an analogous case. In 1940, when the isolationists were trying to keep us out of the war on the plea that we would lose our souls as well as our shirts if we went into it, Edwin F. Gay, one of our greatest economists, rose in a meeting which I attended and said, "Gentlemen, it is true, as the isolationists say, that we cannot get into a war against totalitarian Hitler without becoming for the time being to a large extent a totalitarian state ourselves. We cannot fight this kind of a totalitarian war otherwise, but if we do not go in, what is the alternative? We shall merely become a part of Hitler's totalitarian world anyway, whereas if we fight to retain our freedom and win I, for one, have enough confidence in the Anglo-Saxon's genius for freedom to count on our ability to throw off our war-built totalitarianism and get back to a free system as we did after World War I. In other words, if we make peace with Hitler we shall be forever the slaves of his totalitarian world, but if we can conquer him we have at least a good chance of returning again to our system of freedom. We have no other alternative if we want to remain free men." I hope Dr. Gay's faith in the Anglo-Saxon genius to preserve freedom and to throw off the totalitarianisms which we had to submit to in war will be justified.

My criticism, then, of the last part of the report of the Joint Policies Committee is that it seems to me to hold out the expectation that we can find a mechanism of accepting large Federal subsidies for education continuously without suffering the consequences and acquiring a corresponding measure of Federal control of education. In this I think the authors of the report are in error, for in the long run "the man who pays the piper is the man who calls the tune." Even the United States Supreme Court has decided that this is a legally sound statement, for in a test case brought before it in the summer of 1942 this highest court ruled that "the Government has the right to regulate that which it subsidizes." This decision shows that the insights and fears of our founding fathers were well grounded that Federal support entails Federal control.

---

[1] This is issued in pamphlet form under the title "Federal-State Relations in Education," the signers of the report for the Committee on Problems and Policies being Edmund E. Day (chairman), Oliver C. Carmichael, Harold W. Dodds, Charles E. Friley, Luther H. Gulick, Henry H. Hill, J. L. Morrill, William F. Russell, Alexander J. Stoddard, George D. Stoddard, Ralph W. Tyler, William E. Wickenden, Herman B. Wells; and for the Educational Policies Commission, Alexander J. Stoddard (chairman), Francis L. Bacon, James Bryant Conant, Prudence Cutright, Edmund E. Day, A. C. Flora, E. W. Jacobsen, Edwin A. Lee, Paul T. Rankin, Maycie Southall, George D. Stoddard, Mabel Studebaker, Pearl A. Wanamaker.

Another element in the second part of the report which in its present form is misleading and which tends to perpetuate a common but obviously a fundamental fallacy is found in the heading: "State and local resources alone are inadequate." That seems to me at least a very unfortunate statement, for taken the country over State and local resources are, of course, all the resources there are. The man who penned the foregoing phrase slipped into a fundamental economic error which the great labor leader, Sam Gompers, warned his followers against making, telling them essentially that in general socialistic measures are necessarily made at the expense of the economic well-being of the worker; that they also tend to destroy individual initiative, which is far and away the greatest restoring, or antidepression, force in existence, hundreds of times more potent than anything government can do.

The nearest approach to an ideal system of raising and spending tax funds is to get these two operations of raising and spending tax money as close together as possible. If graft or inefficiency then appear those who suffer from it are on the spot to check it. You catch the cancer at its inception. This is just what Montesquieu was saying when he was lauding the virtues of small republics. This, plus the education of all the citizens in the art of self-government, is the reason for his statement that large republics are destroyed by an inner vice while small republics are relatively free from such corruption.

It is actually more costly in taxes to any community to get its funds through the Federal Government than through its own local government. In a word, anything a local community gets from the Federal Government it itself pays for and at an unnecessarily excessive rate, too, unless it steals what is raised in, and rightfully belongs to, some other community and this no self-respecting community wants to do.

But when the system of getting funds for a community from a common pot collected by the central government once becomes the recognized procedure, then every community must fight continually with all the others to get its share, as it says, but what it actually does under such a system is to try to get as much more than its share as it can. As a result, vice and corruption in all their forms become rampant and there is no solution except the ultimate rise of the despot, who takes control and cleans out the small grafters by putting himself as a big grafter in their place. Liberty is then gone and tyranny has replaced freedom and justice.

But so far I have not touched the case which the advocates of large Federal subsidies for education bear down upon most heavily. This argument runs thus: There is an uneven distribution of educational load and financial resources in different sections of the Nation, and our ideal is to give every boy and girl as nearly as possible an equal educational opportunity.

This kind of egalitarianism seems to spring from commendable humanitarian ideals. But it is a part of the paternalistic, socialistic, collectivistic philosophy which is the antithesis of the American free enterprise philosophy. For this latter philosophy tries to stimulate individuals and communities alike to self-improvement by providing rewards for social effectiveness instead of doles for ineffectiveness. The first question to ask is, to what extent is the inequality of opportunity real in this case, i. e., how bad is it, and is the suggested remedy a real one, and to what extent is this merely a lawyer's argument put forward to make the most of a good sentimental slogan for his clients. This last is what its critics claim, and they cite the prevalence of the promises of increased pay for teachers through Federal subsidy. The next question is, how big a price do we pay for the suggested change?

To answer the first question I present some official Government figures which give for each State the percent that current expenditures for public schools by each State is of the total income-tax payment of that State. The average for the whole United States is 1.50 percent, and it is simply amazing how little fluctuation about this average figure is found anywhere in the country. This table shows that the States that spend the largest fraction of their total income on their public-school sysem are: Idaho, 1.83; Minnesota, 1.98; Montana, 2.28; New Mexico, 2.41; Oklahoma, 2.01; South Dakota, 2.21; West Virginia, 2.38; Wyoming, 2.24. These 8 are the only States that spend more than 1.8 percent of their available income on their public schools. Also, keeping in mind that the average for the country is 1.5 percent it is interesting that there are only 11 States that spend less than 1.3 percent of their available income on their public schools. These are: Alabama, 1.29; Delaware, 1.11; Florida, 1.06; Georgia, 1.24; Maine, 1.16; Maryland, 0.98; Nevada, 1.22; Oregon, 1.14; Rhode Island, 1.16; Virginia, 1.15; Washington State, 1.23. All the rest of the States oscillate between the narrow limits 1.3 and 1.8, and the publication of these figures actually constitutes the strongest possible incentive to backward States to emulate the example of their neighbors. Under a Federal-dole system this, the most powerful possible force operating toward improvement, is largely removed.

Again, another interesting comparison is found in the current expenditures for public school education per child between the ages 5 to 17 years. This averages throughout the country $71.15 per year, and there are only nine States that spend less than $45 per child, as follows: Alabama $28.22, Arkansas $26.22, Georgia $32.06, Kentucky $32.66, Mississippi $24.26, North Carolina $34.78, South Carolina $31.37, Tennessee $35.08, Virginia $41.71. Again, there are but six States that spend more per child than $92, which is then to be compared with the general average of $71.15. These six States are California $126.99, Connecticut $94.89, Nevada $98.58, New Jersey $118.05, New York $129.13, Washington State $93.77. But far be it from me to use "dollar payments" as a yardstick of educational adequacy. That is a well-known and accepted fallacy.

From the standpoint of both of these criteria the differences seem to me surprisingly small, in general—with one or two exceptions—scarcely more than the differences in the cost of living in different States, and the way they oscillate between rich States and poor States suggests that the cause of the differences lies more in the interest in education in different States than in the financial capacities of the dwellers in different States. Indeed, nothing could bring out better the folly of assuming that Congress under its existing political pressures has the capacity actually to equalize educational opportunities through any system of dollar doles that could have any chance of passing, is shown by this one striking fact that Utah, which ranks thirty-second among the 48 States in ability to support education, is ranked in statistical educational studies by President Hughes and his co-authors at Iowa State College as the first State in the Union in its educational performance. In a word, this whole Federal-dole approach is a wrong one. It cannot in actual practice accomplish what it claims to do.

In this connection it will be interesting to hear the testimony of Dr. George S. Benson, president of Harding College, Searcy, Ark., who exposes as follows the unsoundness of much talk by educators who call loudly for Federal subsidies for education. He says:

"I am representing the taxpayers association in a State which is forty-seventh in per capita income ($512.00) and which is forty-sixth in value of school property per pupil in attendance ($116.00) and which is forty-seventh in per capita expenditure per student enrolled in the public schools ($34.18). But I am here to testify that the members of the Arkansas Public Expenditure Council believe that Federal aid to education is neither necessary nor desirable.

"As taxpayers in Arkansas we are fully aware that Arkansas' educational advantages are inadequate. We are determined that they shall be improved. We believe the greatest obstacles to be overcome in Arkansas, however, are political, not financial. We believe that Federal aid to education would serve to increase these political obstacles rather than helping to remove them. We believe that Arkansas can and must reorganize and adequately support its own educational program. * * *

"Mississippi is the only State with a per capita income lower than Arkansas and the only State which in the past has been paying its school teachers less than Arkansas, or which has provided less money per pupil for education than Arkansas. Mississippi has, like Arkansas, found a great deal of oil during recent years and her revenue in 1943 increased to $63,602,000, which is about 33 percent above the revenue for Arkansas for the same year—although the population of the two States is about the same. Mississippi's expenditures in 1943 were $10,706,000 less than her receipts from revenue, thus creating a surplus of almost $11,000,000 in that one year alone. The Arkansas surplus over several years has climbed to a present total of $45,000,000.

"Since Mississippi and Arkansas are the two poorest States in the Union, and since Arkansas is able to provide adequate educational facilities, and since Mississippi created an $11,000,000 surplus last year, what I am saying for Arkansas and which appears to be true of Mississippi should be representative of all the States in the Union.

"While the States of the Union have been improving their economic status during the past 15 years and while they have been decreasing their indebtedness, the Federal Government has been increasing its indebtedness by leaps and bounds. We will most likely close the World War with a Federal debt of $300,000,000,000. So with the Federal Government carrying such a superload and with the States in a greatly improved condition it seems absurd to undertake to place on the Federal Government the burden of aiding education throughout the States. Gentlemen, I insist that the States are much more able to take care of their own educational needs than is the Federal Government."

Those are the inspiring words of a real American. But is his thinking correct? If you want more evidence listen again, this time to the voice of one of the finest and ablest men in the United States, a distinguished Congressman from Texas, Hatton Sumners, who after serving for 30 years in Congress with a great record, as all his congressional associates will testify, has recently resigned for the sake of devoting his remaining energies to the spread of the following great message:

"Our whole political system is based on the principle of local self-government. But two forces have been destroying this principle. One is the demand of the people for Federal Government to intervene in problems of every community and every class. The other is the ever-growing practice of passing all these problems on to the Government in Washington. The last war gave this a big push. The postwar dislocation hurried it. The great depression raised it to avalanche proportions. The present war is completing the job. Every town and State, every trade association and trade union, every class and group of desperate minority, brings its problems to Washington. And Washington is gladly accepting that responsibility."

Listen again to what the greatest educational expert in the United States, Nicholas Murray Butler, had to say on this subject a few years ago:

"One of the most noteworthy of recent developments in American life is the zeal with which machinery is designed and built, ostensibly to serve various public interests and undertakings, but in reality to control them. Perhaps in no other way is the decline of faith in liberty so clearly marked. * * *

"So far as education is concerned there has been overcentralization for a long time past. * * *

"There is not enough money in the United States, even if every dollar of it were expended on education, to produce through Federal authority, or through what is naively called cooperation between the Federal Government and the several States, educational results that would be at all comparable with those that have already been reached under the free and natural system that has grown up among us. * * *

"Unless the school is both the work and pride of the community it serves, it is nothing. A school system that grows naturally in response to the needs and ambitions of a hundred thousand different communities will be a better school system than any which can be imposed upon those localities by the aid of grants of public money from the Federal Treasury, accompanied by Federal regulations, Federal inspections, Federal reports, and Federal uniformities."

Similar statements can be quoted from recent presidents of Harvard, Yale, and Princeton. But coming up to date, the Eighty-fifth General Assembly of the State of Indiana adopted in January 1945 the following:

"House Concurrent Resolution 2

"Indiana needs no guardian and intends to have none. We Hoosiers—like the people of our sister States—were fooled for quite a spell with the magician's trick that a dollar taxed out of our pockets and sent to Washington will be bigger when it comes back to us. We have taken a good look at said dollar. We find that it lost weight in its journey to Washington and back. The political brokerage of the bureaucrats has been deducted. We have decided that there is no such thing as Federal aid. We know that there is no wealth to tax that is not already within the boundaries of the 48 States.

"So we propose henceforward to tax ourselves and take care of ourselves. We are fed up with subsidies, doles, and paternalism. We are no one's stepchild. We have grown up. We serve notice that we will resist Washington, D. C., adopting us.

"Be it resolved by the House of Representatives of the General Assembly of the State of Indiana (the Senate concurring). That we respectfully petition and urge Indiana's Congressmen and Senators to vote to fetch our county courthouse and city halls back from Pennsylvania Avenue. We want government to come here.

"Resolved further, That we call upon the legislatures of our sister States and on good citizens everywhere who believe in the basic principles of Lincoln and Jefferson to join with us, and we with them, to restore the American Republic and our 48 States to the foundations built by our fathers."

But another State also officially opposes Federal aid:

"On April 28 Senator VANDENBERG, of Michigan, inserted into the CONGRESSIONAL RECORD the text of a concurrent resolution recently adopted by the legislature of the State of Michigan urging the Senators and Representatives from that State 'to exert all their efforts in attempting to stop, or at least reduce the offering of Federal-aid to the several States and Territories.' The Michigan Legislature in its resolution called attention to the recent action of the Legislature of Indiana along the same line (see RW No. 112) and asserted that since 'our Nation is financially embarrassed to the amount of one-quarter of a trillion dollars' it 'should divert so-called Federal-aid toward reducing its indebtedness.' The resolution also declared that the State of Michigan and most other States 'are in sound financial condition, able to handle their own fiscal responsibilities.' " (Quoted from 'Round Washington, May 5, 1947.)

Also, here is testimony from Oklahoma. Steve Stahl, executive vice president of the Oklahoma Public Expenditure Council, stated before the House Committee on Education and Labor on May 13, 1947:

"I am here because I am gravely concerned over existing trends in Federal-State financial relationship and because I believe Federal aid to education is both unnecessary and undesirable. * * * In the first place, every one of our 48 States is in a better position to bear the cost of education than is the Federal Government with a debt of some $260,000,000,000 whereas the 10 low-ranking income States had at the end of 1946 an aggregate balance of $306,414,000."

Listen again to what the National Grange has to say:

"The Grange has always stood for local and State control of our public schools, because in that direction only lies the path of true progress in educational affairs. In the long run, Federal appropriations for the public schools and Federal control would go hand in hand.

"Because we are against bureaucracy and all the evils that go with it and because we are opposed to Federal control of education and in favor of continued State and local control of our public-school system, we must oppose Federal appropriations for elementary and secondary education except the already existing vocational educational program." ('Round Washington, May 12, 1947.)

And may I add that the fact that we teachers are joining the scramble shuts our mouths from protesting against, from an international standpoint, the most vicious of subsidies, such as shipping and export subsidies.

At this hour fortunately the danger that we may be destroyed by a foreign foe is gone. But is our great Republic, then, to be destroyed after the war by its internal vice? That depends, if Montesquieu was right, upon how you and I vote and talk in this postwar period on the preservation of local self-government.

But what concrete evidence have we that Montesquieu was right? I quoted his lines, not to hold him up as a superman. Indeed, if his spirit is here in invisible form in this room today, as it may well be, I can hear him entering a protest at the importance I have apparently been attaching to his statement of one of the greatest truths of human history. I think I hear him say:

"Pray, do not believe that I would for a moment arrogate to myself the authorship of the ideas behind those lines of mine. The words chosen may indeed be mine, but the ideas represent the sum and substance, the distilled essence, of both the thinking and the experience of mankind in its age-long struggle to eliminate the despot, the totalitarian state, and to achieve free, stable, representative government on earth. Pray, do not for a moment assume, for example, that those extraordinary men who devised your Constitution got the ideas that underlie it from me. They were all, on their own account, profound students of the best thought and experience of mankind. That is where those ideas came from. We all drank from the same fountain of history. That is why they, on their own account, came to devise a federation of small republics, now numbering 48, and reserved to these and their constituent local communities all powers not specifically delegated to the central government, which was to exist, as they clearly planned it, primarily for defending these United States against external aggression, a Federal Government which was not designed to encroach in peace upon the powers of the States or of their constituent communities. If now the 150 years of history which you have had in developing, on the sound basis of those ideas, the highest standard of living for the common man that has ever existed anywhere in history, if that is not enough to establish their validity, then give the credit for these ideas not to me but to the parallel history of the oldest and unquestionably the most successful people in the exercise of parliamentary government, the British Commonwealth of Nations. For Britain, until quite recently, has guarded the principle of local self-government throughout her empire during the last hundred years more jealousy than has the United States, and she has also kept herself much freer in that period from political corruption than has the United States.

"Probably the greatest political document of all history is the Statute of Westminster of 1931 which created the British Commonwealth of Nations, whose constituent parts are federated practically only for one purpose—defense against a common foe, but which are otherwise a world encircling group of completely independent communities. Nowhere in history has the principle of local self-government been more strikingly or more beneficently applied."

Now, having listened to the spirit of Montesquieu, supported by the teachings of history, let me try to apply the foregoing to the critical problems of the ensuing peace.

For the sake of winning the war we had to become very largely, for the time being, a totalitarian state. We knew, as Edwin Gay said, that in war this was inevitable, but if we retain in peace this now highly centralized totalitarian government, if we do not combat at every opportunity this insidious, terrible centralizing tendency, and restore, insofar as present conditions make possible, the principle of local self-government, then if history means anything we shall quickly be destroyed by the inner vice of all totalitarian states and our sons will have died in vain.

The greatest and most insidious danger lies in my own field, the field of education, which must be kept as free as possible from further encroachment from the influence of the central government. All authorities are agreed upon that. Look at what within the last two decades the control of education by central governments has done in Europe. It has substituted for education the indoctrination of whole peoples in the ideologies of the group in power and in the interests of their retention of that power. It is that kind of indoctrination for world conquest that has destroyed the souls of great peoples and made two world wars. Our votes alone, and your influence, American citizens, can prevent that kind of a catastrophe from happening in the United States. Let us remember this when we go to the polls and when we exert our influences in our local groups.

MAY 22, 1947.

Terminal-Leave Bonds

EXTENSION OF REMARKS
OF

HON. JOHN BELL WILLIAMS

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 2, 1947

Mr. WILLIAMS. Mr. Speaker, if one is to believe what he reads in the news-

papers, the Republican leadership has finally decided to bring out a bill to authorize the cashing of our soldiers' terminal-leave bonds. I am delighted to learn of this action, and I only hope that the majority party now will not see fit to further kick this bill around, but will pass it in time for it to go to the President before adjournment.

Since the distinguished Member from Florida [Mr. ROGERS] introduced the original bill on January 3, I have fought with him to bring it to the floor, despite the fact that we knew that the majority party would probably change the name of the author and bring it out as a Republican measure, with a view to the next election.

The payment of terminal-leave money in bonds which are non-negotiable and uncashable constituted one of the most discriminatory acts ever committed by this Congress. Apparently a majority of the Members of at least one House of this Congress did not give our enlisted men credit for having enough judgment and ability to manage their own money, and paid their money in bonds to protect them, while at the same time they paid our already high-paid officers terminal leave in cash.

I am extremely disappointed that this injustice was not rectified during the earlier days of this Congress so that our GI's could now be enjoying this hard-earned and deserved money.

Ideas Have Legs

EXTENSION OF REMARKS
OF
HON. HAROLD F. YOUNGBLOOD
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. YOUNGBLOOD. Mr. Speaker, no one who reads the headlines these days can fail to feel the challenge to democracy to prove itself or go under. Our best answer to the ethics of other ideologies abroad and at home is to set such a pattern that other people will want to follow the road of freedom. Nowhere is this more urgent than in the field of industrial relations. We need to serve notice to the world that, despite the bitterness stirred by recent labor debates and legislation, labor and management are determined to tackle the tasks of full production in a spirit of teamwork.

Last week end I took a trip back to my home city of Detroit to see what was being done in this regard. On the train I met representatives of the United Nations, Congress, the State Department and War Department, management and labor—both CIO and AFL. This unusual medley of travel companions was all going for a special labor-management night arranged by leaders of Detroit, including members of the civic labor-management committees of both Detroit and our neighboring Canadian city of Windsor across the river.

The feature of the evening was a performance of Ideas Have Legs—the most entertaining and convincing dramatization I have seen of the only force that can make American democracy work. This was the fifteenth and final showing of this revue, which has been attended during this past month by over 28,000 of my fellow Detroiters. I understand many hundreds have had to be turned away each night and that the impact on my city has been tremendous and widespread.

People on opposite sides of industrial disputes who could be brought together in no other way have met in the lobby of the theater, and in at least one instance, I am told, a strike was settled the next day. A committee of invitation headed by the mayor brought this revue to Detroit following first performances in Grand Rapids, Lansing, and Benton Harbor. Mr. Allan B. Crow, president of the Economic Club, our city's leading industrial forum, called the attention of its members to the play as most timely and dramatic. Michigan labor has responded equally. Officers, shop stewards, and the rank and file of the UAW and other unions, both CIO and AFL, have attended. "This is it. This has punch," commented one CIO official.

Dr. H. H. Sih, a distinguished Chinese diplomat, who represented his country at the Paris Peace Conference last year, came to Detroit especially to see the revue. He is now taking part in the UN Balkan Inquiry at Lake Success. Speaking at one of the events of the week end, he said:

> In Greece thousands of people are starving more for ideas than for bread. Aid to Greece is necessary—money, bread, ore and industrial products—but what they need more is the right spirit and the right idea. I have found here dramatized the answer to the peace conference and the present difficulties.

Speaking at dinner before the revue, Dr. Sih stated the world need I think we all feel very deeply just now. Referring to the subversive forces, he said, "They have got the weapon of disunity. If we don't want to wage another war of arms, we have to have the new unity." Mr. Speaker, I sincerely believe that the revue, Ideas Have Legs, points the road to national and world unity.

I understand that this new revue owes a great deal for its production to one of the world's foremost athletes, H. W. "Bunny" Austin. Many of you know him as a Davis Cup tennis star. You may not know that he served for 3 years during the recent war in the American Army. As a civilian he has worked for this country without salary for the better part of the past 8 years in the program of moral rearmament.

Thousands of Americans from coast to coast have come to love and know this great Ambassador of Britain, who has so loyally and sincerely served the best in the common ideals of our two nations and has been the means of inspiring thousands more to fight for the democratic ideal that alone can bring the nations into harmony and peace.

I have seen many favorable comments on the revue. I have heard messages, including that of Rear Adm. Richard E. Byrd, who said:

> I want to say with all the emphasis at my command that this movement gives you the chance you have been looking for to go into action to save civilization.

Mr. Speaker, having seen the play myself, I can second all these comments unreservedly. I think one secret of the power of the play is that it is so real and down to earth. Every scene is based on practical experience, including the actual words of our founding fathers in the American heritage sequence, and the letter written by a GI the day before he was killed by Japanese machine-gun bullets at Okinawa.

It is put on by a cast of 150 citizen volunteers—members of a moral rearmament task force—including veterans, teen-agers, housewives, workers, and businessmen. They are doing this without salary solely because of their desire to have a part in helping democracy to pull together. They have been staying in the homes of labor and management throughout the city and helping transmit that spirit to the families who have welcomed them.

Many of you in this House will remember The Forgotten Factor, an industrial play for national unity, which I understand was presented at the National Theater here in Washington in May 1944, by a committee of invitation under the cochairmanship of then Senator Harry S. Truman and our honored colleague, the distinguished gentleman from New York [Mr. WADSWORTH]. Since then this play has been shown to hundreds of thousands of people across America and Europe, and last month was credited by one of England's leading weeklies with lifting production to its highest point in the British coal fields.

On June 10 Mr. WADSWORTH introduced into the RECORD an address of Dr. Frank Buchman, who initiated the Oxford group and its world-wide program of moral rearmament. Speaking from Caux, Dr. Buchman was introduced by Rear Adm. Richard E. Byrd, who also sent a special message to Detroit commending Ideas Have Legs to the attention of the Nation.

Mr. Speaker, this latest weapon, Ideas Have Legs, is a Michigan product, having been developed at the North American Assembly for Moral Rearmament at Mackinac Island, where the State of Michigan has for six consecutive summers made facilities available. Thousands from the United States and 20 other nations have come for training in this program of sound homes, teamwork in industry, and national unity.

Mr. Speaker, as a Member of Congress I have been considerably heartened by what I have seen through this force. At a time when it seems our hopes for a new world are constantly dashed on the rocks of national and international selfishness, it is gratifying to find at work on a world scale a fellowship of people who are ideologically equipped and whose program is rooted in practical human experience. I believe this force points the road to world reconstruction.

Regular Veterans' Association Active in Legislative Fight

EXTENSION OF REMARKS
OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 2, 1947

Mr. HAGEN. Mr. Speaker, I have had an opportunity to cooperate on many occasions with the officers of the Regular Veterans' Association in connection with legislation pertaining to the welfare of servicemen and veterans.

Its national commander, William M. Floyd, is probably as well known to legislators on Capitol Hill as any one leader of veterans' organizations. He has made for himself a reputation for aggressive tenacity which has paid off over the past few years. Commander Floyd is considered an authority on legislation pertaining to veterans' affairs.

In the June 19 issue of Stars and Stripes appeared an article entitled "Regular Veterans Well Led and Prestige is Growing." Because the article outlines quite completely the program of the Regular Veterans' Association, I am including it in my remarks.

REGULAR VETERANS WELL LED AND PRESTIGE IS GROWING

The small but strong Regular Veterans' Association is establishing an enviable record for promoting the passage of veterans' legislation and for leading a fearless attack against the spread of Communist doctrines in America.

Under the leadership of energetic National Commander William McKinley Floyd, the RVA is recognized favorably on Capitol Hill. "It takes an act of Congress to get things done," says Floyd.

The RVA is no newcomer as a veterans' organization. It has had its national headquarters in Washington since the early 1930's, but the organization is much older than that, tracing its origin back to 1880, when small groups of veterans organized for the purpose of representing the interests of members of the Regular Establishment. The growth of the movement was slow and fitful, finally culminating in the RVA, a hard-hitting veterans' outfit organized along modern lines to stay and grow.

Unique among veterans' groups, it did not spring out of any war. It was founded with the express purpose of helping to maintain the rights of Regular service enlisted men who served their country both in peace and in war.

After the outbreak of World War II, the RVA widened its policy of membership eligibility, because a considerable number of its members had suddenly become war veterans. It opened its ranks to all members of the armed forces, officers as well as enlisted personnel, and thus became an association of active, retired, disabled, and honorably discharged members of the armed forces of the United States. However, the RVA is emphatic in its refusal to accept in its ranks any person who advocates or who belongs to any organization which advocates the overthrow of the United States Government.

From the beginning, the RVA has been famous for needling Congress into protecting the rights of the members of the Regular Establishment. Back in its early days, it succeeded against heavy odds in preventing an unreasonable slash in the appropriations for the Veterans' Administration which would have adversely affected many veterans.

LEGISLATIVELY ACTIVE

"Today, the RVA stands ready to be of assistance to all veterans, whether or not they are members of the organization and whether they are in or out of the service," asserts Commander Floyd.

Floyd recalls that in the early 1930's, the peacetime veteran suffering 100-percent disability was receiving a pension of but $30 per month. A little later an Executive order increased the pension to $45. Then, in 1939, the RVA caused S. 522 to be introduced. Its enactment increased total disability pensions for peacetime veterans to $75 per month, and the situation then remained static until Floyd was elected national commander.

His first legislative endeavor was aimed at securing greater parity in the disability compensation of peacetime and wartime veterans. Through his efforts, the RVA introduced H. R. 4999, now Public Law 469, Seventy-eighth Congress, and he was instrumental in securing its enactment. This law granted a 15-percent increase in peacetime pensions, retroactive to June 1, 1944, thus bringing compensation for total peacetime disability to $86.25.

Not content with this program, the RVA again sponsored and fought vigorously for H. R. 3908, which became Public Law 659, Seventy-ninth Congress. This legislation brought the compensation for total disability to $103.50 per month. It resulted in an increase of pension for thousands of Regulars disabled in line of duty. Today this law provides a greater measure of protection to enlisted men still in the service.

The RVA, however, is not permitting its drive for parity to rest on its accomplishments thus far. At the present time, the organization has sponsored H. R. 1335, which, if enacted by the Eightieth Congress, will grant compensation of $124.20 per month for total peacetime disability, as against the monthly compensation of $138.50 received by war veterans for the same disability. The organization is throwing all its resources into a fight to secure passage of this bill, and invites all veterans interested in fair play to join in its battle to secure justice for men and women of the Regular Establishment.

Commander Floyd calls attention to the fact that the RVA was also instrumental in getting the Reserve retirement bill enacted into law. This would make it possible for enlisted personnel of the Regular Establishment to retire at 50 percent of base pay after 20 years of service and at 75 percent after completion of an additional 10 years of Reserve duty.

It is notable that while Commander Floyd has done trojan work for the benefit of peacetime veterans, he has extended his wholehearted cooperation to other veterans' organizations in all reasonable legislation. Last year the RVA helped to enact H. R. 6811, now Public Law 662, Seventy-ninth Congress. It protects veterans against a cut in compensation while hospitalized. This measure, explains Floyd, assures the veteran that his compensation or retired pay will not be reduced during the first 6 months of hospitalization.

Other legislation, secured principally by the RVA, is a law increasing the pensions of widows and dependents of deceased disabled Regulars. The organization cooperated in the passage of the 20-year disability retirement law for enlisted personnel. It also sponsored legislation making pension laws applicable to all men and their dependents who served in the United States Coast Guard prior to 1930.

Emphasized by Commander Floyd is the fact that the RVA is continuing its vigorous fight for better legislation for veterans. It seeks passage by the Eightieth Congress of H. R. 262, to provide adjusted pay for service personnel at the rate of $4 for each day of overseas service and $3 for each day of service in the United States during World War II. "The provisions of this bill make a lot more sense than the so-called GI bill of rights," declares Floyd.

The RVA also urges passage of a number of other veterans' bills, among them measures to provide more adequate pensions for disabled servicemen and their dependents, annuities for the widows of deceased retired servicemen, awards of $60 monthly to veterans afflicted with arrested tuberculosis, double-time credits on retirement to enlisted personnel and warrant officers for foreign service, and elimination of any and all taxes on active and retired servicemen's pay.

BOLDLY ANTICOMMUNIST

A resident of Unalaska, Alaska, Commander Floyd is presently seeking improved conditions for veterans who wish to settle in the Territory. Alaska offers opportunities for the veterans, he says, but he declares that it will take legislation, time, and money to realize those opportunities to the fullest.

Quick to recognize the threat of communism to America, the RVA has been conducting a zealous anti-Red campaign in Washington for the past 2 years. In August 1945 the RVA demanded that the Department of State, the House Committee on Un-American Activities, and the Department of Justice, and its FBI conduct immediate investigations of all Communist activities in the United States.

In March 1946, Commander Floyd and the RVA called on the armed forces to throw out all Communists. "Communists should be kicked out of the Army and Navy and be forced to wear a red discharge button," Floyd declared at that time. Charging the Reds with instigating World War II and planning to sabotage American industry, Floyd asserted, "We Regulars don't want any Communists or other subversives in the postwar Military or Naval establishment."

In February 1947, the RVA demanded that the Administration clamp down on admission of alien subversives to the United States. Charging the immigration service with serious laxity in allowing alien subversives free entry to the country, it now calls on the Eightieth Congress to effect sweeping remedies.

Appearing before the House Committee on Un-American Activities recently, Commander Floyd urged passage of a bill which would abolish the Communist Party in the United States.

Pointing to State Department and Justice Department inaction, despite repeated requests from RVA, Floyd called for congressional action to eliminate the scourge of communism. As additional safeguards, the RVA has strongly recommended that universal fingerprinting be required, that lists of known Communists be published for information of the general public, and that all aliens in the country be required to register.

The RVA has its ups and downs, Floyd says, but since its inception the membership has consistently increased by a few thousand each year. During that time the RVA has fought steadily for the rights of veterans. The national commander offers a guaranty that the RVA will continue its all-out support of better legislation for veterans and its strongest opposition to the spread of communism in America.

FLOYD IS WAR VETERAN

The RVA stands for sound legislation for all veterans according to its national mandates. "But," says Floyd, "there are right now hundreds of disabled peacetime veterans who are not supporting the RVA program even though they are receiving the benefits of its efforts. At the present time, its greatest support comes from wartime veterans who have a deep-seated belief in the justice of its broad program. Some of these veterans have served in peacetime and many do not now have disabilities, but they continue to sup-

port RVA instead of hanging on to its apron strings."

A seasoned veteran himself, and four times national commander, Floyd was born in 1897 in Norris City, Ill. He joined the Army in 1914 and went to Tientsin, China, to serve with the Fifteenth United States Infantry. In December 1917, while in China, he volunteered to return to the United States for overseas duty in France.

He joined the Fourth Infantry at Newport News, Va., in January 1918 and sailed for France shortly thereafter. He served with the Third Division throughout World War I and was one of the first in the division to receive a citation for gallantry in action, the Distinguished Service Cross, on July 13, 1918, at Les Evaux, France, while serving as a private in Company L, Fourth Infantry. He saw action in six different engagements and was wounded in September 1918.

After the war Floyd received his discharge at Camp Lewis, Wash., to play professional baseball. Until 1931 he resided on the west coast, later moving to Alaska, where he has made his home ever since. He still owns property in Alaska and claims his rights as a resident of the Territory.

ACTIVE IN ALASKA DEFENSE

At the outbreak of World War II Floyd was made chairman of the Unalaska Defense Committee. He was present at the Jap attack on Dutch Harbor on June 3–4. During the attack he was in charge of evacuating civilians, in command of civilian demolition squads, and responsible for all transportation in and out of the area. Later, at the request of Delegate Anthony J. Diamond, he journeyed to Washington, D. C., to make a full report of the Jap bombing, bringing with him a fragment of a Japanese bomb which damaged the civilian hospital at Dutch Harbor.

Floyd became a member of the RVA in 1942. In September 1943, in recognition of his work among the service personnel in Alaska, he was elected national commander and has served continuously in that post up to the present time. He is a tireless worker in the interests of veterans, and can be found on this job 24 hours a day. After completion of his term of office he plans to return to his home in Alaska, where he will continue his ardent fight for veterans.

The RVA will hold its national convention this year at Wilkes-Barre, Pa., August 28–31.

Beyond the Veto

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein an editorial which appeared in the Washington Post today on the President's veto on the wool price support bill:

BEYOND THE VETO

The President's veto of the wool price support bill was due to the inclusion of a provision authorizing him to impose import quotas or import fees on foreign wool. The enactment of such a measure at a time when the United States is taking the lead at Geneva in a movement to lower trade barriers would, as the President says, be a "tragic mistake, a blow to our leadership in world affairs." Since Congress is not prepared to override the veto, the administration is rescued from a most embarassing position that threatened to bring about the collapse of the Geneva Conference.

The President has signified his willingness to accept a bill continuing wool support prices at 1946 levels until the end of 1948. Following this suggestion the Senate has repassed, with minor changes, the price-support bill it originally approved which did not contain the offending import-quota and import-fee section. Since failure to act would leave the country without any wool-support program, the pressure on the House to accept the modified program will be very strong.

While enactment of the bill just passed by the Senate would provisionally solve the international problems growing out of congressional efforts to support domestic wool prices, it would do so at a high cost to the consumers and taxpayers of this country. For, by keeping domestic wool prices at artificially high levels, above parity, the Government will either have to sell most of the huge wool stocks now held by the Commodity Credit Corporation at a loss, or else keep those stocks in storage and add to them, in order to support prices at the legislatively decreed level. Moreover, foreign wools entering the country over existing tariff barriers will be sold at ultra-high levels, thereby benefiting foreign wool growers at the expense of domestic users of wool and woolen products. In short, as Senator SALTONSTALL points out, the bill just passed by the Senate at the urging of the President would put and keep the Government in the domestic wool market, making it the sole buyer of the domestic wool crop unless the prices exceed the price of 1946. It also would compel the Government to buy wool at a price above parity, and maintain the price of clothing, so far as wool is concerned, at artificially high levels.

Although relieving the tension in Geneva, the Presidential veto leaves the whole problem of price support just where it was. Indeed, his veto message emphatically indorses price support for wool growers at an elevated level, although the price support program is in final analysis the root cause of the maladjustments that led Congress to approve of import quotas for wool. Eventually we shall have to recognize the fundamental inconsistency between the administration's foreign trade policies and our agricultural price support policies, as applicable to wool and other commodities. We can dodge this awkward issue for the time being, since wool presents an exceptional case of an important agricultural product in which we are deficient, while the world demand for agricultural products of which we have a surplus is so pressing that there is no need, for the time being, of governmental price supports. Even so, cotton export subsidies have been and are still being paid to facilitate export buying of American cotton. Such payments are in principle quite as inconsistent with the liberal trade program of the administration as import quotas.

The real test will come when countries now heavily dependent upon us for foodstuffs and other agricultural raw materials have restored their economies and demand for our products declines. When that time comes, it will be necessary to review and revise our price support policies in the light of changed conditions. The great majority of our agricultural economists are opposed to the existing price support system for many reasons, apart from its effect on foreign trade. They regard the present parity price formula as outmoded, and claim that it distorts price relationships. High support prices also tend to freeze production patterns and lead inevitably to extensive governmental control over agriculture.

A limited amount of price support or other forms of aid to the farming population may be necessary in periods of depression and could be so managed as not to interfere unduly with competitive fixation of prices. But, to repeat, if we cling to a system of agricultural support prices that prevent the operation of competitive forces, we shall find our export outlets drying up, domestic market channels contracting, and Government-bought surpluses accumulating when the present abnormal demands are satisfied and inflationary forces begin to subside. Then the Government will no longer be in a position to advocate freer foreign trade while following domestic price support policies that create obstacles to free movement of goods, "America Must Choose," as Henry Wallace once said.

American Colleges Train Leaders of Near East

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. JUDD. Mr. Speaker, over 100 years ago American missionaries began establishing schools and hospitals as well as churches in the Near and Middle East as well as elsewhere in the world. Those institutions have grown steadily in stature and in favor with the peoples of Turkey, Syria, Egypt, Iraq, and later in Greece and Bulgaria. Thanks to the vision and faith of those hardy pioneers, the Near East has a group of high grade American-type educational institutions ready and on the job for training the leaders of those crucial areas in the ideals and practices of free societies and democratic governments.

Americans of yesterday did a job because it was right. Today it is paying big dividends.

Under leave to extend my remarks, I include the following article from the Washington Post describing the work and the strategic importance of those Near East colleges:

IDEALS OF AMERICAN DEMOCRACY, WAYS OF LIFE BEING TAUGHT TO YOUNG MEN AT ATHENS COLLEGE

(By M. W. Fodor)

PSYCHICO, ATTICA, GREECE, June 30.—In the foothills of the violet-wreathed Attic Mountains, surrounded by the towering peaks of the Parnes, Pentelikon, and Hymettos, where once gods, nymphs and satyrs were wont to roam, lie the American-looking buildings of Athens College. The bare slopes on the mountainsides remind us of Utah, yet along the road, next to pepper and locust trees, the rose-and-white-colored full blooms of the oleander make the countryside look almost lush.

In Athens College, founded by lovers of Hellas in America, Egypt and Greece, ideas of American democracy and of American ways of life are being brought home to the young men of Hellas. In Athens College, as in the many other universities and schools of the Near East College Association, we possess a pivot to spread our moral influence.

This is terribly important at a time when from Stettin to Trieste, from Vienna to the Russian steppes, a big battle is being waged between the oriental idea of communism and the occidental conception of democracy. We, in our innocence and ignorance, have started with unequal odds. Soviet Russia fully realized for years what she wanted. Thus clandestinely, yet carefully, she educated a new crop of leaders fit to be the bosses in the Soviet-dominated countries.

Let's look around. Who are the leaders in those countries? Marshal Tito, Alexander Rankovitch, and Edvard Kardelj, of Yugoslavia; Georgi Dimitrov, Vassilij Kolarov, and Tsola Dragoisheva, of Bulgaria; Emil Bodnarash and Anna Pauker, of Romania; Clement Gottwald, of Czechoslovakia—they are all graduates of the Lenin Institute of Moscow. In this institute they have learned the rudiments of Soviet administrative methods, of police and secret-police oppression, of demagogy and propaganda, all essential to the Bolshevik way of life.

Have we nothing to pitch against this physical and psychological invasion from the East? For the last quarter of a century public-spirited Americans maintained various colleges in the Near East which have contributed a rather important chapter in educating the Levant to our own ideas and ways of life. The list of these colleges is impressive, indeed. The Near East College Association maintains the Athens College at Psychico, Greece; the International College and the American University at Beirut, Syria; Roberts College on the Bosphorus in Turkey, the American School for Boys in Baghdad, Iraq; the Istanbul Women's College, the Damascus College in Syria, and the American College at Simeonovo, Bulgaria. In addition, missionary organizations maintain the Pierce College for Girls at Kelleniko, near Glyphadia, Greece, and Anatolia College in Salonika, while another group maintains the important farm school in Salonika, Greece. Again, another group supports the American University in Cairo.

Athens College was founded at a period which in its violent political and economic fluctuations recalls the situation of today. Greece was engaged in an almost continuous warfare from 1911 to 1922. Then, in the wake of the defeat by Turkey in 1922, 1,500,000 refugees were dumped into this small country.

In those days a group of public-spirited Athenians realized the necessity of an improvement in Greece's educational system as a basis for the moral rejuvenation of the country. In 1925 Greek benefactors furnished the campus and the buildings of Athens College at a cost of $600,000, while the American board raised an endowment of the same amount. A faculty of Americans and Greeks began to work on building an institution which would imbue American ideas of education in this most enlightened people of the Levant, meticulously observing, however, the fundamentals of Greek mentality and spirit. The college began in 1925 as a private house with 15 students. At present the campus at Psychico can board 600 students, while the Athens campus houses another 100. There are 63 members of the faculty, of whom 10 are Americans.

Nothing characterizes better the popularity of the college than the fact that last year 3,000 applicants had to be turned down and that the list of applicants for admission is full right up to the end of 1954—provided the college can raise funds badly required to maintain its educational mission.

This correspondent, who for a year and a half toured Russian-occupied Europe, is firmly convinced that within a few years the Communist-ruled satellites will rid themselves of their present rulers. The future leaders of that new eastern Europe will come from these colleges. The ideas of the police state imbued into the Communists in the Lenin Institute will be replaced by the future leaders of free states—leaders who learned their ideas in these colleges.

When I visited Sofia last year, I had the opportunity to talk to the secretary of one of the "big bosses." The young lady was highly intelligent and in her fluent English one could feel, "between the lines," her enthusiasm for American ideas.

"Where did you learn your English? Where did you come across American ideas?" I asked.

Coyly she answered:

"I was studying at the American College at Simeonovo."

This college is now closed. But the buildings still stand and many a Bulgarian remembers the days when he spent happy times on this magnificent campus.

Once upon a time Roberts College on the Bosphorus educated Greeks, Macedonians, Bulgarians, Serbs and Turks. Now the pupils are mostly Turkish, but many of the old pupils still live and remember.

The leaders of Syria and Lebanon today are pupils of the American colleges of yesterday. Many leading personalities in Egypt's political and public life studied at the American University in Cairo.

But let's go back to Psychico and Athens College. I had the opportunity to eat with the students in their dining room. The students vary from the age of 9 up to 19. When they graduate, their grade corresponds to junior college. Many of them go to Columbia University in New York or to other American colleges from here; while those who want to become future engineers of Greece try to get into MIT, or other American technological schools, after their graduation.

About half of the students are sons of rich people and pay high fees. Another half live on scholarships, the funds for which are being raised in the States by the Near East College Association. About 40 orphans of the Albanian war are being admitted to the school on scholarship basis.

Among the great Greek benefactors of Athens College we must name the late Emmanuel A. Benaki, a rich Greek from Alexandria, Egypt, and his son-in-law, Stephanos Delta, the single largest donor to the college, who is now 87 years of age.

The president of the college is Dr. Homer W. Davis of Coram, Long Island. He studied at Hamilton College and at the University of California. He taught for 4 years at Roberts College in Turkey, and then in 1925 it was his idea to start a college in Greece based on American principles. Dr. Davis is the brother-in-law of John Ehrhardt, who until recently was political adviser of the State Department, with the American Forces in Austria.

The Fourth of July 1947—State of the World

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. BENDER. Mr. Speaker, on the Fourth of July 1947 freedom is more than a word throughout the world. In our own country it is the most calmly accepted, matter-of-fact, almost wholly ignored commodity on our list. Elsewhere it is a remote dream utterly unknown in practice. Get up on a soap box in nine-tenths of the nations on the face of the globe and chances are very good, indeed, that you will shortly find yourself in the local hoosegow. If you attempted to read the Declaration of Independence on most of the European Continent, or even the no-less famous French Declaration of the Rights of Man, you would find yourself on the list of "enemies of the state" in jig time.

We have our troubles in America, to be sure. But so long as we retain the basic determination to listen to the arguments of the other fellow, no matter how distasteful they may be, we stand a fairly good chance of arriving at a workable solution of our problems. We blow off our indignation in the public press, freely; we organize protest meetings; we buy time on the radio to argue our case. These are rights which we regard as inalienable. Elsewhere they are nonexistent.

To those who urge us to abandon our way of life as outmoded, let us remember that all that is new is not necessarily better than what is old. We have built in free America a land which has served as a model and a challenge to the nations and the peoples of the earth, because we have given man the chance to exercise his brain, his muscle, his ingenuity, his total capacities to the utmost of his abilities, freely and unfettered. Let us determine on the Fourth of July, that come what will, through labor disputes and tax quarrels, foreign problem and defense emergencies, this shall continue to be our goal.

Veterans' Home Loans

EXTENSION OF REMARKS
OF
HON. MONROE M. REDDEN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. REDDEN. Mr. Speaker, last Monday the Reconstruction Finance Act became law but it did not contain previous authority for the Reconstruction Finance Corporation to purchase veterans' obligations given to secure indebtedness incurred by the veterans in connection with the construction or purchase of a home. This, to my mind, was a serious mistake because the veterans will be unable to finance their homes in full without such authority.

In other words, there will be no market for these obligations, and thousands of people who have undertaken to help the veterans by loaning them various amounts of money to construct homes will be unable to dispose of the obligations, even though they accepted them on a temporary basis. That leaves both the veteran and the nonveteran without proper means of disposing of these obligations. Thousands of banks loaned money to veterans on their newly constructed or purchased homes because they believed that the RFC would take over these loans at any time in the future they might be called upon. In addition, there are many thousands, even millions of veterans, who now contemplate the construction or purchase of a home and will be absolutely unable to do so unless steps are taken to restore this provision.

I introduced a bill yesterday to amend the Reconstruction Finance Act and

grant authority to purchase obligations created by the veterans purely for home construction or purchase. This bill ought to pass immediately. We have plenty of time left before the adjournment of Congress to enact this bill into law. No hearings are necessary. We know conditions that exist. I hope every member of the Banking and Currency Committee to whom this bill has been referred will immediately join in making a favorable report. If so, I am convinced that this House will pass the bill by overwhelming majority, and there is no question about favorable action in the Senate.

Army-Navy Bill Is Analyzed as Costly Dream

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article which appeared in the Chicago Daily Tribune on Monday, June 30, by Admiral Frederick C. Sherman, USN, retired. To many people, mergers or consolidations indicate economy and efficiency. We know that that is not always the case. We know that mergers sometimes stifle healthy competition. Great improvements have been realized as a result of sensible competitive spirit. Reserving my final judgment with reference to the advisability of the so-called merger, we must do nothing that will hamper the illustrious Marine Corps or stifle the splendid spirit of the United States Navy.

ARMY-NAVY BILL IS ANALYZED AS COSTLY DREAM

(By Frederick C. Sherman, admiral, U. S. Navy, retired)

Considerably amended from its original form, the bill to unify the Army and Navy has been approved by the Senate Armed Services Committee and efforts are being made to enact this legislation prior to the July adjournment of Congress. It has yet to be passed upon by the House Committee on Expenditures in Executive Departments.

In attempting to satisfy all elements of the services, many changes in the wording have been made. One of these was a clause advocated by Gen. A. A. Vandegrift, head of the Marine Corps and valiant hero of Guadalcanal, to insure that the Marine Corps could not be abolished under the new set-up. Another paragraph states that it is intended "to provide for their [that is, the Army, Navy, and Air Forces] authoritative coordination and unified direction under civilian control, but not to merge them."

BILL WOULD INCREASE COSTS

A naval officer of high rank who must be nameless has said that the bill means different things to the different services. He has further stated that the agreement does not extend to basic principles and, in his opinion, it would be disastrous to pass it in its present form. It is doubtful if any bill can be written which will put in plain language just what is intended, unless some one gets perfectly frank and writes one which states that the intention is to permit the Army General Staff to control the Navy.

From the standpoint of economy, the bill will completely fail to accomplish any useful purpose. It is admitted that it will result in increased costs over the near term and only promises some vague savings in the indefinite future. The increased expenses of two new executive departments, the Department of Air and the new super Secretary of National Defense, will all be administrative and will add no combat strength to our armed forces.

"TOO MUCH POWER FOR ONE MAN"

Other objections to the present bill may be summed up as follows:

1. It is so poorly drawn that it means different things to different people.

2. It gives too much power to one man, short of the President. No one man can possibly be well informed on all branches of the services and be competent to administer them all. He will depend on his advisers, and under the proposed arrangement the Navy will be in the minority, and the weight of advice reaching the supersecretary will favor the Army at the expense of the Navy.

3. The control of the budget by the supersecretary could be used to atrophy any branch of the service, such as naval aviation or the Marine Corps, in spite of the supposed safeguards written into the bill.

4. The proposed elevation of the Army's strategic air command into a coequal department of the air is unsound. The Army's long-range bombers have no greater importance than the Navy's air arm. There is no more reason for a separate department of Army bombers than there is for a separate department of naval aviation.

NAVY AND MARINE CORPS OPPOSE

Col. Melvin J. Maas, president of the Marine Corps Reserve Officers Association and formerly a member of the House Naval Affairs Committee, appeared before the House Committee on Executive Expenditures in opposition to the present bill. He stated, among other things, that the creation of the separate air department for the Army was actually a step backward, that it is absolutely essential for aviators to be in the highest commands, naval and military, and that the day has arrived when the Army and Navy will have to be run by aviators, to a large extent, if not entirely.

Colonel Maas also stated that it was common knowledge that 95 percent of naval officers are opposed to this legislation.

FURTHER STUDY NEEDED

It is the opinion of this writer that the Congress should defer action on this bill for further study and hearings. If necessary to act now, at least the bill should be amended to eliminate the separate department of air and the supersecretary of national defense.

The powers of the latter should be given to the National Security Council, as recommended by Fleet Adm. E. J. King, former wartime Commander in Chief of the United States Fleet and Chief of Naval Operations. The provision for the Joint Chiefs of Staff, which functioned so successfully during the war, should be retained and placed on a permanent basis. Another desirable feature would be a requirement that the Chief of the General Staff of the Army and the Chief of Naval Operations of the Navy be aviators.

New Jersey Declaration of Independence

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. AUCHINCLOSS. Mr. Speaker, I have asked for this time to call the attention of my colleagues to the fact that 171 years ago today the great State of New Jersey in its provincial congress which was in session at Burlington adopted a combined declaration of independence and a new State constitution and thereby asserted its independence 2 days before our national Declaration of Independence was adopted in Philadelphia on July 4, 1776.

By such action the people of the State of New Jersey not only became the first of the Thirteen Original Colonies to declare its independence from the Crown of Great Britain but also was the first State to give tangible evidence of that love of liberty which identifies the people of our beloved country.

In this connection, it might also be remembered that the State of New Jersey was the first State to ratify the Bill of Rights. All through the life of our great Republic, New Jersey has been prompt in its answer to the call of the needs of the Nation and has contributed its share and more in every way to our national defense. It is a small State in area compared with many of the other States, but it has a heart and a fervent patriotism which is as big as the Atlantic Ocean which bounds its coast.

Problems of the Oil Industry

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. GAVIN. Mr. Speaker, it is encouraging to see the greater interest that is being taken in the problems of the oil industry. It seems to take a pinch in the supply to get many people to notice that industry. We were all very conscious of it during rationing days and now all the talk of shortage that is coming chiefly from persons with little information—that is building up quite a public interest.

As a matter of fact there is every possibility that the supply situation will work out all right, given some decisive action by Congress on the things that Congress alone can do, and a general hands-off policy on the part of those who have no business trying to give advice to any industry that knows its answers and asks merely to be allowed to apply them. I have said before that we are suffering from an overproduction of oil experts. Some got that way by working awhile for the OPA or the FEA and drifted down the street to some other agency that inherited the furniture and the philosophy of those dear departed outfits.

Let us keep our eyes on one thing: There is not a shortage of crude oil. If we will use a little intelligence we need not have any trouble over oil supply. We are doing a lot of talking about exports of our oil but we are ignoring the thing that causes more trouble and will continue to cause more trouble than anything else. I am talking about exports of steel and particularly the casing and tubing that we use in oil wells and

the pipe that is needed for new oil and gas pipe lines.

Oil shipments to Russia should be stopped right now and shipments of steel and pipe should also be stopped immediately until we get our petroleum industry built up to the point where it is ready to meet any and all emergencies. It seems we never learn. We are again going down the line feeding supplies to Russia as we did to Japan but a few short years ago.

4-H Club Work

EXTENSION OF REMARKS
OF
HON. OMAR BURLESON
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. BURLESON. Mr. Speaker, for several weeks I have been waiting for a time and place to call a matter to the attention of this Congress which I think is of the utmost importance. Here in the midst of national and international problems, tremendous issues of the day, we are likely to lose sight of those down-to-earth, everyday features and attributes of American life.

I refer particularly to 4–H Club work being directed by the extension service of our agricultural and mechanical colleges, more particularly that of Texas A. & M. College Extension Serivce. At this point in the record I wish to pay tribute to those sincere and hardworking county and home demonstration agents, whom I know from actual experience and observation have rendered the most unselfish service, and whose accomplishments are obvious to the farm people of my district and surrounding territory. I do not believe there is a more conscientious group of people than our county and home demonstration agents and those who direct their activities from Texas A. & M. College. Their job is not easy, and from my experience and observation a great majority of them have gone beyond their actual duty to perform services wherever possible to make farm life more livable, more profitable, and more desirable.

This serving as a preface, I wish to inform the House that this year the State winner of the Maggie W. Barry scholarship—the No. 1 award for Texas 4–H Club girls—was a young lady of my district. She is Wanda Jean Heine, of Roscoe, Nolan County, Tex. The award climaxes 8 years of intensive 4–H Club work for Wanda Jean, during which time she has been a gold-star 4–H Club girl, and last fall was chosen as a delegate to the National 4–H Club Congress in Chicago.

I point with pride to the accomplishments of Miss Heine as a goal toward which many of our young Texas farm boys and girls aspire. Through learning by doing, as it is practiced in 4–H Club work, not only Texas but every State in the Union will be more aware of the fullness of life enjoyed by eager, alert, and ambitious members of this organization.

Perhaps it will be interesting to you to know the accomplishments of this young lady, which were considered in the contest for the signal honor bestowed upon her. She conducted individual demonstrations in sewing, wardrobe planning, poultry raising, gardening, bedroom improvement, swine production, calf feeding, and record keeping. In the past 4 years she has designed and made 98 garments, and ranked high in the clothing revue of the 1946 4–H round-up at Texas A. and M. College. She has been president of her 4–H Club on two occasions, and at present is vice chairman of the Nolan County club for older 4–H Club girls. Incidentally, her income from demonstrations has been more than $4,000, which she has put into bonds and savings for her college education. These savings are now supplemented by the scholarship, valued at $300.

Miss Heine's personality is reflected in the fact that she was elected best all-around girl in Roscoe High School this year by taking a leading role in all high-school activities, and maintained the highest scholastic average in her class last year, and was the highest for the first semester of this year.

Wanda Jean certainly has had the inspiration and training which have resulted in the above-mentioned accomplishments. Her mother, Mrs. M. M. Heine, has been active in home-demonstration club work for years, and her father has long followed scientific practices in the operation of his 160-acre farm near Roscoe.

I am sure you join with me in extending congratulations and hearty good wishes to Wanda Jean Heine, and wishing for her a future filled with all the good things of life, for which she is constantly striving, not only for herself, but for the betterment of farm living every place. The time is long past when the country should be more conscious that the farm and farmers are really the backbone of the Nation, and to whom the Nation must look for sustenance.

Civil Rights and Minority Rights

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, July 2 (legislative day of Monday, April 21), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the RECORD what I regard as one of the greatest speeches made in recent years in defense of civil rights and minority rights. I refer to the address made by the President of the United States last Sunday at the Lincoln Memorial exercises.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

TEXT OF PRESIDENT TRUMAN'S ADDRESS TO NAACP YESTERDAY

The text of President Truman's address yesterday at the thirty-eighth annual conference of the National Association for the Advancement of Colored People:

"Gentlemen, I am happy to be present at the closing session of the thirty-eighth annual conference of the National Association for the Advancement of Colored People. The occasion of meeting with you here at the Lincoln Memorial affords me the opportunity to congratulate the association upon its effective work for the improvement of our democratic processes.

"I should like to talk to you briefly about civil rights and human freedom. It is my deep conviction that we have reached a turning point in the long history of our country's efforts to guarantee freedom and equality to all our citizens. Recent events in the United States and abroad have made us realize that it is more important today than ever before to insure that all Americans enjoy these rights.

"And when I say all Americans—I mean all Americans.

"The civil-rights laws written in the early years of our Republic, and the traditions which have been built upon them, are precious to us. Those laws were drawn up with the memory still fresh in men's minds of the tyranny of an absentee government. They were written to protect the citizens against any possible tyrannical act by the new government in this country.

"But we cannot be content with a civil-liberties program which emphasizes only the need of protection against the possibility of tyranny by the Government.

"We cannot stop there.

"We must keep moving forward, with new concepts of civil rights to safeguard our heritage. The extension of civil rights today means, not protection of the people against the Government, but protection of the people by the Government.

"We must make the Federal Government a friendly, vigilant defender of the rights and equalities of all Americans. And again I mean all Americans.

"As Americans, we believe that every man should be free to live his life as he wishes. He should be limited only by his responsibility to his fellow countrymen. If this freedom is to be more than a dream, each man must be guaranteed equality of opportunity. The only limit to an American's achievement should be his ability, his industry, and his character. The rewards for his effort should be determined only by these truly relevant qualities.

"Our immediate task is to remove the last remnants of the barriers which stand between millions of our citizens and their birthright. There is no justifiable reason for discrimination because of ancestry, or religion, or race, or color.

"We must not tolerate such limitations on the freedom of any of our people and on their enjoyment of the basic rights which every citizen in a truly democratic society must possess.

"Every man should have the right to a decent home, the right to an education, the right to adequate medical care, the right to a worth-while job, the right to an equal share in the making of public decisions through the ballot, and the right to a fair trial in a fair court.

"We must insure that these rights—on equal terms—are enjoyed by every citizen.

"To these principles I pledge my full and continued support.

"Many of our people still suffer the indignity of insult, the harrowing fear of intimidation, and, I regret to say, the threat of physical injury and mob violence. The prejudice and intolerance in which these evils are rooted still exist. The conscience of our Nation, and the legal machinery which enforces it, have not yet secured to each citizen full freedom from fear.

"We cannot wait another decade or another generation to remedy these evils. We must work, as never before, to cure them now. The aftermath of war and the desire to keep faith with our Nation's historic principles make the need a pressing one.

"The support of desperate populations of battle-ravaged countries must be won for the free way of life. We must have them as allies in our continuing struggle for the peaceful solution of the world's problems. Freedom is not an easy lesson to teach, nor an easy cause to sell, to peoples beset by every kind of privation. They may surrender to the false security offered so temptingly by totalitarian regimes unless we can prove the superiority of democracy.

"Our case for democracy should be as strong as we can make it. It should rest on practical evidence that we have been able to put our own house in order.

"For these compelling reasons, we can no longer afford the luxury of a leisurely attack upon prejudice and discrimination. There is much that State and local governments can do in providing positive safeguards for civil rights. But we cannot, any longer, await the growth of a will to action in the slowest State or the most backward community.

"Our National Government must show the way.

"This is a difficult and complex undertaking. Federal laws and administrative machineries must be improved and expanded. We must provide the Government with better tools to do the job. As a first step, I appointed an Advisory Committee on Civil Rights last December. Its members, 15 distinguished private citizens, have been surveying our civil-rights difficulties and needs for several months. I am confident that the product of their work will be a sensible and vigorous program for action by all of us.

"We must strive to advance civil rights wherever it lies within our power. For example, I have asked the Congress to pass legislation extending basic civil rights to the people of Guam and American Samoa so that these people can share our ideals of freedom and self-government. This step, with others which will follow, is evidence to the rest of the world of our confidence in the ability of all men to build free institutions.

"The way ahead is not easy. We shall need all the wisdom, imagination and courage we can muster. We must and shall guarantee the civil rights of all our citizens. Never before has the need been so urgent for skillful and vigorous action to bring us closer to our ideal.

"We can reach the goal. When past difficulties faced our Nation, we met the challenge with inspiring charters of human rights—the Declaration of Independence, the Constitution, the Bill of Rights, and the Emancipation Proclamation. Today our representatives, and those of other liberty-loving countries on the United Nations Commission on Human Rights are preparing an international bill of rights. We can be confident that it will be a great landmark in man's long search for freedom since its members consist of such distinguished citizens of the world as Mrs. Franklin D. Roosevelt.

"With these noble charters to guide us, and with faith in our hearts, we shall make our land a happier home for our people, a symbol of hope for all men, and a rock of security in a troubled world.

"Abraham Lincoln understood so well the ideal which you and I seek today. As this conference closes we would do well to keep in mind his words, when he said:

" 'If it shall please the Divine Being who determines the destinies of nations, this shall remain a united people, and they will, humbly seeking the Divine guidance, make their prolonged national existence a source of new benefits to themselves and their successors, and to all classes and conditions of mankind.' "

Research Laboratory, Quartermaster Corps, Boston, Mass.

EXTENSION OF REMARKS
OF
HON. FRANCIS J. MYERS
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES

Wednesday, July 2 (legislative day of Monday, April 21), 1947

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the RECORD a statement which I made to the Armed Services Subcommittee of the House of Representatives, in opposition to House bill 612, which would authorize the expenditure of $6,000,000 for a research laboratory for the Quartermaster Corps, at or in the vicinity of Boston, Mass.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR FRANCIS J. MYERS, DEMOCRAT, OF PENNSYLVANIA, BEFORE THE HOUSE ARMED SERVICES SUBCOMMITTEE IN CONSIDERATION OF H. R. 612, JUNE 27, 1947

I wish to voice my opposition to H. R. 612 which would authorize the expenditure of $6,000,000 for a research laboratory for the Quartermaster Corps at or in the vicinity of Boston.

It is just a little over 1 year ago that I appeared before the House Subcommittee on Appropriations in charge of the War Department's appropriation bill in opposition to a similar proposal. Reading back over the statement that I made on June 6, 1946, I am unable to find an argument that I then advanced in asking rejection of the prior proposal that I would care to amend in the slightest degree, for actually while I considered those arguments most compelling at that time, I am now more certain that in these swiftly changing times they are more pronounced than ever.

First and foremost, it is difficult at a time when every Member of Congress is pledged to eliminate all unnecessary expenditures, to reconcile an appropriation of $6,000,000 for the construction of a new building for research purposes when there is the alternative of increasing the size of the laboratory now engaged in the Army's research program at Philadelphia, or by the conversion of one of the several large buildings which were erected at the quartermaster depot at Philadelphia during the war period. Such an operation I am sure could be accomplished for a sum vastly less than the $6,000,000 now proposed for new construction.

In the light of the acute shortage of building materials which is causing every Member of Congress grave concern, the alternative here recommended should be adopted.

As I review the architects' sketches, I seriously question whether this building could be constructed in today's market for $6,000,000, an estimate that was made many, many months ago. The committee should also inquire if this figure includes essentials such as a cafeteria, equipment utilities, much of which are now available at the Quartermaster depot at Philadelphia.

In addition to my desire to reduce governmental expenditures and to conserve building materials needed for our housing program, I also desire to emphasize the resultant natural advantages in the consolidation of all the Army's research activities now scattered throughout the country with the work that has been performed at Philadelphia for some time. None of this work is now performed at Boston.

Prior to the retirement of General Gregory, such a plan to consolidate these activities at Philadelphia was proposed by him, and General Middleswartz has also stated that the Department was satisfied with a consolidated laboratory in Philadelphia.

The logic of both these proposals is well understood in view of the proximity of several of the War Department's other agencies which have much in common with the research program, i. e., the inspection unit now located at New York City and other agencies located in the city of Philadelphia.

I have discussed with the officials of the Quartermaster General the research program contemplated for future years, and quite frankly I cannot find any reason why this work cannot be carried on at the Philadelphia depot.

In the development and interpretation of textile test methods the research laboratory, if located in Philadelphia, would be in the very center of the textile industry and its allied fields, particularly the rayon industry, which includes Du Ponts at Wilmington, Del., and the Viscose Corp. at Marcus Hook and Lewistown, Pa. There are also located in Philadelphia 22 manufacturers of textile machinery.

While climatic research is but a small segment of this program, Philadelphia is situated close to the Pocono Mountains and the Atlantic Ocean. But it is well to remember that in this phase of the work it has long been the custom of the Quartermaster General to send test teams into the field, such as frost (Camp McCoy, Wis.) and frigid (Fairbanks, Alaska) the Aleutians, etc., a practice that will be continued regardless of where the laboratory is located.

Proponents of the bill have advanced the theory that this laboratory should be located in the Boston area because it would be advantageous to be close to the technological schools located there. I suggest to the committee the proximity to Philadelphia of technological institutions such as the University of Pennsylvania, Temple University, the Philadelphia Textile Institute, Drexel Institute, Lehigh University, Pennsylvania State College, the University of Pittsburgh, and many other scientific and engineering schools. They afford to the research and development division expert technical advice which cannot be equaled in any other section of the Nation.

Furthermore, Philadelphia is the medical center of the world, for it houses such national famous medical schools as Hahnemann College, the Jefferson Medical College, the University of Pennsylvania Medical College, the medical school at Temple University, and others. Johns Hopkins at Baltimore is not too far from Philadelphia to be used to complete advantage. The faculty at these institutions and the constant flow of new students guarantees a never ending reservoir of new ideas and fresh minds as well as technical advice in the study of biology, biological chemistry, physics, colloid chemistry, etc.

The Berkshire Mills, largest in the world, is located at Reading, Pa., and offers unlimited possibilities in research on underwear and knit goods. Another function of the Research and Development Division is research on garments which necessitates a very close relationship to the clothing industry and this industry is largely located in Pennsylvania, New York, and Baltimore.

For generations Philadelphia has been known as the workshop of the world, and it is noted for its hardware and metal trades. Research on such articles is another function of the Quartermaster Laboratory and the location of such manufacturers as Henry Disston & Son Co., North Bros. York Tools, Yale & Towne Manufacturing Co., and several other equally nationally famous companies offer compelling arguments for locating the laboratory in Philadelphia.

I also understand that at the present time much research data is exchanged by the Army with such concerns as General Electric

and Westinghouse. They have plants both at Philadelphia and Pittsburgh. Similar mutual arrangements are in existence with the J. E. Frick Co. at Waynesboro, Pa., and the York Ice Machine Co. at York, Pa., both of which firms are considered the largest manufacturers of refrigeration equipment in the country.

As to aluminum and stainless-steel products, a large number of manufacturers of steam kettles and kitchen equipment have their plants either in Pennsylvania or close by. Nearly 67 percent of all laundry equipment is located within a radius of 150 miles of Philadelphia. Considerable research is conducted by the Quartermaster Corps in this field.

Experiments are also conducted by the Quartermaster Corps on shoes. In 1944 over 37,000,000 pairs of shoes were manufactured in my State. Close to Scranton, Pa. is located the Endicott-Johnson Shoe Co., one of the largest shoe firms in the world.

Plastics is an item in which the Quartermaster Corps conducts extensive research and in this respect Philadelphia is in a most advantageous position with Rhom & Haas in the vicinity and the Du Pont industries at Wilmington, Del. Also, the oil industry at Marcus Hook, Pa., offers an opportunity for research on fuel oil and lubricants that is second to none in the country.

Du Pont paint works is likewise located in Philadelphia and all of its facilities are available to the Government for research in the field of paint and white lead.

I, therefore, strongly appeal to the members of your committee to act unfavorably on H. R. 612 for the very reason that it would appear to be an unnecessary expenditure at this time in view of the fact that the Quartermaster depot at Philadelphia is the finest location in the Nation to carry on the research and development program of the Quartermaster Corps in the future.

Resolution Adopted by Massachusetts House of Representatives

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following resolution adopted by the Massachusetts House of Representatives memorializing the Congress of the United States to place an embargo on all exports of gasoline and oil and products thereof to the Union of Soviet Socialist Republics:

RESOLUTION MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO PLACE AN EMBARGO ON ALL EXPORTS OF GASOLINE AND OIL AND PRODUCTS THEREOF TO THE UNION OF SOVIET SOCIALIST REPUBLICS

Whereas it has already been brought to the public attention by the Congress of the United States that there is a known shortage in this country of gasoline and oil and products thereof, and that gasoline rationing is to be expected in the near future: Therefore be it

Resolved, That the Massachusetts House of Representatives hereby urges the Congress of the United States to impose immediately an embargo on all gasoline and oil, and the products thereof, which are listed for shipment to the Union of Soviet Socialist Republics; and be it further

Resolved, That copies of these resolutions be sent forthwith by the Secretary of the Commonwealth to the President of the United States, to the presiding officer of each branch of Congress, and to the Members thereof from this Commonwealth.

In house of representatives, adopted June 19, 1947.

LAWRENCE R. GROVE,
Clerk.

The Nature of Future War

EXTENSION OF REMARKS
OF
HON. HENRY CABOT LODGE, JR.
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 2 (legislative day of Monday, April 21), 1947

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial on the nature of future war from the Boston Herald of yesterday, which I think will be of great interest to all Members of the Senate, particularly the members of the Committee on Armed Services.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROPHECIES OF DOOM

Two days after Owen J. Roberts predicted an atomic world war in 1948 or 1949, seven eminent scientists headed by Dr. Albert Einstein warned that the same thing might come in 1955. One year or eight to doom?

Nor is there much comfort in their separate preventives. Former Supreme Court Justice Roberts put his confidence in universal military training, and he so told the House Armed Services Committee. The scientists declared that only a supranational government can save the world from disaster.

But whatever arguments there may be for universal military training, the prevention of atomic warfare cannot be one. Whether we have a million or fifteen million men instructed in the science of modern warfare can hardly deter a nation with 20,000,000 potential fighters and a store of A-bombs, if war there is to be. General Eisenhower's complaint that we are a poor second to Russia's Army is well taken, but men's bodies are but feeble barriers to nuclear fission.

Then there is the scientists' cry for a supranational government. As if the Soviet, which has stubbornly clung to all sovereignty, except some inconsequential shreds, in atomic control, could now be persuaded to enter a world federated union in all matters of international relations.

More effective than either of these is the grim fact of our increasing store of bombs and our constant improvement of the Hiroshima model. We have delved deeply into the Soviet Russian mind since she first became an ally, and there is no evidence that it can be moved by anything but a singularly narrow and immediate self-interest.

If we have our bomb reserves, well scattered in strategic world locations, but give guarantees that we shall never use them unless we ourselves are attacked by A-bombs, we shall make peace desirable and war undesirable. This is strong medicine and may not be necessary. But it may be the only alternative to the war our prophets of doom predict. For the nature of our own security measures can only be shaped by the cooperation or lack of cooperation evidenced by the potential enemy.

John C. Crockett

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 2 (legislative day of Monday, April 21), 1947

Mr. HILL. Mr. President, a few days ago the Senate had the pleasure of congratulating its very able, fine, devoted, and efficient Chief Clerk, Hon. John Crockett, on his 40 years of service to the Senate. Mr. Horace C. Carlisle, of Alabama, has written a tribute to Mr. Crockett, and I ask unanimous consent that the tribute may be printed in the Appendix of the RECORD. In doing so I join Mr. Carlisle in his tribute to our good friend, our very devoted and able public servant, Mr. John Crockett.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

JOHN C. CROCKETT

John C. Crockett, in the Senate,
Has been serving forty years,
In continuous succession,
Although he, in truth, appears
To be not much over forty
Years of age today, yet he,
Without caring to conceal it,
Tells us that he's eighty-three.

Everybody knows John Crockett
As the Senate Reading Clerk—
When he calls the roll, he does it
In a way resembling work,
In a tone, strong and sonorous,
Like Niag'ra's rumbling roar—
Every Member has to hear him,
If he's on the Senate floor.

Everybody likes John Crockett,
For he's everybody's friend—
Every Member of the Senate
Knows on him he can depend—
Strong today, in mind and body,
With a smile that always cheers,
May God, in His mercy, spare him
Many more most useful years.

—*Horace C. Carlisle.*

The Future of Agriculture

EXTENSION OF REMARKS
OF
HON. HARLEY M. KILGORE
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, July 2 (legislative day of Monday, April 21), 1947

Mr. KILGORE. Mr. President, I had intended to make a short address on agricultural conditions, and particularly on the appropriation bill dealing with the Department of Agriculture. Inasmuch as I feel that at the present time it will not be possible to make the speech, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I have prepared on the subject.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. President, I am deeply concerned for the future of our great agricultural industry. This effort which is being made to destroy, under the guise of economy, the

great forward strides which the American farmer has made with Government help in solving his marketing problems and preserving the future productive capacity of our most vital resources, the topsoil, is nothing short of alarming.

The farm program which has been in effect during the past decade and which is now well established has provided for the first time in American history the means whereby the actual dirt farmer himself could have a real voice in the formulation of programs and policies which affect his income and his welfare. Not only that, but he has, in fact, the job of administering these programs himself through farmer committeemen whom he elects in his own county and community. Surely any action which undermines, weakens, or destroys the right and privilege of farmers to work together to solve their local and national problems threatens to remove from our society the democracy we are trying so hard to preserve.

The complexity of our economy and the tremendous increase in monopolistic corporation mergers has disadvantaged the farmer. As an individual he is but 1 of 6,000,000 individuals engaged in free enterprise. Little can he do alone to safeguard his interests. His problems are no longer his alone. He sells to giant corporations and he buys at the prices other giant corporations dictate. Only by national action and even international action can his welfare be safeguarded.

Let us see what is taking place in his markets. I quote from the March 7, 1947, report of the Federal Trade Commission on the present trend of corporate mergers and acquisitions. Let us see from this what the farmer's chances would be of surviving if he tried to operate alone in some of our so-called free markets.

"A new wave of mergers is under way in the dairy industry bearing striking resemblance to that of the late twenties, which witnessed the emergence of giant corporations and the elimination of hundreds of small dairy companies. Since 1940 the Borden Co., the second largest firm in the industry, has acquired 14 different concerns. In fact, most of the recent acquisitions in this field have been made by Nation-wide firms, which not only purchased other concerns in the dairy industry, such as creameries and icecream plants, but also expanded into such unrelated fields as fisheries, sardine canneries, and breweries.

"In meat packing, acquisitions consisted of the purchase by large packers of small, strategically located meat-packing houses, as well as the absorption of firms in such divergent lines as poultry and eggs, creamery products, coffee, macaroni, and canned goods.

"Another important influence in the food field was the acquisition by large grocery chains of meat-packing plants and small organizations producing food specialties. This type of expansion by the grocery chains was under way long before the war and has embraced many phases of food processing, as well as warehousing and wholesaling functions.

"Other features of the merger movement in the food industry were the acquisition of nine companies by the General Foods Co., including two sea food firms, a flour mill, a cereal company; the acquisition by the Burry Biscuit Co. of six firms; and the absorption by Pillsbury Mills and Quaker Oats of three companies each."

In the past 6 years 1,800 formerly competitive manufacturing and mining firms in the United States have been swallowed up in furtherance of monopolistic practices in the United States.

I wish to emphasize, Mr. President, that the 25,000,000 people on our farms can look forward to a decreasing standard of living and, in some areas, even poverty, unless they have legislation which will provide them means of effective action in the market place. Reduce their purchasing power and you pull down the whole economy with them.

Our programs for farm research and education and the dissemination of information to farmers are necessary and valuable services. So, too, are the farm organizations and cooperatives. However, these lack the means of providing positive action in the market place, particularly when action is needed quickly to forestall disastrous marketing conditions. Only under adequate legislative authority can farmers work together locally or nationally to provide orderly marketing and assure themselves and the consumer of fair treatment.

It is not strange that powerful business interests are behind the moves which would weaken and destroy the elected farmer committee system under which the farmer has been able to cooperate with the Government in protecting the welfare of little men in a world of giant corporations.

Now I want to deal specifically with the conservation of our soil and protection of our productive capacity so greatly needed for the ever-increasing population of this country and to meet our food commitments to foreign countries.

It has been proposed that the agricultural conservation program be cut in half in 1947 and eliminated in 1948. This is supposed to be a great act of economy, an alleged step in the direction of so-called free enterprise for the farmer; done in the interest of the public welfare.

I submit that the destruction of the agricultural conservation program will have none of these happy results.

It is false economy to permit an increase in the destruction of our soil. We shall pay heavily for this in the future many times what we save now. It is not enhancing free enterprise when the farmer is forced by economic pressure to deplete and destroy our resources; it is not in the interest of the general public to allow our soil to wash away or the soil minerals to be depleted to the point where the nutritional value of our food is deficient and undermines the health of the consumer.

The sooner we act adequately on the crying need for conservation, the cheaper it will be.

Let me illustrate by citing the case of my own State, West Virginia.

In common with many other States, the largest type of farming is the dairy industry, followed by poultry and eggs, fruit, and forest products, in that order.

One of the most urgent soil-conservation needs in my State is the use of liming materials. Lime to correct soil acidity; lime to enable farmers to grow soil-building legumes such as clover and alfalfa, and thick pasture swards. These legumes and pastures are the very foundation of soil productivity in my State.

Now let us see what has happened concerning the use of lime in my State.

In 1934, before the agricultural-conservation program began, only 16,000 tons of lime were used. In 1936, the first year of the program, farmers doubled their use of lime. In 1940 they used 363,000 tons, 23 times the preprogram use. In 1946 they used 450,000 tons, 28 times the preprogram use. But the most startling fact is that the actual need for lime on West Virginia farms each year is 1,300,000 tons, 81 times the use in 1934, and nearly 3 times the use in 1946. This same amazing progress, and this same difference between the use of lime and the actual annual need for lime exists in every State east of the Mississippi and in certain humid areas west of it.

In total the United States needs about 52,000,000 tons of lime applied each year as compared to somewhat less than half that amount now being used. Before the program only 3,000,000 tons were used annually.

The same applies to even greater degree in other soil-building practices.

Use of superphosphate for soil-building purposes in my State has increased from 3,000 tons to 40,0000 tons annually in the past 10 years with assistance of the agricultural conservation program, but the total annual need is 237,000 tons.

Are we to stop this progress now? To do so is only to postpone the job, increase the costs, magnify our soil and fertility losses, decrease our food supply, increase the consumer's food bill, and lessen our exports to feed hungry people in other lands.

Now, it is charged that the farmer ought to finance this himself—and I want to point out that he is paying half the cost now—or that, given research, education, and information, he will be able to do it himself without the agricultural-conservation program.

There are several reasons why we cannot expect the farmer to do this conservation job alone. First, although he was lectured, educated, informed, and urged for two or three decades prior to the agricultural conservation program that it was in his own interest to carry out soil- and water-conserving practices, the number of farmers who responded was negligible, as shown by the figures I gave you for my State in 1934, before the agricultural conservation program was established.

Second, the large number of tenant farmers precludes conservation on their farms because of their short-term tenancy and lack of incentive for capital improvements. Thirty-two and three-tenths percent of United States farms are operated by tenants.

Third, the cumulative losses of fertility and soil destruction over generations of exploitive farming are greater than it is reasonable to expect contemporary farmers to pay for, even in the comparatively prosperous agriculture of today.

Fourth, many farmers, particularly dairymen, have not received any substantial increase in net income, nor can they view the future without apprehension as to their financial position. The costs of production have equaled or exceeded any price increase in the market place.

It is conservatively estimated that if this program is eliminated, the use of lime and fertilizer will drop from one-half to one-third of the amount now used under the program. This means that on thousands of farms no soil-building or soil-conserving practices will be used at all, particularly in those types of farming less favored by price increases and on the smaller family-type farms where every bit of net income is needed for a minimum standard of living, and on most of the 2,000,000 tenant farms where the operator naturally serves only his short-term interest.

For example, we ought to terrace about 5,000,000 acres every year to get the job done in the next 20 years. But in 1945, with program assistance, farmers terraced 900,000 acres, and if the program is eliminated even this annual rate would be reduced 75 percent. Vast soil losses could not be recovered if the job is postponed and extended over many decades.

Drainage ditches would be reduced from an annual removal of 52,000,000 cubic yards to 14,000,000 cubic yards if the program is discontinued. Yet we should be constructing drainage at the rate of 90,000,000 cubic yards annually to get the job done in the next 20 years.

The land is a resource vital to all the people. The farmer is, in a sense, merely the custodian of this productive plant which serves us all, now and in the future. All of the people should share with the farmer the responsibility of safeguarding our agriculture.

When thousands of farmers of their own accord cannot take the measures necessary to safeguard the future of this country by maintaining the soil productivity, it certainly is short-sighted to eliminate the agricultural-conservation program which for 10 years has demonstrated so well that the farmer will match the rest of the people, dollar for dollar, to do the job he cannot do alone.

Everything considered, I am sure that it is only in the best interests of agriculture and

our entire population that the Government continue to share with the farmer the cost of maintaining the productivity of our agriculture, restoring fertility used up by past generations and exported during the war and postwar.

It is only fair and just that the Congress provide the $300,000,000 program which was promised the farmers by the Seventy-ninth Congress and that there be no curtailment or postponement of the conservation of our agricultural resources in 1948. This is an investment in the future of America, a constructive partnership between the farmer and Government to protect our food supply, meet our export commitments, and guarantee the future for coming generations.

Mr. President, at this point I wish to place in the record some tables which prove conclusively the value of the soil-conservation program.

Mr. President, I also wish to comment briefly on the action taken by the House of Representatives with respect to the FHA appropriations. I regret to say the House drastically cut the President's request for funds for the Farmer's Home Administration for the fiscal year 1948, thus eliminating direct loans for farm purchases.

This action was taken in the face of pyramiding applications for farm ownership loans from veterans and tenants. There were 34,206 more applications for such loans on file with FHA on December 31, 1946, than on the same date in 1945—92,100 against 57,894.

On July 1, 1946, there were over 51,000 applications on file, and during the first 10 months of this fiscal year nearly 58,000 additional applications were received—a demand more than 16 times as heavy as available funds could satisfy.

Where 15,000 applications from veterans were on file April 30 of 1946, more than 41,000 were on hand the same date this year, and to attack this demand farm ownership loans to nonveterans had been suspended in 26 States.

In eliminating farm ownership loans, House Members declared an intention to assist the President in his efforts to combat inflation of farm-land prices. But in a letter to Representative COOLEY dated May 27, 1947, Secretary of Agriculture Anderson declared that the President is strongly opposed to a curtailment of the farm-tenant program to any point lower than the figure carried in his budget. He said further that the recent conference on the farm real estate situation was not intended to destroy the farm tenant purchase program.

House action in eliminating farm-purchase loans, in fact, eliminates an effective weapon in combatting rising land prices. Each loan made under the program is based on careful appraisal of the long time earning capacity of the farm being considered. This determination is made by a qualified appraiser and a well informed county committee composed of local farmers. Loans are not made unless the appraisal indicates they can be repaid from farm earnings. Furthermore, the act authorizing the farm ownership program limits loans to the average value of efficient family type farm management units, as determined by the Secretary of Agriculture, in the locality where the farm is situated.

Because of the insistence of Federal appraisers and county committees that loans be made only on the basis of the normal earning capacity of the unit, there have been many instances of substantial reductions in the asking prices of farms, especially in the case of veteran applicants.

Mr. President, elimination of the farm-ownership program would stall one of the main efforts to preserve family-type farms in America. By denying to many veterans and tenants the opportunity to buy farms at reasonable prices, it would further concentrate ownership of land in the hands of big operators and speculators. Veterans' benefits extended by the GI bill of rights would be removed and the specific authorization of loans to veterans for improvements on project properties, contained in Public Law 563, would be nullified.

Elimination of the farm ownership program would be particularly inopportune at this time, because current farm commodity prices are highly favorable. This circumstance is vitally important to veterans and farm tenants who, under the farm ownership program, would be given an opportunity to make sound and reasonable farm purchases and could repay their loans in a period of good commodity prices.

Besides cutting out the direct lending program for farm purchases, the House bill puts the insured mortgage program, implemented for the first time, on a token, experimental basis, by reducing that appropriation to $1,000,000.

Like the demand for farm purchase loans, the demand for operating loans made by the Farmers Home Administration is increasing rapidly. During the first 7 months of this fiscal year over 144,000 applications were received by FHA, an increase of 27 percent over the 113,209 applications received during the same period in the last fiscal year. Applications from veterans show an even greater percentage rise. In the fiscal year 1945 only 5,210 for adjustment operating loans were received from veterans, while 32,897 such applications were received during the first 7 months of this fiscal year—a jump of 531 percent.

From September 1944 through January 1947, 35,244 veterans had received adjustment loans totaling $53,844,576.

While the demand for operating loans increased, the House reduced the FHA operating-loan fund from the President's request of $90,000,000 to $60,000,000. Present borrowers will need most of the $60,000,000 during the 1948 fiscal year, and will have to be taken care of first, in order to protect the Government's investment. It is estimated that after these needs are met, there will be funds for an average of about two new loans per county.

The fiscal year 1947, during which $94,000,000 was available for FHA for making operating loans, saw 36 States exhaust their funds for making initial adjustment loans by January 31, 1947. The fiscal year 1948, with only $60,000,000 available, is expected to see funds for all new loans used up before the beginning of the peak lending season.

Along with House action cutting FHA lending funds went a provision reducing salaries and expenses from the $30,000,000 requested by the President to $18,000,000—a cut of 40 percent.

With this reduction, 575 county offices—29 percent of the total—would be closed. Fifteen State offices would be closed, leaving only 25 in the country. The number of FHA employees would be reduced from 8,219 to 4,800. With this reduced staff the agency would attempt to service 1,200,000 borrowers with outstanding accounts totaling $700,000,000, and to give the on-the-farm assistance which had been the core of FHA's credit program.

Mr. President, I repeat, in order to meet the cut the FHA is preparing to close 575 county offices, and it has given dismissal notices to more than 3,400 employees. In my own State the number of employees will be reduced from 111 to 44—or a 67-percent reduction. I am informed by FHA officials that the cuts will be made as follows: The State office will be reduced from 17 employees to 9; the field office will be reduced from 5 to 1, and the county office personnel will be reduced from 89 to 34.

In West Virginia the Farmers Home Administration made 1,133 loans, totaling $652,641, during the first 10 months of the present fiscal year. Forty-six percent of the funds went to veterans. As of April 30, 742 applications for loans were on file, 332 of them from veterans.

Direct loans, totaling $2,338,355, for the purchase of 470 farms have been made in West Virginia under the program which has been eliminated by House action. Applications on file from veterans alone total 300.

Operating loans, totaling $11,634,459, have been made in West Virginia and 79 applications are on file. The bill passed by the House reduces funds for this type of loan to the point that an average of only two new loans per county can be made during the next fiscal year. Almost all of the proposed funds will be needed to meet the credit requirements of present borrowers.

Mr. President, nationally the reduced staff will service more than 1,200,000 borrowers, whose obligations to the Government total $700,000,000. In conclusion, I wish to emphasize that part of the Government's security for these loans has come from the assistance in farm and home planning and in the on-the-farm guidance toward improved farm practices given borrowers by the Farmers' Home Administration. These services will be eliminated under the guise of economy.

Mr. President, I hope the Senate will take a much more objective view of the important work performed by the FHA and restore the cuts made by the House of Representatives.

I ask that tables bearing on agricultural conditions be printed in the RECORD.

There being no objection, the tables were ordered to be printed in the RECORD, as follows:

West Virginia—Soil-rebuilding and soil-conserving practices under the agricultural conservation program

SUPERPHOSPHATE—BASIS 20 PERCENT P_2O_5 (PHOSPHORUS PENTOXIDE)

Program year	Tons			Credit	
	Used from Government contracts and purchase orders	Used where purchased for cash	Total use under program	Credit value of tons used	Percentage portion of State funds

[1] Acreages needing lime and the rates of application are those recommended by the department of agronomy, West Virginia State College of Agriculture.
[2] From 1940 Census.
[3] The annual lime need indicated is one-fifth of the total.
[4] The annual lime need indicated is one-tenth of the total.

[2] Includes all pasture.
[3] Subject to revision—not approved by State agronomists. Tables approved by State agronomists, showing annual lime needs by counties, are available for all States except Arkansas, Florida, and Washington.

Electric Utilities

EXTENSION OF REMARKS
OF
HON. LISTER HILL
OF ALABAMA
IN THE SENATE OF THE UNITED STATES

Wednesday, July 2 (legislative day of Monday, April 21), 1947

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in this afternoon's Washington Daily News captioned "Don't let utilities backslide," and also an article published in this afternoon's Washington Daily News by Thomas L. Stokes captioned "Floods and consciences." The editorial and article by Mr. Stokes deal with the legislation now pending in the Congress to remove from the electric-utility industry certain regulations now imposed by the Federal Government.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Daily News of July 2, 1947]

DON'T LET UTILITIES BACKSLIDE

The electric-utility industry, sobered up, a respected member of the community, its shady past almost forgotten, shows signs of a relapse. It would do well to jerk itself up fast, recall the 1920's, and take the pledge all over again.

Twenty years ago the public was just waking up to the fact that utility stocks were of questionable value because utility accounts were so full of water and write-ups; because holding companies were draining so much from operating utilities in charges for this, that, and the other; and because the utilities had found a way to operate in no man's land between State and Federal regulation where it was impossible to check on what they were doing.

After a 10-year battle this situation was corrected. Changes in the Federal Power Act brought about regulation in the field beyond the power of the States to reach. The water was wrung out of company accounts—$1,250,000,000 worth of water. And when it was out financial pages began bragging about the soundness of the whole procedure and the strong fundamental position of the utilities.

Another act gave the SEC power to break up great holding company pyramids, and the companies that wept most bitterly over their fate in 1936 are more prosperous today than ever before.

Government-developed power furnished a yardstick for rates and showed companies the way to larger profits through wider markets. Again, what the companies thought was ruin turned out to be rosy prosperity.

But memories are short and greed is eternal.

The utilities are backing half a dozen bills in Congress designed to put them back where they were in the twenties. They aren't suggesting repeal of the Water Power Act—just amendments. But the amendments, innocent-sounding, cut away all that's important in the act. They once more would leave things up to the States, and the States once again would find themselves groping in an interstate no-man's-land, confused and impotent.

Other proposed bills are planned to force an end to cheap power rates, an end to demonstrations that the cost of a project eventually can be written off and cease to be a charge to the consumer, an end to the use of power sales as a means of developing the West.

Hearings are being held quietly and in unseemly haste. It's time for the country to take a long, penetrating look at the whole business.

The great tears being shed by the power men, their pleas that they seek only a chance to survive, would be more impressive if they hadn't said it all before—and if it were not for daily stock-market quotations. Taking the cure made the utilities sleek and prosperous and was good for the national economy. Congress will be foolish and reckless if it doesn't keep them that way.

[From the Washington (D. C.) Daily News of July 2, 1947]

FLOODS AND CONSCIENCES

(By Thomas L. Stokes)

The rampaging Missouri and Mississippi and their tributaries not only are sweeping over the levees in their path but are slopping over in little rivulets that figuratively are sweeping into the consciousness of this Capital.

What is happening in the Middle West shows the need to do the job, once and for all. It would be done through the comprehensive, all-purpose plan for flood control, power development, irrigation, and navigation that is embodied in the proposed Missouri Valley Authority, as it was done for another large area of our country through TVA.

Such an all-purpose program, which was envisioned many years ago by President Theodore Roosevelt for the Missouri as well as other watersheds, was submitted to Congress 3 years ago in the MVA plan by another Roosevelt—Franklin D. There it slumbers.

The Missouri River is lapping at the levees of neglect and indifference erected here by selfish private interests which include among others, utility interests. As well as resisting MVA, the utility interests are trying to build another levee against property development of our river resources in still another sector here, the House Interstate Commerce Committee. This is related to the general problem involved not only in the Missouri but in other rivers which need proper development to prevent floods and for other beneficial purposes, including cheap power.

It seems timely to reemphasize the threat revealed here previously to integrated development of water resources that is contained in two bills sponsored by Representative WILLIAM MILLER, of Connecticut, Republican, which the utilities are trying to slip through Congress in a hurry. These measures would well-nigh destroy the regulatory authority of the long-established Federal Power Commission.

The danger to integrated water-resource development is in the bill that would withdraw many rivers from FPC supervision by a new and narrow definition of navigability. The other bill would affect the consumer in his electricity rate by removing many companies from FPC supervision by a new definition of interstate commerce, including supervision of accounting that already has squeezed so much water out of utility companies and opened the way for rate reductions.

On the general problem of integrated water resource development, Chairman Nelson Lee Smith of FPC said:

"There are many areas of Government lands and many streams subject to the jurisdiction of Congress which would be opened by this bill to private power development without Federal supervision or control. In proposing removal of Federal supervision, the bill represents a distinct

departure from previous congressional policy both as to land use and water power development, completely destroying the wide public benefits to be obtained from planned comprehensive use of these natural resources."

He said the present law, which the bill radically would revise, was "designed to insure that water resources will be developed to make the best possible use of water resources for navigation, flood control, irrigation, municipal water supply, recreation, and other public benefits. If these uses are to be considered in the broad public interest, they should be considered whenever a power development is proposed at a site subject to Federal jurisdiction, regardless of the use to be made of the electric energy after it is generated.

"The limitation of the licensing requirements to projects within a narrow public utility class as proposed would practically nullify any effective control over stream development for conservation purposes."

The private utility type of thinking revealed in these two bills affects all of us adversely—whether it be in water for irrigation of a farm, protection from floods, or cheap electricity to light homes and operate household facilities and to run industries, small and large.

A Ray of Light on the Alleged Bipartisan Foreign Policy

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 16, 1947

Mr. BUFFETT. Mr. Speaker, a recent George Sokolsky column, These Days, sheds a ray of light on the alleged bipartisan foreign policy since 1941.

It will be interesting to watch the reaction of the American people as the truth comes out. When the people understand that their savings are being used to finance socialism abroad, and that this action is rushing us toward socialism at home, their indignation may be considerable.

Bipartisan collaboration that bleeds our taxpayers to sweeten a European transition to socialism is a questionable practice, to put it mildly.

Mr. Sokolsky's editorial follows:

THESE DAYS
(By George E. Sokolsky)

From the 1944 Presidential campaign until now, this country has witnessed a united political front with regard to its foreign policy. The Republican and Democratic Parties have functioned together as one in foreign affairs. The active opposition centered in left-wing groups headed by Henry Wallace and CLAUDE PEPPER.

The father of the bipartisan policy was Gov. Thomas E. Dewey, of New York.

During the 1944 campaign an appeal was made to him by General Marshall not to impair the war effort by a general debate during the campaign.

That was followed by negotiations between John Foster Dulles, representing Governor Dewey, and Cordell Hull, Secretary of State, representing President Roosevelt. As a result of these conferences, the two parties agreed not to make the conduct of the war an issue.

Many Republicans at the time regarded this as an error of tactics and as not being in the best interest of the country. They felt that the Presidential campaign was precisely the time to air the relations between the United States, Great Britain, and Soviet Russia.

Many of them still believe that Governor Dewey lost the election because of this policy.

Dewey, on the other hand, felt that he could not endanger our armies in the field or the prospects of victory or permit the campaign to give aid and comfort to the enemy.

Subsequently, Senator VANDENBERG and John Foster Dulles, representing the Republican Party, attended a number of international conferences.

Senator Warren Austin, a Republican, was appointed the United States delegate to the United Nations.

John Foster Dulles, on a number of occasions, provided the formula and text which became American policy and Senator VANDENBERG held the Republicans in line behind the President on major issues, including the Greco-Turkish aid, the wisdom of which many Republicans doubted, and the confirmation of the Italian and Hungarian treaties, which many Republicans really opposed.

Even more, no major investigation of the State Department has been instituted, although many feel that that is essential in view of their suspicion that Communists have won high places where they ought not to be.

Undoubtedly, as a result of this bipartisan policy, Herbert Hoover, the most effective personality among Republicans, has served the President on several missions of the greatest importance.

This policy appears to have outlived its usefulness. In the first place, it is impossible to make a clear demarcation between the foreign and domestic policies of this country.

For instance, when the administration commits itself to export $5,000,000,000 to $7,000,000,000 a year to Europe and Asia for a prolonged number of years, it stipulates the nature of taxes, wages, and prices in this country.

The Republicans cannot support dollar exports abroad and seek lower taxes at home, because the two are really one.

The same is true in many other matters, as, for instance, support of a socialistic government in England while we imperial our own cotton and wool markets.

The breach, then, in the bipartisan policy is being made by domestic issues. The President's veto of the tax bill, and the activities of his agents among Representatives and Senators to prevent overriding the veto, engendered a bitterness which will be felt in every quarter.

The fact that the State Department is pressing the Export-Import Bank and the World Bank to make political loans, which cannot be repaid and are therefore illegal, has reached congressional ears and gives the impression of roundabout double-crossing that annoys no end.

Furthermore, the Marshall plan is viewed with considerable suspicion because it gives the impression of encouraging the debtors to bring pressures upon this country which it may be as embarrassing to reject as it will be impossible to fulfill.

In a word, the honeymoon is turning into a Hollywood marriage—one of those things that are wonderful while they last but which must split on the rock of divergent interests.

The split is here, although the divorce papers have not been filed.

Once it is all in the open it will be clear that the principal issue in the 1948 campaign will be foreign affairs, and the argument will revert to Teheran, Yalta, and Potsdam. It will not be nice going.

Illinois Activities of Federal Home Loan Bank Administration

EXTENSION OF REMARKS
OF
HON. SCOTT W. LUCAS
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Wednesday, July 2 (legislative day of Monday, April 21), 1947

Mr. LUCAS. Mr. President, I have received a letter from John H. Fahey, Commissioner of the National Housing Agency, Federal Home Loan Bank Administration, giving a detailed report of the activities of that organization in the State of Illinois. It is a very illuminating and interesting report on what the Home Owners' Loan Corporation has done in my State, and I ask that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NATIONAL HOUSING AGENCY,
FEDERAL HOME LOAN
BANK ADMINISTRATION,
Washington, D. C., June 12, 1947.

Hon. SCOTT W. LUCAS,
United States Senate,
Washington, D. C.

DEAR SENATOR LUCAS: On February 28, 1945, I wrote you giving you some current facts concerning the progress of liquidation of the Home Owners' Loan Corporation, particularly the record of its accomplishment in your State. The figures which I gave you then were as of the close of business September 30, 1944. Since that time even greater progress has been made and I now present to you figures as of March 31, 1947, which reflect the progress made up to this time.

Out of a total of nearly two million applications filed throughout the United States and its possessions during the period from June 13, 1933 through June 12, 1936, 1,017,821 loans were closed having a dollar value including subsequent advances, chiefly for taxes, repairs and other necessary expenses, of nearly $3,500,000,000.

Since June 12, 1936, at which time the Corporation's lending activities ceased, it has been engaged in a rapid yet orderly liquidation of its assets. As of March 31, 1946, a total of $2,695,784,648 had been liquidated, or 77.2 percent. As of March 31, 1947, 1 year later, a total of $2,896,279,856 or over 82.9 percent had been liquidated. In other words, during the 12-month period from March 31, 1946, to March 31, 1947, the Corporation liquidated a total of $200,495,208. Out of a cumulative total of 198,191 properties which the Corporation was forced to acquire, there remained on hand as of March 31, 1947, a total of but 78 properties throughout the entire country.

Out of the total number of loans made, 69,985 were closed in the State of Illinois, representing an aggregate amount of $304,997,764. This amount includes subsequent advances, chiefly for taxes and insurance, made for the account of the borrower. In this connection you will be interested in knowing that according to the 1940 Housing Census 44.6 percent of all owner-occupied, nonfarm dwelling units in the State of Illinois were under mortgage, and 22.3 percent of these mortgages were refinanced by the Home Owners' Loan Corporation.

As of March 31, 1946, the total amount of outstanding loans of the Corporation in Illinois, together with the value of the properties acquired, had been reduced through collections and the sale of its properties to

a balance of $68,481,445, a liquidation equivalent to 77.5 percent. As of March 31, 1947, 1 year later, the amount of the outstanding loans and the value of the properties acquired had been reduced to a balance of $50,035,417, a liquidation equivalent to 83.6 percent, or a liquidation of $18,446,028 during the 12-month period.

A total of 42,083 borrowers have paid their accounts in full as of March 31, 1947. This represents an increase of 6,520 over the number who had paid their accounts in full a year ago. A substantial number of borrowers in the State of Illinois are making monthly payments in excess of the amount required under their contracts.

The Corporation was obliged to take over through foreclosure in the State of Illinois a cumulative total of 9,197 properties. As of March 31, 1947, 9,193 have been sold, representing a liquidation of acquired properties in your State equivalent to 99.9 percent.

According to the present trends of the Home Owners' Loan Corporation's income and expense and the projection of these into the future, if the present loan balances are liquidated in accordance with amortization schedules, the Corporation should not only be able to cover all future expenses but also be able to wipe out its present deficit and thus make possible the return to the Federal Government of the entire original $200,000,000 capital of the Corporation advanced in 1933 by the Secretary of the Treasury.

We believe that the Corporation's record will be a source of pride to you and to the Congress which passed the original Home Owners' Loan Corporation legislation which has proven to be one of the most advanced measures ever undertaken in any country for the encouragement and maintenance of home ownership.

Sincerely yours,

JOHN H. FAHEY,
Commissioner.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. KEATING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times:

STATEHOOD FOR HAWAII

After some 27 years of intermittent debate, Congress seems at last to be on the road to voting statehood for the Hawaiian Islands. The House yesterday passed by a vote of 196 to 133 the bill introduced by Delegate FARRINGTON, of Honolulu, which has been unanimously approved by the House Public Lands Committee, and which is supported by President Truman and Secretary of the Interior Krug. Although a Senate vote at this session appears unlikely, we believe the weight of evidence is in favor of prompt and affirmative action by Congress.

The Hawaiian Islands have been under the American flag since 1898 and a Territory since 1900. Their population of more than 500,000 persons is larger than that of any other Territory when it was admitted to statehood with the exception of Oklahoma. The islands pay more taxes to the Federal Government than 14 present States and are admittedly more advanced in education and public services than many others. Speed of transportation now makes its isolation from the mainland a factor of little importance.

The principal argument against granting statehood—that its polyglot population, (which was 32.5 percent Japanese in 1945) would make it unassimilable—is not, we believe, a valid one. During the war the varied races of the Hawaiian Islands proved that they were good and loyal Americans. There is little evidence that any racial group has ever indulged in bloc voting in Territorial elections. If Congress believes in the American principles that all men are born equal and that there should be no taxation without representation, then its Members should vote to make Hawaii the forty-ninth State. Hawaii's estimated 519,000 people have, we believe, proved their right to that estate.

Fourth of July 1947 in America—and Elsewhere

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. BENDER. Mr. Speaker, I ask permission to insert as part of my remarks the following speech I am making on the Fourth of July in my home community before the American Legion of Chagrin Falls, Ohio:

I am happier than I can say to be here with you on this Fourth of July, 1947. The surroundings of this beautiful valley, the sight of all these friends and neighbors give all of us a feeling of contentment and peace. Ours is the only country in all the world where this sense of security prevails today. Ours is the only country in all the world where freedom is more than a pleasant word.

Instead of taking our liberty for granted, every Fourth of July and every other day of the year, we should thank God for having blessed us with this land. In America freedom, liberty, justice under law have become platitudes. We talk about them as if they were the simplest items of everyday commerce. We almost forget that they were purchased with the blood of hundreds of thousands of men and women who came to this continent looking for a better life for themselves and their children.

In almost every other country on this globe, freedom is a remote dream utterly unknown in practice. Stand up on a soapbox anywhere in nine-tenths of the earth and chances are very good indeed that you will shortly find yourself in the local hoosegow. If you attempted to read the Declaration of Independence on most of the European or Asiatic Continents, or even the famous French Declaration of the Rights of Man, you would be listed as an "enemy of the State" in jig time.

You know, after the First World War, most of the republics that were set up by the Peace Conference at Versailles adopted constitutions patterned after our own.

They put in long, rhetorical phrases about the Bill of Rights and guaranteed every man, woman, and child the precious freedoms we enjoy in America. These things sounded all right and looked very handsome in printer's ink. But they were meaningless. They blew right out of print with the first wind of adversity. As soon as economic distress struck the words were forgotten. Old hatreds were revived. Old political rivalries were reborn. The traditional Old World solution to every internal problem—a declaration of war on somebody—was pulled out of Pandora's box, and the people of Europe were right back where they had started—at each other's throats. Freedom is more than a word. It is not something you can export in a book. It must be earned—and fought for—and guarded.

There are some modern historians who preach the doctrine that all the patterns of history are purely economic in their origins. To these people America's great success in building this great land of ours is due exclusively to the vast natural resources we have inherited. But look around the world. There are great natural gifts of iron ore and flowing oil and gold and coal in China and Russia and South Africa and dozens of other areas of the world's surface. Yet in none of them has there been anything comparable to the development of these great resources in our own soil. Nowhere have these wonderful gifts of a beneficient God been used for the enrichment of human life as they have here.

We have our troubles in America, to be sure. But behind them all we have built a solid base of principles guiding and sustaining us in every trial. Those principles are preserved in our fundamental law.

So long as we retain the determination to listen to the arguments of the other fellow, no matter how distasteful they may be, we stand a fairly good chance of arriving at a workable solution of our problems. We blow off our indignation in the public press freely. We organize protest meetings. We buy time on the radio to argue our views. These are the rights we regard as inalienable. Elsewhere they are nonexistent.

To those who urge us to abandon our way of life as outmoded, let us say this. All that is new is not necessarily better than what is old.

Sometimes the excitement and glamor of the new idea blinds us to the merits of those things that have been long established. In our own country today there are some people who preach the socialism and communism of Europe. They talk loud and long about the theory of these movements. They talk very little and very quietly about life and human happiness where they are in practice. Everyone who has watched the operation of these systems has come back to our shores blessing America. Every observer, whether he liked or disliked the Soviet Union, has reported that the rights of free speech, free press, free thought, the right to worship our God, the right to build for the future—the very things that have made America great—do not exist across the ocean.

Materially and spiritually we have built in our country a model and a challenge to the nations and the peoples of the earth. When we grow fearful of the future, when we become faint-hearted, let us remember the struggles of our history. It is trite and old fashioned to recall the determination and courage which carved an empire out of the wilderness of this continent.

Today we have a highly complex industrial civilization. We have major social problems. All of us can recite them. There is not enough decent housing in our country. But there is more here than anywhere else in the world. There is too much emphasis upon the machine and not enough upon human personality in our industrial economy. But we are more deeply conscious of this difficulty than any other nation anywhere else. There is too little human tolerance and understanding in many parts of our country. But we are striving everywhere to remind ourselves that no matter what may be our color, creed, or place of origin, we are all children of one God and brothers under the skin. There is too little provision for the education of our youth and their training for the responsibilities of the atomic age. But we are rapidly moving forward in our fight to offer equal educational opportunities to every child in America. There are too many works and too little faith. But we realize our shortcomings and the beginning of wisdom is knowledge of our weaknesses.

Yes; we have still a long way to go before we realize the American dream. We have a hard path to travel before we achieve here a Nation in which all men are free to develop to their maximum usefulness to themselves and to the world. But we have come a longer distance toward that goal in the years since July 4, 1776, than any other people in human history.

There are dangers and pitfalls ahead. If labor and management decide to enter upon suicidal combat, they may destroy the economic pattern of free enterprise. If prejudice and intolerance gain the foothold here that they have achieved in the Old World, they may lead us into the fratricide of civil war and shatter our hopes. If unwise statesmanship determines our foreign policies, we may be surrounded by a circle of potential enemies who raged our wealth with envy and malice. These are real perils. Anyone who minimizes either the domestic or the foreign issues facing us today is deceiving himself. But we in America are the world's great optimists.

We could not have built our magnificent civilization without confidence in what lies ahead. Our great problems today are man-made. They arise largely from the fact that our scientific advances in technology have outstripped our ability to absorb them. We have not been able to translate the steam engine into terms of human society, and today we are confronted with the fact of atomic energy. We must make the difficult effort to catch up in our thinking. World-wide organizations have functioned across national lines in trade and commerce. American engineeers have built railroads and turbines on every continent. The boundary lines drawn on maps are artificial devices. We must learn to think across those lines if we are to have world-wide, enduring peace.

I am confident as we face the future. Here in America we have given men and women the chance to exercise their brains, their muscles, their ingenuity to build a New World. On this Fourth of July 1947, the blessings of this brave New World are everywhere apparent. Let us determine that come what may, we shall labor together with the peoples of the earth to spread the blessings of this world of ours everywhere and preserve them for those who come after us to enjoy in peace and happiness.

The Founders of the American Navy

EXTENSION OF REMARKS
OF
HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Capt. Dudley W. Knox of the United States Navy:

THE FOUNDERS OF THE AMERICAN NAVY

(By Capt. Dudley W. Knox, U. S. Navy)

Although there is no precise definition of the term "founder of a Navy," the many men who were conspicuously associated with the origins of our Navy might be regarded as its "founders."

The first naval forces under Continental pay and control were those established in the spring and summer of 1775 by Generals Arnold and Schuyler on Lake Champlain, and by General Washington near Boston. The Lake force saw no important service for nearly a year when under General Arnold it was defeated by a greatly superior British squadron, although the Americans had gained a vital strategic victory by delaying an invading British Army.

The so-called Washington Fleet, however, was effectively employed at an early date. When General Washington took command of the Army before Boston in July 1775, the extreme shortage of powder and arms persuaded him to commission several vessels in advance of congressional approval to prey on the sea communications of the British Army in Boston, in the hope of capturing munitions. The first of these vessels was the schooner *Hannah* which sailed on September 5, 1775, under Capt. Nicholson Broughton and brought in a prize within 2 days. Commodore John Manly commanded the little fleet of seven vessels that during several subsequent months were very active off Boston and made other valuable prizes of British ships carrying munitions.

Meantime, under the leadership of John Adams, Congress resolved on October 13, 1775 that two Continental ships be fitted out. This was the legislative birth of the permanent Continental Navy. A Congressional Naval Committee was appointed, consisting of Silas Deane, John Langdon, Christopher Gadsden, Stephen Hopkins, Joseph Hewes, R. H. Lee, and John Adams. This committee laid the foundation of the Continental Navy. It directed the purchasing, outfitting, manning, and operations of the earlier ships, prepared the legislation organizing the new naval service, and drafted admirable rules and regulations to govern its conduct and internal administration. The latter was principally the work of John Adams.

Esek Hopkins was appointed commander in chief of the fleet and had general charge of its preparation at Philadelphia under the supervision of the congressional committee. The work of structural alterations needed to transform the purchased merchant ships into men-of-war was placed under the naval architect, Joshua Humphreys. The rerigging and outfitting of the ships were under Capt. John Barry. The matter of obtaining crews was given the special attention of the commander in chief, Hopkins, who was necessarily so much occupied with the affairs of the fleet as a whole that the preparation of his flagship, the *Alfred*, fell largely to the lot of Lt. John Paul Jones, the second in command on board the flagship.

The captain of each of the other ships attended to various wants of his own ship more particularly. These captains, in the order of rank, were Dudley Saltonstall, Nicholas Biddle, Abraham Whipple, John B. Hopkins, John Hazard, William Hallock, William Stone, and Hoysted Hacker.

The first Continental Fleet put to sea under these officers in February 1776. It proceeded to New Providence (Bahamas) and there landed and captured a large stock of munitions which was taken to New London, Conn., for the army. Captain Barry was not in this fleet but remained in Philadelphia and soon was put in command of the *Lexington*, which did splendid service in guarding the Delaware River and its sea approaches.

Following these initial operations, which virtually "launched" the American Navy, other ships were put in active service on the home coast and overseas. There were frequent combats in which the "fighting edge" of the Americans was proven to be the highest. Among the more conspicuous who might be said to have fathered the fighting spirit of our Navy in this way were Capts. Lambert Wickes, Nicholas Biddle, John Paul Jones, John Barry, Gustavus Conyngham, James Nicholson, and Joshua Barney.

After the Revolutionary War the Navy went out of existence completely. It was not reestablished until 1794, when Congress provided for the construction of six new frigates, and appointed six captains to supervise the work and to command the vessels when completed. These men were John Barry (who was the senior in rank), Samuel Nicholson, Silas Talbot, Richard Dale, Thomas Truxtun, and James Sever, of whom four, Barry, Nicholson, Dale, and Sever, were former officers of the Continental Navy.

In 1798 we went to war against the French at sea, hastily buying more ships and appointing more officers. In the subsequent 3 years of quasi war, Capt. Thomas Truxtun especially distinguished himself in two successful and severe actions in the *Constellation* against French frigates. Lts. John Shaw and Charles Stewart also fought brilliant engagements in smaller ships. Among the squadron commanders were Capts. John Barry, Alexander Murray, Silas Talbot, Thomas Truxtun, Thomas Tingey, Stephen Decatur, Sr., and Richard Dale.

Closely following the quasi war with France came our Barbary Wars in which the most distinguished high-ranking officer was Capt. Edward Preble. He established an enviable fighting tradition in several hard-fought attacks on Tripoli by a squadron of 14 vessels under his command, with the frigate *Constitution* as flagship. Under Preble's leadership the loosely knit Navy of that day became a unified fighting force for the first time, and this unification has lasted until the present time.

All of the persons named in the foregoing, from Washington to Preble, may be said to have had an important part in the founding of the Navy. There were also others who might be included in a group designated as the founders of the American Navy. For example, Benjamin Franklin, when acting as our diplomatic representative in France, was largely instrumental in creating a squadron of American ships for operations in Europe, and there was a period late in the Revolutionary War when the Continental Navy would have disintegrated but for the financial and political aid of Robert Morris.

Word "Trusteeship" Waves Red Flag on Korean Peace

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 24, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith the following article by Mr. Ralph Donaldson, of the Cleveland Plain Dealer:

WORD "TRUSTEESHIP" WAVES RED FLAG ON KOREAN PEACE

(Article 28)

We not only have the Russians to contend with in Korea; there is also the word "trusteeship," a word which causes Koreans to see red, deprives them of the power of reason, and arouses stubborn and implacable opposition.

That word came out of the Moscow Conference, held in December 1945. This conference made the following decrees regarding Korea:

That a provisional Korean democratic government should be formed with a view to the reestablishment of Korea as an independent state.

In forming this provisional government, a joint commission, consisting of representatives of the United States command in southern Korea and representatives of the Soviet command in northern Korea, should

consult with the Korean democratic parties and social organizations. Recommendations of this joint commission should be submitted for consideration by the Governments of Russia, China, Britain, and the United States before being put into effect.

Then the joint commission, with the participation of the provisional Korean Government and of Korean democratic organizations, should prepare various recommendations to assist Korea, including an agreement concerning a four-power trusteeship of Korea, for a period of up to 5 years.

JAP AGGRESSION RECALLED

Right then and there a beautiful friendship between Koreans and the United States came to an end. It was over that word trusteeship. The Koreans had heard it before. In 1905 Japan had established a trusteeship for Korea. This was followed in 1910 by outright annexation. The Koreans were convinced that the proposed trusteeship would follow the same course and bring to an end their dreams of independence.

We tried to explain to them that, as far as we were concerned, trusteeship means friendly aid. We reminded them of the fulfillment of our promises to give Cuba and the Philippines their independence, as evidences of our good faith.

But none of these arguments has had any effect. The Koreans are convinced that trusteeship will means permanent occupation as a colony or protectorate. Their minds are made up, and that's all there is to it.

COMMUNISTS SWITCH STAND

There was one exception, however. The Communists favor trusteeship, although there was a time when they were on the verge of coming out against it. Immediately after the Moscow Conference, the Communists planned to stage a big demonstration and parade in southern Korea to protest the establishment of a trusteeship. This was scheduled for January 3, 1946. But on January 2 their respresentatives called on Lt. Gen. John R. Hodge, commander of the United States Army forces in Korea, and told him that their demonstration would be in favor of trusteeship. Apparently the word from Moscow regarding the party line had been slow in reaching them.

Further complications arose when it came time for the joint commission of American and Russian representatives to consult with Korean democratic parties and social organizations regarding the formation of a provisional Korean Government.

OPPOSITION FROZEN OUT

The Russians took the position that they would not consult with anyone who had opposed the Moscow agreement or who was opposed to trusteeship. The Russians argued that the Moscow decision had been made by democratic powers and therefore that anyone who opposed it was not democratic.

Since everyone in southern Korea was opposed to the trusteeship provision of the Moscow agreement, except the Communists, this meant that the Russians would consult only with Korean Communists in preparing recommendations for the establishment of a provisional government in Korea.

General Hodge quite naturally refused to limit the consultation to Communists. He said that to deny other Koreans an opportunity to participate would be a violation of the right of free speech.

HODGE COMPROMISE FAILS

The Russians refused to budge from their position. The deadlock continued for several months. Finally General Hodge reopened negotiations and persuaded the Russians to accept a compromise under which they agreed to consult with various Korean parties and organizations provided they subscribed to a declaration that from then on they would uphold the Moscow decision in its entirety, including the trusteeship provision, and would not agitate against it.

The Koreans emitted loud yells of protest. One of the most vigorous was a manifesto by the Antitrusteeship Independence Council, an organization composed of 50 political parties and patriotic societies, of which Dr. Syngman Rhee is listed as supreme adviser.

ANNEXATION IS FEARED

"This (agreement) will only result in trusteeship being forced upon us," the manifesto asserted in part. "Only recently, in discussions over the exercise of American trusteeship over certain Pacific areas, the Soviet spokesman naively admitted that trusteeship is annexation. We cannot forget this. Remember what we underwent under the iron heels of the Japanese oppressors for the past 40 years.

"In short, trusteeship means erasing our national spirit and culture, fostered through 50 long centuries, suppression of our sovereignty and finally reducing us 30,000,000 to perpetual serfdom."

These and other blasts from southern Koreans made it impossible to carry out even the first step of the Moscow agreement, which was the formation of a provisional government for all of Korea.

So the Russians retired to their side of the border, while General Hodge flew to Washington in an effort to find some solution of the problem on a higher diplomatic level. Meanwhile, the gulf between northern and southern Korea widens.

National Housing Shortage

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 3, 1947

Mr. JAVITS. Mr. Speaker, a great chorus of voices of individuals, social, civic, fraternal, religious, and other organizations have been raised in the last few weeks demanding action in the catastrophic national housing shortage by getting the Taft-Ellender-Wagner bill, introduced by me in the House, H. R. 2523, up for hearings by the Banking and Currency Committee and on to the floor for action. Among those from whom I have heard are some of the most substantial organizations in the United States. I submit as typical, an eloquent set of resolutions of the American Home Economics Association adopted at its recent convention at St. Louis, Mo.:

AMERICAN HOME ECONOMICS ASSOCIATION,
Washington, D. C., July 1, 1947.

Hon. JACOB JAVITS,
United States Congress,
Washington, D. C.

DEAR MR. JAVITS: The American Home Economics Association assembled from all States, 2,500 strong, at St. Louis, unanimously passed the following resolution:

"Whereas the housing problem both for families of veterans and for the families of nonveterans is one of the most critical domestic issues facing the Nation today; and

"Whereas housing facilities in the United States are still inadequate and beyond the purchasing power of the average citizen; and

"Whereas too few houses have been made available for rent; and

"Whereas home ownership is denied to a large percentage of those who desire to buy or build their own homes; and

"Whereas decent housing is a problem of national concern which needs the concerted efforts of National, State, and local Governments, as well as the active interest of those directly connected with building and financial agencies: Therefore be it

"*Resolved*, That the American Home Economics Association urge the passage of the housing bills, S. 866 and H. R. 2523, before the end of the first session of the Eightieth Congress."

Sincerely yours,
KATHARINE M. ALDERMAN,
President.

Foreign Oil and Steel Shipments Must Be Stopped

EXTENSION OF REMARKS
OF
HON. ROBERT J. TWYMAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 3, 1947

Mr. TWYMAN. Mr. Speaker, the chairman of the board of one of the large oil companies wrote me the other day to explain that there has been a 40-percent increase in demand for heating oils and heavy gasoline demands from the foreign areas. In spite of the fact that they are producing 13 percent more gasoline than last summer, they are forced to limit sales to 1946 levels. This means that there will not be sufficient oil and gasoline to supply the requirements of the people of the Central West. It may be that we shall have to resort to gas and oil rationing again. In the face of this possibility, the State Department has seen fit to continue export policies which are responsible largely for the gasoline and fuel oil shortage. We must curtail foreign shipments of oil and steel to other countries and stop such shipments if necessary, in order to take care of our own requirements. There are some who wish to minimize the importance of foreign shipments of oil and steel, and indicate that our shortage is due entirely to the new uses we have found for oil in this country.

Instead of building up our reserves of oil and gasoline in this country, we permitted the exportation of 191,000,000 barrels of gasoline and petroleum products since January 1, 1946. In 1947, between January 1 and May 1, 600,000 barrels of gasoline and oil were shipped to Russia alone from the California coast. We must support the proposal of the gentleman from Ohio, Representative WEICHEL, to conserve our petroleum and petroleum products in this country against exportation to foreign countries.

Mr. Walter S. Hallanan, chairman of the National Petroleum Council, speaking at a meeting of the marketing committee of the American petroleum committee, in Minneapolis the other day, had this to say:

Here is one example of what the exportation of tubular goods in the first 3 months

of the present year means to the consumers of oil products in the great Middle West—

Hallanan said—

in those 3 months we sent abroad 82,250 tons of such goods.

That same amount of steel manufactured into pipe would be sufficient to construct a 12-inch line from west Texas, where additional crude supplies are available, to the refining and marketing area in the Chicago district. That alone would solve all of the existing and threatened shortages of the Middle West.

In the first quarter of 1947 our total exports of seamless and welded casing and oil-line pipe were 411 percent greater than in the prewar period. In 1946 our exports of those materials to Communist Russia were 670 percent greater than in the 1935–39 period. In the first quarter of the present year they were continuing at a rate of 430 percent greater than before the war.

As you can see, we are not only exporting our oil and gasoline, but we are also exporting the materials which should be used in the distribution of oil and gasoline in this country. The president of the Standard Oil Co. of New Jersey states that the difficulties in connection with obtaining sufficient oil and gasoline in the Central West is due to lack of transportation and distribution facilities.

By all means we should protect our own interests in these important regards. This is particularly true in view of the fact they are so important to our national defense. We must build up our own oil and gasoline reserves and stop shipments of oil and steel products to foreign countries until this is done.

The Future of the Navajo

EXTENSION OF REMARKS
OF
HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article of Mr. Jerry McLain which was published in the Arizona Republic on June 11, 1947:

WINDOW ROCK, June 11.—The future of the Navajo—grim today in the face of drought that has parched the ranges, ignorance that has retarded economic advancement, and rising living costs that are bringing poverty—now lies off his 25,000-square-mile reservation.

That is the frank opinion of James M. Stewart, superintendent of the mighty Navajo Nation, as expressed to RICHARD F. HARLESS, Arizona's junior Congressman, who came from Washington to investigate reports of possible starvation among the Indians by the time the next snow falls.

Already, says Superintendent Stewart, Government social workers have reported cases of malnutrition among the Navajo.

"Things look bad," he says. "What we're going to do I really don't know."

With Government education and health programs pitifully inadequate, with the limited relief funds exhausted more than a month ago, Stewart can only look with foreboding toward the future.

In Washington the Congress has recommended a $10,000,000 cut in requests of the Indian Office. A spokesman of that office already has said such a slash will work particular injury in the Navajo Reservation.

But even if Uncle Sam took cognizance of the red man's plight and poured into the reservation the millions which would be required for long-planned improvements, the fact remains that only 35,000 of the Navajo's estimated 60,000 population could hope to subsist in their homeland.

Fifteen thousand, says Stewart, already have seen "the handwriting on the wall." They have moved off the reservation.

The Navajos are believed to have come to the Southwest 10 to 12 centuries ago. They were warlike until 79 years ago they laid down their arms and signed a peace treaty with the United States Government after Kit Carson had led Army forces into the wild frontier to end their depredations.

Navajos, who had been exiled to the New Mexico military garrison at Fort Sumner, were assigned, as a reservation, a huge area in which they had waged their losing battle against the white soldiers.

For more than three-quarters of a century this reservation has been their home; a harsh but fantastically beautiful land where yesterdays linger and time is unimportant.

It blankets the northeastern corner of Arizona and spreads into Utah, Colorado, and New Mexico. It is larger in area than Rhode Island, Connecticut, Massachusetts, and New Hampshire.

The grass in the sixties and seventies was knee high, and areas now barren then were well wooded. Women and children tended the flocks, and the families followed in their wanderings the sheep following the grass. Many thought these people were to become "the vanishing Americans."

But the tribe's population grew. The original 7,000 or 8,000 doubled, trebled, and then quadrupled in number. Superintendent Stewart says there was no true picture of the tribe's size until wartime sugar rationing registration revealed a population of more than 53,000. Today the tribal growth is estimated at 1,000 or more persons per year.

But through the years heavy grazing denuded much of the range. Storms brought rushing water to erode the lands. Wind whipped the loose sand into dunes. Drought dried up the water holes.

So the Government stepped in more than a decade ago with a plan to reduce the flocks in the hope of conserving the land and improving quality of the sheep. The reservation was divided into 18 districts and, depending upon the quality of the range, residents in each area were told the maximum number of sheep they could graze.

Though still free to roam to any part of the reservation, they were required to keep their sheep or other stock in their particular grazing area. Families were not permitted to increase the number of sheep once the "ceiling" was placed on the flocks. When the children grew up to marry and have families of their own, the only way in which they could obtain sheep was for the father to divide his original allotment.

Though the tribe was increasing in numbers, the Government ruled sufficient sheep, cattle, or horses must be sold or slaughtered each year so that grazing would not be on the increase. It was a telling blow to the Navajos, and many still resist the Government's orders.

In 1946 the rainfall for the first 6 months was less than 2½ inches, while 10 to 15 inches is considered normal. The ground is exceedingly fertile, but without water nothing will grow.

So in some areas as much as 50 to 250 acres is required to pasture one sheep, and for even the simplest type of living a family of five or six must have 150 to 200 sheep. Thus the nomadic Navajo cannot live in communities, but rather in isolated units of one or two hogans.

They are scattered at the rate of 2.1 to the square mile.

Life has been, of necessity, reduced to its simplest terms. Fuel is scarce and water even more difficult to obtain. During very dry seasons the Navajo families travel in wagons and pick-ups as much as 15 to 20 miles from their hogan homes to obtain water for drinking and cooking purposes.

Superintendent Stewart told Congressman HARLESS that for anything more than mere subsistence—that is, for a decent living—the average Navajo family should have 350 sheep units. He explained that one cow or one horse represents five sheep units.

But in 5 of the reservation's 18 districts the Government limits the Navajo to 104 or less sheep units. In one district the maximum for a family is 61, in another only 72 to the family. Sixty-one sheep hardly would support more than one person.

Stewart says that right now the reservation's grazing potentiality can support only about 1,500 families, or some 7,500 Navajo. Talk of the reservation supporting 7,000 families, or 35,000 Navajos, involves full development of reservation potentialities, he declares.

So the Navajo, ill-equipped from an educational standpoint to seek a living off the reservation, faces a momentous decision:

Shall he stick to the reservation and battle an economic future where the cards appear stacked against him, or should he pull up stakes and try for a new start elsewhere?

As a ward of the Government, he rarely has had to think for himself. But now, if he is to survive, it appears he must do so.

Yes, Superintendent Stewart told Congressman HARLESS, Washington is aware of the serious situation confronting the Navajo.

Of the Indian Bureau, he says: "I believe they were shocked when we developed these facts."

But Washington isn't doing anything about it.

Two Worlds

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial from the Washington Post of July 3, 1947, entitled "Two Worlds":

TWO WORLDS

When Mr. Molotov left Paris, he buried the last hope that we are living in one world and we must now get used to the idea that there are two worlds. The realization will have a grave impact upon the national policy of all countries. Thanks to Secretary Marshall's initiative, there can be no more pretense, and our daily object from now on should be to knit together all nations who are likeminded with us. We may yet find recruits behind the iron curtain, for the Muscovite rejection of mutual aid in Europe is bound to be resented bitterly by, for example, many Czechs and many Poles.

It is a relief to know that France has decided to drop off the fence and join the West. Italy will doubtless follow suit. But both of them are in for a time of trouble (as, indeed, we all are), though it is by no means certain exactly what their Communists will do. One thing only is sure. that is that deviously or openly they will seek to accomplish the aim set out starkly

and crudely by Mr. Molotov. This is to keep Europe divided and prostrate. It should now be obvious to the meanest intelligence that the West must gird itself to retrieve and then protect its civilization.

Labor Relations

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials from the Portland (Oreg.) Daily Journal of June 28 and 30, 1947:

[From the Portland (Oreg.) Daily Journal of June 28, 1947]

PORTLAND'S LABOR PLAN

Portland may set a pattern for the Nation in the handling of its labor relations.

Top Portland industrialists and labor leaders have announced there will be no rock throwing in this city over the Taft-Hartley bill. The industrialists and labor leaders, members of the Portland Labor-Management Committee, sat down around the table this week, as they have done countless times before, and looked the new situation in the face.

They took a common-sense attitude. They talked without heat, and agreed that regardless of any laws that are passed they can continue on a basis of cooperation to keep production humming. They agreed that so-called protest strikes by labor accomplish nothing but confusion and they agreed that any employer or union group who attempts to use provisions of the Taft-Hartley bill to cause disruption and ill feeling in Portland labor relations should be exposed to the public.

Said L. R. Hussa, president of Albina Engine & Machine Works: "There is no legislation that can alter friendship. If labor and management want to be fair no one will be hurt."

Portland is indeed fortunate in having such a level-headed group of industrialists and labor leaders, who realize that continuous strikes, lock-outs, and heated bickering hurt everyone.

The labor-management committee is no Pollyanna group talking pretty words. It is composed of hard-headed businessmen and labor leaders who have some very definite ideas of what they are entitled to for their ability, investments, and labor. Everything is not all sweetness and light when they meet to tackle a problem on which they disagree. Some of their talk is brutally frank.

But the important thing is they all realize that only by sitting down around the table and threshing out differences between management and labor can there be prosperity and decent sort of living for all. Cooperation is the key.

We can use more of that kind of common sense.

[From the Portland (Oreg.) Daily Journal of June 30, 1947]

ABOUT LABOR RELATIONS

(A recent American Legion magazine article about labor relations, by Dave Beck, of Seattle, vice president of the International Brotherhood of Teamsters, has caused considerable comment. Some paragraphs of the article are printed below, followed by a letter to the American Legion editor written by E. C. Sammons, president of the United States National Bank and one of the founders of the Legion.)

"Industrial peace, like all much-wanted things, is easier to destroy than to create. It is always easier to talk about wrong ideas, wrong methods, and wrong policies than it is accurately to suggest right ideas, right methods, and right policies.

"If those who cry loudest for laws to curb labor were sincerely desirous of industrial peace they would explore the tried and proven ways. They would tackle the problem by the use of the only successful formula: Better, closer relationships, confidence, and mutual understanding between those who speak for labor and capital.

"Labor has its responsibilities. It must not retard but encourage the introduction of labor-saving machinery and processes. Labor must not interfere with the mechanization of industry and must encourage greater production and resultant lower consumer costs.

"Capital and labor must cease placing the public in the middle. The way to do this is plainly at the conference table. And leave the professional labor haters out as advisers to the employers. This will cut down to a minimum the possibilities of a strike. This will increase the possibilities of arbitration and conciliation."

Sammons letter to the Legion magazine editor:

"Having just finished reading the article by Dave Beck in the May issue of the Legion magazine, I wish to compliment you on it. My compliment arises out of three premises: (1) As one of the founders of the American Legion in Paris in 1918; (2) as a citizen interested in the welfare of our country; (3) as a member of the labor-management committee, successfully functioning in the Portland area.

"During World War II, we saw a notable example of what Kipling called the 'everlastin' teamwork of every bloomin' soul'—government, labor, management, working shoulder to shoulder to win the war. We must, it seems to me, revive that teamwork in order to win the peace.

"As Dave Beck says in his article, labor unions are here to stay, and both labor and management must cooperate for the public good. That great statesman, Barney Baruch, in talking before the legislature in South Carolina recently, said there is nothing wrong with our business situation in America that adequate production cannot cure. We need more things for more people at lower cost, and high production can achieve that goal.

"To get that production we need a cooperative spirit mentioned by Mr. Beck in his article, and such as has been evidenced in the Portland area in consequence of an intelligent approach through the efforts of the labor-management cooperation. More articles of that type, I believe, will be helpful to the cause of stability in this country."

European WPB

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Post of July 1, 1947:

EUROPEAN WPB

An economic concert of Europe including Russia seems impossible to achieve as the result of the Russo-British-French talks in Paris. Mr. Molotov's objections bar agreement. The secrecy governing the parley makes it difficult to determine the sequence of these objections. It seems that in response to the Bevin-Bidault proposal to set up an agency or agencies for the integration of national economies in Europe, Mr. Molotov countered with the request that the whole matter should be referred to UN's European Commission, which will meet again at Geneva on July 5. When the British and the French declined, he seems to have asked that more information be requested on what our Congress will do for Europe. That, of course, is putting the cart before the horse. Secretary Marshall invited Europe to find out what Europe, after an inventory of resources, could do for itself in reconstructiong the Continent as a "working economy." The administration declared it would seek congressional help only after such a plan had been prepared. Mr. Molotov did not rest content with this effort to return the ball to America. He appears to have justified the Bevin-Bidault declination to remit the Marshall proposal to the Economic Commission for Europe by turning his back on any exploration of a scheme for the integration of national economies in Europe. Any discussion in the Economic Commission would amount to precisely nothing within the terms of reference set by Secretary Marshall.

It is to be hoped that any disappointment that Mr. Bevin may feel will not be expressed in a Bevinesque explosion. That would worsen the diplomatic atmosphere. And it would make the position of the French the more difficult as they confront the dilemma of having to make up their minds whether to continue limited negotiations with the view of bringing as much of Europe as possible within a scheme. The Communists in France are bound to take the tip from Mr. Molotov's diplomacy. They may be expected to throw every ounce of effort into restraining the Ramadier government from making a further try to link the coordinate France's reconstruction with Britain's. But if the Ramadier government stands firm, the Communists might be outbluffed. The Marshall initiative, judging from the comment in France as well as Britain, has appealed to the silent men in both countries. They see action in conformity with it as their only salvation. If they remain steadfast, and the French Government sees a mandate in such a manifestation, the Communists may be outwitted. An initiative on the part of Paris and London is, furthermore, encouraged by the avid interest expressed in the capitals, notably in Brussels and Bern. Secretary Marshall would be content, judging from his Harvard speech, with a partial European plan.

Accordingly, the best course to pursue, it seems to us, is to resume, after a respectable pause, the British-French conversations under Mr. Monnet's aegis. They have continued at the instance of former Premier Blum since last August. Little progress seems to have been made, but an impetus is now forthcoming from Secretary Marshall. It may be that this spur will yet bring action, as some of the European newspapers hope, in formulating a super-Monnet plan.

The Monnet plan, certainly, is the nucleus for basic reconstruction. It provides for action in key industries, the modernization of the out-of-date plant in these industries, and a system of priorities for investment money and of allocations for raw material and new equipment. To stretch its provisions to include Britain would be to start the scheme that Secretary Marshall has in mind. The result, if the neighboring countries should see any seriousness of purpose in London and Paris, might conceivably be the blueprinting of a sort of continental WPB.

Somewhere on the way the capitals in Europe might pluck up courage to issue what the London Observer calls a declaration of

interdependence more or less like the Articles of Confederation which were the prelude to the American Union. At least such a declaration has become the aim of the growing army of unionists in Europe. That is probably too much to expect in view of Moscow's frown. However, such a declaration would be implicit in supranational agencies engaged in allocating new equipment available at home or from abroad to jobs that are most urgently needed to speed the revival of Europe. It would be better to underline in some ringing statement the meaning of this kind of activity.

But, even if this is impossible, the significance of functional agencies similar to those we had in our WPB could not be lost on Congress. Russia, we are convinced, would not allow the task of integration to go very far before trying in some way to participate in it. For one thing, Czechoslovakia and Poland would get progressively more restive as this activity went on, and Moscow cannot altogether ignore her satellites, especially when a question of living standards is involved. If Russia can impose a veto on European recovery and the prospect of American investment in it, then the hope of restoring the circulatory system of Europe will go under a cloud, and the future of Europe cannot be foreseen. The struggle to save Europe that Russia is avowedly blocking will be watched with deep concern in America.

Congress Ponders Foreign Aid

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. O'HARA. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the Mankato Free Press, Mankato, Minn., on June 30, 1947:

CONGRESS PONDERS FOREIGN AID

There is one point concerning the so-called Marshall plan for aiding Europe that troubles Congress.

Lawmakers in Washington are asking themselves, "Are we following the same course and making the same mistakes that we made after World War I?"

Then vast sums were loaned to Europe, loaned and not given to prostrate nations as is now proposed. On the strength of these advances the heavy industries of this country were kept going, manufacturing goods to be marketed abroad, paid for with the money that was borrowed here. In other words, we were virtually keeping wartime production going by lifting ourselves by our own bootstraps—we were maintaining a false prosperity on loans that were never paid back.

As a result, when we ceased to loan abroad, the depression here was relatively more severe than in the rest of the world because we had supported a false prosperity longer and the problems of recovery were accordingly greater. Members of Congress are asking how different the Marshall plan is, from this program which we followed a quarter century ago.

The difference rests with Europe. If the peoples of Europe have the will power and the desire to make that difference. We propose to advance aid to those nations only long enough to get them on their feet, to insure their economic rehabilitation, after which it is argued they will be able to proceed to sound recovery on their own. That is the argument but the question is how decisively we will act in cutting off aid when we consider enough has been advanced, and also, how much integrity European leaders and peoples will manifest in trying to proceed on their own, after the initial assistance we have given has been exhausted.

Russia is betting that such a program will exhaust us and leave our allies virtually as prostrate as they are now. That is why she is playing a delaying and waiting game. She sees communism triumphing eventually over greatly weakened democratic powers—particularly us, as the leader of the democracies.

That is why we read that Congress is cool to the Marshall plan. It is not that we do not want to aid Europe—it is that we do not want to waste that aid or to so weaken ourselves that we cannot meet any future crisis which may develop. Certainly our postwar experience warrants reasonable caution in proceeding with a program of foreign loans or grants. We loaned England nearly $4,000,000,000—that was to completely rehabilitate her economy and establish her on the road to stability and prosperity.

Now the four billions is virtually exhausted, Britain needs additional funds and her economy is weaker than it was 2 years ago. France has had a smaller grant and our experience with her has been similar to that with Britain. That is why an increasing number of lawmakers and thinking citizens are strongly supporting the so-called Vandenberg-Hoover plan.

That is a program to measure our own economic strength, to assay our wealth and then to decide the amount of aid we may be able to contribue to support of the Truman doctrine, without seriously weakening our own economy. The Truman-Marshall plan proposes to extend such aid abroad as may be needed to halt the spread of communism; the Vandenberg-Hoover plan proposes to extend such aid as we are able but at no dangerous sacrifice of our economic strength and resources.

At the present moment it appears that both Congress and the general public will support some form of the latter plan, in preference to the all-out aid proposed under the Truman doctrine. Certainly if our position is seriously weakened more damage can be done to the cause of world-wide democracy than by any other development. Democracy will live and expand only if the United States remains strong.

St. Paul's Women's Institute

EXTENSION OF REMARKS
OF
HON. EDWARD J. DEVITT
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. DEVITT. Mr. Speaker, no less a personage than William Shakespeare is authority for the saying, "Frailty, thy name is woman." But when so speaking I am sure that Mr. Shakespeare was not thinking of the women of the city of St. Paul, Minn.

For a more accurate description of the women of St. Paul we must needs turn to the writings of the venerable Oliver Wendell Holmes, who in his The Autocrat of the Breakfast Table said, "Nature is in earnest when she makes a woman." No group of women have done more for their community than the women of St. Paul have done for their home city in the way of civic betterment and community promotion. They have, through hard work, reawakened the civic spirit of St. Paul until today it is one of the fastest growing and most prosperous cities in the land. The activities of the St. Paul's Women's Institute were written up in the current issue of Parade magazine and distributed throughout the Nation this past week. I know the Members of the House will be interested in reading of the splendid activities of these women, so I asked permission to include the article in my extension of remarks. The article follows:

ST. PAUL'S WOMEN'S INSTITUTE

Many a merchant knows that local prosperity inevitably follows in the wake of aroused community pride. "But exactly how," he's likely to ask, "do you go about arousing civic zeal?"

More than 12,000 members of the Women's Institute of St. Paul, Minn., think they've found the answer. So do the Twin City merchants.

In 1937 St. Paul's retail stores were operating in the red; $15,000,000 worth of business was going across the river to Minneapolis. An economic survey showed that incomes were high—but that business was poor. Bernard Ridder, publisher of the St. Paul Dispatch-Pioneer Press was convinced that something could be done. But what?

Agnes Kennedy had an idea. Miss Kennedy, who was later to become Mrs. Bernard Ridder, argued that 85 percent of the Nation's spending is done by women. So, she reasoned, if a program of good, low-cost entertainment could be devised to keep St. Paul women at home, they would probably shop at home, too. The Women's Institute was born.

Fifty speakers were sent out to women's organizations to explain the objects of the institute. Within 3 weeks the membership limit was reached.

The first institute program, a sell-out, was attended by out-of-town guests from 496 cities in 24 States and Canada. Today, 8 years later, only the size of the municipal auditorium, St. Paul's largest hall, keeps the membership from expanding beyond its present 12,500 mark.

Membership costs a Minnesota housewife $2.40 a year. It admits her to 12 programs, presented on six institute days. For 17 cents—the ultimate cost per program—she can hear such outstanding lecturers and entertainers as Eleanor Roosevelt, Gracie Fields, Oscar Levant, Eve Curie, Andre Kostelanetz, Tito Guizar, Sigmund Romberg, and Gladys Swarthout.

As one member puts it: 'It's the biggest bargain in the State. Imagine, Oscar Levant for 17 cents."

A bargain to the women, the institute is also a boon to businessmen. Last year St. Paul ranked first in the Northwest, third in the Nation, in increased volume of retail sales. More than one Twin City businessman gives the credit to the Women's Institute.

Prosperity didn't come to St. Paul merchants while they sat and waited. The Women's Institute asked for, and received their cooperation. It sent committees to each store and questionaires to each member.

What did the shoppers want? The Institute found out, and carried the message to the eager storekeepers. The result was a new deal for shoppers, and for merchants, too.

In 18 months, the effects were apparent. Bank deposits rose. Statistics showed that local business was on the upswing.

Having demonstrated its worth—business indexes proved it—the Institute turned to more ambitious projects. St. Paul's shopping district is having its face lifted. More than 350 unsightly hanging signs have been

removed from one street alone at the Institute's request. By dividing the shopping district into blocks, and appointing three women committees for each block, the Institute has cleaned up the area outside and in.

Eighty-five women personally interviewed 263 merchants and building owners to suggest improvements in the appearance of their premises. And 190 of the later have since spent a total of over $16,000,000 on renovations.

Committees from the Women's Institute meet regularly with the chamber of commerce, the St. Paul Retail Board, the Central Business Development Committee, the city council and the mayor to discuss civic affairs.

This year, the Institute's beautification committee is broadening its scope to include the entire city. Its goal is 12,000 new gardens this summer. Based on past performance it will come as no surprise to St. Paul folk if they get the gardens. The Women's Institute wants them.

The Late Honorable John Tolan

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. O'HARA. Mr. Speaker, it was with deep personal sadness that I learned of the death of my good friend and former colleague, the Honorable John Tolan.

When I first came to Congress I served on the Judiciary Committee with Mr. Tolan. The fact that he had been born at St. Peter, Minn., in my district, and that relatives and friends of his still lived in my district, was a common bond which ripened into lasting friendship. Often he discussed with me his boyhood days in Minnesota and his early experiences were a part of the history of that part of the State.

He was a dear friend and associate and I recall the feeling of sadness which came to me when he told me that he intended to retire from Congress. He was devoted to his family and looked forward to spending his remaining days in the enjoyment of the love and affection which he had for them. It is understood that his death resulted from the shock he received when one of his beloved grandchildren became lost. It is to be regretted that he did not live long enough to know the joy that she was found.

I never knew John Tolan to say an unkind or critical thing of anyone either in committee, on the floor, or in private conversation, and I never knew him to have an enemy during the years I knew him.

He not only represented his district and his people diligently and well, but his service in Congress was able and distinguished.

Since his retirement from Congress I have missed his companionship and kindly philosophy and humor. It was his custom to take the same place in the Chamber where he held a benign court where his friends on both sides of the aisle gathered and visited and discussed matters which were closest to their hearts. In memory he will always be sitting there.

My heartfelt sympathy goes to his devoted and beloved wife and the members of his family, whom he loved and who loved him.

May his fine and lovable soul rest in peace.

Address of Col. Melvin J. Maas

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address given at the twenty-ninth annual convention of the Army Reserve Officers Association at Miami, Fla., on June 18, 1947, by Col. Melvin J. Maas, USMCR, president, Marine Corps Reserve Officers Association:

The world is already choosing up sides for the third world war, and there are only two sides. A third world war will involve everyone in the world as active participants and will be fought to the extinction of one side or the other, if not both. When it is over, the victor will have suffered more damage than any previously defeated nation has ever suffered in all history.

Contrary to the popular conception that it will be confined to push-button warfare and will be over in 48 hours, it will be the longest, the most totally devastating, the bloodiest, and the most costly in all history. Before it finally burns out, over half the population of the world will be dead, and three-fourths to nine-tenths of the property and wealth of the world will be destroyed.

The only way it can be a short war is if the American people surrender in 48 hours.

Only Russia and the United States are capable of waging modern warfare. Therefore, in our time, a major war can be started only between Russia and the United States. If there is to be a third world war, it will be because we are attacked by Russia. We know we won't start it. If Russia starts it, she won't quit in 48 hours because she will have done ghastly damage to us the first few hours and will believe that she will certainly win.

We would surrender at the start only if we were craven and depraved. We aren't, so we would dig in and fight back. Such a war, if it comes, will involve the greatest military mobilization in all history and might very well last several generations—until there is just nobody left to fight. Every known weapon of mass destruction will be employed and new ones, yet undreamed of, will be developed.

It looks as if civilization is determined to commit suicide.

The great problem that faces us is not the imminent danger of such a war breaking out this year or next. Russia is not capable of fighting us right now. But what we do in this country this year and next will, in all probability, determine whether or not there will be a third world war. The Second World War didn't start in 1939. It started in 1933, when the political and financial backers of nazism supported Hitler and his sinister plans. It started, too, when the war lords and industrialists of Japan got behind Tojo. In both cases, it was possible only because these supporters of Hitler and Tojo were convinced that we in America had neither the will nor the ability to fight back. It was because of our disarmament after the First World War, and our failure to even maintain such pitifully small defenses as were provided in the Disarmament Treaty of 1922. Had we remained strong, no one of power or influence would have wasted time or money on Hitler or Tojo.

You can be very sure that the potential Hitlers and Tojos and their backers in Russia are watching most intently to see what we do now.

If we show a determination to avoid our mistakes after World War I, to remain strong this time; if we demonstrate the national will to punish any transgression against the peace of the world, the potential backers of a future Hitler-Tojo will become discouraged and such a movement will never get started. But let us show any signs of weakening, of following our path after 1918, and a revolution for world conquest will be upon us unexpectedly, sooner than we think, and with such sudden fury that it will literally shake the world.

There is no group of citizens in the world upon whom such a great responsibility rests in this matter as we United States Reserve Officers. America must provide the leadership, the power and the influence to prevent such a war. Therefore, you and I have an almost terrifying responsibility. We civilians who have worn our country's uniform and especially those of us who still remain subject to military call have a great and solemn obligation. We did not win a victory. We won only the military battle that gave us an opportunity to work for victory—continuing peace. For us the real job started when we took off our uniforms and returned to civil life. Yes, we won the war, but unless we can keep it won, we shall yet lose the victory for which we fought.

You and I, because of our military service, know the military needs of the Nation and, being civilians, we can translate those needs to the public and the Congress as the professional cannot. He is forbidden, by law, regulation, and public opinion, from openly campaigning for military appropriations.

The Regulars know the grim seriousness of the situation, but may not plead its cause. The statesmen know the realities, but custom, tradition and caution dictate their silence.

You and I, fellow Reserve officers, are under no such restrictions and prohibitions. The regular, were he to plead in peacetime for more appropriations, would be suspected of self-interest.

The Reserve officer in peacetime must be as much a liaison between the military and the public as he is in training to be a part of the fighting forces when and if war comes. The general public will listen to us. For us to remain silent to the needs of our national security is for us to fail in our obligation. Is it any wonder that the public becomes complacent if we remain inarticulate?

To be an effective force in creating proper and enlightened public opinion on our military security needs we must have the full and complete confidence of the public. To merit that confidence we as Reserve officers must play an actual and substantial part in the military policies of the Nation.

When we speak on military matters the public has a right to expect that we speak with the knowledge of participants in the making of military policies. They are right. Reserve officers not only have a right but we have a duty to actually take part in peacetime in the making of military and naval policies. The civilian components comprise 95 percent of the Army and Navy in wartime.

We bear the overwhelming burden in numbers of the fighting when war comes. We have a right to have some say about the policies and practices which are to so vitally affect us in peace as well as in war.

For instance, a reorganization of the Military Establishments is of as much concern to the Reserves as it is to Regulars. We have a vast and valuable contribution that we in the aggregate can make to their problems, in peace as well as in war.

Most military progress is made during a war. Much of the wartime innovations and new developments come from the civilians in uniform, even to tactics, if not strategy.

Frankly, the Regular services are not taking advantage of the opportunity to obtain very substantial aid and assistance on all of their problems that Reserves could contribute. Too often, in fact it is practically a rule, our advice is not welcomed because we are "only Reserves." Much of this is our own fault. We have been timid, awed by brass, and too often petty ourselves in our dealings with Regulars.

We have grown up, and the time has come, gentlemen, for a genuine partnership between Regulars and Reserves. The time has passed when we can afford the luxury of having Regulars treat us as if we were little boys who like to play soldier. Too many Regulars in the past have had the attitude of good-natured indulgence toward the Reserves as long as we didn't bother them, but became quickly resentful if we, too, wanted to play with their toys—congressional appropriations.

In wartime we are praised to the skies and assured that without us they couldn't have "won the war." From now on, however, words won't be enough. They will have to come through with a concrete demonstration of their change in heart by taking us seriously and treating us as officers and not as high-school cadets. They need us far more than we need them. There should not, and there must not, be any class feeling nor any antagonism between Regulars and Reserves.

If the Regulars will accept the Reserves as partners, there are benefits to be gained by them that they have never dreamed of.

For instance, the case of the pending merger bill, or unification as they prefer to call it. They have been running into all kinds of trouble in Congress on this matter. But never once were we, who are so directly concerned with how our military forces are organized, even consulted in the matter. Among the ranks of Reserve officers there are men and women who have a vast knowledge in their own fields of the very problems involved in unifying the services. These problems involve administration, procurement, transportation, medical service, hospitals, construction, finance, and kindred subjects. There are Reserve officers in each of these fields who have had far greater experience in such fields than any Regular ever gets a chance to have.

Yet Reserves were not called in on these problems. We have been ignored in this whole unification endeavor. Reserves should have assisted from the beginning both in fact finding and in the drafting of the bill.

If the bill doesn't become a law at this session of Congress, a commission of Reserve officers of all services, should be convened to make an independent study and report on reorganization of the armed services. If the bill is passed, such a commission should be created to advise the President and the Congress on the detailed steps necessary to implement the law in accomplishing the actual unification and integration of the armed services.

Certainly the public's apprehensions about universal military training are partly due, at least to a traditional suspicion of the military in peacetime, and a fear that they seek militarization of the country.

Most, if not all, of these fears would disappear if the citizen soldiers had a real and prominent part in the military departmental policies. Reserve officers are civilians, they are neighbors, they are the communities' school teachers, lawyers, doctors, businessmen, merchants and members of the local churches and clubs. They are leaders in the veterans' organizations, they are boy-scout troop masters. They are home folks. The people see them every day and know them. The public is not afraid of them. If the public knew that they had a responsible and substantial part in determining military policy matters, and some hand in guiding the administrative policies of the military departments, they would feel far better about the situation. They would know that there was no danger of militarism ever gaining control of their boys. Universal military training has a value far beyond just the military training that the boys themselves will get. It will provide a real training for Reserve officers, also. This value alone may exceed the direct benefit, because our greatest need upon mobilization is for an adequate corps of properly trained officers who are leaders and immediately available.

But there is yet an even greater value.

A sufficiently large Reserve—officers and men—will provide a real deterrent to a potential aggressor. It must be a trained Reserve, for a Reserve no matter how large, if not properly trained, will be worse than no Reserve at all. Because an untrained Reserve will give the country a false sense of security. Such a Reserve, while impressive on paper, just won't exist as a protection at all. The enemy, however, will know the true condition.

A real Reserve, trained and ready, will do more to prevent a war than any other single factor.

For there is only one way to stop an aggressor before he ever starts. That is, to make the situation clear in advance that if he starts it, he will receive more damage himself than he can inflict upon you. He must be made to know that he will be destroyed, in fact, if he breaks the peace.

Two things are essential for this. One is the capacity to destroy him and the other is the will of the people to take such action. The world knows of our capacity. The question is of our will to punish an aggressor.

Nothing will so convince Russia or anyone else of our determination and national will, as the citizenry at large maintaining their youth and their leaders in a constant state of readiness through citizen-soldier training. This is not militarism, this is self-preservation. It is notice to the world that America has the will, not only to defend itself, but to carry out its world obligation to maintain the peace, or to wreak terrible punishment upon any violator.

In this connection, it must become axiomatic, that whenever the Congress determines that the national economy requires a reduction of the regular forces, the reserve components must be correspondingly increased so that the over-all mobilization plan shall not be impaired.

Gentlemen, whether we are to witness the destruction of civilization, or we are to participate in resuming the upward march of civilization to new heights of attainment, depends more upon you than any other group alive.

The rest of the nations of the world are seeking security. They are more concerned with that than with ideologies. They will turn to the side they believe the strongest and best able to protect them.

You and I are not in the war-making business. Our job is to prevent wars. The only way we Americans can be absolutely sure of winning a Third World War is to prevent its ever happening.

It is up to you.

Why Present Meat Prices?

REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 3, 1947

Mr. MURRAY of Wisconsin. Mr. Speaker, there has been much discussion in regard to the present meat prices. I noted in the press that the Agricultural Department is at a loss for an explanation. This is the first acknowledgment that it has not had all the answers as to the future prices and all past, present, and future of American agriculture. The press quotes the Agricultural Department as saying that the exports are not responsible for short supply and meat prices. This is not altogether in keeping with the facts.

There are many reasons why meat is in short supply. Among the reasons are:

First. The basic reason that meat in the United States is in a continuing short supply is because as a nation for years we have not fostered the livestock industry in comparison to other lines of agriculture. We cannot expect meat at the market place if sheep are reduced one-third, hogs by 40 percent, and cattle by four to five million head.

(a) For the last 15 years the New Deal administration has invited more and more livestock imports and subsidized and promoted other phases of American agriculture, especially corn, cotton, and wheat. At the present time the $6 per bushel floor price on flax surely does not tend to increase the production of livestock or livestock product. We raise about one-third more tobacco and then talk about a food shortage. Most of us voted for these appropriations to furnish this food for the hungry of the world. That, however, does not alter the fact that the export of meat has contributed to the shortage and accounted for a part of the advance in meat prices.

(b) See what has happened to the sheep business during the past 5 years. During the past 5 years the sheep of the United States have been reduced over one-third, and there is grave danger about the future of the remaining two-thirds of the United States sheep. The 15,000,000 sheep that have been liquidated in the past 5 years would now produce lamb and mutton for the American consumer. They have been killed and consumed. The political wool bill was only one angle. The same group that complains about the meat prices and meat shortages is the same group that votes to kill off the meat supply of the country, like the sheep industry. This group evidently wants more to complain about, otherwise why would they vote to erase the mutton producers of America at the very hour they complain about meat prices and meat shortages?

(c) Another reason for a short supply is that the administration in 1943 and 1944 did not fulfill the commitments made by the Congress when it passed

the Steagall support legislation so far as livestock products were concerned. Pork was allowed to sell for 50 to 60 percent of parity when the law stated that the support price was to be "not less than 90 percent" of parity. The administration's support price on dairy products like dehydrated milk even in 1947 was not on the basis of not less than 90 percent of parity nor on a comparable-price basis. When livestock products have been subjected to such discriminations, is it surprising that cattle numbers, hog numbers, and sheep numbers on American farms have decreased? Milk prices have been reduced, but do you see any result when you purchase dairy products?

(d) The duties on livestock and livestock products have been reduced time after time, thus inviting imports, while embargoes have been put in effect on wheat and cotton imports. The duty on hogs imported, for example, was cut in two but the duty on corn remains the same. A bushel of corn can be imported in the form of pork for one-half of what the same bushel of corn can be imported as corn.

(e) Beef has been on an import basis ever since 1913 except during the World War I and World War II periods.

(f) Government official records show that in the fiscal year of 1944–45 only 12,000,000 pounds of beef were exported. In the fiscal year of 1945–46 we exported 440,000,000 pounds of beef, or over 30 times as much as in 1945. Did the Agricultural Department state that exports did not influence the amount of meat in the market place and the price of meat? In the fiscal year July 1, 1946, up to May 1, 1947, we exported a total of 491,000,000 pounds of meat, of which 96,470,000 was beef and veal, for the 10-month period, or at a rate of over 500,000,000 pounds for the whole fiscal year. Can anyone say that meat exports have not been partly responsible for the inability of the American consumer to get the good beef?

(g) The Agricultural Department has advocated a reduction in livestock numbers.

Second. There is another angle to this beef-supply situation. The exports have been largely of meat from the choice or top cattle. Do not let anyone deceive you about this fact. The choicest steers were purchased for export purposes. Since only 10 percent of the beef of the country is the top and choice cattle, and since such a large part of the exports are these choice cattle, is it surprising that the lovers of good choice United States beef find it next to impossible to find it on the meat counters of America?

To secure an unneeded supply of beef for consumption in the United States from July 1, 1940—fiscal year of 1940—to July 1, 1945—fiscal year of 1945—we imported an average of 103,852,000 pounds of beef each year. In the fiscal year of 1941 we imported 157,000,000 pounds and exported only 31,000,000; in the fiscal year of 1944 we exported only 12,000,000 pounds and imported 122,000,000 pounds. Then in the fiscal years of 1945 and 1946 we reversed this import-and-export situation, and all at once changed from a beef importing nation in an attempt to become a beef-exporting nation. Instead of importing four to six times as much beef as normally exported, we changed around and exported over 30 times as much beef as we imported. There were over 4,000,000 less cattle on the farms of the United States on January 1, 1947, than there were on January 1, 1944.

Third. Is it surprising that good beef is difficult to obtain? Is it surprising that when the United States loaned money to others to buy our products the prices advanced? Most of us voted for foreign food relief. The American people paid twice. First in taxes to furnish the money, and second they paid again in advancing prices.

Fourth. The United States from 1909 and including the 1920's had been a large exporter of pork, but the exports dwindled in the 1930's to 63,000,000 pounds in 1937 when the imports of pork were 74,000,000 and exceeded the exports. However, beginning in 1942 the United States exports of pork increased rapidly, and instead of having imports that averaged over half the exports as they did from 1936 to 1939, we find that the exports of pork from 1940 to 1947 were hundreds of times more than the imports. For example, in the 2-year period of 1944 and 1945, we exported 2,200,000,000 pounds and imported only 7,000,000 pounds. This is a rather quick about face in the pork trade. While these amounts may not look large when compared to domestic production they are a factor in the price set-up and they are a factor in the available supply at the market place.

In numbers, there has been from 50,000,000 hogs on the United States farms from 1910 to 1934 when the number declined to 39,000,000. These numbers increased until January 1, 1943, when there were 83,000,000. Due to the lack of proper support under the Steagall amendment this number decreased to 56,000,000 on January 1, 1947. Another cause of short meat supply and another cause of price advances in pork. The imports of pork as well as beef have declined rapidly of late and so have the exports.

Fifth. From 1934 to 1937 when United States cattle were being shot and buried, from 74,000,000 to 94,000,000 pounds of beef were imported—the very time the Agriculture Department was destroying our own cattle and paying the United States farmer less than one-third the value of their cattle.

Sixth. The reduction in lard prices had its effect on pork meat prices. If a packer pays 25 cents per pound for live hogs, dresses them out and sells the lard for 19 cents per pound, it is evident the meat must carry the load.

Seventh. Another reason for the apparent short supply is that the foot-and-mouth disease in Mexico has prevented normal imports of 500,000 head from that country, and Argentine beef imported into the United States has been diverted to other markets to a great extent.

Eighth. The apparent shortage of choice meat then is due to the large exports of this class of meat.

The apparent shortage of all beef is due to the policy of the United States Department of Agriculture to discriminate against the livestock farmer all during the New Deal.

The weather conditions and crop prospects for 1947 with advancing grain and feed prices can be expected to be reflected in the market place so far as prices are concerned.

Ninth. The OPA cannot in peacetime do anything but add confusion to the economic beef picture. The OPA can divert the available beef to black markets or to men with the price. There is not much use complaining about meat shortages, meat prices and meat quality so long as the New Deal discriminates against the livestock farmer. The New Deal liquidates the sheep business; it refused to support the pork prices in accordance to the law; it discriminated against the cattle business these many years so that there has been a marked reduction in United States cattle numbers. This procedure has been advocated by the New Deal. Yet the New Dealers who vote to liquidate the livestock industry are the same ones that complain about meat shortages and meat prices, and try to blame the meat problem on to the Seventy-ninth Congress that was dominated by the New Deal itself.

Summing up the meat-supply situation, it appears that the supply of meat or lack of supply is due to:

First. The legislative and administrative attitude taken by the present administration in regard to the livestock industry.

Second. The liquidation of the seed stock when hog numbers on farms dropped over 40 percent, cattle numbers decreased by over 4,000,000, and sheep were reduced by one-third by the administration.

Third. An effort to be an exporter of beef.

Fourth. The elimination of Mexico as a source of beef supply due to the foot-and-mouth disease.

Fifth. The diversion of Argentine beef to other markets.

The prices of meat and the advance in price is in general due to the same factors that made automobiles and most everything else sell for more than before the war. Some livestock products have been selling, and are today selling, below the OPA prices.

The old adage "you cannot have your cake and eat it" applies to the meat situation. You cannot have your meat if you liquidate the livestock industry. Meat may be available temporarily, of course.

The population of the United States is increasing by 1,500,000 per year. We do not want to be misled by statements of United States production when compared to drought years, and we must realize that the domestic demands as a result of population increase are not always given consideration by the propaganda peddlers. We must consider the fact that our agricultural exports have been less

and less ever since 1925, and that our agricultural imports have increased very materially since 1933. Since 1925 we have not been self-sufficient agriculturally, meaning that we have imported more agricultural products than we have exported.

House Resolution 27

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, I am once again renewing my demand to the Rules Committee that it give prompt consideration to my bill, House Resolution 27, to create a select committee to make an investigation and study of the operation of the Army court-martial system, with special reference to the Litchfield trials.

I do so at this time because of the fact that Col. James A. Kilian, whose most noteworthy achievement was the reign of brutality toward enlisted men at the Litchfield Reinforcement Depot, has now sued the President of the United States to get on the regular promotion list of the Army. As we know, his name has once been withdrawn from the promotion list because of Presidential, congressional, and public disapproval.

In view of the testimony brought out in the Litchfield trials, which showed conclusively the inhuman treatment accorded enlisted men suffering from battle fatigue, I feel this matter should be gone into thoroughly with the purpose of seeing that no future actions of this kind are ever undertaken again. I thoroughly disapprove of the methods used at Litchfield, and I am shocked at the severe penalties given to the enlisted men tried at that time especially in view of the extremely light punishment given to the officers and especially Colonel Kilian, in command of the Litchfield Depot. It is hard to believe that any court would be so callous as to give the man directly responsible for the reign of terror at Litchfield a punishment of only a $500 fine and a reprimand while the enlisted men under him who were tried for carrying out orders received, in addition, prison sentences and dishonorable discharges.

Mr. Speaker, I feel very strongly that the whole Litchfield administration and trial should be reviewed, that justice be rendered where deserved, and that punishment be accorded to those directly responsible for the outrages perpetrated.

I feel also that in reviewing the Litchfield trials we should also investigate the whole court-martial system so that in the future justice can be dispensed with a more even hand and the constitutional rights of all Americans—regardless of rank—be protected.

Mr. Speaker, under unanimous consent, I am inserting at this point in the RECORD a news story in the Washington Daily News of July 2, 1947, and a column from the New York Post of July 1, 1947, entitled "Washington Memo":

[From the Washington Daily News of July 2, 1947]

KILIAN OF INFAMOUS LICHFIELD PRISON SUES TO GET ON PROMOTION LIST

Col. James A. Kilian, whose reign of brutality at the Lichfield (England) Reinforcement Depot helped spark the clean-up of the United States military court system, is suing President Truman for keeping him off the Army promotion list.

Colonel Kilian, now on duty at Walter Reed Hospital here, filed the suit in district court yesterday. The Army was going to promote him last March but the President blocked it.

Colonel Kilian is now serving on the retirement board at Walter Reed Hospital. He passes on all discharges from the hospital.

JUST 6 MONTHS

The recommendation for promotion was made just 6 months after Colonel Kilian had been convicted of brutality to enlisted men at the Lichfield Army Reinforcement Depot, fined $500 and reprimanded.

The trial was carried on in England and Germany for 9 months and resulted in the conviction of 13 of the 16 men on trial.

BRUTALITY

Testimony brought out cases of almost inhuman treatment of soldiers, some of whom were suffering from wounds or battle fatigue and others whose offenses were relatively minor.

One of the prosecutors quit because he said the trials were so rigged that enlisted men guards would take the rap instead of the responsible officers who gave the orders.

At one point in the proceedings General Eisenhower requested that the trial be speeded up to get it out of the newspapers. The way things were going was bad for the Army's recruiting campaign.

As a direct result of Lichfield, Congress is now considering a bill which will permit enlisted men to sit with officers on courts martial.

Bob Considine, writing of Lichfield in the July issue of True magazine, says, "Fortuitously, the sum total of the terror period promises to have as much effect on the often heartless and inefficient United States military court system as the case of Capt. Alfred Dreyfus had on French justice."

ONE DIED

Wounded combat men were beaten insensible, according to testimony at the trial. One Purple Heart man died of massive cerebral hemorrhage after having his head beaten against a wall by guards.

And public indignation mounted despite the statement by Under Secretary of War Kenneth C. Royall that there was no reason for a lot of fuss because the Lichfield trials were just a lot of hollering by lawyers.

[From the New York Post of July 1, 1947]

WASHINGTON MEMO

(Editor, Charles Van Devander; associates, Oliver Pilat, James A. Wechsler, and William O. Player, Jr.)

WHAT'S WRONG WITH UNITED STATES COURTS MARTIAL? AN "IRRELEVANT AND IMMATERIAL" MEMO

WASHINGTON, July 1.—New and sensational evidence dramatizing the need for a sweeping congressional investigation of military justice has just been obtained by Washington Memo.

Demands for a full-fledged probe of the court-martial system have been intermittently voiced in both Houses of Congress since VJ-day. But the services have skillfully resisted such moves by conducting "whitewash" inquiries of their own.

Now a secret Army document unearthed from the files of the United States occupation army in Germany and transmitted to this column throws sudden and shocking light on the brass-hat conception of justice being practiced in courts martial of both American civilians and soldiers who fall into the hands of the military police.

In amazingly blunt language this document warns Army officers concerned with courts martial that acquittals of certain prisoners who obtained outside legal help would make their lawyers "semipermanent thorns in the sides of this command and theater."

THIS IS THE BACKGROUND

Earl J. Carroll was an officer identified with the prosecution of Col. James A. Kilian, commander of the notorious Lichfield horror camp. He quit when it became apparent to him that the Army was determined to let Kilian get off lightly. Aroused by the inequities of the courts-martial system, Carroll and another ex-officer named Thomas Foley, decided to devote their time to defense of GIs and civilians facing Army trials.

Five prisoners in an Army guardhouse at Frankfurt were the first to obtain their services. The charges against them ranged from murder to counterfeiting. Four were civilians—ex-GIs who had agreed to remain in Germany to serve in the occupation—and the fifth was a private first class. Carroll and Foley set out for Germany last autumn to handle these cases.

It was a fairly unprecedented move. Normally Army prisoners must rely on counsel chosen for them; the rate of convictions has always been phenomenally high. The intrusion of Carroll and Foley plainly threatened to alter that picture. If they won acquittals other prisoners in similar circumstances might get subversive ideas.

In the face of that peril this column now learns that Brig. Gen. C. E. Ryan sent a historic memorandum to members of the Headquarters Command at Frankfurt. We are able to quote these salient passages from his memo:

"Messrs. Earl J. Carroll and Thomas Lester Foley, California attorneys, are expected to arrive in this theater sometime next week to act as special defense counsel for five prisoners now awaiting trial by general court martial in the post guardhouse.

"Mr. Carroll, formerly an Air Corps captain on duty in this theater, has secured widespread newspaper publicity by violent attacks on the system of military justice, the Army generally, commands with whose activities he has concerned himself, and particular officers of those commands.

"It is probable, in view of their past conduct, that Carroll and Foley will again use every device known to clever civilians to prolong trials unnecessarily and to introduce large masses of evidence which are irrelevant to the issues in the trials and seriously damaging to this command and the Army.

"It should be borne in mind that if Carroll and Foley succeed in securing acquittals in all or some of these cases, it is probable that their services will be requested by other accused and that they will seek to remain in the theater indefinitely, practicing law.

"This would give Carroll and Foley a considerable advantage over other American lawyers who are not permitted to come here to practice law and would make them semipermanent thorns in the sides of this command and theater.

"In order that the interests of the Government and the Army may be adequately protected along the lines above indicated it is considered essential that the general court martial which tries cases defended by Carroll and Foley be staffed by alert and thoroughly competent lawyers as law members and staff judge advocates. This command

does not now have available officers who are qualified for these assignments. Request that qualified officers be made available."

SEQUEL

Last week, we are informed on unimpeachable authority, an attempt was made to introduce this document as palpable evidence of prejudice during the trial of one of the accused—John M. Logsdon. The authenticity of the letter was not questioned. The Army's presiding officer ruled, however, that the document was "irrelevant and immaterial."

Communism Confuses and Condemns Europe

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. MUNDT. Mr. Speaker, in view of the disappointing although not altogether unexpected break-down of the Paris Conference of Prime Ministers, it seems to me the following analytical commentary by George E. Reedy, of the Mutual Broadcasting System, might prove interesting reading for the Congress and the country. I take this means of calling it to the attention of those making it a policy to keep abreast of developments in the field of foreign affairs.

Mr. Speaker, the collapse of the Paris Conference also high lights another important matter. It is this. Who is going to interpret for the millions of people of Europe the basic reasons why the Conference failed? Who will explain to Europe's homeless and starving people why their hopes for economic and political rehabilitation are being frustrated? Who will describe the motives behind our offers to help and the motives behind those who sabotaged our plans of assistance?

Either the Communists of Europe and their Moscow overlords will tell the Europeans about this conference, its purpose and its results, Mr. Speaker, or they will be told the truth by American sources. The Voice of Moscow, unfortunately, is beamed into all parts of Europe and is booming along with full overtones and growing strength. Contrarywise, the Voice of America is being silenced in many parts of the world, its strength is being decreased and the frequency of its periods on the air is diminishing. All because misguided concepts of economy are motivating Congress to limit the authority and reduce the activity of our American foreign information service at the very period of our history when we should be expanding it emphatically.

There is still time to turn back from this folly, Mr. Speaker, and I hope before this Congress recesses for the summer we can pass authorizing legislation for a full-scale foreign information service and then support it with appropriations adequate to equip it to tell the truth about America at a time when it so badly needs to be told today.

Mr. Reedy's broadcast follows:

The Soviet Union stands indicted today as the major threat to the most important plan for reconstructing war-torn Europe. It is an indictment that will be clear to the entire world, one that cannot be escaped by any fast pleas.

The situation came to a head yesterday when Russian Foreign Minister Molotov walked out of the three-power conference in Paris. He had just finished rejecting the only possible compromise to put into effect the reconstruction program of the United States.

The conference, attended by England, France, and the Soviet Union, had been called to draw up a plan for European economic recovery. It was based entirely on the offer of Secretary of State Marshall to hold out a helping hand to the entire continent.

Britain and France had proposed a program to organize all of the Old World nations for mutual self-help. It was, of course, completely dependent upon financial aid from our country, something which few want to turn down these days.

No one was particularly surprised when Molotov, in the name of the Soviet Union, turned down the plan. It has been no secret that American aid for the reconstruction of Europe was unpopular with the Communists at the time it was announced.

The Soviets proposed what amounted to a blank check signed by Uncle Sam. They wanted the money turned over to foreign nations with no strings whatsoever. In short, they set up impossible conditions in the deliberate knowledge they were unacceptable.

Molotov, after walking out of the Conference, claimed that the whole thing represented an attempt for United States domination of Europe. He said that small nations would be unable to maintain their independence under the British-French program.

The sudden Soviet desire for freedom for small nations will impress no one, least of all the small nations themselves. That is a line that could hardly be sold to the most confirmed party-line addict, let alone a person with freedom of judgment.

The rather obvious fact is that the Soviet Union cannot permit the United States to aid in the reconstruction of Europe. It would be a shattering blow to the prestige of communism to have a capitalist democracy save the world from its own folly.

In addition, there would naturally be strings attached to any American aid. The strings would, no doubt, include guaranties of press freedom, and truly free elections in the satellite nations surrounding the Soviet Union.

These are requirements which the Communists cannot face. They cannot permit press freedom, and they cannot allow free elections. They would be completely incapable of standing the blows that would be dealt them under such circumstances.

Of course the Russians are skating on perilously thin ice. Every competent observer who has been in Europe recently reports that the American reconstruction plan was received with real enthusiasm. No small nation will thank the Soviets for their stand.

The program is not completely dead. France and Great Britain have indicated they will attempt to follow through and come to an agreement between themselves. If they do, Europe may be divided into two worlds—eastern and western—each isolated from the other.

Under these conditions, the cold and hungry Soviet satellites may find themselves peering over the iron wall at countries that are pulling themselves together again. And that might just give the shove that upsets the Communist applecart.

The Minimum Wage Should Be Raised to 65 Cents Per Hour

EXTENSION OF REMARKS
OF
HON. JOHN B. BENNETT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. BENNETT of Michigan. Mr. Speaker, when Congress passed the Fair Labor Standards Act in 1938, the 40-cent-per-hour minimum wage seemed to be reasonably adequate for the general well-being of the workers. But today it falls far short of minimum requirements, and in terms of real wages, it is far away from the goal envisioned by Congress when the original law was passed.

The bill which I have introduced today would raise the minimum to 65 cents per hour.

In 1942 the index of consumers' prices for moderate-income families was 116. In the first 3 months of 1947 this index was 153 and by now it is probably somewhat higher. At approximately a 50-percent increase in the cost of living, the 40-cent minimum rate applicable in 1942 would now have to be raised approximately to 65 cents to have the equivalent purchasing power. There cannot be a justifiable rise in the cost of consumers' commodities without a corresponding raise in wage rates; in other words, a corresponding increase in purchasing power.

The increase in the cost of living and the generally improved employment situation during and since the war have been recognized in American industry in adopting de facto a minimum wage in practically all industries which is higher than the legal minimum. The War Labor Board designated as substandard anything less than 50 cents per hour as far back as November 1943, and they raised this to 55 cents per hour in February 1945. The War Labor Board is not now in existence, but its experience shows that in practice as far back as the beginning of 1945, 55 cents per hour was the practical working minimum in interstate commerce.

The economic and social validity of the minimum wage is more widely accepted than ever before. If a minimum wage is adopted which is not much higher than the prevailing minimum wage actually being paid by the bulk of the employers in industry, its effect is to lessen competition at the expense of the workers, that is, by paying lower wages by less efficient or profiteering employers. It gives the employers who pay decent wages a better break.

In the light of all the foregoing, it is clear that the additional burden upon industry of a 65-cent minimum will be even less than the burden when the 40-cent minimum was originally imposed. Moreover, while the number of workers in trade unions is much greater now than in 1940 and the number of union contracts very much greater, large numbers of workers receiving minimum wages are

not covered by union contracts. Some of them are in areas and pockets of industry which have been bypassed by the general labor-management settlements of recent years. Many of these have had no increases or very small increases, while the prices they pay have gone up as much as prices paid by workers and other consumers who have had wage increases.

The principle of the minimum wage is to take an amount of wages representing absolutely basic human need out of competition by making this a cost and an overhead of all competing business. No part of our population needs the money more or can make better use of it, but, unfortunately, also, no group is less able to help themselves than those working in unskilled trades and industries who receive the minimum wage. As in the past, industry will be aided rather than hurt by the adoption of a minimum wage which lifts standards to those prevailing in the more efficient establishments and which affords a weekly income for minimum needs. A 65-cent rate would barely meet these requirements on the basis of conditions in 1947.

Mr. Speaker, the Eightieth Congress should give legal effect to a 65-cent minimum-wage rate before this session ends.

Development of the Columbia River

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. HORAN. Mr. Speaker, I introduced, on June 25, H. R. 3969. It calls for a comprehensive arrangement between the Federal Government and the States of Idaho, Montana, Oregon, Washington, and Wyoming for the proper development of the Columbia River.

In this regard, I am pleased to include an editorial from the Spokane Spokesman-Review:

HORAN BASIN PLAN WORTH HEARINGS

There is a great deal of merit to the plan proposed by Congressman WALT HORAN for the establishment by the Federal Government of a Columbia Interstate Commission.

Such a unit would be a new departure in regional autonomy, so far as federally sponsored economic developments are concerned. For the Horan proposal visualizes a commission, made up of representatives from each of the four Pacific Northwestern States, plus one member at large, who would be given complete control over the planning, promotion and operation of Federal projects within the entire Columbia River Basin.

This, of course, is an alternate plan to the generally discredited idea of a Columbia Valley Authority, the best features of which would provide a coordinated development of the river basin, and the worst features of which would endanger individual enterprise and lead toward total socialization of factories, farms and all other types of private business in the area.

Mr. HORAN claims his proposal, being submitted in the form of a bill before Congress, is not to create a valley authority. He says the Commission would act as an independent corporation and would be required to reimburse the United States Treasury for every loan or appropriation made to it by the Federal Government.

Anyone familiar with the activities of the many governmental units concerned with the economic development of the Pacific Northwest knows how badly we lack effective machinery for proper coordination among the Federal, State and private units now engaged in hydroelectric power, reclamation, inland navigation, fish, wildlife and other such activities subject to Federal jurisdiction.

A Columbia interstate commission may be one way by which this region might attain maximum utilization of our natural resources and encourage their development by private enterprise through minimum Federal "interference."

The Horan suggestion merits close study and wide public discussion, which would be possible through congressional committee hearings, not only in Washington, D. C., but also in various localities throughout the Pacific Northwest.

Victory for Silence

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, under unanimous consent, I am inserting in the RECORD an editorial from the Daily Missoulian, of Missoula, Mont., dated June 16, 1947. This editorial contains the only story covering the final ends of the Japanese balloon story and as such should be of interest to the membership of the House. It follows:

VICTORY FOR SILENCE

About 2 years ago a Japanese war balloon fell on Waterworks Hill on the edge of Missoula. Another had landed near Kalispell a year earlier. Still another fell near Whitehall, east of Butte. Others were reported in this part of the State. Yet no newspaper said a word about these balloons, each of which was fitted with devices to promote fires, save for the first one in the Flathead region, about which the War Department made a statement. Yet the Japs had launched more than 9,000 such balloons and at least a thousand crossed the Pacific on the prevailing winds and fell on western America. The weapon was not so futile as most of us think. It did some damage here and there and would have done more had the Japs not become discouraged to the point of abandoning this campaign. And the reason they were discouraged was the silence of America as to the arrival of the bomb-laden balloons. The newspapers and other communications services went along with the authorities in their effort to keep the foe from learning what effect his long-range aerial campaign was having.

It was a well-kept secret. Americans did better only as to the immense preparations needed to produce the atom bomb. That great thing was kept so secret that most Americans were as much surprised as were the Japs when Hiroshima and Nagasaki were blasted. That secrecy paid dividends; so did the keeping quiet as to the war balloons.

Brig. Gen. William H. Wilbur, of Chicago, tells an interesting story concerning this. As chief of staff of the Western Defense Command at the time of the balloon attacks in 1944 and 1945, General Wilbur lowered the curtain of secrecy as to their success or failure. Recently, on a visit to Japan, he got the Jap side of the story from Major General Kusaba, who directed the campaign from Nippon. Kusaba admitted that not hearing from the United States as to the landing of the balloons—and they had figured Americans could not refrain from mentioning them—had caused the curtailing of the attack by air and its eventual abandonment. General Kusaba still is bitter about it all, says General Wilbur, still believes the campaign might have caused considerable trouble to Americans had it been continued. And perhaps he is right. Silence paid off. Millions of Americans—and a great many Canadians, for many balloons fell in the Dominion—may pat themselves on the back, even if somewhat belatedly.

Will Independent Unions Now Get a New—and Fair—Deal From the Government?

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. SHAFER. Mr. Speaker, one of the minority groups of this Nation about which we in Congress hear very little consists of the members of the independent unions in the United States.

A great deal is said on the floor of the House, and sometimes properly so, about the plight of this or that minority. There is talk of antidiscrimination legislation galore, particularly around election time, but for some reason or another, the minority—consisting of the members of the independent unions—is ignored.

As we all realize well, one of the supposed New Deal planks through the years has been that of working against discrimination. Yet, those of us who really know the New Deal and its perennial policy of double talk, realize that the executive branch of this Government never has done anything to prevent discrimination among people of this country. As a matter of cold fact, as I shall prove before I am through, the New Deal itself has made possible new forms of discrimination against workingmen who did not cooperate with the bureaucrats in building up either the Congress of Industrial Organizations or the American Federation of Labor.

It is a matter of history that the National Labor Relations Board, which now is being reorganized under mandate from the Congress because of the passage of the so-called Taft-Hartley Act, for many years has discriminated against the independent unions in favor of the AFL and the CIO.

Frank Rising, a noted student of labor relations and formerly labor editor of Business Week, writing in the July 5, 1947, issue of the Saturday Evening Post, points to the evidences of favoritism and biasedness in Government as among labor-union organizations. Let me read a portion of his excellent editorial from

the Saturday Evening Post. Regarding discrimination, he states:

The Department of Labor goes further.

I might insert this thought, Mr. Speaker, that under the Taft-Hartley act, the Department of Labor rightly has had its wings clipped.

It promotes the cause of unionism vigorously and thoroughly with its series of publications and its Labor Education Service, which assists unions, universities, and other institutions in their educational programs.

Its Women's Bureau—to quote the Department's official guide—cooperates with unions in developing women's participation in unions. One of its publications, Women's Stake in Unions, is reckoned by many labor-relations people as one of the most one-sided promotional propaganda pieces ever printed by the Government.

In action, Government administrators have followed a sort of rating system covering all parties to labor disputes. The rating is well known to all who work in the field; it goes like this:

(a) Between employers and unions, favor the unions.

(b) Between unions and nonunion workers, favor the unions.

(c) Between CIO and AFL, favor CIO.

(d) Between either CIO or AFL, and an independent union, favor CIO or AFL.

Mr. Speaker, I agree with Mr. Rising's conclusions in regard to labor law administration. He said, and I quote him again:

The Government can recapture the respect and confidence of "all the people" only by being above petty favoritism. If the question of union membership and collective bargaining is really to be left to the individual's free choice, Government propaganda to influence his choice is wrong. The unions would be far better off, if they had not sought Government favors.

In the long run, the union movement will be far stronger, far more respectable, and respected, when it learns to stand on its own feet.

I want to reemphasize the fact that this independent labor observer, and many others of his caliber, have observed the methods by which Government bureaus consistently have discriminated against independent unions. Neither I, nor leaders of independent unions, desire special privileges from our Government. But every citizen, whether he is a member of a CIO union, an AFL union, an independent union, or no union at all, deserves to have his rights respected and to have nonpartisan and fair administration by men whom he has employed, in effect, to administer his Government, namely, the bureaucrats.

Not long ago, I received a letter from David L. Knox, system secretary and treasurer of the Pullman Car Employees Association of the Repair Shops, an independent union with headquarters in St. Louis, Mo. His letter was so appropriate and gave such specific examples of discriminations practiced by Government boards and agencies against independent unions that I want to read it to the House of Representatives:

The independent unions of the country are looking forward with a great deal of hope that some action will be taken in Congress that will insure fair and impartial treatment of independent unions by governmental boards.

Let me interpolate this thought. We in Congress feel that we have done our duty, at least for the time being, by passing the Taft-Hartley labor act. If this act is not administered properly, or is administered with the same kind of prejudice and bias that characterized the administration of the so-called Wagner Act, the only thing left for the independent unions and all other Americans is to vote to put a Republican in the office of President. Congress passes the law, but Congressmen cannot administer the law. We have done our duty. It is up to the administration in power in the executive branch now to do its duty.

But I continue with a reading of this interesting letter from Mr. Knox:

However, it seems that the National Labor Relations Board and its dealings are being exposed to a much greater degree than the National Mediation Board. This conduct may be due to the far greater number of cases that come before the NLRB.

We who are members and officers of independent unions feel that when Congress passed the amended Railway Labor Act it intended that we have a choice in our form of representation. This choice, by a majority of those involved, has been denied us through administration and tricky interpretations of the act by the National Mediation Board. These interpretations have been tailored to fit each individual case, and almost without exception to the disadvantage of the independent unions. This condition is due to independent unions not being represented on the National Mediation Board.

Incidentally, Mr. Speaker, let me add that neither the AFL nor the CIO represents a majority of the union members of this Nation. Millions of Americans who are union members belong neither to the organization headed so grandiosely by Philip Murray nor the one led so negatively by William Green. The independent unions deserve representation wherever the AFL or the CIO have such representation in Government, but they heretofore never have achieved that representation.

Continuing, Mr. Knox says:

This charge can be substantiated by looking into the National Mediation Board Case No. R1625. In this case, the Board, after holding hearings in which the Pullman Car Employees Association, the Independent Pullman Workers Federation, the Brotherhood of Sleeping Car Porters, and the United Transport Service Employees Association, and the CIO all intervened trying to persuade the Board that our interest would not be served best by a craft election. Only the Railway Employees Department of the A. F. of L. desired a craft election. The Board ruled the election would be held on a craft basis and this was done.

We based our opposition to the craft election on the difference in the work performed by workers involved, location, and the number of hours worked and so forth. It was shown that in the repair shops, we perform heavy general repairs to cars, while in the yards only minor running repairs are made. Also the shops are located in Chicago, Ill.; Buffalo, N. Y.; Richmond, Calif.; Atlanta, Ga.; Wilmington, Del.; and St. Louis, Mo., while the yard employees are scattered throughout the United States. For many years the shops' employees have had a 40-hour workweek contract, time and one-half being paid for any work in excess of 8 hours per day or Saturdays, Sundays, and holidays.

The yard employees have preferred a 48-hour workweek contract, irrespective of Saturdays, Sundays, and holidays. We tried to make it clear to the Board that we had a chartered organization covering the employees of the six repair shops, and this arrangement had proved satisfactory to a majority for 13 years and there were no expressed or implied desires to be grouped with the yard employees. Likewise, the representative of the yards' employees clearly indicated their desire to remain separated from the shops' employees.

The employees of these two groups (shops and yards), who were the only employees involved, had done everything within their power to conform to the provisions of the amended Railway Labor Act, felt confident that we could expect a fair deal from the Board, only to be sadly awakened to the fact that the Board had and exercised arbitrary powers, and in too many cases used this power to wreck independent unions.

To arrive at this decision, the Board found it necessary to reverse its former position, since previously they had refused to give its blessings to the unnecessary grouping into classes and crafts for the purpose of an election, where a group of employees had organized in accordance with the provisions of the Railway Labor Act, as amended, and this representation had been satisfactory to a majority of the employees involved.

As a result of this election, two groups of our members have been denied the right to bargain through a representative of their own choice, but must negotiate through representatives designated by the National Mediation Board.

While we have no quarrel with the Railway Labor Act, as amended, we do feel that we have been forced to deal with a board which has used tricky interpretations to wreck independent unions at every opportunity and we believe this to be contrary to the wishes of Congress.

We have no legislative program and we are not critical of this piece of legislation. However, the administration of this Board and the interpretations of the act surely are not what Congress contemplated when the act was passed. We are not asking for legislative changes, but we are hoping that something can be done within the framework of the existing act to give us a fair and impartial National Mediation Board whose actions will be to promote harmony, instead of making every effort to create discord among workers who are unfortunate enough to come before them and not see eye to eye with them.

The consideration given this appeal will go further than the few thousands involved directly; it will serve as a stimulant to a large group of independent unions' members who have been oppressed by the Board, or some other board, when they rightfully should have been protected.

I know, Mr. Speaker, as you know, that a majority of this Congress for many years has had ideas similar to those expressed so well by Mr. Knox. We have tried to legislate fairly, but the officials in the executive departments have discriminated against nonunion men and members of independent unions at every turn. It is apparent why this has been done—in an effort to curry political favor and to control the huge blocs of votes represented in the CIO and the AFL.

Let us hope, and have confidence in our hoping, that the day will come soon when we can restore nonpartisan, unbiased administration into every branch, every board, every bureau of our Government. If we Republicans can help hasten that day and can live to see our aims brought to pass, future generations of American citizens will rise up and bless us for our endeavors.

Cultural and Information Program of the State Department

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. HORAN. Mr. Speaker, the Senate and House committees have agreed upon appropriations which will implement the cultural and information program of the State Department.

I believe that that program should express, to a very maximum, our truly free and individualistic America and, therefore, should be based upon contractual use of free enterprise as far as possible.

My amendment to the Mundt bill calling for this policy was accepted. At this time I feel that other expressions on this policy are worthy of consideration.

[From the Christian Science Monitor of May 20, 1947]

VOICE OF FREEDOM

The Voice of America is seldom heard as a solo. Usually it is a chorus, in which everyone is free to join. That is the democratic (if sometimes cacophonous) way.

The public has been hearing of the invaluable work done by the Voice of America, the State Department's short-wave, foreign-language broadcasts to the world. But it needs to remember the possibilities of private broadcasting in this field also. The splendid achievements of Boston's WRUL (at present the only private company in the field) have been amply attested by the flood of grateful responses from other countries.

Independent short-wave broadcasting can help to swell the chorus of freedom along with the official Voice of America. Though there is clearest need for the State Department program, even on an increased scale, we are opposed to any attempt of the Government to monopolize or control the whole field. For that reason we find unacceptable the proposal of Assistant Secretary of State Benton for a trustee-controlled Government corporation to control all short-wave programing.

There is plenty of room on the international air for the best that the United States can give through both public and private means.

[From the Christian Science Monitor]

WORLD RADIO UNIVERSITY AIRS PLANS TO RAISE $2,000,000

NEW YORK, N. Y., May 21.—Plans for raising an additional fund of $2,000,000 for the rapid expansion of the World Radio University of the World Wide Broadcasting Foundation were announced today by Dr. Harlow Shapley, director of the Harvard Observatory and chairman of the foundation's board of trustees. The foundation, a nonprofit, noncommercial organization, operates short-wave Station WRUL over which it now radiocasts cultural programs in nine languages to Europe, Central America, and parts of Africa.

With the cooperation of faculty members of Harvard, Yale, Princeton, Columbia, Brown, and the Massachusetts Institute of Technology, the curriculum of the World Radio University includes programs on the natural sciences, geography, history, economics, and current events, together with language courses, especially basic English instruction for listeners abroad.

AID TO STATE DEPARTMENT

"Our board of trustees believes that these broadcasts over an independent, nonpolitical station are of direct assistance to the State Department's cultural program," Dr. Shapley said. "In any programs touching foreign policy, close cooperation with the State Department is maintained," he added.

The current WRUL schedule includes a series of talks on world geography of the air age under the auspices of Harvard University; a weekly series on nutrition, sanitation, and related problems of war-devastated areas arranged by Yale University; a group of programs on housing problems and rehabilitation prepared by MIT, and a series on the constructive, peacetime uses of atomic energy arranged in cooperation with the Federation of American Scientists. The nine languages now radiocast to Europe include Russian and Greek as well as French, Dutch, and Norwegian.

Half-hour daily news reports on the United Nations sessions are radiocast direct from Lake Success in English at slow dictation speed; listeners who know English only slightly are thus able to write down these reports for subsequent translation into their own language.

APPEAL FOR FUNDS

American business and industrial organizations as well as individuals who share the foundation's belief that world democratic cooperation and peace can best be created through widespread education and understanding, will be invited to contribute to this project. Donations from listeners abroad who, before the war, sent in thousands of small contributions from England, Holland, and other countries are of course not expected at present.

The $2,000,000 fund will permit WRUL to widen the scope of its radiocasts; to increase its staff for additional languages in order to serve all the peoples of Europe, the Middle East, and Latin America; to provide supplementary reading material for listeners to the radio university lectures; to increase its time on the air; and to arrange for reradiocasts in the Mediterranean and Near East areas.

Efforts to build up the fund, estimated to be able to carry the work ahead for 2 or 3 years, will be made through committees in New York, Boston, and other communities.

[From the Washington Post of May 20, 1947]

A NEW ENTERPRISE

Advocacy by the McGraw-Hill Publishing Co., in the accompanying editorial, of an effective world economic policy is not a mere verbal exercise. In the faith that we as a nation shall develop such a policy, this company, following a trail blazed by leaders in American industry and finance, is expanding its operations overseas.

A newly created McGraw-Hill International Corp. will push forward the frontiers of our technical magazine and book publishing business throughout the world. The new corporation comprises:

Eight international magazines—the McGraw-Hill Digest, the American Automobile and El Automovil Americano, Pharmacy Internacional and El Farmaceutico, Ingenieria Internacional Construccion, Ingenieria Internacional Industria, the Machinist.

A news-gathering agency, McGraw-Hill World News, specializing in industrial and engineering coverage with correspondents in 36 world centers.

McGraw-Hill Publishing Co., Ltd. (London), serving the special needs of Britain and western Europe and publishing the Machinist (London).

Five buyers' guides—Automotive Equipment (in English and Spanish), Construction Equipment, Industrial Machinery, and Pharmaceuticals (all in Spanish).

In addition, the McGraw-Hill Book Co. has an overseas network for the distribution of its books.

[From the Christian Science Monitor of May 21, 1947]

PRIVATE CAPITAL FOR INVESTING ABROAD URGED

LONDON.—W. Randolph Burgess, vice chairman of the board of the National City Bank of New York, declared here that investment of American private capital abroad can speed world recovery and questioned the value of direct Government loans.

"The experience of the twenties and thirties demonstrated that direct investment by business abroad is far sounder than loans of money," he told the American Chamber of Commerce in London.

"In the search for principles to govern our lending," Mr. Burgess said, "I suggest we turn to England's own experience. In the half century before World War I * * * she was by all odds the greatest source of liquid capital."

Mr. Burgess said that in the past "direct investments ran into some trouble—took some losses—but much less than the very sizable losses on loans."

"Business, like banks," he declared, "is now equipped for foreign operations. They know problems; they have trained people. They will avoid some old mistakes.

"They have learned, for example, that you burn your fingers when you play politics in a foreign country."

Mr. Burgess sought to quiet concern, often expressed in Britain, of another American depression.

He forecast a decline in prices and income in the United States but added, "our readjustment—our recession—is likely to be brief and mild."

"Unfilled demands for goods are so great—available funds so ample—that, if we can get over the hurdle of readjustment quickly, we ought to have a long period of prosperity ahead," he said.

Citing "British experience as at least an illustration of principles of lending money wisely and courageously," Mr. Burgess noted the following five "secrets" of British success in international financing:

Her men went with the money to see that it was used wisely and profitably.

British banking and insurance serviced British business.

The Government stood behind British traders.

Goods, money, and men moved freely about the world. There were few Government controls, quota restrictions, or other trade barriers.

Ventures were profitable.

Recalling that the United States "lent not wisely but too well" after the First World War and took an "awful shellacking," Mr. Burgess warned against repeating those losses.

"Overlending," he declared, "usually fails to strengthen and may actually weaken the borrower if it means he postpones the painful process of overhauling his own economic machine."

Muddy Oil

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. SADOWSKI. Mr. Speaker, this very timely and sane editorial appeared in the Washington Post of this morning,

July 3, 1947. It is my feeling that the Weichel resolution should have been referred to the Committee on Interstate and Foreign Commerce instead of to the House Merchant Marine Committee. The House Committee on Interstate and Foreign Commerce has had jurisdiction over all legislation pertaining to oil for many years, and they are best qualified by the background of many years of experience to give to the people of the Nation a sound and unbiased report on the oil situation.

It would take a Rube Goldberg's invention to prove that Russia is to blame for our present oil shortage. May I suggest to the "hate Russia" propagandists that they cool down a little. Their nightmarish thinking is silly and ridiculous.

The editorial in the Washington Post follows:

MUDDY OIL

Oil shortage or not, there is no shortage of efforts to make Russia appear the villain in the temporary domestic inconvenience we are suffering. From some of the charges emanating from the fanatics one would think that we were at war and that the Soviet has been buying oil as a dastardly trick to weaken us. This sort of irresponsible scapegoating, we submit, is exactly the kind of evidence to which Pravda points to sustain its complaints against warmongering in the United States. The truth is that oil shipments to Russia have had little if anything to do with the temporary reduced supplies of oil and gasoline in the Middle West.

Last year we shipped to Russia approximately 2,500,000 barrels of oil. So far this year the amount has been proportionately less. This compares with American oil consumption in 1946 of 1,773,000,000 barrels. In other words, we sent to Russia only a little more than one thousandth of the amount we used at home. Even though we have shipped more petroleum to other countries, the total is dwarfed by our own use. Nor could we lop off these exports suddenly without drastic effects elsewhere. We are, for instance, the principal source of the oil used by our good friend, Canada. What is causing the pinch is the shortage of steel in increasing the facilities wherewith to meet a demand at home which has grown till it is as much as the world's total prewar consumption.

An impartial investigation to disclose the truth about the oil situation could be helpful. But the demagogic campaign unleashed by Chairman WEICHEL of the House Merchant Marine Committee, with its reported browbeating of witnesses and its extravagant charges, only brings discredit upon Congress and increases the difficulty of our relations with Russia. We need facts, not headline hunting.

Diplomatic Staff Mushroomed

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. ELLIS. Mr. Speaker, in view of the discussion on the floor a few moments ago the following news item is very timely. The administration supporters were pleading for more money for the State Department. It is difficult to justify the enormous pay roll now supported by the Department. The item follows:

PARIS EMBASSY EMPLOYS 1,200; HAD 118 IN 1940—MANY NEW SECTIONS EXPAND STAFF

(By Henry Wales)

PARIS, July 1.—In the refined but intriguing and adventurous atmosphere of postwar Paris society, the American State Department's establishment here has swollen from 118 members in 1940 to 1,200 today.

The diplomatic staff mushroomed from the prewar installation in four apartments in the Rue de Chaillot to the pretentious four-story mansion in the Place de la Concorde with the overflow lodged in adjacent buildings on the Rue d'Aguesseau and around the Etoile.

The Embassy has more departments than a State Street store, with everything from uniformed guards to wine tasters and its own commissary, restaurant, and soft-drink service.

PLENTY OF ROOM FOR MORE

Although only a few more than 100 persons occupied the vast, high-ceilinged, modernized building during the hectic days before Pearl Harbor, there are now more than 500 occupants in the combined Embassy-consular service. But there is plenty of space in the big, roomy offices to install more personnel if necessary.

The Office of Information and Culture, which carries on a dreary and airy propaganda service over the radio and by handouts, numbers 100, with most of the staff concentrated in the building recently acquired from the French Navy in the Rue d'Aguesseau. It maintains field detachments in Marseille, Lyon, Toulouse, and Bordeaux.

The Office for Liquidation of Foreign Claims—which investigates, classifies, and pays off damages to French civilians, numbers 500, including 3 naval officers, 100 Army officers, 72 enlisted men, 144 American civilians, and 166 French clerks.

SECTION FOR WAR BRIDES

The passport and visa sections of the consular staff employ 75, chiefly engaged in examining the applications of French war brides and fiancées, or digging up old records to issue new credentials to expatriate Yanks who remained in France under cover throughout German occupation.

About half of the staff is American, the rest being French. The glamorous, glittering secretaries, stenographers, and typists have long scarlet fingernails, wear nylon hose, and smoke American cigarettes, which thus far escape French custom duty.

Bankers Torpedo Veterans' RFC Home Loans—Government Loans to GI's Prove Veteran Good Risk

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. SADOWSKI. Mr. Speaker, I have here an article that appeared in the Christian Science Monitor, Tuesday, July 1, showing that business loans to veterans have proved to be good risks. Only one-third of 1 percent of these loans have turned out bad. The soundness of this loaning program has been more than justified.

The bankers of the Nation and their friends solemnly shook their heads and prophesied that 50 percent of the GI loans would result in business failures. I wish that every one of those prophets of doom could read this statement. The finest thing that the Democratic administration has done to preserve democracy and to extend opportunities to all the people of the Nation has been in the field of extending Government credit to home owners, farmers, and veterans. Business has flourished, the national income has increased, and the economic condition of millions of Americans has been bettered. The money changers in the temple who had controlled and stifled credit and brought about our depressions and panics naturally hate the Democrats for having trespassed upon their secred ground—the private control of credit.

However, under the Republican administration in Congress the bankers' gang is getting back in the saddle. They have just dealt a terrific blow to the veterans when the recent bill was passed extending the life of the Reconstruction Finance Corporation, and the authority to buy veterans loans on housing was taken from the RFC. This leaves the ex-GI's completely at the mercy of the bankers. The RFC no longer can guarantee veterans loans 100 percent. The banks never did like these loans, because the interest rate was too low for them. The RFC began to purchase these veterans' loans last October after the bankers had boycotted these loans and refused to purchase them. The RFC became the only outlet available for the sale of these loans. Of recent weeks the RFC has been purchasing these loans at the rate of $1,500,000 per day. These veterans' loans carry an interest rate of 4 percent. The FHA loans carry a total interest rate of 5 percent, so now the avaracious bankers have succeeded in wrecking the whole veterans' loan program, and the veteran will be compelled to qualify under FHA and pay 5 percent interest rate instead of 4 percent, and will only get about 80 percent mortgage loan instead of 100 percent mortgage loan, as he was getting under the veterans' loan program. The veterans organizations and the builders of homes for veterans were caught sound asleep, because the press gagged all news on this most important legislation. This week I have received numerous calls and telegrams and inquiries from veterans and home builders, as they are just beginning to find out what happened. Under the Democratic legislation that had been in effect up to this time veterans that had a couple of hundred dollars could buy a home. Now they must have a down payment of at least $1,500 to $2,000 in order to qualify. How many veterans can scrape up that much money for a down payment?

I am advised that 80 percent of the veterans will be pushed out of the market, at a time when millions of ex-GI's are homeless and are struggling to establish their family life. I think that this banker maneuver is mean and inhuman. I am sure that the protests from the veterans will be so voluminous that

Congress will be compelled to restore the original Democrat-sponsored GI home loan provisions to the RFC Act.

The article in the Christian Science Monitor follows:

GOVERNMENT LOANS TO GI'S PROVE VETERAN GOOD RISK

WASHINGTON.—The Government is finding the war veteran a good business risk.

The ex-GI's who got loans from the Veterans' Administration to set up small businesses are generally doing very well, although the truck and tavern operators have had some tough sledding.

A. G. Deane, chief of the agency's Business Loans Division, said the Government has had to pay only $799,000 in claims on veterans' loans it has guaranteed. This represents 1,196 claims out of a total of 70,000 business loans with a face value of $201,000,000.

In addition to the outright failures, 1,079 other veteran borrowers have defaulted. Mr. Deane said, however, that some of the defaults may be "cured" or partially satisfied.

Under the GI bill, the Veterans' Administration began guaranteeing partial repayment of loans to veterans in September 1944.

"The volume of defaults on loans has been small," said Mr. Deane. "The showing to date has been very creditable. The veteran businessman has turned out to be a surprisingly good investment."

TRUCK BUSINESS RISKY

Highest rate of failures has been among veterans who became single operators of trucks. Mr. Deane believes this is partly because the men lacked administrative experience and partly because of faulty equipment.

Some veterans' groups have charged that ex-GI truckers have been "taken for a ride" by second-hand car dealers disposing of machines that were fit only for the junk pile.

Trucking failures, said Mr. Deane, have been most numerous in the Western States, where long distances and mountainous terrain add to the difficulties. The first 6 months usually are the crucial ones.

Second highest business casualty rate was among operators of taverns, restaurants, and night clubs.

"With such enterprises," Mr. Deane remarked, "it seems to be feast or famine."

The Veterans' Administration also has reported that defaults on home loans now number 2,821 out of 723,000 that have been guaranteed.

The Veterans' Administration said that "business loans accounted for about half of all defaults to date, although they comprised only 8.1 percent of all loans approved. The business-loan default rate in March reached 3.9 percent of all business loans closed, while defaults on home loans amounted to only 0.3 percent of home loans closed."

INCREASE IN DISCONTINUANCES

The Department of Commerce recently reported a considerable increase in small business failures, and estimated that a large number of them involved veterans.

Small business "discontinuances"—about half of which were failures, in a broad sense, the others being the result of retirements, illnesses, and the like—averaged 30,000 to 40,000 a quarter during 1944 and 1945.

During the last quarter of 1945 they increased to 37,400, then to 42,600 in the first quarter of 1946 and to 54,200 in the last quarter of that year. Of the firms going out of business, 98 percent employed less than 20 persons each.

Meanwhile, new businesses, many of them operated by war veterans, continue to make their appearance. The Commerce Department said 272,800 new business establishments were organized in 1944; 411,800 in 1945, and 187,000 in the first quarter of 1946. Thereafter the number declined slightly, to 103,500 in the last quarter of 1946.

Civil Rights Dilemma

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. HOLIFIELD. Mr. Speaker, the subject of preservation of civil rights is probably one of the most important subjects before the people of our democracy. It is the primary and fundamental principle of difference between a free people and a slave people.

Marquis Childs in today's Washington Post presents a worth-while treatment of a phase of this problem, as follows:

CIVIL RIGHTS DILEMMA
(By Marquis Childs)

When Attorney General Tom C. Clark appeared before the President's Civil Rights Commission in closed session not long ago, he came in for something of a grilling. Members of the Commission wanted to know whether the Truman administration did not itself threaten civil rights through the Executive order on loyalty among Government workers.

Most persistent questioning on this line came from Bishop Francis J. Haas, of Grand Rapids, Mich., and from Boris Shishkin of the AFL. They pressed down hard on Clark, demanding to know what right of appeal individual employees would have from the arbitrary action of department and agency heads.

Clark replied, as he has to all such queries, that he intends to be sure that the broad powers under the loyalty order are not abused. Bishop Haas, one of the most liberal and courageous churchmen in America, suggested that the order had already contributed something very much like a witch-hunt in the Government.

Emphatically Clark denied any intention of witch-hunting. He repeated that every effort would be made to safeguard the rights of those suspected of disloyalty. Shishkin pointed to the danger of the precedent which others might misuse.

Here, once again, is the dilemma of our time. At the root of it is the perverted loyalty of the Communist and the fellow-traveling stooge. Their loyalty is to an ideology opposed to our form of society and our Government. Serving that ideology with blind allegiance, they will go to any length to do the bidding of the bosses of communism.

Now no one, except the members of the House Un-American Activities Committee who tremble at shadows, believes that many individuals of questionable loyalty have infiltrated into our Government. But no one can doubt that there have been some. Their very presence, even though they may have done a minimum of harm to national security, has raised a cloud of suspicion.

The other day, the State Department announced dismissal of 10 employees whose loyalty was in question. They were summarily dismissed under the McCarran rider to the State Department appropriation bill. Under the terms of that rider, they have no right of appeal.

Here is the danger and it is a serious one. By this procedure the individual is prejudged and found guilty without appeal.

In at least two recent instances, it has been proposed in the Senate that the FBI be given the right to pass on all new employees of a particular bureau. That would in effect be giving to a police agency the supreme power of Government. It would be a long step in the direction of the police state.

The deeply troubling thought in the minds of many men is that, in scourging the few who are disloyal, we may endanger the whole structure of liberty on which our free society depends. In this there is a terrible irony. In combating communism we can get the very kind of totalitarian controls on which communism inevitably rests.

The President's Civil Rights Commission has made a well intentioned move to point up the dangers in this troubled time and the need for further safeguards in law. Public hearings were held. A digest of the hearings was used in an effective Nation-wide broadcast.

Various subcommittees are now studying special phases of the civil rights problems. A wealth of data is being compiled on discrimination in employment with the end of the war. This will be helpful in giving a push to the new Fair Employment Practices bill recently introduced in Congress under the sponsorship of both Republicans and Democrats.

Shortly the commission will begin putting together the over-all report. A lively discussion is certain on whether it should include a warning on the approach of the Truman administration to the loyalty investigation. It is, of course, a Presidential commission and the final form of the report will be determined by the White House.

The effectiveness of turning over a major problem to a commission of public-spirited citizens is open to question. The members of the Civil Rights Commission all have compelling outside interests, which means that they can give, at most, only part time to the inquiry. The chairman is Charles E. Wilson of General Electric.

With Congress in the midst of a chaotic rush to get out, no new legislation is likely. We may wake up one day to discover that civil liberties are not just a spare-time preoccupation.

Treasury Department Appropriations

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the St. Louis Post-Dispatch of July 2, 1947:

SILLY BUSINESS

Those economy-minded Republican Congressmen have begun to act like people who would spend $20 to save one. That is what President Truman implied when he signed the Treasury Department appropriation measure under protest.

This bill cuts Internal Revenue Bureau funds $20,000,000. Mr. Truman says more than 4,000 employees will have to be fired, although they were working on 30,000 leads to tax evasion cases which could have put money in the Treasury. The President estimates the probable loss of revenue at $400,000,000 a year—or 20 times the saving.

Other budgets have been butchered on the same silly basis. The Republicans sliced funds and slowed work on half-finished Federal power projects which have to be completed before they can begin to pay off their cost.

Less tangible but more dangerous blows were dealt elsewhere. The GOP Congressmen whittled money for the National Labor Relations Board, although it is smothered under 5,500 cases now and faces new burdens for industrial peace under the Taft-Hartley law. They chopped into budgets for defense, for overseas information broadcasts and other items essential to a vigorous foreign policy.

What the Republicans need to do is to sit down together and read up on third-grade arithmetic. They are so wedded to the idea of subtraction that they cannot see how some of their economies add up to a total loss. It is all very well to try to shine up a platform, but how is it that the party which preaches good business practices monkey business?

Branch Banks

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Thursday, July 3 (legislative day of Monday, April 21), 1947

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the RECORD an address by W. J. Bryan, vice president of the Third National Bank of Nashville, Tenn., before the Independent Bankers Association, on the vicious practice which exists at least in some States, of branch banking, in a little pamphlet entitled "The Bank and Insurance Stock Guide," published by Merrill Lynch, Pierce, Fenner & Beane, New York, N. Y.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

BANK NOTES

In an address before the Independent Bankers Association, W. J. Bryan, vice president of the Third National Bank of Nashville, Tenn., called chain banking a menace to our economy, deplored its growth and urged restrictive legislation.

"I realize," Mr. Bryan said, "that there are banks that technically fall into the above classification which are rendering a good service, and are run on a high plane. Yet no one who is aware of the facts can deny that unrestricted multiple banking—branch, chain, group, or holding company—leads ultimately to either complete monopolization of banking or the complete failure of chain banks. It is usually the former because, after the cancerous growth has become entrenched, the Government cannot permit them to fail, and therefore must step in and underwrite them."

He cited countries as Australia, China, Denmark, Italy, Germany, and England which had to rescue their big branch banks prior to World War II. "The United States, which started as a branch-banking country, originally followed the policy of letting them fail. So, of the hundreds of branch banks that were organized between 1701 and the Civil War, only one remained in 1865. We continued this policy until 1932."

"When the failure," he said, "of so many chain banks brought that name into disrepute, they began to call themselves group banks. When they were confronted with laws prohibiting or restricting branch banking, they formed holding companies to circumvent these laws. Then, when the banks owned by the holdings companies were about to fail, they used that fact as an argument for permitting them to convert into branch banks.

"By 1932 the branch bankers had already perfected the technique through the holding company, a device for evading the law of our States and Federal Government. They not only make possible the evasion of laws respecting branch banking, but all the basic laws designed to protect the depositors' funds. Where banks are prohibited from investing or lending, the holding company can. Controlled banks must lend to controlled companies and must refuse loans to competitors of the cntrolled companies. * * *

"One would think that the sorry record of branch banks and holdings companies (on the whole) would have removed them as a threat. But cancer continuously threatens the person once affected, and likewise multiple banking. It is true that of 97 bank holding companies operating December 31, 1931, only 42 remained 5 years later. But new ones have started. Admittedly, some of those operate in a manner above reproach, and these have nothing to fear from the legislation we seek."

Mr. Bryan closed with remarks of indebtedness to Senator C. W. TOBEY, chairman of the Senate Banking and Currency Committee, "for introducing and setting hearings on a bill looking toward our objective. I believe he could render no greater service to his country than to secure a law that will help insure the continuation of free banks, without which there can be no free enterprise for long, or freemen eventually."

Neglect of Negro Education Creates Problem

EXTENSION OF REMARKS
OF
HON. DENNIS CHAVEZ
OF NEW MEXICO
IN THE SENATE OF THE UNITED STATES

Thursday, July 3 (legislative day of Monday, April 21), 1947

Mr. CHAVEZ. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Neglect of Negro Education Creates Problem," by Ralph W. Page, which appeared in the Philadelphia Evening Bulletin on Saturday, April 19, 1947.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PICAYUNE—NEGLECT OF NEGRO EDUCATION CREATES PROBLEM

(By Ralph W. Page)

WASHINGTON, April 19.—One of the most tiresome and fallacious current cliches is the Negro problem.

There is no Negro problem. There is an American problem. This is how to put into practice the fundamental tenet of our society. It is the essence of the American creed that each one be given the same freedom of choice and the same opportunities and the same consideration in the development of his body, mind, and spirit.

The so-called problem is due to apostasy—forsaking our birthright and denying our sacrament to vast numbers of citizens.

This denial of participation in personal human development is most flagrant in the case of the Negro population. In particular, we deny them the main source from which men build their characters, acquire knowledge, utilize their talents, and realize their abilities—this is education.

This was forcibly brought home Wednesday evening by Dr. Mordecai W. Johnson, president of Howard University, in Washington. Jacob Billikopt, chairman of the executive committee, gave a dinner there for a considerable company of distinguished administrators to hear the dramatic story of this great Negro institution.

This dream of General Howard is supported by Federal appropriations. Starting from scratch, it has developed an undergraduate college of liberal arts with an enrollment of 3,000 students, 2,000 of whom are war veterans. It has accredited graduate schools of medicine, dentistry, pharmacy, physics and chemistry, law and music, and an established school of architecture and engineering that fails being accredited only by lack of equipment. All told, there are 6,000 scholars. And the graduates are the leaven of the whole Negro population and a credit to our population. As a story of success and accomplishment against great odds, this is a splendid tribute to the race.

But this isn't what impressed and depressed the audience.

It was the trifling a- picayune share of educational opportunity this incredibly rich country gives these individual citizens.

A large proportion of the colored brethren live in the segregated States of the South and the District of Columbia. This whole region, in 1939, devoted $137,000,000 to higher education. Of this sum just $10,500,000 went to Negro institutions—$2,500,000 in Federal funds to Howard itself.

Consequence: Today there are only 3,000 Negro physicians in the country. And only about 132 graduate from medical schools each year. Just 12 of these are from so-called open schools in the North. Howard and a little school in Tennessee provide the rest. There existed no place where a Negro can learn to be an architect or an engineer until this Howard Engineering School was recently started.

Well, 6,000 students is a good start.

Sure it is. But observe—this invaluable oasis of Negro opportunity, supported by the United States Government, has these 6,000 in quarters, and in classrooms, libraries, laboratories, and such things designed to hold no more than half that number, and handicapped in quality in almost every particular.

The president seemed to be most grateful to a beneficent Congress for not cutting down his inadequate budget, and for granting money to make plans for 30 percent of absolutely essential buildings.

He may be grateful, but as a citizen I am outraged. What kind of pinchpenny, peanut, miserly policy is it that requires national servants to operate a national school like an orphan asylum, with half enough plant, half enough teachers, half enough equipment? This same kind of philosophy and economy would dedicate a chicken coop as a memorial to Abraham Lincoln and arm our marines with bows and arrows. If we won't invest in education, we will invest in a problem. And it serves us right.

Keep Your Shirt On, Fellow

EXTENSION OF REMARKS
OF
HON. CLAUDE PEPPER
OF FLORIDA
IN THE SENATE OF THE UNITED STATES

Thursday, July 3 (legislative day of Monday, April 21), 1947

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in

the Appendix of the RECORD an excellent letter written by a young veteran named Garrett Mattingly. The letter appears under the heading "Keep your shirt on, fellow," in the June 1947 issue of Woman's Day.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

KEEP YOUR SHIRT ON, FELLOW

(This letter was written by Garrett Mattingly to a young veteran sorely disturbed about today's volcanic world. It contains the author's well-considered advice on the problems facing us all.)

DEAR BOB: I am guessing, the same as you would be guessing, but I say there isn't going to be any war with Russia. Not soon anyway. You've started to take that degree, and a college degree can be a pretty important thing in your life. Stick with it.

What you say about quitting college for a job, and getting into the money while you have the chance, sounds confused to me. You admit that you'd feel a little ashamed to drop out now. You say you wouldn't think of doing so, if you could feel sure that a new war wouldn't come along to make nonsense of your plans. And you ask my advice. All right. I say, keep your shirt on, fellow, and buckle down to finish what you've started. No, you can't be absolutely sure there won't be another war. Certainly is more than you have a right to ask for. You just have to figure the odds and we had better, for the sake of peace, try to keep as calm as we can.

With the kind of stories the newspapers keep printing, and the kind of books that get published almost every week, keeping calm isn't always easy, I know. Just from the way the news is angled, anybody would say that we are a lot nearer to war with Russia right now than we were with Germany in 1939. And a good many people appear to be more enthusiastic about the idea than they were 8 years ago. Some newspapers seem to take a good deal more trouble to dig up nasty stories about the Communists, than they ever did in the past to print what the Nazis were doing.

Not that there isn't a lot of truth, I expect, in most of the anti-Russian stories. And I don't mean to say that the situation isn't serious. When two big countries get to snarling at each other, it's always serious. I certainly don't mean, either, that we ought to back down and get out of the Russians' way. That not only wouldn't be the decent thing to do, it simply wouldn't get us anywhere. We'd just find ourselves in the same kind of spot, somewhere else, nearer home, and you can't keep backing down forever. No, we've got to settle this thing with Russia, and we might as well settle it now, but I feel pretty sure we can settle it without fighting.

You've asked me, so I'll tell you why I feel that way, but, understand, I don't have any inside dope and I won't be telling you anything that everybody doesn't know or couldn't find out. In the first place, I don't see how any Russian in his right mind could want another war in this generation, atom bomb or no atom bomb. Suppose the Germans had invaded the United States in 1941. Suppose they had got as far west as Chicago in one drive, and as far west as St. Louis in another, laying everything flat as they passed. Suppose, before we finally drove the Germans back into the sea, we'd had as many soldiers killed and wounded as our whole Army amounted to in 1943, so that we finished the war with formations filled up with grandfathers and high-school boys. And suppose that, besides combat casualties, practically half the population of New York and the New England States, men, women, and children, had died of hunger and disease, or been killed by the enemy. Would that make us feel like starting another war? Well, that's about what happened to the Russians. However much they throw their weight around, the Russians know that what they need most is about 25 years of peace to put their country back on its feet.

That's the main reason I think there will be no war with Russia for some time to come. There are other reasons, simple ones that are easy to forget. The size of the U. S. S. R., for instance. The Russians aren't cramped and crowded in as the Germans were, or the Japanese. They have lebensraum. And their undeveloped resources are enormous. The Russians are probably about as well off in that respect, and as near to being self-sufficient, as we are. Countries that well off do not, as a rule, start major wars of conquest. They may do a little casual grabbing, if there's territory lying around loose that they happen to want. We've done that, ourselves. But they don't go all out for world rule or downfall.

Then, too, it looks as if Russia, in the west anyway, were coming to its natural limit of expansion. You sometimes hear that the U. S. S. R. has no natural limits, because with their nationalities policy of letting each people have what looks like a pretty independent set-up, and actually running the show through the Communist Party, they can take over any country where the party can get control. On paper, that's logical. Inside the present boundaries of the U. S. S. R. it's probably practical. It seems to work all right in the Byelorussian, and Azerbaijan, Kazak, and the Turkmenian Republics. But none of those countries is what you and I would call a nation. They are just districts where the people have a local language or dialect, and local customs of their own. Now, expanding westward, the Russians have come into an area where there are some old, tough nations. The Czechs and the Hungarians, the Poles, and the Finns have been separate peoples for a long time, and taker some hard knocks, and stayed in business. For more than a hundred years the old Czarist empire tried to absorb Poland, and the most they got out of it was a lot of police work, and one headache after another. Poland is still a nation, and there's no people on earth who like the Russians less than the Poles do. The party seems to be running things in Poland now, but I doubt very much whether they can go on doing so long after the army gets out, and you still can't sit comfortably on bayonets. You will have noticed that although the countries I've mentioned are all inside what's called the Russian zone of influence, and although two of them used to be parts of the old Russian empire, the U. S. S. R. hasn't tried to include any of them in its federal union. Maybe the Russians know that they are approaching a limit.

So far I haven't said anything about systems of ideas, about "ideologies," because I'm not sure how much such things really matter in Moscow. But the people who keep warning us against Russia say that ideologies do matter, so notice this. It's true that the U. S. S. R. is what we call a "totalitarian" state. In fact, the Italians and the Germans copied the one-party system from the Bolsheviks. And it's true that Communist propaganda, like Nazi propaganda, talks about "tomorrow the world." But there's a big difference. The Communists don't have any master-race theory. Their hope of expansion depends on Communist revolutions, on revolutions made in each country mainly, at least, by the people inside it. (Revolutionists always think their brand of revolution is going to spread all over the world. Lots of Americans thought ours would after 1776; most of the French thought theirs would after 1789). If the Communist theory proves to be wrong—if the people of the rest of the world choose not to be Communists, then that's another limit to Russian expansion.

The final limit, of course, is our threat of force: The atom bomb and all the deadly gadgets that go with it. I think we are entitle to assume that the Russian people, as a whole, don't want to commit suicide any more than we do. You remember Mr. Ridgely, our CIC officer? The morning after we got the news about Hiroshima, he said: "I knew if we let those scientists fool around with this war they'd end up by making it dangerous. I want out of here, and I think we'd better call this whole thing off." That's still the most sensible remark I've heard anybody make about the atom bomb. And I expect a good many Russians can figure out how dangerous war would be now, whether or not they had the bomb themselves.

Well, you say, if the Russians don't want another war, why do they act the way they do? That's one to stump the experts. But I can give you some common-sense answers, partial answers, that don't depend on any deep dark Russian plot to conquer the world. In the first place, remember they've just won a tough war; a big war, and that's enough to make any people a little chesty. It's more stimulating to the Russians because it's the first big war they've won since Napoleon's time, over 130 years ago. In between, the French and British whipped them in the Crimea, the Japs whipped them in Manchuria, and the Germans licked the tar out of them in 1916-17. Even when they did win a little war, against Turkey, back in the 1870's, they were not allowed to cash in on it. Now, when they have been on the winning side, and think they have contributed more to the victory than anybody else, it is not surprising that they think they ought to collect some of the things Russia has been wanting for a long time.

They want to collect reparations and booty, for instance, and they don't much care how. That's one of our most frequent complaints against them. There's a lot of truth in it. But when you read about Russian demands for reparations, and the stripping of food and machinery from areas that can barely struggle along as it is, remember that the Russians have, at least, the excuse of the desperately poor. If the richest part of your country has been turned into a desert, if, over hundreds of square miles, there are no tools left to work with, and no farm animals, and you own people are hungry and in rags, it's hard to remember, when you see a pig or a pair of pants, that your former enemies must live too.

We also complain about Russian expansionism, about their grabbing territory. So they do, but their expansion is somewhat less alarming when you remember that the U. S. S. R. right now isn't so big as the old Russian empire was in 1905, and that except for a little corner on the Baltic, and a little corner against the Carpathians, everything the Soviets have annexed in the last 8 years was Czarist territory not so very long ago. Even their main unsatisfied claims are just old Czarist claims revived. The British practically gave the Czar northern Persia in 1907, and promised him Constantinople and the Straits in 1915, and didn't seem to feel then that the balance of power would be upset if the Russians moved in permanently in both areas.

What's really alarming is the way the Russians seem to be muscling in on countries like Poland and Hungary and Yugoslavia, and taking over the government through local party stooges. As I've said, I'm not sure that's going to last. But right now the backwash of the war has left all that area, and a good deal of the rest of Europe besides, a political and economic vacuum. There just hasn't been any stable government, or any stable economy. Into such a vacuum the nearest big power is likely to be sucked, like it or not. Our critics would say that we and the British have let ourselves get sucked into Greece and Italy with no better

excuse. In the long run, the problem in those borderlands of eastern and central Europe is the same as the problem all over the world. If the things we believe in, democratic government, and personal liberty and private enterprise are going to win out, then the economy that supports those things has got to be made to yield a decent living, and a fair amount of security, and a reasonable hope for the great mass of the people. Misery and insecurity, gross injustice and oppression, hatred between rich and poor, are all so many invitations to communism to step in. If we can help the people of Europe make some kind of democratic economy work, we don't need to be afraid of communism there, any more than we need to be afraid of it over here if we can keep our own economy working.

The toughest problem is the difficulty of working with the Russians—their isolationism. They are suspicious of us and our motives, and they guard their national sovereignty. Some of the reasons for their acting that way are pretty complicated, but the biggest and simplest is fear. They are afraid of us—more afraid of us than we are of them.

They feel as sure that we want to overrun their government and force them to accept a capitalist system as any of us do that they are out to undermine the American way of life. In the past, we've both given each other reasons for being afraid of each other, but we'd better both get over it. There's nothing more dangerous than that kind of fear. We've got to make up our minds to live together in spite of our differences, if we want to live at all. I think we can. It will take time, but, as I've said, I don't think the Russians want to fight now. We shall have the time, if we know how to use it. Maybe 25 years from now it will seem absurd that anybody should ever have thought we'd have to fight the Russians. Maybe, given time, the UN will grow up to be big enough to step between any two nations that grow angry or afraid. Maybe, 25 years from now, it will seem absurd to think of fighting wars at all. It is, of course.

Anyway, fellow, if I were you, that's the way I'd play it. I think I know how you feel. Part of your uneasiness is rational enough. There could be another war which would bust up all your plans, and make all this effort you are putting in just so much waste. That's a chance you have to take. But part of what you feel is just the restlessness and depression that catches up with all of us when we look ahead and see nothing but a long stretch of hard work, and decisions to make, and chances of failure, and less money and less fun than we'd like to have. It isn't just what you thought life would be like when you got out of the service, is it? Just getting along on what Uncle Sam allows you, and what he'll stand for your earning on the side is tough going with prices the way they are, and I suppose it's tougher still to see some of the boys who got out when you did earning more in a week than you can scrape together in a month. I'm not going to argue with you about that part of it. You know all the reasons in favor of an education as well as I do. We went over them together on more than one night watch. If you've changed your mind now, well, it's your life, and you must decide for yourself. Only decide on your own terms. Don't let the headlines and the commentators get you all mixed up.

Let me remind you, though, of one of the things we talked about. We agreed then that there might be another war, but that there didn't need to be. If enough people had really understood what was going on, we said, there need not have been World War II. To avoid another one, we said we needed, most of all, better informed people, people who knew more about the world they lived in. And we agreed that it was every man's duty to learn as much as he could and to help influence his neighbors, and not to give up hoping and working for a peaceful world. That used to be a part of your plan, a part of your reason for going to college. I don't think anything that has happened so far need make us lose hope. That was the trouble last time, you remember; too many people lost hope too soon. Too many people, especially here in America, forgot about the world, and scrambled for their own profit and their own safety. At the end, too many people, especially in Europe, acted as if they were paralyzed with fear, because they were certain that the worst was bound to happen. Indifference and despair and panic—those are the surest ways to invite catastrophe. You've got to have some faith in life if you're going to go on living at all. And if you want a better and safer world to live in, maybe it's up to you to lend a hand. That might be a reason you've forgotten for finishing that degree.

One last word, Bob. You don't have to wait until you are out of college to start lending a hand. Take those past-midnight discussions you tell me about. Get into them with both feet. Talk up the UN. Point out how bitter words between nations may be a hopeful sign rather than a discouraging one. If the fur flies over international conference tables, that may mean that the cards are face up on those tables, as they should be. The hotter the discussion, the more it establishes the principle that words and not wars, open discussion rather than guile and trickery, are the best ways to settle differences between nations. If you can influence, even slightly, only a dozen of the boys you know, you may be influencing a dozen families, and in the end a dozen communities. That's the way public opinion is formed in this country, and, when it is formed, the Government in Washington does what the people expect it to do. That's how democracy works.

Yours,

GARRETT MATTINGLY.

New Labor Era

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. SMATHERS. Mr. Speaker, most of the editorials we read today about the new labor bill are intemperate and excessive in their descriptions of it. Those which are against it make use of the words such as, "Fascist, slave labor, moderate murder," and other extreme descriptions, while avid proponents describe it as "Utopian decree, panacea, and cure-all." It is therefore a distinct pleasure to read an editorial which describes the Taft-Hartley bill in what I think is reasonable, sane, and sensible language and which points out its obvious weaknesses while at the same time recognizes its many good provisions. Such an editorial is this one from the Miami Beach Sun Tropics which I ask unanimous consent to insert in the Appendix of the RECORD for the edification of all the Members of the Congress.

NEW LABOR ERA

Nearly every alert citizen and medium of information will comment on the Senate's action yesterday in over-riding the President's veto of the Taft-Hartley labor bill, as they did after the House action a few days earlier.

"Smart politics" or "such a bill had to come" or "President Truman was right" or some other theme will be taken. Through it all what is the situation, how will it affect labor and capital-management, what good or harm will the measure do in our national economy?

President Truman, in vetoing the bill, said it "would reverse the basic direction of our national labor policy," that is would cause more strikes, not fewer. He painted a gloomy picture.

On the other hand proponents of the labor-control or labor union-control bill insist that it means the revamping of a labor program that had run its course, that labor leaders had caused the public's stampede for strike-ending, for disturbance in industry that retarded production, etc, etc.

Labor is still here; there will be work for all; the unions will not be destroyed; plants and shops will continue operation; wages will be paid. Such conditions must and will persist. Plainly, the labor bill was evolved, was passed by the House and the Senate because the general public got tired of labor-management turmoil. Leaders of great masses of loyal and dependable, patriotic, and true Americans who make labor paramount outran their privilege. That would seem to be a blunt way of finding a basis for the bill.

Henceforth the country hopes for peace. High pressure, filibustering tactics, lobbying against the bill had no effect. The Senators and the Representatives felt that the public wanted surcease from labor-management trouble, and so voted.

Labor, so essential to winning a great war, is still as loyal to the country as before. The leadership only must trim its sails to meet the new era in labor relations. One might say it is a change that came about from the ill-fated, ill-timed, and ill-conceived sit-down strikes of a decade ago.

The bill protects the national welfare, outlaws the closed shop, secondary boycotts, and jurisdictional disputes. Labor, no more than management, needs to bury itself in gloom, not in this land dedicated to free enterprise where the laboring man like his associate citizens enjoys the greatest of democratic blessings.

Doing Nothing No Way To Solve a Problem

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks in the RECORD I ask unanimous consent to include an excellent editorial from the Miami Herald which discusses the failure of this Congress to do anything about the drastic housing problem. I hope all the Members of Congress will read it.

DOING NOTHING NO WAY TO SOLVE A PROBLEM

A concerted effort is being made this week to win Congressional enactment of the Taft-Ellender-Wagner housing bill.

Representatives of more than 20 national organizations endorsing the measure have scheduled a meeting with its sponsors in Washington today.

One of the organizations, the United States Conference of Mayors, has published an illustrated brochure stressing the bill's provisions for slum clearance and low-rent public housing. "America Cannot Afford Slums" is the title of the booklet.

Among its telling points is a chart headed "Slums drain off far more than their share

of city revenue." The example is Atlanta, where only 5½ percent of 1941 real property tax revenues came from slum areas which accounted for 53 percent of the city's costs for police, fire, health and other services.

Virtues of low-rent housing in wiping out slums' high cost of law enforcement, health, and welfare services have been demonstrated in Miami by the projects completed in 1939–40. They provided more than 1,000 dwelling units for families which had lived in slums.

Crime, disease, fires, and juvenile delinquency are virtually nonexistent among the inhabitants of these low-rent units.

More were planned, but the program was halted when all available funds were dedicated to war emergency housing.

One of the war developments administered by the Miami Housing Authority is Victory Trailer park. Its 500 trailers are filled to capacity by veterans' families—a total of 1,870 men, women, and children who would qualify for low-rent housing if such projects could be built.

The bill also provides the means for eliminating by reconstruction of whole blighted areas such as Miami's central Negro district.

But low-rent housing—meaning projects subsidized by the Federal Government—would not solve the whole housing shortage.

As the chart shows, more than 14,000 dwelling units were built in Miami in the 6 years that followed the creation of the Federal Housing Authority in 1934. The FHA program succeeded in combining sound financing with private enterprise to provide good homes at prices many families could afford. It also encouraged some apartment building, although this phase of the FHA work is not well known.

The Taft-Ellender-Wagner bill could scarcely be expected to produce the same results as FHA, now that construction costs have soared above the reach of most people. The measure will relieve the housing shortage for families of low income, and its long-range potentialities for slum clearance are outstanding.

The National Association of Real Estate Boards has denounced the bill as "dangerous" and "communistic." The National Association of Home Builders has called it "the most serious threat" to the private construction industry, and suggested a division into several bills to be acted upon separately.

Just saying the Taft-Ellender-Wagner bill is bad won't cure the housing shortage. Opponents should wake up to the fact that doing nothing is no way to solve a problem.

Independence Day in the Atomic Age

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, July 7, 1947

Mr. WILEY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD the text of a radio address which I delivered on the Fourth of July over Wisconsin radio stations. The subject of this address was The Meaning of America's Birthday in Our Times.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, Independence Day is the birthday of Uncle Sam, but it is also every American's birthday. On Independence Day, every American, so to speak, is reborn. Every American celebrates the birth of his personal freedom and that of his fellow countrymen. It is not a mere formal occasion, lacking meaning except historically; rather it is a living reality to every adult and child of our land.

On the one hundred and seventy-first birthday of our beloved America, there is a feeling of pride in every American breast, a feeling of gratitude for all the blessings that we enjoy, and a feeling of hope for the future.

Every day, we might say, is Independence Day for our land. Yet it is fitting that one particular day should be set aside for consecration and commemoration of the valiant deed of July 4, 1776, when the mightiest declaration of human freedom was proclaimed to all mankind.

I am grateful to this station for the opportunity to speak to you at this time. I hope that I may express the thoughts which many of our citizens feel and, particularly, which many of us in the Congress in Washington feel. Speaking to you at this time in your homes and elsewhere gives me a feeling of being home again in our own State.

CONGRESS ON INDEPENDENCE DAY

Right now, as you know, Congress is proceeding toward what is expected to be the end of its first session at the close of this month. We have met great challenges during the 5 months since we convened, and there are still mighty challenges up ahead on the domestic and the foreign scene.

But I believe that we will be adequate to them, that we will fulfill the trust which the men of 1776 placed in us.

OUR SUBJECT NOW

We are considering now the subject of Independence Day in the atomic age. Of course, in any age there is a certain lasting meaning of independence, a certain enduring set of qualities and characteristics which withstand the changes of time. Yet we know that when the first atomic bomb was released at Hiroshima, the world entered a new era of miraculous discoveries. Many of our concepts underwent a tremendous change. And we have still but touched the hem of the garment, so to speak, of this new era.

HISTORY OF CELEBRATION

But first let us go back to that eventful day 171 years ago when a group of men sat in a plain red-brick building in Philadelphia in the State House there. Half a hundred delegates had come to affix their signatures to a document. It was a bold document, defying one of the mightiest powers of that time. It was a document—the Declaration of Independence—which was to become one of the great landmarks in the history of man's fight for freedom.

The delegates that day in July 1776 were humble men. There was a farmer named Thomas Jefferson, a printer named Benjamin Franklin, and John Adams, Robert Livingston, and John Hancock and others.

By around 2 o'clock that day the great document—the Declaration of Independence—had been signed. A little boy ran from the doorway into the street with uplifted arms and gave the tidings of the birth of the new nation to the crowd that had assembled outside. The little boy gave the word to the men who were waiting to ring the great Liberty Bell.

On that bell there was this message: "Proclaim liberty to the land; unto all the inhabitants thereof."

The message on this bell was first spoken to Moses on Mount Sinai by God: "Proclaim liberty throughout the land; unto all the inhabitants thereof."

The bell pealed forth the news of liberty. That message went not only to the people of the infant Thirteen Colonies, but the message encircled the globe.

Thus American liberty took as its keynote the spiritual message from on high. It was America's destiny to realize that message, to proclaim and maintain liberty for our own people and to inspire all other people by our example.

Freedom really rang out to challenge all peoples. Our job is to keep ringing the Liberty Bell.

LESSONS OF INDEPENDENCE DAY

There are lessons which we all might learn from Independence Day, and perhaps we should review a few of them now.

I. LESSON OF CONSTRUCTIVE IDEAS

The most obvious lesson is the power of constructive ideas. Radio and the newspapers tell us each day of the power of physical force in various countries of the world—the power of arms, of violence. They tell us also, however, of the influence of creative ideas.

The Fourth of July confirms that fact. To be sure, the Declaration of Independence was sealed in the blood of the martyrs of the American Revolution. It was reinforced by the sacrifices of Bunker Hill and Valley Forge when the ragged Continentals of George Washington bled for freedom.

But it was ideas which inspired those Continentals, which inspired the Thirteen Colonies to fight the mightiest power of that time. Yes, as Victor Hugo told us, "there is nothing more powerful in this world than an idea whose time has come."

The truth of those words are attested by the Declaration of Independence itself, by its dynamic ideas which burst upon the world like an atomic bomb. But whereas the atomic bomb was destructive the Declaration of Independence was constructive. It nourished the seeds of liberty throughout the world. It inspired men, uplifted them, enlarged their human horizons.

Today all the world looks to the American idea, to the American concept of checks and balances. All the world hungers for our freedom. In this globe of over 2,000,000,000 souls not more than 200,000,000 of them, at the most, enjoy the blessings that we enjoy.

Other peoples have but to recognize, however, that they can realize the heaven-on-earth which we have realized if they will but take hold of the idea which we freely extend to them—the idea of freedom and of liberty.

Thoughts in declaration

What are some of the atomic thoughts of freedom in the Declaration of Independence? I quote:

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty, and the pursuit of happiness. That to secure these rights, governments are instituted among men, deriving their just powers from the consent of the governed."

How meaningful are those words today when dictatorship still prevails in many corners of the world.

What a challenge we are presented with by those words—the challenge of passing on vital and unimpaired the liberties which we enjoy—economic, political, social, religious—to the generations which will come after us.

As the poet said:

"The glory of our present
Is to make our future free;
We love our land for what she is
And what she is to be."

The lesson of constructive ideas must never be forgotten by us. Emerson said, "Beware of a thinker, he may turn the flank of history." Creative thoughts can turn the flank of dictatorship and oppression, of war and strife, of envy and misunderstanding.

II. LESSON OF COOPERATION

There is another lesson to be learned from the Fourth of July—and it is the lesson of cooperation. Our independence could never have been gained if men of different views

had not been able to reconcile whatever differences they had in favor of common agreement.

Unity, a willing desire to submerge minor disagreements, so as to protect the common good is an objective we must all bear in mind.

But cooperation does not only apply domestically to our homes, our work places; it obviously applies to the international scene as well.

Foreign cooperation

Cooperation is the supplement of national independence in the world picture. Our conception of world cooperation has changed since the days when George Washington warned us against any foreign entanglements and urged us "not to quit our own." To be sure, we still prize as dearly as ever our freedom of speech, of conscience, of the press, of assembly, of worship. We still treasure our self-determination and our ability to forge our own destiny by our own hands and minds.

Yet, we realize that in this atomic age time and space exist no more. Man's ingenuity and inventions have contracted the world. Atomic energy, rocket power, and other discoveries have put every nation in every other nation's back yard. The implications of this are clear.

Our national destiny is interwoven with the destinies of foreign peoples, whether we like it or not. Economic and political storms from across the sea bring storms in our own country and vice versa. We still believe nonetheless, that our foreign policy must be an American foreign policy, designed for our enlightened self-interest. At the same time, we are seeking to make the United Nations Organization, which is just 2 years old, a living, vital organism for peace. One hundred and forty million Americans have demonstrated the will, intent, and purpose for peace, and we expect the rest of the world to do likewise.

THE UNITED STATES AND RUSSIA

We know that we are living in one world geographically, but we are living in two worlds spiritually, economically, and politically. The Stars and Stripes floats over our land, but it confronts the Red flag of the hammer and sickle, already floating over one-sixth of the earth.

The United States and the Soviet Union appear to be contesting, whether we admit it or not, not only for the independence of governments throughout the world and for the control of resources, but for the minds of men.

I am satisfied, however, that with strength and courage, we can, under God, achieve a basis of understanding with Russia, and I hope we can achieve a just and lasting peace.

Our independence, then, in foreign policy is an independence of freemen, who are willing and eager to cooperate with their foreign cousins but who fiercely prize their own self-determination of policy.

CONCLUSION

My fellow citizens, you and I have briefly contemplated the history of Independence Day. We have seen some of the lessons of this occasion. We have felt the need for reconsecration of ourselves to the principles of July 4, 1776. We say now, as the youngster said, in effect, that summer day 171 years ago outside the Philadelphia State House: "Let freedom ring, let freedom ring."

We say: "Let the Liberty Bell peal forth the message, 'Proclaim liberty throughout all the earth and unto all the inhabitants thereof.'"

And we say in our hearts the words of a poet:

"Let independence be our boast,
Ever mindful what it cost;
Ever grateful for the prize,
Let its altar reach the skies!"

American Relations With Russia

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, July 7, 1947

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Clergyman Wants United States To Get Tough With Russia," containing excerpts from a sermon delivered yesterday by Dr. Walter Rowe Courtenay, pastor of the First Presbyterian Church of Nashville, Tenn. He stated, among other things, that trying to appease Russia is like tossing fire into straw and expecting the straw not to burn. This is good reading, and I commend it to everyone.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CLERGYMAN WANTS UNITED STATES TO GET TOUGH WITH RUSSIA

Dr. Walter Rowe Courtenay, pastor of the First Presbyterian Church, stood in his pulpit yesterday morning and got some things off his chest.

"Trying to appease Russia is like tossing fire into straw and expecting the straw not to burn," he said, and added:

"It's time, right now, for the United States State Department to drop its talk, treaties, and bungling efforts to placate Stalin.

"The thing to do is get tough, quick—before it's too late.

"When the Russians get the atom bomb, we should be wise enough to know, from bitter experience, that then it will be too late."

Dr. Courtenay spoke before approximately 850 people in the church auditorium. His address was also broadcast by radio station WSM.

"Trying to feed and clothe the world, while we 'yes' the Russians, will never solve the problem," the minister said.

"At present," continued Dr. Courtenay, "the Russians have 93 heavily armed, well-trained divisions in Europe, while the United States has 3 divisions of hastily trained, unhappy, and dissatisfied young men, trying unsuccessfully to police a small part of the area in which this country fought to the death just a little more than 2 years ago."

LITTLE MORE THAN MYTH

"From what I can learn, through consulting the best-informed sources, United States military air power now is little more than a myth.

"Two years ago, it was, without question, the greatest in the world. Now, the recent report of the Compton Commission describes it as a hollow shell, so obviously, the question arises: How long will it be before we are hopelessly outclassed—and how can we prevent this alarming state of affairs?

"I understand that at present the United States has less than 3,000 modern fighting planes available. Russia has more than 14,000 modern combat planes—ready to take the air.

"This comparison alone is frightening."

Dr. Courtenay told his listeners he disliked very much the risk he was taking in being considered an alarmist, but he added that he felt it was his duty to "try to arouse the people of the United States to the obvious danger of the present situation."

He said he did not approve, entirely, of President Truman's current plan for universal military training, but he thought this country needed a mobile striking force of more than a million men, capable of operating in the tropics, in the Arctic and throughout the world—and he added:

"Such a force does not exist at present—nor is it in prospect."

COMMUNISTS A DANGER

"Communists in the United States are an ever-present danger," said the pastor. "We were shocked, sometime ago, when the Canadian Government discovered Russian spies calmly working in government offices close to the sources of vital military information.

"Now we find, much to our consternation, that the same situation exists in Washington. I read last week, to my surprise, that the State Department had discharged several Communists—and that several other suspects disappeared mysteriously.

"How did these people get their jobs in the first place? That's what I'd like to know. That's what citizens of the United States are entitled to know, but I doubt very much if they will find out."

Dr. Courtenay pointed out that in the two most recent previous wars in which the United States had been involved it had been possible, from an industrial standpoint, to expand with the emergency.

"Then," said the speaker, "we had months—even years when we needed them. But in the future the time limit may be weeks—even days, or possibly it will not exist.

"Don't discount the Red menace," urged the clergyman. "It can be the red of blood and doom—or it can be the red of the sunrise heralding the dawn of a new day.

"It's strictly up to us."

Appropriation for Internal Revenue Bureau

EXTENSION OF REMARKS
OF
HON. CHET HOLIFIELD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. HOLIFIELD. Mr. Speaker, the present false economy drive of the Republican-controlled Eightieth Congress is the acme of extravagance as proved by a letter which I received from an honest hard-working employee of the Internal Revenue Department, sixth California collection district.

Appended to the letter is an analysis of the money recovered by the 95 men whose services are to be terminated July 15, 1947. It shows that these 95 men recovered during the calendar year 1946 $3,623,832 from taxpayers of 1943, money which would have been lost if their returns had not been personally audited by the field collectors. The letter also indicates that the internal revenue agents are 3 years behind in their auditing due to present lack of personnel.

The letter follows:

Hon. CHET HOLIFIELD,
Congressman, Nineteenth California District, House Office Building, Washington, D. C.

DEAR CHET: This is an open letter to the Congress of the United States regarding what I think is a stroke at the foundation of our democracy. That is, the elimination of several thousand Government employees from the most vital department of the

Government, the Bureau of Internal Revenue.

In the sixth California collection district 95 field deputy collectors are to be terminated as of July 31, 1947. This is over 19 percent of the total field division. Most of these men are from the lower salaried brackets, that is, grades five, six, and seven. I happened to be in this group, therefore, I am also personally interested.

This district is already understaffed to the extent that all 1943 income-tax returns were not audited for additional tax due before they were outlawed by statute. We are just now starting on 1944, 1945, and 1946 returns for the three biggest profit years, therefore where the most chiseling was done. This district has grown so rapidly we have been unable to keep up with the tremendous case load.

I enclose self-explanatory figures showing production results of the 95 deputy collectors being let out as of July 15, 1947, showing the comparative class of the collectors. Most of these are nonveterans as well as myself.

Almost everybody, it seems, is out to beat Uncle Sam and during the last filing period, I personally saved losses in revenue of approximately $20,000 by challenging and disallowing fictitious dependents claimed, and this is only scratching the surface.

In addition to the regular work to be done it takes 2 or 3 years to train a field deputy for this kind of work, and more if they have had no business experience, as have most of the men who were terminated. While it is true we have drones who should be weeded out, for the next 18 months our personnel should have increased instead of decreased.

This past month of June my individual production was over $6,000 of which $3,600 was collected from a local chiseling second-car dealer and $1,097 additional tax was collected from a trucking company. This is the additional revenue Uncle Sam never gets unless discovered by audit in the field. I am sure the poorest deputy collectors pay for themselves 10 times or more in this work.

Many thousands of dollars in taxes will be lost to the Government merely by the taxpayer being aware that the enforcement department of the Bureau of Internal Revenue has been decreased and figuring that his chances of not paying his just taxes has been materially increased in his favor.

I could add many other reasons why this reduction of personnel is a mistake, but I know that you will do everything possible to right this wrong. Many fine deputies are being let out at a time when they are most needed.

With kindest personal regards, I am,

Sincerely,

(Name deleted.)

Sixth District of California, Los Angeles, Calif.

During calendar year 1946:

Total deputies	478
Total productive cases	130,985
Total money production	$22,982,613

Ninety-five men (to be terminated July 30, 1947) equals 19.8 percent of total. These 95 men (19.8 percent) produced 30,693 cases (23.4 percent of total); $3,623,832 money (15.8 percent of total).

The top 50 men (of the 95 mentioned above) equals 10.4 percent of total. These top 50 men (10.4 percent) produced 22,082 cases (16.8 percent of total); $2,772,196 money (12 percent of total).

The top 44 men (of the 95 mentioned above) equals 9.2 percent of total. These top 44 men (9.2 percent) produced 20,123 cases (15.3 percent of total); $2,585,578 money (11.2 percent of total).

The top 28 men (of the 95 mentioned above) equals 5.8 percent of total. These top 28 men (5.8 percent) produced 14,219 cases (10.8 percent of total); $2,032,301 money (8.8 percent of total).

Community Property Tax

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 2, 1947

Mr. REED of New York. Mr. Speaker, on June 26, 1947, I introduced H. R. 3989 to amend section 51 of the Internal Revenue Code to equalize Federal income taxes upon married persons. A comparison of tax payable on specified net incomes by a husband and wife residing in a noncommunity and in a community property State indicates the necessity for such legislation.

I am inserting a table which presents the picture of discrimination as between noncommunity and community property States:

Net income before personal exemption (combined income of husband and wife)	Non-community-property State [1] (total tax on a joint return)	Community-property State [2] (total tax of husband and wife filing separate returns)	Tax advantage in community-property States
$1,000			
$1,200	$38.00	$38.00	
$1,500	95.00	95.00	
$1,800	152.00	152.00	
$2,000	190.00	190.00	
$2,500	285.00	285.00	
$3,000	380.00	380.00	
$4,000	589.00	570.00	$19.00
$5,000	798.00	760.00	38.00
$6,000	1,045.00	969.00	76.00
$7,000	1,292.00	1,178.00	114.00
$8,000	1,577.00	1,387.00	190.00
$9,000	1,862.00	1,596.00	266.00
$10,000	2,185.00	1,843.00	342.00
$11,000	2,508.00	2,090.00	418.00
$12,000	2,869.00	2,337.00	532.00
$13,000	3,230.00	2,584.00	646.00
$14,000	3,638.50	2,869.00	769.50
$15,000	4,047.00	3,154.00	893.00
$20,000	6,393.50	4,693.00	1,700.50
$25,000	9,082.00	6,460.00	2,622.00
$30,000	11,970.00	8,540.50	3,429.50
$40,000	18,097.50	13,290.50	4,807.00
$50,000	24,795.00	18,724.50	6,070.50
$60,000	31,891.50	24,529.00	7,362.50
$70,000	39,273.00	30,561.50	8,711.50
$80,000	46,939.50	36,850.50	10,089.00
$90,000	54,891.00	43,434.00	11,457.00
$100,000	63,127.50	50,274.00	12,853.50
$150,000	105,383.50	86,953.50	18,430.00
$200,000	148,124.00	127,081.50	21,042.50
$250,000	191,339.50	169,337.50	22,002.00
$300,000	234,564.50	211,612.50	22,952.00
$400,000	321,014.50	297,103.00	23,911.50
$500,000	407,464.50	383,543.50	23,921.00
$750,000	623,589.50	599,668.50	23,921.00
$1,000,000	839,714.50	815,793.50	23,921.00
$2,000,000	1,704,214.50	1,680,293.50	23,921.00
$5,000,000	4,275,000.00	4,273,793.50	1,206.50

[1] Entire income reported by husband on joint return.
[2] Income divided equally between husband and wife.

Koreans Lack Training, Unready For Self-Rule

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 24, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith the following article by Mr. Ralph Donaldson, of the Cleveland Plain Dealer:

KOREANS LACK TRAINING, UNREADY FOR SELF-RULE

(Article 29)

While the Koreans believe they are competent to govern themselves, and on that theory are demanding immediate independence, the evidence is all to the contrary.

There is in Korea a small intellectual class, part of which is the product of 50 centuries of Korean culture and tradition and part of which is due to the activities of American missionary societies. Many Koreans have been educated in the United States and, as a consequence, they are familiar with the terminology of democracy and its philosophy.

But there is scarcely anyone in Korea who, prior to the defeat of Japan, had had any training in the administration of any kind of government. Most Koreans have no conception of the meaning of democracy and freedom.

During the 40 years that Japan was in complete control of Korea, the Japanese made a practice of excluding the Koreans from all positions of responsibility in government and business. At the time of the initial occupation, there were only 70,000 Koreans in the civil service, and these were permitted to hold only minor positions and to perform menial tasks. On the other hand, 130,000 Japanese held positions in the government.

WAR DISRUPTS ECONOMY

Moreover, the end of the war found the Korean economy completely disrupted. For years the wealth of Korea had been drained for the benefit of the Japanese interests. However, during the 40 years of Japanese domination, the economy of Korea had become integrated with that of Manchuria and Japan. Although Japanese exploitation kept the Koreans poor, the interchange of products among Korea, Japan, and Manchuria resulted in Korea being virtually self-sustaining.

Now, however, Japan and Manchuria have both been cut off from Korea, and Korea itself is divided with an iron curtain at the thirty-eighth parallel. There is no exchange of goods or products between the northern zone, occupied by the Russians, where most of the mineral wealth and industry of Korea are located, and the southern zone, occupied by the Americans, which is largely agricultural.

Consequently, southern Korea is poverty stricken. It does not produce enough food to sustain the population, nor does it have a surplus of manufactured products which can be exchanged for food. The food deficiency in the American zone must be supplied by the United States in order to prevent starvation.

We are just beginning to realize that when we assumed the obligation to occupy southern Korea, remove the Japanese, and help prepare the Koreans for self-government we also acquired, in effect, 19,000,000 relief clients. And these people, who are dependent on us for aid, and who have no experience in the practical application of democracy or in running a government, now insist that they be allowed to govern themselves.

Even if we wanted to give Korea its independence immediately we would be handcuffed by the Moscow agreement under which Korea is divided into two zones. Under this agreement independence cannot be granted until after a period of trusteeship, for a period of up to 5 years. But the trusteeship cannot be worked out until after a provisional Korean Government has been established. And we cannot agree with the Russians as to who in Korea is to be consulted regarding the organization of a provisional Korean Government.

It is clear that Russia will not consent to the organization of any provisional government unless it is dominated by Communists. The United States will not consent to such domination. We want a Government that is

democratic, according to the American definition of democracy as modified to meet the oriental needs.

The fundamental principles of such a democracy, according to Maj. Gen. Archer L. Lerch, the military governor of Korea, the right of everyone to take part in the Government and acceptance of the wishes of the majority, once everyone has participated and spoken.

The Russians, on the other hand, want a government which is democratic according to their standards, which means domination by the Communists, since they regard all other parties as being undemocratic.

We might abandon southern Korea, but if we did the Russians would move in from the north and all of Korea would become communistic. This would be a serious threat to the democratic reforms we are attempting to establish in Japan.

If the United States and Russia were to agree to withdraw from Korea simultaneously the result would be the same. First, there would be civil war between north and south Korea in which the Communist-trained army of north Korea would have a decided advantage. Moreover, such a war eventually might involve the major powers.

So what we are trying to do is to plant the seeds of democracy in southern Korea so that they will grow and flourish, and to train Koreans in the administration of government.

We have established a provisional legislative assembly in southern Korea, consisting of 90 members, of which half were elected by the people and half appointed by General Hodge. Another assembly is to be chosen soon, with all the members to be elected. This will be done as soon as the election laws are revised to permit universal suffrage, replacing the system under which only the head man in each family casts a vote.

We have also appointed Korean administrators in every top government position, who work with the American authorities. Our policy is to train them, so that American military supervision can be withdrawn at the earliest possible moment.

It will be of interest to Ohioans that General Hodge's Korean adviser is Dr. Myo-Mook Lee, who was graduated from Mount Union College at Alliance in 1925 and who also attended Syracuse, Boston, and Harvard Universities.

We have also encouraged Koreans to organize political parties. There are more than 200 such parties. The chairman of the Social Democratic Party and president of Min Bo Sha, The Voice of the People, a newspaper published in Seoul, is Woon Hong Lyuh, who was graduated from the College of Wooster in 1918. Incidentally, he is a brother of Woon Hyung Lyuh, former organizer of a Communist-front party.

The future of Korea is far from clear. But this much is certain: Democracy's only toehold on the continent of Asia is in southern Korea. We cannot pull out and allow this oasis of democracy to be engulfed by communism without losing face throughout the Far East and imperiling the success of our efforts to democratize Japan and to establish profitable trade relations with the Orient.

Two Hundred and Seventy Billion Dollars Income by 1975?

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. HAGEN. Mr. Speaker, most of us realize that wars and depression are caused by greed, avarice, and lust for power. Cartels have dominated much of our international trade.

It is refreshing to learn that many firms realize that a "dog-eat-dog" philosophy of business must be fought, not by Government control and bureaucracy but by voluntary cooperation of the trade associations of the Nation.

I hope that this campaign takes hold of the imagination of those who must lead America in the future, because, after all, it is the idealism of the few which, throughout history, has lighted the way for the millions.

Just recently I received a letter from the Homestead Valve Manufacturing Co., of Coraopolis, Pa., in which F. E. Schuchman, the secretary-treasurer, had the following to say:

Attached is the first of a series of institutional advertisements which our company has seen fit to sponsor.

Our aim is so simple that its import may not be realized at first, but some consideration will reveal, we believe, that somewhere along the route between our boyhood days and man's estate we have mislaid an important ingredient to happy though spirited living. I am referring, of course, to teamwork in business.

Even in our most simple childhood games we played within a prescribed limit—a code—and so do we in the field of business, except that for some obscure reason we seem to shy away from setting down the code of business behavior so that all may be sure that they understand and act within the limits that will permit each of us to be always at our best in business relations.

The price paid for this blind spot is, of course, "booms and busts." With this conclusion you will, no doubt, agree, since it is not monopoly or any similar bugaboo but rather lack of economic balance that has been and is our source of weakness in business relations.

Following are the contents of the advertisement above mentioned:

TWO HUNDRED AND SEVENTY BILLION DOLLARS INCOME BY 1975?

An economist of high standing has said, "My studies show that by 1975 our national income should be $270,000,000,000 if we behave ourselves economically speaking."

Our 140,000,000 people want high, steady, national income, naturally, since it means high, steady, individual income. But to get it we must learn how to behave ourselves economically speaking. Under the guidance of the men who have the know-how—the wisest men of business and experienced economists—we must learn how to exchange to everyone's advantage our goods, our labor, our services.

Therefore it is proposed that men chosen by recognized national groups meet and draw up a code for the guidance of consumers, employees, and employers.

This would not mean a planned economy. It would be simply a blueprint for mutual understanding and cooperation which, if followed, would lead us to the behavior that assures full, steady, profitable employment.

Team action is needed if a code is to be developed and used. We grant the use of all or any part of this advertisement without permission or acknowledgment.

AMERICA'S GREATEST NEED

A code for the fair exchange of goods and services, freely arrived at, freely used.

Urge your national business groups to join in this search for economic order. These groups include all Nation-wide associations of commerce, banking, manufacturing, labor, farming, and marketing.

The Late Maj. R. R. Wright, Sr.

EXTENSION OF REMARKS
OF
HON. ROBERT N. McGARVEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. McGARVEY. Mr. Speaker, today in Philadelphia the funeral of a distinguished citizen is being held. Maj. R. R. Wright, Sr., who started his life as a slave in Dalton, Ga., rose from this humble beginning to become a renowned educator and one of the foremost leaders of his people in the United States.

He was 94 when he died on July 2, and the span of life encompassed by those 94 years tells the story of a fine American and a distinguished gentleman. Major Wright was educated in the schools of Georgia and graduated from the University of Atlanta in 1876. He also attended Wilberforce University, the University of Chicago, Harvard University, and the University of Pennsylvania. He was the recipient of master of arts and doctor of laws degrees.

He was the principal of the first Negro high school in Georgia and for 30 years was the president of Georgia State College. His educational activities were interrupted by the outbreak of the Spanish-American War, in which his appointment as special paymaster with the rank of major was approved by the United States Senate.

In 1921, after 50 years of honorable service in the field of education, he came to Philadelphia and founded the Citizens & Southern Bank & Trust Co., which today is the largest Negro-owned and operated bank in the North. As head of the bank, he organized the National Association of Negro Banks, and served as its president for 16 years.

Major Wright was unflagging in his efforts to obtain the recognition due his people. It was through his efforts that a memorial stamp honoring the late Booker T. Washington was issued. He was the founder of National Freedom Day, which celebrates the thirteenth amendment to the Constitution. National Freedom Day is proclaimed annually in Philadelphia and Pennsylvania. It has yet to be recognized nationally, although a bill has been introduced in both the Senate and the House for this purpose. The ideals of National Freedom Day were very dear to the heart of Major Wright, and the formal recognition of this day would be an appropriate honor to an outstanding citizen who contributed so much to this race and to his country.

It was with overwhelming sorrow that I learned of the death of Major Wright. I am honored by the brief acquaintance that I had with him. His life story tells the true tale of America in its recounting. His early serfdom and his struggles against hardships, his eventual defeat of the obstacles which stood in his way and the prominent place which he occupied in national affairs and in the hearts of his people at the time of his death, are a tribute to the country which he loved so well. My heart goes out in sympathy to

the family of Major Wright as they mourn the passing of a fine man, a distinguished leader, and a truly great American.

The Federal Courts

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, July 7, 1947

Mr. O'CONOR. Mr. President, recently I took occasion to state my favorable attitude regarding several bills designed to improve the quality of the administration of justice through the operation of the jury system in the Federal courts.

Certainly nothing is more important than the proper functioning of our judiciary and, as an integral part of that branch of our Government, the jury system which has characterized Anglo-Saxon justice over the span of time.

In order to bring to the attention of my colleagues in the Senate the sound reasons for the enactment of these bills, I respectfully call their attention to an editorial which appeared in the New York Times of yesterday, Sunday, July 6.

Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD the editorial entitled "For the Federal Courts."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR THE FEDERAL COURTS

Before it adjourns, Congress has several opportunities substantially to assist the better Federal administration of justice. One deals specifically with the southern district of New York, the other affects the entire country.

The local measure arises from the peculiar circumstance that when the late Judge John M. Woolsey retired that judicial office automatically terminated. At a time when the Federal courts in this district are more crowded than ever before there is thus one less judge to handle the work of the court. For example, the admiralty calendar is almost 2 years behind; in other branches conditions are almost as bad. The House has passed a bill authorizing the appointment of another judge for this district. The Senate should pass the bill and relieve the burden of the overworked judges who are carrying a bigger load than ever, and bigger than that of judges in other districts throughout the country. We urge the Senators from New York to exert every effort to obtain a favorable action on the bill to re-create this judicial position.

The other matter deals with the improvement of the Federal jury system. Our system of justice is built on the foundation stone of trial by jury. Few realize that great differences exist throughout the various United States districts as to who is eligible for and exempt from jury duty as well as in other equally important respects. Several years ago the Judicial Conference of Senior Circuit Judges of the United States appointed a committee of district judges, under the chairmanship of Judge Knox, the senior judge of the southern district of New York, to make an investigation of the operation of the jury system. They rendered a voluminous report which received the unanimous approval of the Judicial Council. Three bills to carry out the recommended improvements and establish uniformity were formulated and introduced into Congress.

Hearings have been held before appropriate congressional committees. The bills have the support of the attorney general, New York State, city and county bar associations, and many of our most distinguished and experienced Federal judges. Congress should enact these bills and help to strengthen and improve this bulwark of our democracy.

What of the Future of America?

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, July 7, 1947

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address entitled "What of the Future of America?" delivered by me on July 5, 1947, as part of a national broadcast from Washington.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

What shall be the future of the world's greatest Nation, born 171 years ago yesterday? This is a question with which the whole world is deeply concerned, for in the keeping of America, as world events have shaped themselves, is the destiny of the liberty-loving peoples of the earth.

FATE OF WORLD IN OUR HANDS

Whether we wish it or not, the fate of the world is in our hands. It is an unparalleled responsibility, and yet at the same time a great and glorious opportunity.

From my earliest infancy I have been taught that the land of America is a land choice above all other lands; that it was kept from the knowledge of the rest of the world for many centuries, to be revealed in God's own time for the establishment of a great Nation by inspired men—a Nation that would have the responsibilities and opportunities sometime in its history that are America's today.

GREAT NATIONS DESTROYED

There have been many powerful nations in the past, which had opportunities for enduring greatness, but one by one they have gone down to destruction because of moral decay. They forgot God and His commandments.

Yes, the America of today has possibilities of greatness yet undreamed of. She may be the savior of the liberties of mankind and lead nations into an era of peace and good will, or, she may, through the gigantic forces she, in her productive might has discovered and learned to use so destructively, send herself and other nations of the earth to the oblivion from which the nations of the past have never returned.

WHAT SHALL BE AMERICA'S DESTINY?

Whether America's rendezvous with destiny will be one of glory or destruction lies in her own hands.

To make it one of glory she must remember her beginning, her pilgrim fathers and others who came to this land that they might worship God and keep His commandments.

She has but to remember that at the founding of the Republic she adopted the great principle that "All men are created equal and endowed by their Creator with certain inalienable rights, among which are life, liberty, and the pursuit of happiness."

AMERICA'S GREATNESS DIVINE GIFT

She has but to remember that in the sacred document adopted 171 years ago the patriots under God, "Mutually pledged their sacred honor to maintain those principles of human liberty."

She has but to remember that her greatness and her power today came as gifts from God and because she tried to live as a Christian Nation even though she stumbled and faltered at times in her well doing.

In short, she has but to repent in sackcloth and ashes of her drunkenness, her licentiousness, her selfishness and hatreds and all those un-Christian vices that drag her down, and once more become active in spirit and in deed in living the Gospel of the Christ.

Having done this, she will, under God, keep her rendezvous with glory.

Of this I testify. Of this I am sure.

The Townsend Pension Movement

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. MILLER of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following addresses:

ADDRESS WELCOMING THE DELEGATES AND VISITORS TO THE SEVENTH NATIONAL TOWNSEND CONVENTION, DELIVERED BY CONGRESSMAN GEORGE P. MILLER, SIXTH DISTRICT OF CALIFORNIA, AT THE ULINE ARENA, WASHINGTON, D. C., ON JUNE 26, 1947

Mr. Chairman, Dr. Townsend, Captain Townsend, distinguished guests, delegates to the Seventh National Townsend Convention, ladies and gentlemen, it seems to me that it is eminently fitting that a California Congressman should have been selected to welcome Dr. Francis E. Townsend and his loyal followers to the District of Columbia, and the Capital of the United States—your Capital and mine.

We, of the Golden West, are very proud of the fact that this great pension movement originated in California. But, the Townsend movement no longer belongs to California—we have gladly given the good doctor to the United States of America. He has broken down State boundaries and bound the senior citizens of the many States together in a militant demand for justice for themselves—and for the liberation of abundance for the use of all, who render useful service in the common life of our democracy.

Out of the suffering of the great depression came this dynamic humanitarian crusade, and, because it is so truly American, and democratic, genuine Americans everywhere have responded, so that in the year 1947 it stands forth as the one great pension movement on a truly national scale.

A NATIONAL ORGANIZATION

There are, of course, isolated State movements, here and there, but the Townsend movement is the only organization with a Nation-wide strength sufficient to command the interest and attention of the Congress of the United States.

A UNIQUE CRUSADE

It appears too, fellow Americans, that the Townsend crusade is unique among the great peoples' movements of history.

For the first time in history, the old folks (senior citizens) are organized, militant, and demanding; demanding not only justice for

themselves, but also, the full use of our mass-production machinery for mass prosperity.

A UNIQUE CAREER

Again, the history of Dr. Francis E. Townsend is, itself, unique. I do not know of any other man leaping from obscurity to national fame at the age of 67, to continue in active leadership of an ever-growing Nation-wide organization, to a healthy 80.

A UNIQUE POLITICAL POWER

Never before have citizens from 45 to 80 years of age, become as a group, a potent political factor in the life of the Nation, holding the balance of power in many States and congressional districts.

A UNIQUE SURVIVAL

Ordinarily during a war period, organizations concentrating on domestic problems pass out of the picture. The Townsend crusade has not only held its own throughout World War II; it is today ready for a great expansion.

I therefore welcome you to Washington. You have every right to be here, as citizens of our great democracy. I know of no organization that comes more directly from the grass roots, speaking in the home-spun language of our farmers, our workers, our shopkeepers, and seeking in our own way to apply the principles of primitive Americanism to the problems and needs of this day in which we live.

Tomorrow we will welcome you on the steps of the National Capitol and in the offices of the congressional office buildings, and hope with you that enough Members of Congress will join with you and with your congressional steering committee to adopt H. R. 16, for we believe most sincerely that the adoption of the Townsend plan will make a very definite contribution toward warding off the threatened great depression, and revitalizing the American free-enterprise system.

May God guide your earnest deliberations.

RESPONSE BY H. N. FILES, FINANCIAL SECRETARY, NATIONAL TOWNSEND PLAN, TO THE ADDRESS OF WELCOME DELIVERED BY CONGRESSMAN GEORGE P. MILLER

Mr. Miller, Dr. Townsend, Robert Townsend, headquarter's, staff and delegates to this Seventh Townsend National Convention, sincerely thank you and the city of Washington for the hearty reception and the warmth of hospitality with which you have greetcd us. We shall remember and cherish all the days of our lives your graciousness and cordiality.

We represent the grass roots of the great cross section of America known as the common people, of whom the immortal Lincoln once said: "God must have loved the common people for he made so many of them."

We are profoundly interested in the Eightieth Congress giving us a hearing on Townsend plan legislation. H. R. 16 was introduced January 3, 1947, by Representative ANGELL, Republican, of Oregon, and is sponsored by 50 other Congressmen, both Democrats and Republicans.

A short time later, on March 10, 1947, J. HARDIN PETERSON, Florida Democrat, introduced H. R. 2476 an exact replica of H. R. 16 so we now have twin Townsend plan bills in the Ways and Means Committee of the House. Senator WILLIAM LANGER, of North Dakota, also introduced in the Senate S. 57, identical with the twin House bills.

We feel that this legislation should be made a fundamental part of the domestic policy of the United States. It is not partisan legislation, but is supported by Members of both parties in Congress.

In May 1937, the late Secretary of Commerce, Harry Hopkins, at that time Federal Works Administrator, delivered an address before a conference on unemployment and education. As reported by the Associated Press, Mr. Hopkins in referring to Dr. Townsend said "I don't care what you think of Townsend, but you have got to admit he did some job—he dramatized the situation of the aged."

Each and every one of us will take home happy memories of this occasion with a yearning desire to return again to the fair city of Washington.

Thank you.

Postal Rate on Books

EXTENSION OF REMARKS
OF
HON. HERBERT R. O'CONOR
OF MARYLAND
IN THE SENATE OF THE UNITED STATES

Monday, July 7, 1947

Mr. O'CONOR. Mr. President, it is obvious to every well-informed person that the most desirable method for the dissemination of information is the widespread use of books. No greater facility exists for the acquisition of knowledge than through books; and I submit that it would be a short-sighted policy on the part of our Government to restrict unnecessarily the use of books by our citizens.

A threat to the increased use of books is before us in the form of recommendations for substantial increases in postage rates. If these increases are made they will discourage the circulation and sale of books and will have an adverse effect upon the efforts of educators and librarians to improve the intellectual standards of our people.

A challenging statement on this all-important question has just been written by Mr. Marquis Childs, and appears in today's edition of the Washington Post. I request unanimous consent to have inserted in the Appendix of the RECORD a copy of the article by Mr. Childs entitled "Postal Rate on Books."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON CALLING—POSTAL RATE ON BOOKS

(By Marquis Childs)

It's an old political axiom that the squeaky wheel gets the grease. That is to say, the pressure group making the biggest noise gets the biggest favors.

Likewise, the meek and the modest, who may some day inherit the earth, receive little attention from the powers that be in Congress. Looking for ways to economize, the Republicans are also scurrying about to find new and preferably painless methods of raising revenue.

One proposal now before Congress is to raise the postal rate on books. To those who deal in global sums and global crises, this will seem a mere flea bite on the body politic. It would bring in only two to three millions in additional money.

But small as this is, it can do a serious injustice with consequences far out of proportion. For many years, magazines have been given preferential treatment on the theory that they helped to educate the public.

This has meant, in effect, a generous subsidy to the magazine industry.

Books, however, have never received such preferential treatment, although they have not fully paid their way in the postal system. Now, Chairman EDWARD H. REES, of the House Post Office and Civil Service Committee proposes to increase the rate from 4 cents to 8 cents on the pound, and from 3 to 4 cents for each additional pound.

If you can make a case for magazines spreading light and learning, you can make an even better case for books on the same score. In fact, in the field of book publishing today there is a wider range of expression and a more free play of ideas than anywhere else. Books coming off the press these days radiate ideas.

In the nonfiction field they are a vital source of information, contributing to an understanding of the complicated world in which we are trying to find a peaceful way. Take that whale of a book, Inside U. S. A., by John Gunther, which must weigh at least 5 pounds. It is a remarkable synthesis of knowledge about this broad land and the strange and wonderful things that happen in it.

At the height of the controversy over the Truman program for Greece and Turkey, there appeared a book called The Greek Dilemma, by William McNeill, based on exhaustive first-hand knowledge. It is useful not merely to the ordinary reader, but for Americans going on the mission to Greece it is a valuable handbook.

Prof. Arnold Toynbee's recently published A Study of History gives us the rise and fall of empires through the centuries. We see in the perspective of this sweep what our own role is likely to be at the present moment of history. Anyone who reads Carlo Levi's Christ Stopped at Eboli will have a better understanding of the politics of desperation in Italy.

The list of current examples could be extended almost indefinitely, and there is a long and impressive record out of the past of books that have cut through the dark of ignorance and superstition. In the continuing struggle for freedom, they are powerful weapons.

While there are large publishing firms and the book clubs are in a sense big business, the opportunity for the newcomer seems greater in this field than in almost any other. Several new firms have come into being since the war ended.

On the retail side, too, the book business is one of the few in which the individual can make a start with a modest investment. A recent development is the 25-cent pocket book, distributed in large numbers. Pocket books include not merely thrillers, but fiction and nonfiction titles representing the best in literature.

Undoubtedly, the postal rates need a thorough overhauling. Like our archaic tax structure, they have "just growed." Some interests are favored, others are penalized. A careful study is needed to make sense out of the tangle.

But meanwhile it is unfair to put a further penalty on the publishing business least capable of defending itself. Books, however they may sometimes be debased in the quest for mass readership, are part of the honorable record of man's long struggle up from the primeval ooze.

Alcohol Tax Unit in First District of New England

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 7, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a letter I have received together with a statement of facts pertaining to duties and accomplish-

ments of the alcohol tax unit in the first district of New England:

BOSTON, MASS., *July 3, 1947.*

Hon. THOMAS J. LANE,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: For your information, there is enclosed a statement of facts pertaining to duties and accomplishments of the Alcohol Tax Unit in the first district of New England with regard to law enforcement, crime prevention, taxes collected, and evasions prevented, in addition to the regular duties of the Unit in enforcing the internal-revenue laws with respect to distilled spirits, wine, and malt beverages.

You, as a Representative of New England, are known to be interested in any program which tends to benefit the civic and economic welfare of its citizens; therefore, in conjunction with the enclosed statement of facts, it might well be pointed out that, under the reduction in force which has come into effect, the Alcohol Tax Unit in the first district will be seriously undermanned, with the probability that a great deal of the progress which has been made in control of crime and tax frauds will be nullified.

The first district has been undermanned for some time, due to the fact that replacement of personnel has not been made to cover deaths, separations, and retirements within the Unit. The reduction in force, which has just been put into effect, takes a further cut of 10 trained investigators who have had an individual minimum of 12½ years' service in the Unit under civil service and efficiency ratings of very good and excellent. In the year 1936 there were 79 investigators of the Alcohol Tax Unit in the first district; in June 1947 there were 38 investigators in the first district, and these 38 have been reduced to 28 as of July 15, 1947.

This communication and enclosed facts are presented for your consideration and any action you may deem advisable to take for the protection of the revenue of the United States and the prevention of crime and tax frauds in the first district.

The cost in salaries to retain these 10 trained investigators for a year is just under $42,000 which includes six step rate increases due, with a far greater potential return to the Government through the actual taxes collected by the prevention and uncovering of crimes and frauds, which will not be uncovered by the reduced force.

The Greater Boston area, under this reduction, will be policed by seven investigators, one of whom is permanently assigned to the raw-materials program, two of whom are assigned to the program necessitated by the National Firearms Act; leaving but four men for the prevention and detection of bootlegging and other duties imposed by law and regulations upon the alcohol-tax unit. Other metropolitan areas of New England will be manned in a similar manner.

Very truly yours,

A COMMITTEE FOR FAIR PLAY,
By RAYMOND E. SOLKA.
FRED W. WICKENS.
JOHN J. COLLINS.
LYMAN G. JUDD.
WILLIAM A. O'DEA.

The enclosed statistical report does not reflect all of the duties imposed upon Alcohol Tax Unit investigation personnel by Executive order and the statutes. The following is a concise report of the accomplishments of the investigators of New England in the above duties.

FLOOR STOCKS TAX, 1942 AND 1943

The plan of operation for the investigation of floor stocks tax cases originated in the New England district and was accepted for the entire country. Investigations in New England resulted in the additional collection of taxes, penalties, and interest in the amount of $300,000, and the seizure of distilled spirits valued at $300,000, which liquor was eventually returned to the individuals from whom it was seized by the Department of Justice upon the payment of a compromise to settle criminal and civil liabilities. The exact amount of these compromises is unknown to this unit, but it is a very substantial amount.

BLACK-MARKET LIQUORS

Investigations of the black-market activities resulted in the preparation of 29 reports, of which 24 cases were submitted to the district attorney for prosecution, containing recommendations for action against 100 individuals. Seventeen of these individuals were indicted and 58 informations were filed; 30 individuals were convicted, 4 liquor permits were revoked, and treble-damage actions resulted in the collection of $36,000.

The ramifications of the black market in liquor make it impossible for the above figures to reflect all of the investigations made by the investigative personnel in New England for other sections of the country. However, as a result of one of these investigations, a man was sentenced to serve 6 years out of a total sentence of 48 years and sentenced to pay fines totaling $480,000 and to pay $2,750,000 in taxes and penalties. The value of the investigations made for other districts cannot be fully determined, but the above-cited case is only one of numerous large violations uncovered and prosecuted.

TIE-IN SALES PROGRAM

This program was initiated as a result of protests by consumers that they were being compelled to purchase other types of distilled spirits, including poor grade rums and gins, in order to obtain scotch and rye of popular label. Investigations to the number of 4,000 were made and 2,200 statements were obtained from retail liquor dealers involving 64 wholesalers in tie-in sales to the retailors. This Department issued citations against the 64 wholesalers involved and these wholesalers entered into stipulations with this Department that this practice would be discontinued. The results of these investigations and stipulations were of great value to the general public and the liquor trade.

ATU-SRA PROGRAM

This Unit has controlled sugar since 1934 under its Raw Materials Program. At the start of the war, sugar rationing was inaugurated and the enforcement was turned over to the SRA. While this Unit no longer maintained the full control to which the trade was accustomed, it did assist the OPA by making 434 investigations and reporting 207 violations, all of which were of a major nature, to the OPA for their consideration and disposition. Complete figures as to the results of the findings of the OPA are not available. However, it is known that many of the dealers involved were suspended and others prosecuted.

The above results were accomplished without the surrender of the complete raw materials program of this Unit, which is still maintained as an integral part of its activities.

NATIONAL AND FEDERAL FIREARMS ACTS

Investigative personnel attached to the New England district of the Alcohol Tax Unit, as a result of the large importation of war trophies, carried on a program of education in order that all persons who have such trophies in their possession would comply with the statute.

This program was carried out by personnel making 1,740 public relations contacts with banks, public-utilities companies, and radio stations. These contacts resulted in the obtaining of a tremendous amount of free advertising for this program. Under this program, 3,337 investigations were made, which resulted in the registration of 422 trophies, of which 418 were rendered inoperative, 12 cases being reported to the district attorney's office, and 11 guns being returned to the armed forces. Six persons were arrested, and five were convicted, in addition to the seizure of two boats valued at $3,600.

TREASURY DEPARTMENT ACCIDENT CASES

Recently this unit was assigned the duty of investigating all types of accident cases involving any of the Treasury Department personnel in which suits might be filed against the Government under the Tort Claims Act. To date, nine such cases have been investigated, and no suits have been instituted against the United States or the Treasury personnel. The activities of this Department have undoubtedly resulted in a great saving to the Government.

OTHER INFORMATION

During the war as many as 11 investigators attached to this office were assigned to the Intelligence Unit of the Treasury Department for the purpose of making personnel investigations of war-service employees, for periods varying from 6 months to over 5 years; during the same time personnel was assigned to assist the Narcotic Bureau, these assignments covering 5 weeks to 3 months. In addition, three men were loaned for a period of 60 days to the Intelligence Unit, on several number-pool cases, the latter involving income-tax frauds.

In 1936, 90 investigative employees were assigned to New England, and this number was reduced until, in 1945, 1946, only 47 regular and 3 war-service employees were assigned. The reduction in force covers 10 regular and 3 war-service employees; only 1 of the war-service employees has veteran status. This reduction will leave only 37 regular employees to cover a district which cannot be adequately policed with such a small personnel to perform the many duties which this Department must perform and which it has so capably performed during the past few years with an undermanned force of 50.

One of the most unfair phases of this particular reduction in force in this old-line agency in New England is the fact that in several other districts throughout the country there are at the present time being retained in service, men holding war-service appointments or permanent appointees having fewer retention points than the career men who are being separated in the New England district.

Although the statutes requires that the workweek of all Federal employees shall consist of 40 hours of labor with all work over 40 hours performed in 1 week to be paid for at overtime rates, the investigative personnel of the Alcohol Tax Unit have performed duties far in excess of the weekly 40 hours, for which they draw their salaries without any of them ever having received 1 cent as overtime pay as required by said statute. If such overtime were paid, it would be impossible for any supervisory official to remain within his assigned budget and operate efficiently.

The following investigators have been affected by this reduction in force:

Name	Service		
	Years	Months	Days
Joseph Irzyk, New Hampshire	13	3	14
Fred. W. Wickens, Massachusetts	15	2	3
Lyman G. Judd, Massachusetts	13	1	15
Raymond E. Salka, Connecticut	14	8	9
John Redway, Connecticut	12	7	4
John J. Collins, New Hampshire	13	7	6
Michail J. Daly, Massachusetts	13	5	0
William O'Dea, Rhode Island	13	4	7
William Gouin, New Hampshire	13	1	5
Daniel T. Rourke, Connecticut	13	1	3
James J. Davern, Massachusetts	(1)	(1)	(1)
Joseph Rosenberg, Massachusetts	(1)	(1)	(1)

[1] War service.

A Good Formula

EXTENSION OF REMARKS
OF
HON. HARLAN J. BUSHFIELD
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, July 7, 1947

Mr. BUSHFIELD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "A Good Formula," published in the July 1, 1947, issue of the Newark Star-Ledger.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A GOOD FORMULA

"Do not expect something for nothing. Do not expect to start where your parents are now. Hold on to some fundamental convictions by which to steer your lives. Hold before yourselves the modern trinity of faith, courage, and grit. Have a magnificent obsession. Be quick to give encouragement. And believe that the law of life is give and live."

That was the advice Dr. Frank Glenn Lankard of Drew University gave graduates of Upsala College. We especially like that part about not expecting to start where one's parents are now. It is not only good counsel to the graduates, but good advice also to overindulgent parents anxious to start their sons off in life with a vice presidency.

Who Is Responsible for the High Cost of Living, the Housing Shortage, and the Weakening of Rent Control?

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. SABATH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address which I delivered over radio station WMAQ at Chicago, Ill., on Sunday, July 6, 1947:

ANNOUNCER. Here is Congressman ADOLPH J. SABATH, of the Fifth Congressional District of Illinois, dean of the Congress, who has been asked to give his views on legislation considered by the Congress during the past week. I take pleasure in introducing Congressman SABATH.

Mr. SABATH. Mr. Announcer and radio listeners, the high cost of living, the housing shortage, and rent control are closely related. I shall try to explain briefly why the repeal of OPA and the failure of Congress to enact needed legislation are responsible for the continuous increases in the high cost of living.

The most recent betrayal of the American people by this Congress is the misnamed rent-control bill which will still further increase the cost of living. I deplore its passage as much as the President deplored the compulsion under which he signed the bill into law.

Let me quote just a few sentences from the President's message on the Rent Control Act. He said:

"I have today signed the Housing and Rent Act despite the fact that its rent-control provisions are plainly inadequate and its housing provisions actually repeal parts of the Veterans' Emergency Housing Act which have been most helpful in meeting the housing needs of veterans.

"Had I withheld my signature, national rent control would die tonight. It is clear that, insofar as the Congress is concerned, it is this bill or no rent control at all. I have chosen the lesser of two evils.

"We are still suffering from a critical housing shortage. Many families are desperately seeking homes. In their desperation, they would have to submit to demands for exhorbitant rent.

* * * * *

"It is evident that the present high cost of living should not be increased further by an increase in rents. We must get prices down, not devise means of getting the price up."

The President continued by pointing out that the new bill removes the remaining controls on materials, and that as a result construction of homes will be delayed and additional costs may even be added.

Rent control is continued to March 31, 1948; but there is a provision that landlords and tenants may enter into what the bill calls voluntary agreements for a 15-percent increase.

I opposed this bill because it will not do what it pretends to do. I was especially opposed to this 15-percent increase provision because I felt that landlords will, in most instances, take advantage of tenants and force them to agree to the increase so they would have a roof over their heads for at least 18 months and thereby, as I stated, increase their already high cost of living.

I realized that the small property owners needed some relief and, consequently, I have favored the provision in the original law that would permit them, in hardship cases, to obtain an increase in their rents in order for them to make both ends meet. Actually, to date, over a million of the small property owners have obtained an increase in rentals.

The pressure for the removal of rent control did not come from the small owners but came from the vicious lobby financed by the landlords of the large apartment buildings which they bought in foreclosure actions during the depression at 12 cents, 15 cents and 20 cents on the dollar.

Just a year ago, with support from some reactionary Democrats, the Republicans sent a price-control bill to the President, which he promptly vetoed. They responded by passing a still worse bill, which he had to accept to have any price control, just as he had to accept this rent-control bill.

You remember all those pledges and assurances from big business and from the Republicans that ending price control would not bring any increase in the cost of living—in fact, they claimed it would reduce prices.

You know those promises have not been kept and you know what has happened.

Food costs have doubled in the last 9 months.

Almost every cost-of-living item has gone up sharply.

I introduced House Resolution 133 more than 3 months ago, calling for a thorough investigation of the high cost of meat, butter, eggs, cheese, milk, and other items, and to fix the blame where it belongs. I introduced the resolution in the hope of bringing about a reduction in the outrageously high prices, but, unfortunately, have been unable to force the Republicans to act.

You remember that the people were unable to obtain any meats, even at high prices, the reason being that last fall the packers struck against the American people. They refused to slaughter and refused to ship meat from their warehouses until the controls on the prices of meats were removed, while they ran full-page ads telling the American housewife that without price control there would be plenty of meat at little or no added cost, and that the black market would be abolished.

The black market was abolished, all right, because legal prices soon became even higher than black-market prices.

Only last week meats jumped again 10 to 20 cents a pound. The packers have tried to justify these increases by feeding the people with more untruths—yes; with falsehoods—but not with good meats at reasonable prices.

For the last few years the Congress has been subjected to the greatest pressure from industrial and business lobbies in the history of our country demanding higher and higher prices and to kill OPA and rent control.

Of the many vicious lobbies, one that stands out is the real-estate operators and building-construction lobby.

Time after time I have assailed this selfish group, and in his veto message on the rent control bill the President also lashed out at them.

The big landlords, the speculators, the builders, manufacturers, and the materials dealers, under the leadership of the National Association of Manufacturers, fought every control of prices and of materials. They have hampered every effort of our Government to build homes for our returning servicemen.

They hobbled the veterans' emergency housing program, and eventually caused it to bog down. They blocked enactment of the Wagner housing bill in the last Congress and have prevented it from obtaining even adequate committee hearings in this Congress. That bill, if it had been law, would have aided in the construction of thousands of new homes at reasonable prices.

These lobbyists who have infested Washington for many years past have won a great victory, but at what cost to our servicemen and the consuming public.

It is regrettable that the Republican majority in Congress has permitted itself to be the willing tool of these conscienceless profiteers. Oh, I concede that some reactionary Democrats cooperated with them, but the Republicans unfortunately have sufficient votes in this Congress to put over this special-privilege legislation. It is aid to the already wealthy at the expense and to the detriment of the wage earners, yes, to the people of low income and to the public in general.

I am not opposed to industries and corporations making profits; in fact, I favor their making fair profits. But when 228 corporations and combines who continuously clamor for free enterprise increase their earnings by 305 percent in the last 3 months, as shown by official reports, it borders on plain robbery.

Under the pretext of reducing taxes, the Republicans passed a tax bill which, they said, would cut taxes 30 percent. The President properly vetoed the bill, and I voted to sustain the President. This Wall Street financiers' tax bill would have reduced the taxes of the man earning $2,500 a year by 56 cents a week, while the man with an income of $250,000 would save $1,118 a week, or $58,175 a year.

This was in addition to the $6,000,000,000 tax gift given to big companies and profiteers and racketeers last year when the excess-profits tax was repealed.

As the crowning injury, the Republicans have passed the Hartley-Taft antilabor bill, which destroys most of the union progress of the last 100 years and even forbids union workers to criticize the Congress.

The Republican Party controls both Houses of Congress, and they cannot evade responsibility, no matter how hard they try, for all this legislation against the best interests of the people, which I fear may affect our present high employment and prosperity.

The Republicans gained control of both Houses of Congress on the false promises they made in the last election campaign that with the repeal of OPA and other price controls the shortages of meats and other foods would be removed and that prices would be

lowered. Unfortunately, the people were hoodwinked and misled by these false representations and statements. But they know now who is responsible for the ever-increasing rise in prices and, while they regret what happened in the last election, I am satisfied they cannot and will not be fooled again.

Europe's Testing Time

EXTENSION OF REMARKS
OF
HON. JOSEPH C. O'MAHONEY
OF WYOMING
IN THE SENATE OF THE UNITED STATES
Monday, July 7, 1947

Mr. O'MAHONEY. Mr. President, a sane and constructive article, entitled "Europe's Testing Time," appeared in the Washington Post for last Saturday, from the pen of the able and informed Barnet Nover. In the article he points out that the conference called by Great Britain and France for July 12 to consider the Marshall program, may well be one of the most fateful in the history of Europe.

There is much reason to believe that the proposal of the Secretary of State of a program of self-help for Europe, with the cooperation of the United States, may be the key that will finally open the door to world peace. I ask unanimous consent that Mr. Nover's article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHOOSING SIDES—EUROPE'S TESTING TIME
(By Barnet Nover)

The most fateful plebiscite Europe has ever witnessed is now under way.

This time it is not peoples but governments that are being polled. The question is whether or not to take part in the conference which Great Britain and France have called to meet on July 12.

At that conference—the meeting place, significantly, is Paris, where Russia scornfully rejected the Marshall proposal—plans are to be drawn up for carrying out the program of European mutual aid and cooperative reconstruction with the assistance of the United States.

There would not be the slightest doubt as to the outcome of the plebiscite were the peoples of Europe allowed a truly free, uninhibited choice.

The overwhelming majority of them, those living in the Soviet sphere of influence as well as those living west of the iron curtain, would enthusiastically support the Marshall program as developed by Great Britain and France.

They live in a battered, broken, and bleeding continent. They are desperately eager to get back on their feet. They want something more than an existence on the barest subsistence level.

It was because of such feelings that Russia found it necessary to participate in the Paris conference. To that extent, at least, she responded to the demands of her satellites, particularly Poland and Czechoslovakia.

It is now abundantly clear, what was fairly evident at the time of Russia's acceptance of the Anglo-French bid, that the Soviet Government did not have the slightest intention of helping to carry out the Marshall program.

Instead, Molotov tried to twist that program into a mockery of itself. He got nowhere. Then, as a last resort, he resorted to threats. Great Britain and France were warned of the evil consequences of following their intended course.

Such tactics were aimed to drive a wedge between Great Britain, which has no Communist movement to speak of, and is not subject to fifth column pressures, and France, which has a powerful Communist movement capable of doing great injury to that nation's domestic peace.

Molotov must have known better than to believe that he would get away with such threats. But he was under strict instructions from the Politburo to make no concessions to European unity. The result has been the most serious defeat suffered by Soviet diplomacy in a long time.

No sooner was the three-power conference over, than Great Britain and France sent out invitations to 22 nations to join them at Paris on the 12th.

We can take it for granted that not all of the 22 will accept.

In view of Russia's bitter opposition to the Marshall program, such Russian satellites as Rumania, Bulgaria, Albania, Hungary, and Yugoslavia can be counted on to refuse the invitation. Poland and Czechoslovakia, eager to join in the benefits of the Marshall program though they are, will be governed by Moscow's decision.

They and other satellite states may get a dispensation from the Kremlin to take part in the Paris parley. That remains to be seen.

On the other hand, there is every reason to believe that the countries of western Europe, including Italy, Belgium, the Netherlands, Luxemburg, will attend the Paris meeting.

In deciding whether to respond favorably or unfavorably to the Anglo-French invitation, every nation will also be deciding to which camp it belongs.

Russia's action at Paris transformed into a grim reality what many have hitherto regarded as merely a temporary phase of the postwar situation in Europe, namely, the division of Europe into opposing blocs.

The responsibility for that development rests entirely on Russia herself.

At Paris she had the chance to reverse the evil trend that she herself had set into motion when her armies swept into eastern Europe. She did not do so.

Molotov's complaint that in going ahead with the Marshall program Great Britain and France are dividing the Continent comes with particularly poor grace from him.

His tactics are the tactics of a burglar who, caught red-handed with stolen goods, turns on his accuser and shouts, "Stop, thief!"

The fraud is too transparent.

Modernize Our Presidential Election—I. A Comparison of the Present and Proposed Methods of Election

EXTENSION OF REMARKS
OF
HON. CLARENCE F. LEA
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 30, 1947

Mr. LEA. Mr. Speaker, the greatest demonstration of popular government in our time is when 50,000,000 American citizens, untrammeled, with freedom of thought and action, go to the polls and determine who shall be the next President of the United States.

No patriotic citizen will question the contention that an election, which in such an important way registers the will of the people of our country, should be conducted under rules which will definitely result in the election of one of the candidates; that all votes will be counted as cast; and counted by a method that under all circumstances will accurately and justly reflect the will of the American people.

We do not now have such a system. Ever since 1824, when a deadlock threw the election into the House of Representatives, all students of Government have recognized that our system of electing the President has serious defects, some of which are glaring. At best it clearly fails to meet even these elementary requirements of a proper method of electing the President. Under all circumstances it is inherently incapable of accurately reflecting the will of the American people.

About 200 years ago Blackstone, the great pioneer exponent of our system of Anglo-Saxon law, set forth the simple basic formula for the consideration of every legislative problem. In substance, he said, "There are three fundamental questions as to every proposed problem of legislation. The first is, "What is the present law?" The second, "What are the defects or evils of that law?" The third question is, "What is the remedy?"

I am going to attempt to present to you, as I see it, the background of our system of electing the President, its defects and evils that may accompany its operation, and then the remedy as proposed in House Joint Resolution 124, introduced by me and similar resolutions introduced by Mr. GOSSETT, of Texas; Mr. CELLER, of New York; Mr. KEFAUVER, of Tennessee; and Mr. GEARHART, of California.

Nearly 20 years ago I introduced a resolution like those now under consideration. Twice a committee of this House favorably reported such a resolution without dissenting votes. The years that have since passed have increased my conviction of the need of the amendment of the Constitution as proposed in these resolutions.

It is my conviction that the defects and evils of the present system which we propose to remove, serve no useful purpose. Their elimination would be all for the good side of the ledger.

Our constitutional system of electing a President was designed under a clear misconception that we were to have an independent, nonpartisan government; that a small group of electors, an intermediate agency, rather than the people themselves, should select the President.

That was a theory discarded by practical experience within 12 years after the adoption of the Constitution. For 147 years, restricted by inappropriate provisions of the Constitution intended for what has long been a discarded theory of our Government, we have failed to remove the most obvious of those defects. We have failed to modernize and adopt our way of electing a President to the needs of our time.

Now I want to epitomize the substantial factors of the present system of electing the President; summarize the proposals we advocate; and later I hope in more detail to contrast the antiquated

system by which we now elect a President with the modernized method we propose.

MAIN FEATURES OF PRESENT SYSTEM

The main factors for consideration in our present system of electing the President are as follows:

First. With limited exceptions, each State fixes the qualifications of its own voters; in other words, each State determines who of its own citizens may vote for Federal officers.

Second. Under the Constitution, each State is given a definite assurance as to the extent of its right to participate in the operations of the Federal Government and in the election of its President. This assurance not only secures the individual State its rights, but protects it by provisions defining the rights of every State.

Each State has the right to participate in the proceedings of Congress by assuring it two Senators and a number of Representatives in the House of Representatives in proportion to its population.

Each State has two electoral votes corresponding to the number of its Senators; and electoral votes corresponding to the number of its Representatives in the House.

Third. The President is elected by the votes of the Presidential electors, and not by the popular votes of the people. The electoral votes of the State can be cast only by Presidential electors. Those electors are chosen for that purpose by each State in such manner as the legislature thereof determines.

In practice, these electors in each State are now chosen by a plurality vote of its voters at the general election in November.

Fourth. In computing the electoral votes to determine who is elected, no credit is given for popular votes cast for any elector who received less than a plurality of the popular vote in the State election.

Thus, all minority votes cast in a State election for President are disregarded in computing the final result. The plurality candidate receives the total electoral vote of each State, notwithstanding the fact that a majority of its voters may have voted for two or more other candidates. This is known as the unit voting system.

The unit voting plan was introduced into our system of electing the President several years after our Government was established. That was done by and for the purpose of entrenching the power of the dominant political organization in each State by giving it control of the whole vote of the States; and for the avowed purpose of preventing minority candidates from getting any credit for the popular votes cast in their favor.

The Constitution fails to give any assurance to minority voters within the State that their votes will even be counted for the candidate for whom they were cast.

The electoral votes of the State, represented by the minority voters, are in fact not only not counted as cast, but, in the ultimate result, are computed as if cast the exact opposite of the way voted.

Of all the millions of votes for minority candidates within the last hundred years, not one has ever been counted in computing the aggregate vote of the Nation, which determines who is elected.

Fifth. A majority vote of all the electors appointed by all the States is necessary to elect a President.

Sixth. If no candidate secures a majority vote of the presidential electors, the election is thrown into the House of Representatives, where the election is limited to one of the three highest candidates unless one of them has died in the meantime.

A MAJORITY IS NECESSARY TO ELECT

In such an election each State has but one vote, which is cast by the majority vote of its Representatives voting. That means a total of 48 votes; 25 necessary to elect if all States vote. If there is a tie vote among the Representatives of a State, then no candidate receives its vote. Each State is equal to every other State in such an election. The smallest State is the equal of the greatest State.

Seventh. If the House fails to elect, then a vacancy exists when the new term begins, which, under the twentieth amendment, is to be filled in such manner as Congress shall provide.

Eighth. In case a vice-presidential candidate is not elected in the electoral college, then the Senate, by a majority vote, may select. In case there is no such election in the Senate and the President dies, the vacancy would be filled in such manner as Congress provides.

MAIN FEATURES OF PROPOSED AMENDMENT

Substantial factors for consideration under the system of electing the President we propose are as follows:

First. It leaves with the State the right to decide who of its citizens shall be its voters, as under the existing law.

Second. It leaves in the Constitution as at present, the assurance to each State of its relative right to participate in the Federal Government through representation in Congress and in the election of the President.

Third. The State is awarded electoral votes in the same number and on the same basis as at present.

Fourth. Presidential electors would be done away with. There would be no Presidential electors. The people would vote directly for the candidates for President.

Fifth. Each candidate would receive exactly the same proportion of the electoral votes of the State as he received of its popular vote. In this way the State electoral votes would be divided between the candidates according to their popular votes. There would be no unit State vote as now; unless one candidate received the whole popular vote of the State.

Sixth. In the ultimate computation of the aggregate votes of the Nation to determine who was elected President, every candidate would be credited with the electoral votes he received in each and all of the States.

The plurality candidate, instead of being credited with the whole electoral vote of the State as at present, would receive only such proportion of its electoral vote as he received of its popular vote.

The unit vote under which a plurality candidate receives the whole vote of the State would be abolished. Each candidate would receive his proper share of the votes given him in all the States where he was a candidate.

Seventh. The candidate receiving the highest aggregate number of electoral votes would be elected.

Eighth. Under the method of computing the final result proposed in these resolutions, there can be no deadlock in elections. Therefore, under this amendment there would be no necessity of an election in the House of Representatives. In this way we would remove the possibility of an election in the House of Representatives in which each State, regardless of population, would be the equal of every other State in electing a President.

Ninth. The Vice President would be elected in the same manner as the President.

The Present Liquor Situation

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Monday, July 7, 1947

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Present Liquor Situation," by Mrs. D. Leigh Colvin, president of the National Woman's Christian Temperance Union.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the July 8, 1947, issue of Signs of the Times]

THE PRESENT LIQUOR SITUATION

(By Mrs. D. Leigh Colvin, president, National Woman's Christian Temperance Union)

A man who was, until recently, in the brewery business strikingly describes how much of a curse alcohol is in America today:

"The cocktail lounges of today are far worse than the old-time man's saloon. * * * From the pretentious to the dives they are purposely named cocktail lounges and cold-bloodedly designed with soft stools at bars, upholstered booths, subdued lighting to encourage lounging and thereby excessive drinking and flagrant familiarities getting worse all the time to the extent of well-known seduction as evidenced by the employment of dapper young bartenders, which even the old saloons did not have, with blatant, raucous so-called entertainment blasting out into the streets, an evident decoy to youth and women."

"In fact," he says, "they are actually seduction parlors far worse than the old red-light districts because so widespread and in residential sections.

"Women would not go into old-time saloons but are enticed by the chromium and leather-trimmed chairs and tables, the soft lights, the music, and the seeming respectability of the cocktail lounge."

The consumption of liquor under prohibition was but a small fraction of what it was before, and because of the inaccessibility of liquor many millions lost their drinking

habits. Even during the first year of repeal and notwithstanding the tremendous advertising and hullabaloo over liquor, the per capita consumption was only about half what it had been in the preprohibition wet period.

Since repeal there has been a steady rise in liquor consumption, which increased from 10.53 gallons in 1934 to 20.25 gallons per capita in 1945.

During the war years the consumption went up from 15.47 gallons in 1941 to 20.25 gallons in 1945, an increase in the four war years of 4.78 gallons for every man, woman, and child in America.

SOCIAL CONSEQUENCES

The increase in the number of crimes committed by young people is a matter of serious concern. The average age of criminals is being lowered.

Boys and girls of high-school age are learning to drink and frequent drinking places, where morals are impaired and the criminal and dissolute congregate. Young girls as well as young men are being brought into our courts.

Miss Jessie Binford, reporting for the Chicago Juvenile Protective Association, lists seven challenging situations which adults must face if the youngsters of today are to be given a chance to grow normally. "Alcohol is a major item on the list. This problem," says Miss Binford, "in its economic, social, and personal aspects stands out as one of the greatest we face today in relation to children and youth. There is today an alarming increase in the drinking of young people."

In a large proportion of the major crimes reported within the past few months, alcohol has been a contributing factor. The 17-year-old, self-confessed kidnaper and triple murderer in Chicago had been drinking before the crimes were committed.

The Chicago Daily News, during the last week of May 1946, carried a series of articles based on an extensive survey by that paper of the reasons for the boom in the number of divorces. There is one divorce for every three marriages in Cook County, Ill. Sociologists estimate that by 1965 more than half of all marriages will end in divorce.

In the list of ten reasons for divorce as shown in the Daily News survey, alcoholism was placed second on the list. One judge said that of three hundred divorces granted in his court, 72 percent of the causes of marital difficulties were directly or indirectly attributable to liquor.

Another Cook County judge said that 78 percent of the divorce cases in his court resulted from alcohol.

ALCOHOLISM

Alcoholism, which has assumed gigantic proportions in the last few years, has multiplied so fast since repeal that Assistant Surgeon General Kolb of the United States Public Health Service has called it a "very serious health problem" and "fourth in the list of conditions that bring people to the hospital for mental diseases."

Dr. Winfred Overholser of St. Elizabeths Hospital, Washington, D. C., writes: "With tuberculosis, cancer, syphilis, mental disease, and infantile paralysis receiving competent and intelligent medical attention, we now have alcoholism as the greatest public-health problem of the present time which is not being systematically attacked."

No other disease so disrupts the family life, brings discord into family relationships, causes neglect, poverty, and unhealthy living conditions, is such a drain upon the country through inefficiency in industry, causes accidents upon the highway, is such a drain upon the taxpayer for care of the drinker's family, or causes loss of profits on the part of legitimate trade. No other disease costs the sufferer, his family, or the public so much as alcoholism, and yet we continue to legalize a traffic, the net result of which costs so much in human, social, and financial values.

Even recognizing that personality make-up and psychological factors play a part in the effect of alcohol upon the individual, we also know that without alcohol that individual could live an ordinary safe, healthful, and useful life.

In dealing with the cure and prevention of disease, the most scientific approach from the standpoint of public health is prevention.

In attacking the problem of alcoholism, we have a known factor—alcohol. We also know that it is not an infection, or germ disease, that can be transmitted from one person to another. We know, moreover, that with no alcohol there is no alcoholism, and that the only means of arresting the disease is to stop absolutely the use of any beverage alcohol. It is also known and acknowledged that anyone having become an alcoholic can never safely taste any amount of alcohol again without the possibility of a return of the disease.

Trying to cure the alcoholic without trying to prevent the recruiting of new drinkers is like trying to cure a few typhoid cases but leaving the polluted well or typhoid carriers free to spread the disease.

AWAKENING SENTIMENT

There are signs of an awakening upon the part of the churches to their responsibility in dealing with the traffic in intoxicating liquors. The bishops of the Methodist Church, with a constituency of 8,000,000 people, issued a ringing call to prayer on June 2, 1946, and it was "to be an initial step in an intensive program of education and commitment to be carried on in the months ahead." This call read:

"The Council o. Bishops of the Methodist Church, in session at Atlantic City, N. J., on February 22, 1946, after serious consideration of the state of the church and the Nation, has been led to set apart June 2, 1946, the Sunday before Pentecost, as a day of prayer to Almighty God for the curtailment of alcohol-beverage traffic in America. We call upon our ministers and officials of our 40,000 churches—and upon others who will join us—to give prayerful consideration upon this June Sunday to this present-day menace. We seek divine guidance for ourselves and for the moral and political leaders of America in saving this Nation from moral and spiritual degeneration."

In spite of all the efforts of the public relations and advertising departments of those engaged in manufacturing and selling alcoholic liquors, numerous local option elections in States where such elections are permissible show a decided increase in prohibition sentiment. Three-fourths of 15,000 local option elections since repeal have resulted in dry victories.

One-fifth of the population of the United States now lives in areas that are dry, or that outlaw hard liquor. More than 20,000,000 people are members of organizations committed to national prohibition, a ban on alcoholic beverages by local option, or to total abstinence.

Recent Gallup polls show that one-third of the country's voters would, at the present time, vote for the return of national prohibition if given the opportunity.

The WCTU Research Bureau shows that there are more than 4,200 bone-dry areas in 29 States, including counties, cities, towns, townships, wards, and precincts.

In addition, three States and 1,560 lesser areas ban hard liquor. Attempts to repeal dry laws were defeated in 2,200 local option elections. In dripping wet Chicago there are 133 dry precincts, while the suburban cities of Evanston, Oak Park, and Zion City are totally dry.

In the repeal election of 1933, only 14,000,000 people voted for repeal out of a possible 60,000,000 voters. However, only twenty million even went to the polls to vote. Of these, fourteen million voted for repeal after the most stupendous wet repeal campaign backed by immense sums of money and with the aid and connivance of the political machines in the Republican, Democratic, and Socialist Parties.

A recent Gallup poll indicates that many more people now favor national prohibition and are willing to vote for it again than voted against the the eighteenth amendment when it was repealed, this notwithstanding the tremendous wet propaganda and the absence of any great campaign waged by the moral forces to influence public opinion.

The 33 percent of the total voters today who would vote for national prohibition totals more than 25,000,000 votes, as compared with 14,000,000 votes cast for repeal 13 years ago. Repeal was put across by the votes of only 24 percent of the qualified voters of the country while 33 percent of the now larger population and voting strength would vote for its return.

The WCTU educational program is one of prevention rather than cure and includes both the destruction of the liquor business and the avoidance of any alcoholic indulgence, as safe and effective methods of dealing with this problem.

Its educational program consists not only in education regarding the physical and mental effects of alcohol upon the individual, but upon society as well, and also includes education as to the citizen's responsibility toward the traffic in alcohol, and the knowledge of the tremendous power exerted by that traffic in the social and governmental life of America today.

Trusting in our heavenly Father for guidance and knowing that in any battle victory comes often following the darkest hour, we shall press on and never falter in the holy crusade to rid our homes and our country of the devastating power of the liquor traffic.

And victory will surely come.

American Forum of the Air—Theodore Granik

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 7, 1947

Mr. CELLER. Mr. Speaker, as we come to the close of this session of the Eightieth Congress, I think it is fitting and proper that I pause to pay tribute to a great institution which has aided me and many other Members of this Congress in informing the American people of our work, the decisions we make, and the issues that face us.

I refer to the American Forum of the Air and to its founder and moderator, Theodore Granik. This weekly radio-discussion program is a unique institution in our Nation's Capital. The proceedings of the American Forum of the Air as they are broadcast every Tuesday night through the facilities of the Mutual Broadcasting System to every corner of our land stimulate our people to think clearly on the vital problems of the day.

We Members of Congress who are forced by the press of our duties in Washington to remain away from our home districts for various periods of time realize only too well the value of informing the people back home about our work.

The American Forum of the Air founded on the principle of free and open discussion of all sides of all issues is one of the best examples of democracy at work that we have in this Nation.

This radio program, which is the oldest public service discussion program, recently celebrated its nineteenth anniversary. For 19 years it has presented discussions of vital issues with outstanding authorities. The name American Forum of the Air has been established in the minds of America's radio listeners as the program from which they can get both sides of an issue.

Many of my colleagues join me in thinking of the program as practically a quasi-congressional activity. The scores of Members of the House and distinguished Senators from the upper branch of this Congress attest to the fairness, impartiality and importance of the American Forum.

The President of the United States during the period he served as Vice President paid tribute to the American Forum in the following manner:

OFFICE OF THE VICE PRESIDENT,
Washington, February 26, 1945.

We know that we speak the sentiments of most of our colleagues in congratulating Theodore Granik on the seventeenth anniversary of his radio program, the American Forum of the Air. Mr. Granik's program, the oldest forum on the air, has been outstanding in its field; week in and week out it has presented to the American people discussions of vital concern to them in the finest American tradition of freedom of speech.

For his splendid public service in conducting these programs without compensation for 17 years, the American people and the many Members of Congress who have participated on the forum owe Mr. Granik a debt of gratitude. The radio industry can be proud of this pioneer in the field of public service programs.

HARRY S. TRUMAN,
Vice President of the United States.

Mr. Speaker, I take a personal pride in paying tribute to the American Forum of the Air and to Theodore Granik. I have known Mr. Granik since his boyhood and I am proud to count him as my friend. I watched him go through law school and start his radio activities in the public service when still a comparative youngster.

I am extremely proud of the fact that almost 20 years ago I appeared on Mr. Granik's first program which at that time established a new method for radio discussion programs. The subject for discussion on that occasion, as I well recall, was repeal of the prohibition law. The great national debates of that day brought about the present format of the American Forum which calls for proponents on both sides of an issue to appear on the same program and debate the issues face to face. In radio's early days, this was an innovation. Ad lib., spontaneous programs were viewed with alarm. Split-second radio timing required everything to be in script form. The American Forum pioneered the new type of discussion program which became an immediate success.

The early program was called Law for Laymen and was broadcast over the facilities of radio station WOR in the city of New York. When Theodore Granik came to Washington as counsel for the United States Housing Authority, he brought his radio program with him which was broadcast through the facilities of WOL here in Washington as well as WOR, New York. The program grew and developed with the Mutual Broadcasting System into the present American Forum of the Air. Theodore Granik as an individual is a great champion of free speech in America. Upon the occasion of receiving an honorary degree of doctor of laws from St. John's University School of Law the accompanying citation recited that Mr. Granik had been an "outstanding student at St. John's University School of Law from 1926 to 1929; while still a student, organized the forum; served from 1934 to 1937 as assistant district attorney of New York; counsel for the United States Housing Authority from 1937 to 1941; helped write the law creating the much-needed Smaller War Plants Corporation; the first alumnus of the school of law to win a place in the current edition of Who's Who in America. The Board of Trustees of St. John's University," the citation concluded, "taking cognizance of the remarkable achievements of a loyal son, devoted father, and distinguished public servant, is happy to confer the honorary degree of doctor of laws."

As moderator of the American Forum, Mr. Granik has become such an unbiased adviser on legislative and policy problems that he has been called upon for advice by various war agencies and committees of the Senate and the House. For example, as a result of a discussion on the forum, Mr. Granik was appointed special counsel to the Subcommittee on Banking and Currency of the Senate to devise legislation for the conversion of small business enterprise to war production. The result was the establishment of the Smaller War Plants Corporation. He also served as a special adviser to Mr. Donald Nelson, of the War Production Board. He served as civilian aid to Gen. Lewis B. Hershey, National Director of the Selective Service.

In 19 years of radio the forum has presented practically every prominent American and hundreds of foreign spokesmen on issues of the day. During one session of Congress alone, 75 percent of the Members of Congress have been guests; labor leaders, spokesmen for industry, authors, doctors, engineers, and authorities of every type have spoken to the people through the forum microphones.

The weekly pamphlet, which consists of a stenotypist's report of the debate, is now distributed to libraries and schools throughout the country. Research organizations follow the proceedings consistently. The American Forum is recognized as an institution and has won the George Foster Peabody award and many other outstanding radio awards for public service.

I know that I voice the feelings and thoughts of most of my colleagues in paying this tribute to Theodore Granik, the individual whose concept of free speech through the medium of radio has advanced the cause of understanding between the people and their Government.

As every institution develops and matures, personalities and staff play an important part in its growth. Mr. Granik has found an able assistant in Irvin P. Sulds, the producer of the forum, whose work these past 3 years in connection with the weekly program is known and appreciated by many Members of Congress.

Mr. Speaker, I include in the RECORD at this point an article from the New York Times, one from the New York Herald Tribune, and a copy of a letter to Mr. Granik by the Senator from Illinois [Mr. BROOKS], together with a list of subjects covered by the American Forum of the Air.

The matter referred to is as follows:

[From the New York Times]

WHERE FREE SPEECH PREVAILS

(By R. W. Stewart)

Congress has an unofficial battleground. Opposing factions of the Senate and the House rally to the American Forum of the Air Sunday nights to continue arguments on current issues before a coast-to-coast audience. Under the direction of Theodore Granik, a benevolent rather than an arbitrary moderator, free speech prevails as the listeners are treated to the inside of congressional debate complete with arguments, rebuttals, and just plain wrangling.

Mr. Granik is a combination of liberalism and altruism. He is a liberal because he sees no reason why the layman should not have the opportunity to personally question Congressmen on pertinent current affairs. He is an altruist because he provides the layman with this opportunity at no personal gain or compensation and on his own time as originator and director of this forum on the air in New York through WOR.

THE MODERATOR'S BACKGROUND

Mr. Granik is not a visionary or an idealist; he is a hard-headed lawyer who attained the position of deputy district attorney of New York County and who was appointed special counsel to the United States Housing Authority. He sees in his forum the embodiment of his principles and calls it a practical example of free speech, which he believes to be America's most important right. He likes to consider the panel discussions as his contribution to education and pursues them as a hobby.

The forum is of a quasi official nature. Although it naturally has no connection with the Senate or House of Representatives, a verbatim account, including station announcements, of each 60-minute broadcast during the past year has been read into the CONGRESSIONAL RECORD. This practice was begun, according to Mr. Granik, by interested legislators who wanted their speeches put into the RECORD as broadcast.

Another purpose of the procedure, he continued, is that through the introduction of the scripts further discussion on the radio topics is carried to the floor of the Houses, and the broadcast record serves as the basis for rebuttal. "It is like an extension of the broadcast," he explained.

Mr. Granik's stand on free speech is not a pose. He carries his principles right into the forum discussion in Washington's Hotel Willard. So long as order is maintained, freedom of expression is the rule, and everyone is given an equal chance. This opportunity also is extended to the speakers—sometimes they need it.

TWO FACTIONS ARE REPRESENTED

Since all the topics are controversial, the forum opens with both sides stating their stand from prepared speeches. This is limited to 30 minutes. Then the panel discussion begins. Rebuttals are made, and it is then that Mr. John Citizen has his opportunity to stand up to the honorable speakers

and state his difference of opinion or to ask a question. And Mr. Granik does not permit the legislators to evade the issue. So long as the layman has an argument he is permitted to hold the traveling microphone in the audience until he is reasonably satisfied.

This generous practice often leads to round-robin arguments. For instance, it is not rare for a member of the audience to stand up and take issue with another member for the latter's opinion as expressed to one of the speakers. Members of the listening audience unable to attend the broadcast also are permitted to quiz the speakers by telegraphing questions. These are answered over the air by the speaker involved. "It's like open house," Mr. Granik laughed.

He calls this part of the forum his answer to the people who sent in letters stating that they wanted to hear their Congressmen in action; that they wanted to speak to and question them.

HOW TOPICS ARE CHOSEN

In line with his policy of equal opportunity, Mr. Granik points out that regardless of personal politics he always invites an equal number of Democrats and Republicans to each broadcast. The only deviation from this policy is made when the question under discussion breaks party lines, he explained. As examples of these topics he mentioned the isolationist question, aid to the allies, and conscription.

Although people from all walks of life have appeared in the forum, Congressmen have made up the greater part of the guest list, mainly because their opinions were of greater importance on the topics selected.

"In booking programs for the forum I try to get those topics which are 'hot' in the news," Mr. Granik continued. "I watch the congressional debates and if a timely subject comes up on the floor of either the Senate or the House I immediately contact the proponents and opponents of the particular legislation and offer them the facilities to broadcast their views."

That is the format of Mr. Granik's forum. He is no green hand at the game. He has been conducting open discussions on the air for 12 years.

[From the New York Herald Tribune]

FORUM REFEREE AT WASHINGTON HAS TRYING JOB—GRANIK NEEDS HIS 15 YEARS OF EXPERIENCE TO KEEP SPEAKERS UNDER CONTROL

Every Sunday evening at 8 o'clock Theodore Granik, director of WOR's American Forum of the Air, steps to the microphone to referee one of the most controversial battles on the air. Mr. Granik has had 15 years of experience in radio-discussion programs. His American Forum is a continuation of the WOR Forum, which he produced before the present program went on a national hook-up. It is produced jointly by WOR and WOL, from Washington, over Mutual.

The forum topics and speakers are announced only a few days before broadcast time. Listeners and editors frequently comment on his talent for keeping on top of the news. On occasion he has changed the topic and line-up of the forum on Saturday night because of some sudden and important development on the Capital news front.

Mr. Granik keeps in constant touch with the chairman and ranking members of important House and Senate committees, many of whom let him know in advance what bills are up for consideration in their committees and when they may be expected to reach the floor. He says his aim is to keep his radio debate simultaneous with the congressional battles or, if possible, even a bit in advance, so that on Sunday the forum is frequently a preview of the biggest congressional debate of the following week. The proceedings of the forums are noted in the CONGRESSIONAL RECORD every week.

The most embarrassing incident Mr. Granik can recall in this regard was when a team of a Senator and two newspapermen debated a similar group of three. Just before going on the air, Senator A won one of the opposing journalists over to his point of view. As a result, Senator B found himself being asked embarrassing questions by the reporter who was supposed to be with him on the issue. "I had weeks of explaining to do to that Senator," Mr. Granik says ruefully.

When the forum was moved from New York City to Washington with expansion of the Mutual network in 1937, and the title of the program was changed, Mr. Granik found that most Congressmen and Government officials had not yet become adept at broadcasting. They were of the William Jennings Bryan school of stentorian tones and oratorical flourishes. Many of them had to learn the informal, personalized approach the radio demands.

Getting some Capital luminaries to cut their prepared messages to allow ample extemporaneous discussion time on the second half of the program is occasionally a problem. Most Congressmen and Government officials, however, have learned to conform to this requirement. Congressmen scheduled for a forum, frequently call on Mr. Granik for advice during the week. Sometimes a Senator will telephone him in the middle of the night to read his prepared talk and get his reactions.

Mr. Granik started in the broadcasting business in 1925 as an assistant director of a now defunct New York City station. He presided over a series called Law for the Layman, which he brought over to WOR in the late twenties. In 1929 the law broadcasts became the WOR forum, when it was found that debate made for a livelier program. He was an assistant New York district attorney for several years, and at present is a special counsel to the new Federal Housing Authority, as well as advisor to the National Selective Administration.

UNITED STATES SENATE,
COMMITTEE ON APPROPRIATIONS,
February 18, 1941.

Mr. THEODORE GRANIK,
Director of the American Forum,
Washington, D. C.

DEAR MR. GRANIK: Confirming our recent verbal conversation, I would like for you to know that as a direct result of the debate conducted by the American Forum of the Air over the Mutual Network on Sunday, January 19, 1941, I received approximately 18,000 letters.

You may recall that during the debate in which Senator Gerald P. Nye and myself opposed passage of the so-called lease-lend bill, while Congressman Andrew J. May, chairman of the House Military Affairs Committee, and former Senator Ernest W. Gibson advocated passage of the measure, I repeatedly asked the following question:

"What will this so-called lease-lend bill do to aid Engand, short of war, that we are not doing now?"

Seventy-five percent of the letters received as a result of this broadcast quoted this question almost verbatim, and the following sidelight might be interesting to you:

I attended a meeting of the Passaic (N. J.) Marine Corps League, where I was presented with a medal for outstanding achievement by an ex-marine during the preceding year. During the evening seven ex-marines spoke to me about the debate which they had heard over the air. All of them interrogated me as to whether or not I had received an answer to my question. I asked each one if he remembered the question, and each one repeated the question to me practically verbatim.

I know of nothing in my public life that has aroused the interest and enthusiasm so much as the above-mentioned debate.

I want to take this opportunity of again expressing to you my appreciation for the opportunity of appearing on your program.

With every kind personal regard, I am,

Yours sincerely,

C. WAYLAND BROOKS.

AMERICAN FORUM OF THE AIR, 1946

January 1—What we face in 1946: Bill Slater, Mutual, New York; Al Warner, Washington; William Hillman, Washington; Cedric Foster, Boston; Paul Schubert, New York; Frazier Hunt, New York; Cecil Brown, New York; Arthur Mann, London.

January 8—Should the USES be turned over to the States immediately? John J. Corson, former director, USES, director of research, Washington Post; Ted F. Silvey, chairman, CIO reconversion committee; Claude A. Williams, past president, Interstate Conference of Employment Security Agencies; Stanley Rector, chairman, legislative committee, Interstate Conference of Employment Security Agencies; guest chairman, Arthur J. Altmeyer, Chairman, Social Security Board.

January 15—Should we merge the Army and Navy? Lt. Gen. James H. Doolittle; Senator Edwin C. Johnson, of Colorado; Ferdinand Eberstadt, financial authority; Representative Harry R. Sheppard, of California.

January 22—What's holding up housing? Douglas Whitlock, chairman, advisory board, Producers' Council; Joseph Meyerhoff, treasurer, National Association of Home Builders; Boris Shishkin, economist, A. F. of L., secretary, A. F. of L. housing committee; Norton E. Long, Assistant OPA Administrator; Gilbert Convers, American Veterans' Committee; Louis B. Schwartz, American Veterans' Committee.

January 29—Should Congress establish a 65-cent minimum hourly wage for American industry? Senator Claude Pepper, of Florida; Leon Henderson, chief economist, Research Institute of America; Dr. Claudius T. Murchison, president, Cotton Textile Institute; Representative Gerald W. Landis, of Indiana.

February 5—Do we want more TVA's? Ralph L. Carr, former Governor of Colorado; Lachlan Macleay, president, Mississippi Valley Association; Representative Estes Kefauver, of Tennessee; Judson King, director, National Popular Government League.

February 12—Does Atomic Warfare Make Universal Military Training Obsolete? Prof. Harold C. Urey, metallurgical laboratory, University of Chicago; William B. Ziff, author and publisher; Maj. Gen. Lewis B. Hershey, National Director, Selective Service System; Dr. Edward C. Elliott, president emeritus, Purdue University.

February 19—How Can We Achieve Industrial Peace? Representative Roger C. Slaughter, of Missouri; Representative Francis Case, of South Dakota; Representative Hugh De Lacy, of Washington; Representative Luther Patrick, of Alabama.

February 26—What Should We Do About the British Loan? William L. Clayton, Assistant Secretary of State; Senator Claude Pepper, of Florida; Senator Edwin C. Johnson, of Colorado; Representative Dewey Short, of Missouri.

March 5—How Far Should Our Social Security Program Be Expanded? John J. Corson, Director of Research, Washington Post; Paul Sifton, National Farmers Union; Dr. Emerson P. Schmidt, Director of Economic Research Department, United States Chamber of Commerce; Representative Carl T. Curtis, of Nebraska.

March 12—Should the War Powers Act Be Continued? Representative Emanuel Celler, of New York; Representative Chet Holifield, of California; Representative John M. Vorys, of Ohio; Representative A. L. Miller, of Nebraska.

March 19—Should Congress Adopt the Wyatt Housing Plan? Senator Homer E.

Capehart, of Indiana; Representative Jessie Sumner, of Illinois; Douglas Whitlock, Chairman, Advisory Board, Producers' Council; Representative A. S. Mike Monroney, of Oklahoma; Representative George Outland, of California; Chat Paterson, National Legislative Representative, American Veterans Committee.

March 26—The Atomic Bomb—Civilian or Military Control? Senator Edwin C. Johnson, of Colorado; Senator Thomas C. Hart, of Connecticut; Senator Joseph C. O'Mahoney, of Wyoming; Dr. Joyce C. Stearns, dean of the faculty, Washington University, St. Louis.

April 2—Should We Continue the OPA? Senator Robert A. Taft, of Ohio; Representative Fred L. Crawford, of Michigan; Senator Glen H. Taylor, of Idaho; Richard V. Gilbert, former Economic Adviser to the OPA Administrator.

April 9—Should We Continue the Draft? Norman Thomas, Post War World Council; Brig. Gen. H. C. Holdridge, United States Army, retired; chairman, legislative committee, Veterans League of America; Joseph M. Stack, commander in chief, Veterans of Foreign Wars; Maj. Gen. Edward P. Curtis, Army of the United States, retired, chief of staff to General Spaatz in Europe; vice president, Eastman Kodak Co.

April 16—Should Congress adopt the President's health insurance plan? Dr. Morris Fishbein, editor, American Medical Association Journal; Dr. R. L. Sensenich, chairman, board of trustees, American Medical Association; Dr. Michael M. Davis, chairman, committee on research, medical economics; chairman, executive board, committee for the Nation's health; Representative John D. Dingell, of Michigan.

April 23—How can we bring peace to Palestine? Dr. Carl Hermann Voss, codirector, American Christian Palestine committee; Mrs. Moses P. Epstein, national president of Hadassah; Mrs. Bedia Afnan, the Arab office; Anwar Nashashibi, the Arab office.

April 30—Can America's armies of occupation secure the peace? Senator James O. Eastland, of Mississippi; Representative H. H. Buffett, of Nebraska; Representative John J. Sparkman, of Alabama; Kermit Eby, director, education and research, Congress of Industrial Organizations.

May 7—What should we do about the OPA? Senator Kenneth S. Wherry, of Nebraska; Representative Frederick C. Smith, of Ohio; Senator Hugh B. Mitchell, of Washington; Representative Daniel J. Flood, of Pennsylvania.

May 14—What position should we take on the Spanish question? Dr. Joseph F. Thorning, well-known student of Spanish history and culture; Dr. Jack R. McMichael, executive secretary, Methodist Federation for Social Service; Frank Gervasi, Washington editor of Collier's.

May 21—Are communism and democracy mutually antagonistic? Representative Clare Boothe Luce, of Connecticut; William Henry Chamberlain, noted writer and lecturer; William Z. Foster, chairman, Communist Party, United States of America; Dr. Harry F. Ward, professor emeritus of Christian ethics, Union Theological Seminary.

May 28—Is new labor legislation necessary? Senator Glen H. Taylor, of Idaho; Frank Fenton, director of organization, A. F. of L.; Representative Francis Case, of South Dakota; Representative Harris Ellsworth, of Oregon.

June 4—Should we return to food rationing? Edgar Ansel Mowrer, noted writer and lecturer; Representative Emily Taft Douglas, of Illinois; Representative A. L. Miller, of Nebraska; Walter F. Straub, director, emergency food program.

June 11—Should we draft the 18-19 year olds? Representative John J. Sparkman, of Alabama; Representative Chet Holifield, of California; Representative Dewey Short, of Missouri; Representative John E. Sheridan, of Pennsylvania.

June 18—Should OPA be modified along the lines of congressional action? Senator Robert A. Taft, of Ohio; Charles Holman, secretary, National Cooperative Milk Producers Federation; Robert R. Nathan, economist; James G. Patton, president, National Farmers Union.

June 25—Should we merge the Army and Navy? Senator Thomas C. Hart, of Connecticut; Representative F. Edward Hébert, of Louisiana; Representative Jennings Randolph, of West Virginia; Representative Frank B. Keefe, of Wisconsin.

July 2—What should we do about Spain? Johannes Steel, radio commentator; Alexander H. Uhl, foreign editor of PM; John Vincent Hinkel, director of publicity, University of Notre Dame; Dr. Joseph F. Thorning, nationally known educator, author, and lecturer.

July 9—Do we still need wartime Government controls in our economy? Leon Henderson, chief economist, Research Institute of America; Edward Prichard, former counsel, Office of War Mobilization; Merryle Stanley Rukeyser, economist and author; Henry Hazlitt, editorial writer, New York Times.

July 16—Is the Wagner-Ellender-Taft housing bill essential to veterans' housing needs? Wilson W. Wyatt, National Housing Administrator and Housing Expediter; Representative Estes Kefauver, of Tennessee; Herbert U. Nelson, executive vice president, National Association of Real Estate Boards; Arthur W. Binns, president, National Home and Property Owners Foundation; Guest Chairman: Maj. Gen. Lewis B. Hershey, National Director, Selective Service System.

July 23—What part should the CIO-PAC play in politics? Thomas F. Burns, assistant chairman, CIO-PAC; Dr. Palmer Weber, director of research, CIO-PAC; Representative Clare E. Hoffman, of Michigan; Representative O. C. Fisher, of Texas.

July 30—How should we evaluate the Seventy-ninth Congress? Representative Andrew J. Biemiller, of Wisconsin; Representative Clair Engle, of California; Representative Karl E. Mundt, of South Dakota; Representative Harris Ellsworth, of Oregon.

August 6—What is the best solution to the Palestine problem? Dr. Carl Hermann Voss, executive secretary, Christian Council on Palestine; Dr. Ruth Gruber, foreign correspondent, New York Post; Mrs. Bedia Afnan, the Arab Office; Cecil Hourani, secretary, the Arab Office.

August 13—What Should Our Russian Policy Be? Richard E. Lauterbach, correspondent, Life Magazine; Prof. Frederick Schuman, political science, Williams College; Lawrence Spivak, editor, American Mercury; Louis Nizer, attorney and author.

August 20—What Should We Do About China? Marrison Forman, author and explorer; Dr. J. Spencer Kennard, former missionary in China; Freda Utley, author; Alfred Kohlberg, American-China Policy Association; guest chairman: Dr. Joseph M. Ray, head of the department of government and politics, University of Maryland.

August 27—How Much Government Control Is Required To Maintain Our Economy? Prof. Maynard C. Krueger, professor of economics, University of Chicago; Prof. Mabel Newcomer, professor of economics, Vassar College; Dr. Emerson P. Schmidt, director, economic research department, United States Chamber of Commerce; Prof. George L. Bach, professor of economics, Carnegie Institute of Technology.

September 3—Is a Guaranteed Annual Wage Practical for Industry? James B. Carey, secretary-treasurer, CIO; Kermit Eby, director, education and research, CIO; Merryle Stanley Rukeyser, economist and author; James L. Wick, author and lecturer.

September 10—Atomic Energy — Who Should Control It? Harold E. Stassen, ex-Governor of Minnesota; Dr. Irving Langmuir, associate director of research, General Electric Co.; Representative Clare Boothe Luce, of Connecticut; Representative J. Parnell Thomas, of New Jersey.

September 17—Who Should get Trieste? Dr. Stoyan Gavrilovic, Yugoslavian representative to the United Nations; Dr. Vaso Trivanovitch, economist and author; Dr. Diego De Castro, member of the Italian delegation on Venezia Giulia at the Paris Peace Conference; Prof. Max Salvadori, political science, Bennington College.

September 24—How Can Soviet Russia and the United States Keep the Peace? Earl Browder, former chairman, Communist Party, United States of America; George E. Sokolsky, columnist and lecturer.

October 1—What Are the Campaign Issues? Representative A. S. Mike Monroney, of Oklahoma; Representative John J. Sparkman, of Alabama; Representative Clarence J. Brown, of Ohio; John Danaher, former Senator of Connecticut.

October 8—Is a National Political Change Necessary? Senator Owen Brewster, of Maine; Representative John J. Sparkman, of Alabama.

October 15—Is the PAC a Threat or a Contribution to America? Jack Kroll, director, CIO-PAC; Dr. Frank Kingdon, chairman NC-PAC; Senator Joseph H. Ball, of Minnesota; Louis Waldman, labor attorney.

October 22—Which political party can serve the Nation best? Senator Homer Ferguson, of Michigan; Senator Homer E. Capehart, of Indiana; Representative Estes Kefauver, of Tennessee; Representative A. S. Mike Monroney, of Oklahoma.

October 29—No broadcast, Herald Tribune conference.

November 5—No broadcast, election returns.

November 12—Is the British Government career system better than the American? Sir James Grigg, Secretary of State for War for the Coalition Cabinet under Churchill; Prof Herman Finer, political science department, University of Chicago; H. Struve Hensel, former Assistant Secretary of the Navy; Donald C. Stone, Assistant Director, Bureau of the Budget.

November 19—What can we expect from the new Congress? Representative Clarence J. Brown, of Ohio; Representative Howard H. Buffett, of Nebraska; Representative Estes Kefauver, of Tennessee; Representative Herman P. Eberharter, of Pennsylvania.

November 26—Are closed-shop agreements desirable? James B. Carey, secretary-treasurer, CIO; Boris Shishkin, economist, AFL; Henry J. Taylor, economist and radio commentator; Representative A. L. Miller, of Nebraska.

December 3—Can our national economy stand a general wage increase? Robert R. Nathan, economist; Richard V. Gilbert, former economist, OPA; Dr. Jules Backman, professor of economics, New York University; Lawrence Fertig, economist and financial writer.

December 10—Should the Federal Government provide medical care? (Annual student's program): Lee Reiff, Newton, Kans.; Gordon Parks, Jennings, Mo.; Robert Carson, Lansing, Mich.; George Cabell, Norfolk, Va.; guest moderator, Dr. Richard B. Kennan, National Education Association.

December 17—Should we nationalize the coal mines? Norman Thomas, Socialist leader; McAlister Coleman, author and lecturer; William W. Bayfield, executive secretary, American Coal Sales Association; John D. Battle, executive secretary, national Coal Association.

December 24—No broadcast, Christmas Eve.

AMERICAN FORUM OF THE AIR, 1947

January 7—What Is the Outlook for the Eightieth Congress? Senator Brien McMahon, of Connecticut; Representative Estes Kefauver, of Tennessee; Senator Owen Brewster,

of Maine; Representative Bertrand W. Gearhart, of California; guest chairman, Maj. Gen. Lewis B. Hershey, National Director, Selective Service System.

January 14—Would New Labor Legislation Help Our Economy? Representative Clare E. Hoffman, of Michigan; Representative O. C. Fisher, of Texas; James B. Carey, secretary-treasurer, CIO; Lewis G. Hines, legislative representative, A. F. of L.

January 21—Should There Be Compulsory Arbitration in Public Service Industries? Senator Harry P. Cain, of Washington; M. H. Hedges, director of research, International Brotherhood of Electrical Workers, A. F. of L.; Representative Christian A. Herter, of Massachusetts; Representative Clifford P. Case, of New Jersey.

January 28—Should Congress Act on the Portal-to-Portal Pay Issue? Senator Homer E. Capehart, of Indiana; Representative Clare E. Hoffman, of Michigan; Eugene Cotton, associate general counsel, CIO; Charles Margiotti, former attorney general of Pennsylvania.

February 4—Will Raising of Rent Ceilings Solve the Housing Problem? Senator Albert W. Hawkes, of New Jersey; George M. Englar, president, National Apartment Owners Association; Ray Sawyer, national commander, AMVETS; David Ginsburg, former general counsel, OPA.

February 11—Should We Further Restrict Immigration? Representative Emanuel Celler, of New York; Earl Harrison, former Commissioner of Immigration; Representative Ed Gossett, of Texas; Omar B. Ketchum, national legislative representative, Veterans of Foreign Wars.

February 18—Should Poland Retain Germany's Eastern Territory? James P. Warburg, banker and author; J. K. Galbraith, board of directors, Fortune magazine; Arthur Gaeth, MBS commentator and author; Jean Pajus, author and economist.

February 25—How Far Should a Regulated Industry Be Subject to Antitrust Laws? Senator Charles W. Tobey, of New Hampshire; Judge Thurman Arnold, former Assistant Attorney General in charge of the Antitrust Division; Senator Clyde M. Reed, of Kansas; A. W. Vogtle, general chairman, Southeast Shippers Conference.

March 4 (nineteenth anniversary)—Should We Continue Reciprocal Trade Agreements? Senator Elbert D. Thomas, of Utah; Representative A. S. Mike Monroney, of Oklahoma; Representative Carl Hinshaw, of California; Dr. John Lee Coulter, former member, United States Tariff Commission.

March 11—Should we establish a system of universal military training? Senator Edwin C. Johnson, of Colorado; Prof. Alonzo F. Myers, New York University; Lt. Gen. Raymond S. McLain, liaison officer, War Department Special Staff; Francis X. Burke, chairman, national security committee, Veterans of Foreign Wars.

March 18—What is the solution to the problem in Greece? Andre Michalopoulos, former Greek Government official, author and lecturer; Solon G. Vlasto, publisher, Atlantis, national daily Greek newspaper; Representative J. K. Javits, of New York; Representative John M. Vorys, of Ohio; Senator Glen H. Taylor, of Idaho; Albert L. Warner, MBS commentator.

March 25—Should we reduce income taxes now? Representative Noah M. Mason, of Illinois; Representative Robert W. Kean, of New Jersey; Representative Herman P. Eberharter, of Pennsylvania; Representative Aime J. Forand, of Rhode Island.

April 1—How can we solve the teacher problem? Dr. John K. Norton, Columbia University, Glaude L. Kulp, superintendent of schools, Ithaca, N. Y.; Irvin R. Kuenzli, executive secretary, American Federation of Teachers, A. F. of L.; Selma Borchardt, Federal and international representative, American Federation of Teachers, A. F. of L.

April 8—Where is our present financial policy leading? Leon Henderson, chairman, executive committee, Americans for Democratic Action; Robert R. Nathan, economist; Henry J. Taylor, economist and radio commentator; James L. Wick, economist and author.

April 15—Reciprocal trade agreements—are they benefiting us? Prof. Seymour E. Harris, Harvard University; Representative John D. Dingell, of Michigan; Walter W. Cenerazzo, president, American Watch Workers' Union; Representative Carl T. Curtis, of Nebraska.

April 22—Should Congress adopt new labor laws? Representative Charles J. Kersten, of Wisconsin; Representative Richard M. Nixon, of California; Lewis G. Hines, legislative representative, A. F. of L.; Ted F. Silvey, reconversion officer, CIO.

April 29—Should Congress outlaw the Communist Party? Milton Howard, associate editor, Daily Worker; Dr. Jack R. McMichael, executive secretary, Methodist Federation for Social Action; Representative Harry R. Sheppard, of California; Representative A. L. Miller, of Nebraska.

May 6—Should all co-ops pay Federal income taxes? Senator George D. Aiken, of Vermont; Karl D. Loos, chairman, legal and tax committee, National Council of Farmer Cooperatives; Ben C. McCabe, president, National Tax Equality Association; Representative Robert A. Grant, of Indiana.

May 13—What Should the United Nations Do About Palestine? Frank Gervasi, author and lecturer; Dr. Carl Hermann Voss, extension secretary, the Church Peace Union; Prof. Walter T. Stace, Princeton University; Gordon Waterfield, chief correspondent for the Kemsley Newspapers, Ltd., of London.

May 20—Should Congress Adopt the Taft-Ellender-Wagner Housing Bill? Senator A. J. Ellender, of Louisiana; Chat Paterson, National legislative representative, American Veterans Committee; Edward R. Carr, president, National Association of Home Builders; Charles Stewart, director of public relations, National Association of Real Estate Boards.

May 27—How Can We Get Along With Russia? Jerome Davis, author, lecturer and correspondent; Corliss Lamont, author and lecturer; Representative John M. Vorys, of Ohio; Representative Karl E. Mundt, of South Dakota.

June 3—What Should Congress do About Health Insurance? Senator Robert A. Taft, of Ohio; Dr. H. H. Shoulders, president, American Medical Association; Senator J. Howard McGrath, of Rhode Island; Dr. Michael M. Davis, chairman, executive committee, Committee for the Nation's Health.

June 10—Do We Need Changes in Our Antitrust Laws? Senator Joseph C. O'Mahoney, of Wyoming; Representative Estes Kefauver, of Tennessee; Milton A. Smith, assistant general counsel, Chamber of Commerce of the United States; Gilbert H. Montague, attorney, guest moderator; Hon. Oscar L. Chapman, Under Secretary of the Interior.

June 17—Do We Need Universal Military Training? Maj. Gen. Lewis B. Hershey, national director, Selective Service System; Representative F. Edward Hébert, of Louisiana; Dr. Ralph McDonald, executive secretary, Department of Higher Education, NEA; Representative Dewey Short, of Missouri.

June 24—Should the United States Admit 400,000 of Europe's Displaced Persons? Edward Mark O'Connor, executive assistant, War Relief Services, National Catholic Welfare Conference; Representative Emanuel Celler, of New York; Omar B. Ketchum, national legislative representative, Veterans of Foreign Wars; Representative O. C. Fisher, of Texas.

July 1—How Should We Deal With the High Cost of Living? Leon H. Keyserling, vice chairman, President's Council of Economic Advisers; Senator John J. Sparkman, of Alabama; Representative Howard H. Buffett, of Nebraska; George Terborgh, research director, Machinery and Allied Products Institute.

National Health Insurance

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, July 7, 1947

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two brief but excellent compilations of facts bearing on the need for national health insurance. Each of these facts is documented. Together they convey a most impressive set of reasons for the prompt enactment of the National Health Insurance and Public Health Act of 1947.

There being no objection, the compilations were ordered to be printed in the RECORD, as follows:

HEALTH INSURANCE FACT SHEET [1]

1. On an average two persons out of every three need help to meet the cost of serious illness.[1]

2. About 97,000,000 people in the United States need help to meet the cost of serious illness.[1]

3. In the course of a year there are approximately 22,000,000 disabling illnesses, lasting a week or longer, in the United States.[2]

4. At least 7,000,000 people in the United States are disabled by sickness or other disability in any 24-hour period, half of them for 6 months or more.[3]

(a) One person out of every 20 is disabled by sickness or disability in any 24-hour period.

5. The total hidden costs of sickness and disability, wage loss to workers and costs to business, totaled in 1943 not less than $15,000,000,000.[4]

6. The estimated annual cost of sickness and accidents, in medical costs and loss of earnings due to sickness and premature death, is $8,000,000,000.[4]

7. It is estimated that only about $20,000,000 a year is being spent for research to find causes and new treatments of diseases.[5]

[1] Families with incomes under $3,000 need help in meeting the cost of serious illness. (Factual Data on Medical Economics, pamphlet issued in 1939 by the Bureau of Medical Economics of the American Medical Association.) Sixty-nine percent of the United States population lived in such families in 1945. (National Survey of Liquid Assets Holdings, Spending and Saving, Part II: Relation of Savings and Holdings to Income. July, 1946. Bureau of Agricultural Economics, U. S. Department of Agriculture.)

[2] Public Affairs pamphlet, Who Can Afford Health? by Beulah Amidon, 1944, p. 9.

[3] Senate Subcommittee Report No. 5 (Health Insurance), July 1946, p. 1.

[4] Federal Security Agency fact sheet, The Health of the Nation, June 1, 1946, p. 2.

[5] See following:

American private foundations, 1940	$4,700,000
National Cancer Institute (U. S. Government) 1946–47	1,772,000
National Institute of Health (U. S. Government) 1946–47	5,966,948
Veterans' Administration—National Research Council (approximate)	1,000,000
American Cancer Society, 1946	2,500,000
National Foundation for Infantile Paralysis, 1946	1,858,826
Medical schools and teaching hospitals (estimated)	2,500,000
Total	20,297,774

8. In contrast with this, the Department of Commerce reported in 1943 that approximately $275,000,000 is being spent each year for industrial research.[6]

9. In 1947 Congress appropriated $29,866,200 for the Department of Agriculture alone for research in the control and cure of plant and animal diseases.[7]

10. After about 14 years only about 21,755,766 people, about 16 percent of the population of the United States, were covered by hospitalization plans as of July 1, 1946.[8]

11. Only about 3,500,000 Americans (2½ percent of the population) were covered by comprehensive medical care plans in 1945.[9]

12. In 1941 there was, on the average, approximately 1 active physician for every 1,400 to 1,500 people in the United States.[10]

(a) In 1944, 553 counties in the United States (18 percent of the total of 3,070 counties) had less than 1 active physician per 3,000 population (the "danger line"), and 81 counties (over 2½ percent) had no active doctor at all.[3]

13. More than 10 percent of the people in the United States live where there is no approved general hospital.[3]

(a) Forty-one percent of the counties in the United States (approximately 1,258 counties) with an aggregate population of 15,000,000, have no approved general hospital.[3]

(b) Forty-eight percent of the counties in the United States (1,473 counties) have under the standard of 4.5 beds per 1,000 population; and only 11 percent (337) of the counties meet the standard.[11]

HEALTH INSURANCE FACT SHEET II

I. How many people in the United States need help to meet the cost of serious illness?

1. Two people out of every three who live in the United States, about 97,000,000 Americans, need help to meet the cost of serious illness.[12]

(a) This statement is based on an estimate made in 1939 in a publication of the American Medical Association, that families with incomes under $3,000 need help to meet the cost of serious illness.[12]

(b) However, by 1945 the cost-of-living index had increased by 29 percent over 1939; and in April 1947 the index was 50 percent higher than in 1939.[13]

(c) Therefore, it is reasonable to assume that many people with incomes over $3,000 now need help to meet the cost of serious illness.

II. What is the annual loss to the United States because of sickness, disability, and premature death?

A. In terms of people, the United States lost:

1. In 1945, excluding those who died in the armed forces overseas, 1,401,719 Americans through death. Of these: [14]

(a) 11 percent, or 162,006, were under 20 years of age.

(b) 8 percent, or 112,442, were aged from 20 to 39.

(c) 19 percent, or 274,448, were under 40 years of age.

(d) 23 percent, or 321,921, were aged from 40 to 59.

(e) This means that 42 percent, or 596,369, of the Americans who died in this country in 1945 were under 60 years old.

2. About 1,000,000,000 days of disability each year from chronic illnesses.[15]

(a) There are approximately 22,000,000 disabling illnesses every year in the country as a whole.[2]

(1) Each of these illnesses lasts, on the average, about 57 days.[2]

(b) Over 40 percent of the Nation's selectees were found unfit for military duty.[16]

(1) At least 17 percent of those found unfit had defects which were remediable; many more had preventable defects.[16]

B. In terms of production, the United States lost:

1. About 600,000,000 man-days annually.[16]

(a) Illness and accidents cause the average industrial worker to lose about 12 days from production each year.[16]

(b) More than 75 percent of the 25,000,000 chronic-disease cases in the United States are among people in the productive years from 15 to 64; half of these people are less than 45 years old; 16 percent of them are under 25.[17]

C. In terms of money, the United States lost:

1. An estimated $8,000,000,000 annually, half in medical costs and half in loss of earnings due to sickness and premature death.[16]

(a) It is estimated that American workers lost $560,000,000 in wages in strikes during the first 6 months of peace; at this rate, the annual wage loss would be $1,120,000,000, in contrast with the $8,000,000,000 lost through sickness and premature death.[18]

2. It is estimated that the total hidden costs of sickness and disability, wage loss to workers and costs to business, totaled in 1943 not less than $15,000,000,000.[4]

III. What do we spend on health, compared with what we spend on other things?

1. In 1942 the American people spent only about 3 percent of the total national income on medical care.[19]

(a) It has been estimated that the people of the United States will spend $5,499,963,211 in 1947 for medical care, including supplies and insurance.[20]

(1) This is less than 3½ percent of the national income in 1945 (latest figure available).[21]

2. In contrast with this, the people of the United States, to protect our lives against a possible enemy, will spend 50 percent more for armed defense this year than for all types of medical service, to protect ourselves against disabilities and deaths of our people.

(a) Proposed expenditures for national defense in 1947–48:

Army and Air Force	[22] $5,240,900,000
Navy	[23] 3,469,761,000

Or a total of $8,710,661,000 for national defense, as against $5,499,963,211 for medical care, supplies, and insurance.

3. In contrast with the estimated amount of $5,499,963,211 which the people of the United States will spend in 1947 for medical services, supplies, and insurance, the same people in 1946 spent $8,700,000,000 for alcoholic beverages. This is an average of $89 a year for liquor for each person over 18 years old.[24]

(a) Fifty percent more is spent on liquor than on all health services in a year.

IV. How many doctors are there in the United States? How much do they earn?

1. In 1942 there were 180,496 registered physicians in the United States, including all types of specialists.[25]

(a) In 1943 the number of "effective physicians" was estimated at 135,932.[26]

2. Taking a standard of 1 active physician for every 1,000 patients: [27]

(a) In 1941 there was approximately 1 active physician for every 1,400 to 1,500 people in the United States (if doctors had been evenly divided throughout the country).[27]

(b) However, in 1944, 553 counties in the United States (18 percent of the total of 3,070 counties) had less than 1 active physician per 3,000 population (the "danger line"), and 81 counties (over 2½ percent) had no active doctor.[28]

3. The national net average income of American doctors in 1941 was $5,047; but this figure was overweighted by top-bracket specialists.[29]

(a) About 25 percent had net incomes of less than $2,000.[29]

(b) About 16 percent had net incomes of less than $1,000.[29]

(c) About 12½ percent had net incomes of $10,000 or more.[29]

V. How many hospitals are there in the United States?

1. In 1945 there were 1,738,944 hospital beds in 6,511 hospitals in the United States.[30]

(a) However, approximately 15,000,000 Americans, living in 40 percent of the Nation's counties, have no recognized general hospital.[16]

[30] World Almanac, 1947, p. 773.

(b) Taking 4.5 beds per 1,000 population as the standard for hospitals: [31]

(1) Only 11 percent of the counties of the United States meet this standard.[32]

(2) Forty-eight percent of the counties in the United States have under this standard.[33]

(3) Forty-one percent of the counties in the United States have no approved general hospital.[32]

(c) Sixteen million two hundred and fifty-seven thousand four hundred and two patients were admitted to hospitals in 1945, or an average of about one out of every eight people in the United States.[30]

2. Of 15,800,000 patients admitted to registered hospitals in 1944: [33] 95.1 percent, or 15,000,000, were admitted to general hospitals having 54 percent of total beds; 2.9 percent, or 500,000, were admitted to special hospitals having 3 percent of total beds; [34] 1.4 percent, or 200,000, were admitted to nervous and mental hospitals having 38 percent of total beds; 0.6 percent, or 100,000, were admitted to tuberculosis hospitals having 5 percent of total beds.

VI. How much do we spend for research for new treatments and cures to save our people from death or disability?

1. It is estimated that only about $20,000,000 a year is being spent for research to find cures and new treatments of diseases.[35]

(a) In contrast with this, the Department of Commerce reported in 1943 that approximately $275,000,000 is being spent each year for industrial research.[36]

(b) In 1947, Congress appropriated $29,866,200 for the Department of Agriculture alone, for research in the control and cure of plant and animal diseases.[7]

(c) In contrast with the 1947 total appropriation of $104,088,516 for the United States Public Health Service, Congress made a total appropriation of $744,489,692 in 1947 for the Department of Agriculture.[7]

VII. How much more would a national health insurance program cost the people of the United States than they spend under the present system?

1. It is estimated that about $5,499,963,211 will be spent by the people of the United States for medical care in 1947, including medical services, medicines and supplies, and health and accident insurance.[37]

2. In a study made in 1941, it was found that money spent by sample family groups for medical care was distributed as follows: [38]

	Health and accident insurance	Medicines and supplies	Medical services	Tota
Groups with incomes between $500 and $1,000	$2.13	$9.16	$15.14	$25.12
Groups with incomes between $1,000 and $1,500	4.48	16.28	37.15	57.91
Groups with incomes between $2,500 and $3,000	7.83	18.06	63.99	89.88
Groups with incomes between $3,000 and $5,000	11.39	33.99	107.69	153.07

3. Family expenditures for medical care under the proposed National Health Insurance bill,[39] for people in comparable income groups, would be as follows: [40]

Annual earnings:	*Insurance premiums at 3 percent*
$750	$22.50
$1,250	37.50
$2,500	75.00
$3,600 and over	108.00

4. The above two tables show that the total average family expenditures for medical care under the National Health Insurance bill [39] would be lower than they were in 1941 under the present system.

World Unity

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Monday, July 7, 1947

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of President Truman's address at Monticello, home of Thomas Jefferson:

Governor Tuck, Mr. Houston, distinguished guests and fellow-countrymen, I certainly appreciate that warm welcome extended to me by the Governor of Virginia most highly, and I appreciate the courtesies which have been extended to me since I have been here. Virginia is always courteous to her guests.

It is fitting that we should come to Monticello to celebrate the anniversary of our independence. Here lived Thomas Jefferson, author of the Declaration of Independence. Here Thomas Jefferson died on July 4, 1826, 50 years from the day the Declaration was adopted by the Continental Congress and proclaimed to the world.

The Declaration of Independence was an expression of democratic philosophy that sustained American patriots during the Revolution and has ever since inspired men to fight to the death for their "unalienable rights."

The standard phrase used by writers of Jefferson's day to describe man's essential rights was "life, liberty, and property." But to Jefferson human rights were more important than property rights, and the phrase, as he wrote it in the Declaration of Independence, became "life, liberty, and the pursuit of happiness."

The laws and the traditions of the colonies in 1776 were designed to support a monarchial system rather than a democratic society. To Thomas Jefferson, the American Revolution was far more than a struggle for independence. It was a struggle for democracy.

Within a few weeks after independence had been proclaimed at Philadelphia, Jefferson resigned his seat in the Continental Congress and returned to his place in the Virginia Legislature. There he began his monumental work of laying the foundation of an independent democracy.

Within a few years, the Virginia Legislature, under Jefferson's leadership, instituted full religious freedom, abolished the laws which had permitted great estates to pass undivided from generation to generation, prohibited the importation of slaves, revised the civil and criminal code of laws, and established a general system of public education. These acts, according to Jefferson, eradicated every fiber of the ancient and future aristocracy. These acts formed the basis for a truly democratic government.

RECALLS UN CHARTER SIGNING

Jefferson knew that it was necessary to provide in law the requisites for the survival of an independent democracy. He knew that it was not enough merely to set forth a Declaration of Independence.

Two years ago the United States and 50 other nations joined in signing a great declaration of interdependence known as the Charter of the United Nations. We did so because we had learned, at staggering cost, that the nations of the world cannot live in peace and prosperity if, at the same time, they try to live in isolation. We have learned that nations are interdependent, and that recognition of our dependence upon one another is essential to life, liberty, and the pursuit of happiness of all mankind.

It is now the duty of all nations to converge their policies toward common goals of peace. Of course, we cannot expect all nations with different histories, institutions, and economic conditions, to agree at once upon common ideals and policies. But it is not too much to expect that all nations should create, each within its own borders, the requisites for the growth of world-wide harmony.

The first requisite of peace among nations is common adherence to the principle that governments derive their just powers from the consent of the governed. There must be genuine effort to translate that principle into reality.

The respective constitutions of virtually all the members of the United Nations subscribe to the proposition that governments derive their just powers from the consent of the governed. In many countries, however, progress toward that goal is extremely slow. In other countries, progress in that direction is nonexistent. And in still others, the course of government is in the opposite direction.

It is necessary, if we are to have peace, that the peoples of the earth know each other, that they trade with each other, and trust each other, and that they move toward common ideals. And yet, when governments do not derive their powers from the consent of the governed, these requirements are usually denied, and the peoples are kept in isolation.

The stronger the voice of a people in the formulation of national policies, the less the danger of aggression. When all governments

derive their just powers from the consent of the governed there will be enduring peace.

A second requisite of peace among nations is common respect for basic human rights. Jefferson knew the relationship between respect for these rights and peaceful democracy. We see today with equal clarity the relationship between respect for human rights and the maintenance of world peace. So long as the basic rights of men are denied in any substantial portion of the earth, men everywhere must live in fear of their own rights and their own security.

We have learned much in the last 15 years from Germany, Italy, and Japan about the intimate relationship of dictatorship, aggression, and the loss of human rights. The problem of protecting human rights has been recognized in the Charter of the United Nations, and a commission is studying the subject at this time.

No country has yet reached the absolute in protecting human rights. In all countries, certainly including our own, there is much to be accomplished. The maintenance of peace will depend to an important degree upon the progress that is made within nations and by the United Nations in protecting human rights.

The third requisite of peace is the free and full exchange of knowledge, ideas, and information among the peoples of the earth, and maximum freedom in international travel and communication.

PURPOSE OF UNESCO STRESSED

Jefferson well understood this principle. On one occasion he said, "If a nation expects to be ignorant and free in a state of peace, it expects what never was and never will be." Today we can paraphrase those words in international terms as follows: "If the nations of the world expect to live in ignorance and suspicion of each other in a state of peace, they expect what never was and never will be."

Many members of the United Nations have jointly created and now support the United Nations Educational and Cultural Organization for the purpose of promoting the free exchange of ideas and information among the peoples of the earth. In the preamble to the constitution of this organization the member nations have declared that "the wide diffusion of culture and the education of humanity for justice and liberty and peace * * * constitute a sacred duty which all nations must fulfill."

The United States has taken a leading role in furthering this ideal. We believe that it is essential to a peaceful and prosperous world. We believe that common knowledge and understanding among men can be greatly expanded in the years to come. We have the mechanical facilities—the radio, television, airplanes—for the creation of a world-wide culture. We have only to set them to work for international good.

Unfortunately, a number of countries maintain barriers against the flow of information and ideas into, or out of, their territories. Many of them restrict international travel. Some of them, behind barriers of their own creation, present to their citizens carefully selected or distorted versions of the facts about other countries. They teach and broadcast distrust and scorn of their neighbors.

These activities of organized mistrust lead the people away from peace and unity. They are a far cry from contributing to the full and free exchange of knowledge and ideas which we need if we are to have a peaceful world.

The first step to end ignorance and suspicion would be to stop propaganda attacks upon other nations. The second step would be to let down the barriers to information, ideas, and travel. The final step would be to cooperate with other nations who are so earnestly endeavoring to increase friendly understanding among men.

Here at the home of Thomas Jefferson, who dedicated his life to liberty, education, and intellectual freedom, I appeal to all nations and to all peoples to break down the artificial barriers which separate them. I appeal for tolerance and restraint in the mutual relations of nations and peoples. And I appeal for a free flow of knowledge and ideas that alone can lead to a harmonious world.

The fourth requisite of peace is that nations shall devise their economic and financial policies to support a world economy rather than separate nationalistic economies.

It is important to recognize that the United States has heavy responsibilities here. The United States is the greatest industrial nation of the world, the leading exporter of agricultural products, and the greatest creditor nation. Europe and Asia, on the other hand, have been devastated by war, and with insufficient funds and materials are struggling desperately with mountainous problems of reconstruction. In this situation the economic and financial policies maintained by the United States are of crucial importance.

We have contributed nearly $20,000,000,000 since the war to world relief, reconstruction, and stabilization. We have taken the lead in establishing the World Bank and the World Stabilization Fund. We have cooperated fully in the work of the Economic and Social Council of the United Nations. We have authorized aid to Greece and Turkey. We have made generous loans through our Export-Import Bank, and we have suggested to European nations that further requests for American aid should be on the basis of a sound plan for European reconstruction.

TRADE EFFORTS OUTLINED

Our representatives are in Geneva negotiating a series of tariff-reducing trade agreements. They are seeking agreement with other nations on the charter of an international trade organization designed to bring fairness and a spirit of cooperation into the trade relations of nations.

I believe that the United States is living up to its responsibilities for creating the economic conditions of the peace. We must realize that these responsibilities are continuous. Even the emergency aspects of the job are not yet behind us.

It is not enough, however, for one nation to live up to its responsibilities for aiding reconstruction and for cooperating in the production and the exchange of goods. The cooperation of all nations is necessary if the job is to be done. To the extent that any nation falls behind, to that extent will urgent needs for food, clothing, and shelter remain unfilled.

Yet, certain nations today are withholding their support of reconstruction plans on the ground that this would mean interferenee by some nations in the internal affairs of others. This is as fallacious as the refusal of a man to enter a profitable business partnership on the ground that it would involve interference in his private affairs.

Surely after two World Wars, nations should have learned the folly of a nationalism so extreme as to block cooperative economic planning among nations for peaceful reconstruction.

The life of Thomas Jefferson demonstrates, to a remarkable degree, the strength and power of truth.

He believed, with deep conviction, that in this young Nation the survival of freedom depended upon the survival of truth.

So it is with the world.

As the spirit of freedom and the spirit of truth spread throughout the world, so shall there be understanding and justice among men.

This is the foundation for peace—a peace which is not merely the absence of war, but a deep lasting peace built upon mutual respect and tolerance.

Our goal must be—not peace in our time—but peace for all time.

Analysis of the Labor-Management Relations Act of 1947

EXTENSION OF REMARKS
OF

HON. CHARLES A. HALLECK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, July 7, 1947

Mr. HALLECK. Mr. Speaker, the Congress that passed the Taft-Hartley Labor Act overwhelmingly supports the right of workers to organize and to bargain collectively. It overwhelmingly approves of the trade-union movement. The Taft-Hartley Act is just such an act as anyone would expect of a Congress that wishes to preserve our system of free collective bargaining and that wishes to strengthen the union movement and see it grow and develop on a sound basis.

In recent years both collective bargaining and the trade-union movement have been in danger. This has been due partly to mistakes of the Government in setting up labor policies and in administering them, and partly to persons within the labor movement who have followed short-sighted purposes and policies of their own, regardless of effect upon the labor movement as a whole, or, indeed, upon the welfare of our country.

Had Congress not dealt with these problems now, had it not corrected Government policies that are wrong, and had it not protected the labor movement against those within the movement whose abuses undermine the movement in the eyes of the public, there is no doubt that a later Congress, responding to overwhelming public demand, would be forced to enact laws which would really be severe and drastic compared with the fairness and equal justice of the Taft-Hartley Act.

Immediately upon convening this year, the appropriate committees of the Senate and of the House of Representatives started investigating problems that have arisen in the troubled field of labor relations. They sat long hours for more than 6 weeks, heard the testimony of hundreds of witnesses from all walks of life, of all shades of opinion and from all parts of our country. Both union leaders and union members asked for changes in our laws. Only the top officials of the great federations opposed all change, insisting that Congress refrain from dealing even with those evils that they admit to exist.

After all these weeks of hearings, the two committees prepared their bills, and the Senate and the House of Representatives debated the bills at length. The Hartley bill passed the House of Representatives by a majority of more than 3 to 1. The Taft bill passed the Senate by a vote of nearly 3 to 1.

The two bills went to conference. There emerged a compromise measure known as the Taft-Hartley bill. It was less comprehensive than the Hartley bill, was less far reaching in its effects, and left for future study by Congress the problems which created the greatest controversy, like industry-wide bargaining,

injunctions in ordinary strikes, and regulation of the internal affairs of unions.

The House passed the Taft-Hartley Act by a vote of more than 4 to 1. The Senate passed it by a vote of more than 3 to 1. The majority of the members of each of the two parties in Congress voted for the act.

Then President Truman vetoed the act. Arguments made against it in his veto message to Congress were considered and found to be unreasonable. The House voted to override the veto, 331 to 83, only one vote short of a 4-to-1 proportion. The Senate voted 68 to 25, to override the President's veto, and the measure became law of the land, objection of the President to the contrary notwithstanding.

The great majorities by which Congress passed the act and passed it again over the President's veto included Congressmen who are themselves union members and leaders of labor and who have the interests of unions and of labor at heart. Of the men and women who came to Congress last year and who certainly know what their constituents want, the overwhelming majority in both the House and the Senate supported the act.

Clearly, the act was not one passed by labor baiters and union haters, but was one that our people as a whole, and the rank and file of labor, demanded and still demand.

THE NEED FOR NEW LAWS

The Wagner Act was an experiment. When Congress passed it, there had been no law like it in our country or in any other. Experiment though it was, and notwithstanding that it created many obvious injustices, the act remained unchanged in all these years.

Now, what was the purpose of the Wagner Act? It states its purpose clearly in its preamble. The purpose was to increase the output of goods that move in the stream of interstate commerce and thus make available to all of our people, and at low cost, the things that we need and that raise our standard of living.

The Wagner Act undertook to increase output by encouraging collective bargaining and by attempting to remove some of the causes of strikes and other forms of industrial strife. It proposed to do this by protecting employees in their right to organize, by requiring employers to recognize and bargain collectively with unions of their employees and by setting up the National Labor Relations Board to carry out its terms.

Before Congress passed the Wagner Act, unions had enjoyed rapid growth. Under the act they continued to grow. That was one thing that Congress had intended, and was on the credit side. But other things happened that Congress did not foresee and did not intend.

For one thing, strikes, instead of growing less, increased. In each of the 10 years after Congress passed the act there were, on the average, about three times as many strikes as in each of the 10 years before the act. Even during the war, in 1944 and 1945, there were more strikes than ever before, and in 1946 a new record was set in number of strikes, in man-days idle because of strikes and in output lost as a result of strikes. Some of these strikes brought our country to the brink of disaster. Many of them cost workers losses in wages far greater than any gains that resulted from them.

The act had other results that Congress had not foreseen. It gave to unions great power—power not only in dealing with employers, but power under the law to fix the wages, hours, and working conditions not merely of their members but of all employees for whom they acted as exclusive bargaining agents under the act; and power often to discipline their members and drive from their jobs men who did not conform. This power was so great that competing unions went to all lengths to acquire it, and this often resulted in bitter rivalry between them, in jurisdictional strife, boycotts, violence, and other acts of which no responsible person approved. The Congress of Industrial Organizations came into being after Congress passed the act, and rivalry between it and the American Federation of Labor added to jurisdictional strife. Employers, employees, and the public alike were innocent victims of contests between the great federations.

Turning from their proper purpose to improve the wages, hours, and working conditions of working people, some unions undertook to use their power politically, even to the extent of attempting to dictate how their members should vote and of using member's dues to further political objectives opposed by many of the members.

As time went on, the need for bringing our labor laws up to date became more and more apparent. Demand for a change came from people in all walks of life—the public, workers and employers. In the election of 1946, public opinion polls showed labor legislation to be uppermost in the public mind, and they showed also that the majority of the workers and even the majority of union members themselves favored important reforms. In that election, many candidates who favored changing the Wagner Act won; many congressmen who, masquerading as friends of labor yet consistently exploiting the workingman for political purposes, met defeat.

Obviously, something was wrong with the Wagner Act and the worker knew it, and, in the last election, millions of workers voted to correct what is wrong.

WHAT THE TAFT-HARTLEY ACT DOES

It is obvious that many who attack the Taft-Hartley Act have not read the act or else they deliberately seek to misrepresent it. The act, generally, is fair, sound, and long overdue. Many who oppose it, unable by quotation to make it appear unfair, use extreme, extravagant, and irresponsible adjectives in attacking it, or torture and distort the language of the act in an effort to make it seem to say what it does not say.

For example, they assert that by guaranteeing to workers the right to refrain from engaging in collective activities, just as it guarantees their right to engage in such activities when that is their wish, the act revives the hated yellow-dog contracts by which employers formerly required workers to agree not to join unions. The fact is that the Norris-LaGuardia Act, the very act that outlaws such unfair contracts, contains language almost identical with that which appears in the Taft-Hartley Act; and the Norris-LaGuardia Act, passed during a Republican administration and signed by a Republican President, has been one of the greatest bulwarks of labor for more than 15 years. No, one cannot blindly depend upon what some opponents of the Taft-Hartley Act say it means; one must read the bill itself to see that it is fair.

Take the commonest argument of those who oppose the act: That it oppresses labor. Obviously, the act does not oppress, or affect in any other way, the 45,000,000 people who work but who are not in unions. Nor does it, by a word or a line, compel any worker to render service to anyone for a single hour or part of an hour against his will. Nor does it outlaw any strike for improved wages, hours, or working conditions, except temporarily when the safety or welfare of the entire Nation is threatened.

A really oppressive labor bill Congress considered was the drastic proposal of President Truman last year, that the Government draft strikers and compel them to work. It was a Republican, Senator TAFT, who led in defeating that proposal; and it is he whom labor leaders are now trying to accuse of writing an oppressive bill.

Take another favorite argument of those who oppose the Taft-Hartley Act: That is will "destroy" unions. Those who say this necessarily imply that, in order to survive, unions must be free to coerce workers, to compel them to join unions; that they must be free to violate their contracts, to strike to compel employers to break the law and to engage in other lawlessness, unhampered by even a few of the laws that govern other adult citizens.

The Congress that passed the Taft-Hartley Act does not believe this. Many unions have grown great by rendering service to workers, not by coercing them: by conducting their affairs democratically, by acting responsibly.

The act preserves, in almost identical language, all the rights that employees and unions have had under the Wagner Act to organize and to bargain collectively and prohibits all the same unfair labor practices on the part of employers. Far from destroying the employees' rights, it strengthens them and assures to workers even greater freedom than they had before to exercise those rights. It guarantees to workers every right that they have had in the past to strike for legitimate objects. Saying that the act "destroys unions" is sheerest nonsense.

MAJOR CLAUSES OF THE ACT

Two things became clear as hearings before the committees of Congress proceeded. One was that, although the Wagner Act had given to unions great power over employers and workers, it had not imposed upon unions corresponding responsibilities. The result was that unions sometimes misused their power to the detriment not only of employers but also to the detriment of the public, and even of employees. The power of the

union was so great that workers rarely could protect themselves even when the union abused them or led them into disastrous and unnecessary strikes or used them for purposes of the union's leaders.

Another thing that became clear was that the National Labor Relations Board, which administers the act, had been following policies of its own instead of the policies that Congress had laid down in the act. Instead of attempting to correct abuses under the act, the Board permitted them, and even encouraged them.

To deal with these two problems, Congress did two things in the Taft-Hartley Act. It laid down fair rules for unions to follow in their dealings with employers and in their dealings with employees. And it revised the composition and procedures of the Labor Board so as to require it to render impartial decisions and not to favor unions against employers, employers against employees, or one union against another union.

UNION RESPONSIBILITY

Under the Taft-Hartley Act, unions may not restrain or coerce employees. Unions can organize workers in the usual way, but they cannot threaten them or beat them up to make them join one union or to keep them from joining another.

The act forbids unions and employers, by agreement, to compel employees to join a union unless the majority of the employees, by secret ballot, authorize the agreement; and it forbids unions and employers to deprive workers of their livelihood upon arbitrary or false grounds as long as the workers are willing, by paying fees and dues, to share the cost of maintaining the union.

Under the Taft-Hartley Act unions have the same duty to bargain collectively that employers always have had under the Wagner Act. Any union that in fact exists for a legitimate purpose can have no reasonable objection to this clause.

The act outlaws jurisdictional strikes and secondary boycotts. The President himself asked Congress to enact such provisions of law as these and never made it clear what type of secondary boycott or jurisdictional strike could be a "good" strike.

If, but only if, an employer and a union agree on a union-shop contract, the Taft-Hartley Act says that the union's initiation fees must be reasonable.

The act forbids the kind of extortion by which a few unions have compelled employers to pay them for work that no one did.

These provisions are not extreme, they are not unreasonable. On the contrary, they are fair and moderate. But even if a union violates one of these clauses, what happens? The Labor Board can order the union to cease and desist, and if the union complies with the order there is no penalty. If the union persists and unfairly causes a man to be discharged, the Board can order the union to pay him back pay. In cases of unfair labor practices by employers, the Board has followed similar procedure for years, and the unions have seen nothing wrong with that. This same kind of procedure has been followed with respect to persons other than unions, under many laws, for many years.

Under other clauses of the act, members of unions are entitled to know how officers and representatives of the union are chosen and how much money they receive, what the requirements for admission to the union are, on what grounds a man may be expelled, how much money the union has, and what it does with money it collects from its members. The members also have the right to know that the union's officers are not Communists. If the union violates these clauses, no one can punish it. It merely loses its right to use the Labor Board, and be officially certified.

The act makes unions, as well as employers, suable in the Federal courts when they violate their contracts or engage in certain other unlawful conduct. Public opinion polls show that members of unions agree that both parties to a contract should live up to its terms, and that this clause is fair. If collective bargaining is to mean anything, and if it is to promote industrial peace, then certainly contracts must be binding on both sides.

Another clause enables the President to enjoin, for a limited time, the rare strikes that imperil the public health and safety. The President followed a like procedure in the coal strike last year. While the injunction lasts, collective bargaining, with the help of Government agencies, proceeds. But even in these cases, no one can compel any individual employee to work if he does not wish to work.

Another clause requires employers and unions, when they set up funds supposedly for the welfare of workers, to make arrangements to insure that the money will be used for the welfare of workers, and not for other purposes.

The Taft-Hartley Act exempts from the operation of the Wagner Act foremen, less than two percent of whom have shown any interest in collective bargaining and who, as bosses, ought not to mix themselves in the labor movement of their men.

Collective bargaining, like any other kind of bargaining, calls for two sides—management on one side, and the men on the other. Foremen are part of management, and management cannot operate unless its representatives are wholly loyal and have no divided allegiance.

The new act forbids unions to use members' dues for political purposes but leaves workers themselves free to engage in any kind of political activities they wish. Committees like the PAC collecting its funds frankly for political purposes are entirely legal. In exactly the same way, the Act forbids corporations to use stockholders' money for political purposes.

Other clauses of the Taft-Hartley Act simply say what the Labor Board and the courts already have said the Wagner Act means, and do not change the law. Still others are like clauses that most unions voluntarily include in contracts with employers.

Thus, a fair analysis of the act shows that it is not antiunion or oppressive. It will improve labor-management relations. It will not abolish strikes, and under it we will have strikes. We cannot forbid strikes and have free collective bargaining or free enterprise at all. But strikes will grow fewer in number, and they will be more for the benefit of the man at work than they have been in the past.

Unable to point to anything in the act that supports their outlandish assertions, opponents of the act try to claim that it can be construed to do more than, on its face, it sets out to do. If the Labor Board were prejudiced enough to apply the amended Wagner Act against unions as it has applied the original act against employers in the past, there might be some ground for the labor leaders' alleged fears. But this is not the case, and many provisions of the new law prevent any such application.

LABOR BOARD'S PROCEDURES

Far more than half the changes the Taft-Hartley Act makes in the Wagner Act do not relate to unions at all, but relate to the Labor Board, its organization, rulings, and procedures. The Board is required to render fair decisions. The act increases the number of Board members from three to five, and enables the Senate through the power of confirmation to see to it that the new members are fair-minded men. It provides that the chief administrative officer who passes on all prosecutions shall be independent of the Board, and enables the Senate to see to it that he, too, is a fair-minded man.

It thus abolishes the un-American system of having a single Board as complainant, prosecutor, judge, and jury.

The act requires the Board to decide cases before it according to legal evidence, and according to the weight of the evidence.

It forbids the Board to use against a union or an employer any statement that does not itself violate the Labor Act. It thus guarantees to all concerned the constitutional right of free speech.

And finally, if in any case the Board is unfair or makes a mistake, the act enables the courts to correct the Board's decision.

All these clauses safeguard the rights unions enjoyed under the old Wagner Act and will continue to enjoy under the amended act, and they will eliminate the unfairness that made decisions of the Board in the past a national scandal.

CONCLUSION

Changes that the Taft-Hartley Act make in our laws are for the benefit of collective bargaining, and under them unions will enjoy healthy growth. The changes are in response to the insistent demand of the overwhelming majority of our citizens.

Many clauses of the act appear in State and Federal laws under which unions have thrived for years. As long ago as 1940 Mr. William Green, president of the A. F. of L., approved many provisions of the Taft-Hartley Act when they appeared in a bill that the House of Representatives, when the Democrats controlled it, passed by a vote of more than 2 to 1. Other clauses appeared in

other bills that Congress passed when Democrats were in control.

Congress has considered these clauses and all other clauses of the bill carefully, many of them more than once. Assertions that Congress has acted hastily are not true.

The President of the United States proposed some of the provisions of the Taft-Hartley Act, as well as others that were far more drastic than any that the Taft-Hartley Act contains.

This act, reflecting the considered judgment of the majority of both parties in both Houses of Congress, is designed in the interest of all our people, and particularly in the interest of working men and women, to further the purpose of the Wagner Act to increase output and to strengthen the protection the Wagner Act gives to workers in their organizing and collective-bargaining activities.

The act forbids interference from any source with the workers' rights. It equalizes collective bargaining and gives meaning and effect to agreements that result from collective bargaining, in the interest of stability and peace. And it curbs those within the labor movement whose excesses, deliberate or otherwise, bring discredit upon legitimate labor unions and threaten to wreck them.

Admission of Hawaii to Union Urged by Boston Globe

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial from the July 2 issue of the Boston Globe, of Boston, Mass., as follows:

THE FORTY-NINTH STATE

The way apparently has been cleared to statehood for Hawaii. Although delay is forecast in the Senate and the Senate's Public Lands Committee may visit the islands before recommending action one way or the other, the House of Representatives' vote of 196 to 133 in favor of statehood is the high mark of Hawaii's 50-year campaign for such recognition.

So many years have passed since the forty-eighth star was added to the American flag (for Arizona, in 1912), that most people have forgotten the old tests for responsible statehood. Whatever they were, it is likely that Hawaii satisfies them fully. Its area is larger than that of Rhode Island or Delaware or Connecticut. Its population of more than a half million is greater than that of any State, except one, on the date of its admission to the Union. In those public affairs which the citizens, through their Territorial legislature, have been free to conduct for themselves, its record has been good—in education, it has been excellent.

Everyone knows Hawaii's vast resources. Its sugar crop is valued at $65,000,000 annually. Its second most important product, the pineapple, brings the islands a yearly return of more than $55,000,000 and represents a remarkable 30-year program of supplying a market for canned fruit and juice which simply did not exist a generation ago; Hawaii had to create the demand. Other sources, including a lively tourist business, swell the islands' income; and so completely has the feudalism of the kingdom of 50 years ago been stamped out that 46 percent of Hawaii's residents share these returns sufficiently to pay Federal income taxes.

They have a case for statehood based on taxation alone. In 35 years Hawaiians have contributed to the National Treasury $200,000,000 more than they have received in appropriations. They have, in fact, suffered badly as a result of a blind spot in the eye of the Government to which they were paying enormous sums. Once, in 1934, Congress passed a law which all but wiped out the islands' sugar-refining industry in favor of that on the mainland. Again, at various times, the Territory has been omitted—either by oversight or purposely—from Federal highway-aid legislation and from benefits that would have promoted its training of agriculturists. Moreover, Congress has turned down 27 times bills similar to that which the House of Representatives has now approved.

It is probable that the advance of air transportation, lessening the distance between the continental United States and the islands, is one of the factors in changing Washington's point of view. If there is also a disposition in the Congress to reward Hawaiian wartime patriotism, it is no more than just. Not only did Hawaiians of all strains fight creditably on every front, but the history of the island's AJA's—Americans of Japanese ancestry—was especially notable. People will not soon forget the One Hundredth Infantry Battalion of Japanese-Americans, the most decorated unit that ever served in the United States Army.

Less well known is the war activity of older Japanese. Their sympathies uncertain after Pearl Harbor, the farmers among them were treated as this Territory has always treated each segment of its mixed population—on terms of equality with other groups. To a remarkable degree they responded with increased production of food for the wartime visitors and the ships which took on provisions there. It was an excellent tribute to the effectiveness of an enlightened policy.

If the Senate Public Lands Committee sits in Honolulu it will have a new opportunity to judge the strength of sentiment for statehood. A 1940 plebiscite on the question was 2 to 1 in favor; observers say that the percentage now is much higher and that there is no longer an organized opposition to the change. This being true, there would seem to be no further valid objection to denying to the island people a status they evidently deserve.

UNCLE DUDLEY.

Colorado-Big Thompson Project

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. HILL. Mr. Speaker, the following address was made by Attorney at Law Hatfield Chilson, of Loveland, Colo., who has been actively connected with the project since its beginning. In his address he analyzes the benefits that may be expected from this great project, which will provide 315,000 acre-feet of water for supplementary use. Mr. Chilson tells us that there have been few years since irrigation was started during the 1880's that there have been ample supplies of irrigation water.

We are tonight completing the ceremonies dedicating the Adams tunnel. This is one of the key features in the Colorado-Big Thompson project, which will tap the headwaters of the Colorado River, and by means of this tunnel will make these waters available to northeastern Colorado for two purposes—irrigation and power.

I have neither the knowledge nor experience to speak with authority on the power features of the project. However, as a citizen, I am aware of the tremendous shortage of power in Colorado and in the entire United States. Also, I know that as the use of power increases, so increases the productivity of mankind. The production of power from this water will undoubtedly be of great benefit, not only to northeastern Colorado, but also to the State of Colorado and to the Rocky Mountain region as a whole.

As a resident of this area, I can speak with some authority of the benefits which will be derived within the conservancy district from this supplemental supply of water to be applied to irrigation, domestic and municipal uses. However, it is somewhat presumptuous for me to attempt to tell you people who are also residents of this area what these benefits are. All of you are as competent to speak of these benefits as I am.

For instance, why should I attempt to tell farmer Smith that if this water had been available last year for the irrigation of his barley, that his yield per acre would have been 60 bushels rather than 30 bushels? He is more aware of this fact than I am, and it is probably somewhat painful to be reminded of it. Similarly, why should I tell farmer Smith's implement dealer that the reason farmer Smith didn't buy the new tractor last fall is because the barley crop wasn't so good? He, too, is well aware of that fact.

I will assume, therefore, that I talk to you tonight not so much for your information as for the benefit of the record. The conservancy district in which the water will be used is composed of parts of seven counties; namely, Boulder, Larimer, Weld, Morgan, Logan, Washington, and Sedgwick.

In 80 years this area of northeastern Colorado has grown from its virgin state of grass and sagebrush to a highly developed and well-settled area.

Within the district are more than 600,000 acres of irrigated lands; it has a present estimated population of 130,000 persons. Of these persons, approximately 50,000 are rural residents and some 80,000 are residents of such towns and cities as Greeley, Fort Collins, Longmont, Loveland, Fort Morgan, Brush, Sterling, Julesburg, Berthoud, Johnstown, Windsor, and many others. It reaches from the foothills easterly to the State line.

It is a prosperous and progressive area. Its agriculture is diversified, ranging from fruits and vegetables to sugar beets, grains, and forage crops. Crop rotation, livestock feeding, fertilization, and other soil-conserving and progressive farming practices are generally followed. Its livestock industry is widely and favorably known.

Its towns and cities are prosperous and progressive and are growing rapidly. New industries have been established and old ones have been expanded.

I have been informed that, based on the crop yields for the period from 1929 to 1938, and applying the price average from 1923 to 1942, that the value of the average annual production from crops, livestock, and agricultural processing is in excess of $50,000,000 per year.

A stranger might well ask, "If this area is so highly developed and prosperous, what is there in this particular project which can

be of any great benefit?" To us who reside in the area the answer is obvious, "More water." At the risk of being trite, I repeat that time-worn phrase, "Water is the life-blood of the West," and truer words were never spoken. Growing towns and expanding industry need water; farm lands, with increased diversification of crops, need more water. In spite of our highly developed agriculture, there have been few years in which an entirely ample supply of irrigation water has been available when needed. I emphasize the words, "when needed." A heavy flood of water in June does not help the farmer in August unless those waters can be stored and made available when needed. It is this storage of water contemplated by this project which makes this water so very valuable. It is available when it is needed.

The estimates are that the cash value of crop losses in this district due to water shortages has run as high as $13,000,000 in a single year, and over a period of years has averaged $7,000,000 annually.

You can imagine for yourselves what benefits there may be to a community of 130,000 people to have an additional $7,000,000 per year added to community income.

The raising of additional crops will tend to an increase in the livestock, dairy, and poultry industries; an increase in crops and livestock will cause an expansion of processing industries in connection with agriculture and livestock.

Such an increase and expansion must add to the prosperity of the farmer, and as the farmer prospers so prospers his merchant, his doctor, his lawyer, his newspaper, and his neighbors.

When Farmer Smith knows at the beginning of his crop year that there is a certain amount of water stored in a reservoir for his use when needed, Farmer Smith can plan his irrigation. He may still be hailed out; he may still lose his crop by grasshoppers, by freeze or by disease, but at least one, and I may say the principal, cause of crop loss, lack of water, will be eliminated.

Are the residents of this area aware of the benefits of this project? The record will speak for itself.

In the first place, at the time of the formation of the conservancy district, the residents of the district voted to tax all property in the district, whether farm land, business property, industries or homes, to help pay for the project. In the second place, the farmers and municipalities have agreed to pay the district $1.50 per acre foot for this water, and after transit losses and expenses their cost will be between two and three dollars per acre foot.

The pipe-line project for the temporary diversion of water through the Adams tunnel, which enabled this celebration to be held at this time, is perhaps a good indication of what the water users think of the benefits to be obtained. Five ditch companies in the Big Thompson Valley, together with the city of Loveland, invested approximately $115,000 in the construction of this pipe line, which runs from the east portal of the Adams tunnel to the Big Thompson River. By means of this pipe line a supplemental supply of water will be obtained from the headwaters of the Colorado River for use in the Big Thompson Valley, until the permanent project is completed. I might say for the benefit of those who may not know, that our ditch companies and cities do not pay out that kind of money without the expectation of substantial returns.

I could, if time permitted, go into some detail as to the benefits of this project to the State of Colorado as a whole and to the Nation. I could, for instance, point out that economists say that $1 of newly created wealth creates $6 of wealth to the Nation's economy. I could show how an assured water supply could aid in the general farm economy of the Nation by making greater diversification of crops possible in this area to avoid growing crops of which there may be a surplus elsewhere. I could point out the recreational possibilities afforded by the reservoirs to be constructed as a part of this project. Time does not permit, and I will conclude with this thought. Famine and war are two diseases which have ravaged the world from time immemorial. We have just finished a devastating war, and famine now rules in a great portion of the world; but no country has ever lost a war and no peoples have ever starved because that country and its peoples produced too much.

Letter to Drew Pearson

EXTENSION OF REMARKS
OF
HON. WILLIS W. BRADLEY
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. BRADLEY. Mr. Speaker, since there has been so much misinformation in regard to the attitude of the people of California in their claims for the ownership of oil under the marginal sea adjacent to that State, I take pleasure in inserting in the CONGRESSIONAL RECORD an editorial from the Long Beach Independent which sets forth clearly the position of the people of California in this so-called tidelands affair:

LETTER TO DREW PEARSON

On several occasions we have printed your column in which you refer to the Federal seizure of submerged lands as taking away the lands from oil companies. Your usually well informed sources have certainly misled you on this issue. The great loss is to the State, county, and municipal governments of California. It is doubtful that the oil companies will lose anything. But the loss to the people of California will run into hundreds of millions of dollars. The court decision as worded will protect the oil companies.

Each of the oil wells drilled on these submerged lands is controlled by a lease between an oil company and the State government. Or if the State had vested title of the lands in a county or municipal government, the lease was made between the oil company and the respective governmental bodies. The oil companies pay royalties to these branches of government at rates considerably higher than any percentage received by the Federal Government where it has leased land to oil companies. For this reason it is unlikely that the Federal Government will change the lease held by the oil company. It will simply mean the royalty will be paid to the Federal Government rather than a branch of California government.

For example, Mr. Pearson, the submerged lands from which the city of Long Beach has taken oil or hoped to take oil are probably the richest lands on the coast. It is estimated the total production would reach over 300,000,000 barrels. The money received from these wells to date has gone into development of our harbor which played so vital a part during the war. We had hoped to greatly improve the harbor and use the balance of income for civic improvements over the next 20 to 50 years.

After costs of drilling and producing the oil were paid, the city has received 85.5 percent of the income from the wells in the harbor. The oil company gets a total of 14.5 percent for its supervision, profit on original investment, and gamble. That was a lease made by the city in 1939. The city has just completed another lease with the Richfield Oil Co., wherein the city gets 94.1 percent of all income after costs of production and the oil company gets 5.9 percent. The average net to the city has been over 60 percent of all oil produced. The other 40 percent has paid costs and left the company a maximum of 14.5 percent as shown above.

Now, Mr. Pearson, to our knowledge, the Federal Government has never received royalties half as great from an oil company. It is not likely to take anything away from an oil company where such leases are in force. It can only take away the royalties that have gone to the people—not individuals, Mr. Pearson, but the people.

Another point is that every foot of these seized lands has a Federal mineral claim filed upon it. These are filed by individuals who hope to profit by this seizure. These are of record in Washington. Now that the Federal Government claims to own the lands, these mineral claims may have priority. It is well known that great pressure has been brought by these individuals to bring about this seizure. Without it their claims are valueless. If there is to be a scandal, it will probably come out of these claims that are even filed on our breakwater.

Your columns are read in every State. Your influence is great. We feel you have done an injustice to California by the impression you have created. Will you not check these facts and give your readers a true picture of the situation? This is not a Teapot Dome or Elk Hills scandal. It is an example of the people developing oil lands with the greatest protection to the people ever shown in the oil business. It is a correction and cause worthy of your consideration.—L. A. C.

Universal Military Training

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks in the CONGRESSIONAL RECORD, I would like to include the following resolutions by the Church Federation of Indianapolis, Inc., and the Indiana State Pastors' Conference opposing the adoption of universal military training:

STATEMENT ON UNIVERSAL MILITARY TRAINING OF THE CHURCH FEDERATION OF INDIANAPOLIS, INC.

The executive committee of the Church Federation of Indianapolis at its regular meeting on April 7, 1947, expressed its opposition to any type of universal military training in peacetime and requested the Committee on International Justice and Goodwill to present these sentiments to persons charged with responsibility for determining governmental policy on this issue.

In keeping with the instruction of the executive committee the Committee on International Justice and Goodwill affirms that the opposition of the Church Federation of Indianapolis, Inc. to universal military training rests upon the following premises:

1. The adoption of universal military training in the United States would belie our commitment to cooperative action in the United Nations and would undermine confidence in the evolving international

machinery which alone holds forth hope of bringing to realization mankind's universal aspiration for peace.

2. At the present stage of scientific development mass armies recruited through a universal draft are unrealistic and foster a dangerous sense of false security.

3. The development of more enlightened policies on the part of the Army, the provision of greater vocational opportunities and better pay for volunteers would secure the forces necessary for a modern, mobile, and technically trained Army without drafting teen-age youth.

4. It is un-American and unwise to risk the character and morality of millions of our young men in an experiment which elsewhere has proved demoralizing and destructive of the very democratic principles which we seek to conserve.

5. The experience of nations utilizing universal military training does not indicate that even under past conditions of warfare this system either prevents attacks or insures victory.

RESOLUTIONS OF THE INDIANA STATE PASTORS' CONFERENCE, INDIANAPOLIS, IND.

I. A RESOLUTION CONCERNING UNIVERSAL PEACETIME MILITARY TRAINING

The annual State pastor's conference in regular session at the Third Christian Church at Indianapolis, Ind., January 27 to 29, 1947, is concerned to make known its strong opposition to the proposals for permanent peacetime military training.

We believe that permanent peacetime military training to be an unwise public policy. Many of our stanchest citizens came to this country seeking liberty and freedom from the permanent militarization of society in Europe. It have been the cherished tradition in America for 150 years that such militarization should not be imposed upon our people in peacetime. Military conscription is no guarantee of peace and freedom from attack as evidenced by the experience of Russia, Poland, Holland, Belgium, and France. Security can come only through good will and confidence leading toward an organized and cooperative world.

II. RESOLUTION ON THE UNIVERSAL ABOLITION OF PEACETIME CONSCRIPTION

Be it resolved, That the annual State pastors' conference, in regular session at Indianapolis, Ind., January 27-29, go on record as supporting Congressman GERALD W. LANDIS, of Linton, Ind., in his proposals, asking that the United States delegate, Warren R. Austin, of the United Nations Organization, be instructed to work for an immediate international agreement, eliminating compulsory military training from the policies and practices of all nations.

We also request the officers of this meeting to convey this message to President Truman, Secretary of State Marshall, and the Senators and Representatives in the Indiana delegation of Congress, the Speaker of the House of Representatives, Washington, D. C., and the Chief Delegate of the United States to the United Nations Organization.

III. RESOLUTION ON AMNESTY FOR CONSCIENTIOUS OBJECTORS

Whereas the President of the United States has established an Amnesty Board to consider the treatment of conscientious objectors to war still in prison, and others who though released suffer from civil disabilities arising from their adherence to the dictates of their conscience: Be it

Resolved, That the Indiana Pastors' Conference commend the action of the President of the United States and calls upon the Presidential board to recommend a general amnesty as the only practicable means to release conscientious objectors still in prison and to restore the civil rights of men imprisoned for the sake of conscience.

We Are Being Beaten

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. MUNDT. Mr. Speaker, the following column from the typewriter of Peter Edson appeared in a recent issue of the Sripps-Howard newspaper of Washington, D. C., the Daily News. It is a thought-provoking commentary. Its implications are factual and frightening. It describes eventualities which we in Congress have the power and the duty to avert. It merits our thoughtful reading. It is my hope Congress will take early action to correct the consequences which it describes:

WE'RE BEING BEATEN
(By Peter Edson)

The House has now passed South Dakota Republican KARL E. MUNDT'S bill authorizing the State Department to conduct the Voice of America broadcasts and other cultural relations programs to spread democracy in foreign countries. The bill will probably get through the Senate with some amending.

But even when signed by the President and made a law, the Mundt bill will be a good bit like a pardon to save the Voice's life in order to starve it to death later on. House and Senate Appropriations Committees have hacked Assistant Secretary of State William Benton's Office of Information budget so heavily it has no chance to be effective, whether it ever was before or not.

What started out to be a $31,000,000 program was cut to $10,000,000, then eliminated altogether by the House. The Senate Appropriations Committee has now indicated it will raise the figure to $13,000,000. But $1,500,000 of that is to half-liquidate the outfit and bring back home from overseas all the experienced foreign-service people who will have to be fired.

In all this monkeying around, one basic fact seems to have been ignored. It is that in recent months the United States has been taking a terrible beating in the business of waging ideological warfare.

The shooting ended 2 years ago and the end of hostilities was officially declared last New Year's eve. But the war isn't over by a long shot. Only the weapons and the enemies have changed.

The Nazis were licked with guns and bombs. The only way to lick communism would seem to be with a counterattack of ideas—the ideas of democracy. They're what have to be taken out and sold—spread by printed word and word of mouth in foreign countries.

The throwing around of hundreds of millions of dollars worth of relief and loans and military weapons is fine, but it apparently isn't enough. The reason it isn't enough is that the Communists go around spreading lies about all the good deeds.

It isn't necessary to go out and tell lies about the Communists—to fight dirty just because they fight dirty—though that has been suggested. But it is necessary to counterattack with truth.

Cuts which the Senate Appropriations subcommittee under Senator JOE BALL, Republican, Minnesota, has just put in the State Department's "counter-intelligence" program make its task almost hopeless.

On an $11,500,000 net basis for next year, $8,000,000 will have to be spent in the United States. Broadcasting the Voice of America programs will take $6,000,000 of that.

The reduced appropriation will make it necessary to close half the offices now being operated in 77 foreign countries. It will close half the American libraries. It will practically end the making and showing of American documentary movies.

It will reduce the "army" of 2,600 trained specialists now fighting United States propaganda warfare to a mere 600. That number is a bit reminiscent of the old fifth reader poem about the gallant 600 in the Charge of the Light Brigade.

They were licked before they started.

Colorado-Big Thompson Project

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. HILL. Mr. Speaker, it was my good fortune to attend the celebration and the ceremonies dedicating the Adams Tunnel, which is part of the Colorado-Big Thompson project. This tunnel pierces the backbone of the Continental Divide through the Rocky Mountains. This tunnel brings the water from the western slope of the Rocky Mountains over into the South Platte Valley on the eastern side. The tunnel is 13.2 miles in length and approximately 9 feet square. It will bring supplementary water to provide for shortages during dry years for more than 600,000 acres of irrigated land. All this land is now in cultivation and this extra water will be used when necessary to insure full production.

Mr. J. M. Dille, who made the following address, is secretary-manager of the northern Colorado water conservancy district and has been connected with the project since its inception:

In speaking on behalf of President Hansen and the directors of the conservancy district, about all I can say is to try to express our gratification at the passing of one more milestone in the history of the project.

While other goals have been reached during the 14 years since the program was definitely initiated by the people of northeastern Colorado, the water now flowing toward us, through the tunnel we dedicate today, constitutes the first concrete result of all the years of dreaming, planning, and working.

In spite of present evidence to the contrary, in the prospect of the best local water supply we have ever had, the history of irrigation in northern Colorado is largely a record of short and variable water supplies.

We have the soil, the climate, and the people, but the full agricultural, economic, and social possibilities of this region can only be attained by "firming up" the water supply which is the base of the entire structure that is built upon it.

Following the first mass meeting of public-spirited men in 1933, many problems required solution to get the project in motion. First Mr. R. J. Tipton, consulting engineer, of Denver, made a preliminary report which showed that such a diversion project was feasible.

On the strength of this report, the Bureau of Reclamation was allotted $150,000 to make a complete survey. Their report, released in April 1937, proposed a combined irrigation and power development.

During this period contracts were made with leading irrigation men on the western slope and, as a result of numerous conferences, satisfactory solutions of conflicting interests were worked out, and best of all, friendly relations in the interests of the State and all parties concerned were firmly established.

When, in 1936, it became evident that the Bureau would develop a feasible project, it was realized that some special form of organization was necessary to contract with the United States, guarantee repayment of construction costs, and to do all the things necessary to properly distribute the benefits and costs of the project over such a large, self-developed, and complicated area.

After many months of study by our attorneys and others, a bill for a Conservancy District Act was written and enacted into law by the State legislature in May 1937.

Governor Knous, then a justice of the Supreme Court of Colorado, later wrote the opinion of that court upholding the constitutionality of this act.

Perhaps outstanding among many special provisions of the act is the power given to the directors to levy a tax on all real and personal property in the district. This tax is limited to one-half mill during the construction period and to 1 mill thereafter.

This tax really represents a small reflection of the indirect benefits of the project to the general public and also acts to reduce the cost of water to the farmers.

On petition of property owners, as the act provides, the district was organized in September 1937 by Judge Claude C. Coffin, of our district court.

The 11 directors of the district are also appointed and reappointed by Judge Coffin.

The next important step was the negotiation of a contract with the United States for construction of the project. As most other reclamation projects had been built for the development of new lands, the problems involved in organizing a project to furnish a supplemental water supply to such an old developed area as northern Colorado were new and complex.

A contract was required that would leave all the power features of the project with the United States but which would provide definite terms on which the district would repay the part of project costs allocated to irrigation use.

The reclamation law required such a contract and it was also necessary that the district have the exact terms and conditions as the basis for presenting the proposal to the property owners and water users of the district. During this period many conferences and public meetings were held throughout the district to explain the program and to get the sentiment and advice of the people.

Bureau officials in Denver and Washington cooperated with the district in working out a plan that would assure the United States of repayment and also permit the district to distribute and allocate the water on terms and conditions that the users would accept.

Present water supplies vary widely throughout the district and it was necessary to have a flexible plan that would permit the directors to distribute the water to fit individual and local conditions. In fact, the framing of the district act and the writing of the repayment contract were coordinated in a plan designed to meet the requirements of the reclamation law and also satisfy, as far as possible, all the special needs and conditions of the district.

For instance, when it became known that the part of the cost of the project allocated to the district would require a charge of $2 per acre-foot annually for the water, further meetings were held throughout the district to determine whether this charge would be acceptable as the basis of contract repayment.

When it was finally determined that this was more than the water users were able to pay, the plan for a general property tax was developed to carry part of the load and permit a water charge that the users would accept.

It was finally agreed that if about 50 cents of the annual water charge could be borne by the general taxpayers and the water assessment reduced to $1.50 per acre-foot annually, a repayment contract could be approved by the electors.

The district act and the repayment contract were finally completed to conform to such a plan.

The contract negotiated by representatives of the Bureau of Reclamation and the district directors was approved at an election of taxpayers of the district at which nearly 8,000 electors voted.

In furtherance of the plan the district has already, by recorded contracts, allotted over two-thirds of the 310,000 acre-feet of water on the basis of $1.50 per acre foot, which, together with the mill tax on all property in the district, will fully meet the obligations of the repayment contract.

Most of this water has been allotted to individual farms to fill their particular needs for additional water.

Limited appropriations, the war needs, and many other obstacles have prevented the Bureau of Reclamation from pushing the construction of the project as was expected 10 or 12 years ago.

However, the Bureau is now well underway on an expedited program that should complete most of the irrigation features in the next 3 or 4 years.

In the meantime they have cooperated in making possible the use of the Alva B. Adams Tunnel in bringing water to that part of the conservancy district in the Big Thompson Valley.

The people in this valley are paying for the water and for the temporary pipe line which makes possible this early use and dedication of the tunnel.

During the construction of the project, in addition to developing our own organization and plans, the district has cooperated with the Bureau in such matters as securing rights-of-way, adjudication of water rights, details of water distribution facilities, and, of course, in securing appropriations from the Congress for the project.

I may add that the district has paid most of the $100,000 to Grand County in compensation for reduced tax income.

Mr. R. J. Tipton has been consulting engineer for the district since he made the first report, and his advice and judgment have been invaluable.

Mr. William R. Kelly, present attorney for the district, and others have taken good care of legal matters.

In addition to Senator Alva B. Adams, in whose memory we dedicate this tunnel today, we owe a debt of gratitude to Senator JOHNSON, Senator MILLIKIN, and Congressman HILL of this district, who have kept closely in touch with project problems and given their solution first place on their busy Washington schedules.

Particularly, I think, we owe a debt we can never pay to Clifford H. Stone, director of the Colorado Water Conservation Board. The freely given time and help and the sound advice of Judge Stone have been a pillar of strength to the District ever since he took up the direction of the water board in the same year the district was organized.

Of course, the district is waiting anxiously for the day when the full project can be put into operation. Only then will we know whether the plans that have been worked out to superimpose a supplemental water project over such an area, allot and deliver the water, collect the taxes and assessments and keep to the letter our obligation to the United States, will be fully successful.

Perhaps, 3 years from now—if Congress cooperates, and we think they will—the power plants in Estes Park and the rest of the irrigation features will be completed and we can have another gathering to dedicate the entire project, with both irrigation and power benefits to a better, fuller life to thousands both within and without the district.

Waste and Wanton Destruction

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. ELLIS. Mr. Speaker, while Europe starves and the Congress continues to appropriate hundreds of millions of dollars under administration pressure for relief all over the world, the administration goes its merry way continuing, almost without number, acts of waste and wanton destruction and displaying a degree of frustration, confusion and incompetence, never before witnessed in this country.

In the Pathfinder of July 2 we are informed that the battle of the potatoes had boiled down into a verbal spud-slinging contest between Secretary of Agriculture Anderson and Representative ANDRESEN.

Congressional resentment had smoldered since last year when the Agriculture Department paid farmers $80,000,000 in price-support checks for 87,000,000 bushels of potatoes, then destroyed 22,000,000.

It flared last month when Representative AUGUST H. ANDRESEN, Republican, of Minnesota, charged Agriculture Secretary Clinton Anderson with making a mess of the potato price support program. It grew hotter when Anderson angrily replied: "The fault lies not with me but with Congress, who wrote the law."

By last week our colleague [Mr. ANDRESEN] was ahead on points. His special subcommittee relentlessly cross-examined Secretary Anderson's top officials, tripped them on two facts that did not make sense:

First. Early this year the Department dumped thirteen and one-tenths million bushels of good Maine spuds it had bought from farmers at $1.50 to $2.20 a hundredweight.

Second. The Agriculture Department did not have enough surplus left to fill this spring's export orders.

In January Spain contracted for 60,000 tons of surplus Maine potatoes. But when 18 Spanish ships called at Searsport, Maine, to take them aboard, they had to sail home with only 20,000 tons. Similarly, Mr. Anderson short-changed the War Department by 33,500 tons on a seed-potato order for German relief.

Across the Nation, Representative ANDRESEN stormed, there had been wanton waste. In Virginia the Government paid farmers $2.25 a hundredweight to destroy potatoes, creating such a shortage that Canadian spuds now sell wholesale in Richmond for $4.50.

They present a picture showing mountains of potatoes in Alabama to be dumped and burned by Government agents. This sort of operation is beyond human understanding.

Dollar Economy and Soil Erosion

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Marquis Childs from the Washington Post:

DOLLAR ECONOMY AND SOIL EROSION
(By Marquis Childs)

The Mississippi River at flood crest is rolling down to the sea and carrying with it the stuff of life itself. It is carrying millions of tons of topsoil that can never be replaced.

We read headlines about the damage in dollars done by the floods in the Middle West.

One expert estimate puts the cost of soil erosion thus far in Iowa alone at $107,000,000.

Dollars are such a feeble measurement of the loss, since the soil that goes washing down the river is literally priceless. While we measure with the dollar sign, the true values slip away and are ignored.

* * * * *

Behind the dollar sign is the threat to the well-being, yes, to the very existence of the Nation. There are those with expert knowledge who believe that the great bread basket of America in the Middle West is rapidly approaching the stage of erosion that existed in the South 20 years ago.

Without an immediate large-scale advance to check the rate of erosion, our best farming country will go on washing down into the great sewer of the Gulf of Mexico. That means widening gullies. It means barren subsurface clay and rock. It means eventually drought, dust storms, and desert.

In fact of all this, with every river in the Mississippi system boiling brown with precious soil, it is hard to understand a Congress that hacks away at the funds for the Soil Conservation Service. It is hard to understand until you remember that economy to most Members of the Eightieth Congress means dollars. Such economy completely and tragically overlooks the loss of the wealth that is our bone and sinew, our staff and our strength.

The Bureau of the Budget recommended an appropriation of $48,120,000 for the Soil Conservation Service. That was a little less than $2,000,000 over last year's budget. The House cut this to $40.273,000, and the Senate has thus far shown little disposition to restore even a part of the cut.

Arbitrarily the House cut the amount available for research from $1,423,000 to $673,000. That somehow points up the folly of this dollar economy, for if one thing is important it is to work on new ways to stop the real loss in the good earth that feeds and clothes us.

One of the important functions of the Federal Government in these matters is to provide know-how and guidance for the States and local districts that are setting up soil-conservation projects. There are now more than 1,800 such districts covering about three-fourths of all the farms in the United States.

But in spite of what has been done so far, the losses are still terrifyingly large. H. H. Bennett, chief of the Soil Conservation Service, estimates we are losing around 500,000 acres of farmland through erosion every year. Measured by the dollar sign, this is at least $1,000,000,000 a year.

Soil conservation, through terracing, contour plowing, and numerous other techniques, is directly related to floods. The more water that can be kept in the soil, the lower the level of the flooded rivers. Bennett believes it is possible to cut down flood crests as much as 20 percent through work now being undertaken.

From one river system you hear no reports of floods. This is the Tennessee Valley. Thanks to TVA, the Tennessee system is today the best controlled river system in the world.

Heavy rainfall in the Tennessee Valley in 1945 and 1946 would almost certainly have brought major flood damage at such vulnerable points as Chattanooga if it had not been for TVA's dams and conservation system. Here is an example of constructive effort that stands out in startling contrast to the disaster in the Mississippi Valley—a disaster that will cost at least $100,000,000 quite apart from the soil loss. We can do these things if only we will have faith in our own powers.

Half a Voice

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. MUNDT. Mr. Speaker, no cause in the history of humanity has been more important than the current efforts to make this a permanent peace. It is sincerely to be hoped, therefore, that before this Congress adjourns it will reenforce rather than reduce the mechanics available to the United States in persuading the people of the world to embrace forms of behavior which will enable peace to endure.

The House of Representatives by its overwhelming vote in approval of H. R. 3342 did its part in helping to equip our State Department with the weapons it needs to advance the struggle for peace. It is now up to the other body to schedule H. R. 3342 for action to the end that a comprehensive and carefully controlled program of United States information abroad can be put into operation while there is yet time to avert the development of conditions which make wars inevitable.

Mr. Speaker, the action of the House in voting its approval of a program of information and educational exchanges to dispel distrusts abroad and to develop the wide areas of mutual respect and understanding which are so essential to permanent peace has won widespread acclaim among the outstanding newspapers of America. Innumerable editorials have been written praising the House action and urging similar action by the other body of Congress. At this point in the RECORD, I wish to call attention to a brief but significant editorial which is typical of many others which might have been selected to illustrate the newspaper support being accorded to H. R. 3342 from every section of this country.

The following editorial is from the Washington Post for the morning of July 2, 1947:

HALF A VOICE

If any further emphasis is needed, Secretary of State Marshall's appearance before the Senate Foreign Relations Committee this morning to urge passage of the Mundt bill should demonstrate the importance he attaches to the foreign information program. This is the fourth time Mr. Marshall has gone to Congress to plead for this arm of our foreign policy which the Senate has severely weakened. The temporary funds contained in the rider approved Monday at the behest of the Appropriations Committee are better than nothing, but they are pitifully inadequate for the work expected. The Senate's parsimony is strange at a time when we have invested so much in trying to stabilize our kind of world. Among other effects of the cut, nearly half our information officers overseas must be recalled, nearly half our libraries must be closed, our broadcasts must be curtailed, our film audiences decimated. Activities must cease entirely in 11 countries. We hope that the Foreign Relations Committee will see the damage of this sort of economy to our national interest. The Mundt bill in itself would not assure more funds, but it would dignify the information program by placing it on a permanent basis. If the committee makes an all-out drive for enactment of the bill in the Senate, it then will be in a position to return and ask for the money necessary to do a thorough job in telling the truth about America.

Senseless Policies

EXTENSION OF REMARKS
OF
HON. HUBERT S. ELLIS
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. ELLIS. Mr. Speaker, another ironical story of the senseless policies of this administration was impressed upon us by a news item a few days ago. During the war and since, we have supplied the world with merchandise and machinery of every description. It comes to mind that during the war American farm machinery was available to almost anyone in the world except the American farmer. Now we find ourselves without sufficient farm machinery for the harvest and are dependent upon our neighbors. A recent Associated Press dispatch says approximately 500 combines from Saskatchewan are assisting with the United States midwestern harvest and approximately 100 more are on the way according to M. E. Hartnett, a Saskatchewan agriculture department official.

He also said that most of the combines now en route probably would be sent to Kansas, where the harvesting is reported delayed by a shortage of equipment. Because Saskatchewan had agreed to send farm workers to eastern Canada for harvesting, it was doubtful if any more men or equipment could be sent to the United States.

It is reasonable to believe that these combines are from American factories and delivered to Canada in preference to our own people. This is just another administration operation very difficult to explain and understand.

The Tax Bill

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include the following editorial which appeared in the New York Times of July 5, 1947:

THE INSISTENT MR. KNUTSON

The Ways and Means Committee has reported out a new version of the tax reduction bill recently vetoed by the President, and the Republicans are reported to be counting upon the House and Senate to act on the legislation in time to send it to the White House by the end of next week. If this timetable is adhered to, they point out, the possibility of pocket veto will be avoided, since adjournment is not scheduled before July 26. They apparently feel that they might muster a sufficient number of votes to pass the bill over a regular veto.

Events conceivably may justify this belief. It is possible that the President's veto of the labor bill, coming, as it did, on the heels of similar action on the earlier tax bill, cost him enough strength to make possible repassage of the proposed measure over a second veto. But this hardly seems likely. When a case is reopened in a court of law it is usually on the basis of new evidence calculated to strengthen it. But the only change in the new version of the tax reduction bill is that it puts the effective date off 6 months, or until January 1 of next year. To many this will seem to make the issue more or less academic.

The President vetoed the original bill because, he said, it was "the wrong kind of tax reduction at the wrong time." To be consistent he would have to take the same course with respect to the successor bill. If the first was wrong in "kind," then the second, since it is identical in character, would face the same objection. As to its timing, Mr. Truman could certainly argue with a good deal of force that it was too early now to say with any certainty what the budget and business position would look like in January 1948. There is no doubt that such an argument would be respectfully received, since it was employed repeatedly by those conservative Members of Congress who warned against too precipitate action in the case of the original measure.

The tax-reduction bill would mean a decline in revenue over a year of $4,000,000,000 but the loss in the second half of fiscal 1948 is placed at only about $1,500,000,000. Estimates of Colin Stam, the congressional staff expert, point to a surplus for fiscal 1948 of $3,900,000,000, even with no reduction in the Truman budget. That would allow for the tax reduction of $1,500,000,000, it is pointed out, in addition to a reduction of $2,400,000,000 in the Federal debt.

Doubtless these estimates are as scientific as could be expected of any such forecasts. But the public may perhaps be forgiven if events over the past several months have given rise to a certain amount of healthy skepticism about fiscal predictions generally. Among other things, it has seen the 1947 budget underestimated by upward of $10,000,000,000 on both the revenue and the spending side. It has seen estimate of a deficit for the year just ended give way to predictions of a surplus of as much as $3,000,000,000 to $4,000,000,000—predictions which, in turn, gave way before reality in the form of an actual surplus of about $75,000,000. And it has seen confident statements by the Republicans that they could cut down the Truman 1948 budget by from $4,500,000,000 to $6,000,000,000 proven to be largely illusory. Against such a sobering background it seems doubtful if Representative KNUTSON can expect to arouse an inordinate amount of enthusiasm either in or out of Congress at this juncture with his warmed-over legislation.

Are Levees the Answer to Floods?

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article from the Prairie du Rocher (Ill.) Sun on Friday, July 4, 1947, on the very important subject of flood control in the Mississippi Valley.

This article was written by the editor and publisher of the Sun, the Honorable A. A. Brands, a member of the House in the Illinois General Assembly.

The article fo"ows:

ARE LEVEES THE ANSWER TO FLOODS?

After the 1943 flood, the writer in conversation with the United States engineers gave as his practical opinion, that the Government should dredge the channel of the Mississippi, taking out all the barriers they have been erecting for many years past, to slow up the flow of water, as an aid to navigation, so that the water would have a chance to get away faster. The engineers could not see it our way, stating that the stream should be confined by levees.

Thinking that they knew what they were saying, we became an advocate of levees. The flood of 1943 and this one have demonstrated very clearly that the engineers were wrong, as some mighty fine levees north of here were topped and in most instances broken, with a large amount of damage, due to the release of a large amount of water in a small space.

To prove our theory, the river came up in April and has fallen very little since, and when the flood waters from the upper Mississippi and Missouri arrived, the April floods were still here. Had there been no fences, which have built islands in the river, the April water would have been in the Gulf of Mexico, and there would have been plenty of space for the recent flood, and it would have had a quick get-away, so that it would not have piled up against the Stringtown and Harrisonville levees as it did, thus there would have been no flood.

To prove the point, when highway engineers bring water down a hillside, and want to keep it from washing deep ditches, they build hurdles, to slow down the water, and this is what the Government has been doing for years, building hurdles in the Mississippi, thus slowing the water, with the result that farmers living along the river have sustained losses over the past years, of many millions of dollars, due to the Government's desire to protect navigation. Let the owners of river barges place more powerful boats in service, so they can buck a swift current, and stop this threat to the world food supply.

A copy of this paper will be sent to the Congressman and two United States Senators from Illinois and it might not be a bad thing if every interested citizen would write to these gentlemen, for we have tried the theory of the engineers and it has failed, so we have nothing to lose trying another.

A New Bill for Railroad Safety and Public Protection

EXTENSION OF REMARKS
OF
HON. MARION T. BENNETT
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. BENNETT of Missouri. Mr. Speaker, I introduced on May 13 House Resolution 210 to authorize an immediate investigation by this House of the causes and feasible methods of preventing accidents of all kinds occurring in the operation of carriers by railroad. I stated at that time, in view of the large number of train wrecks during the last several years resulting in the killing and maiming of thousands of passengers and employees, it is imperative that something be done, and quickly, to prevent the continued slaughter of approximately 5,000 railroad employees and the traveling public annually.

Mr. Speaker, House Resolution 210 was referred to the Committee on Rules, but that body has taken no action. Probably House Resolution 210 is slated for a painless death, a fate not suffered by the thousands of passengers and employees who went to their deaths because of rundown roadbeds, equipment and other defective facilities and installations which have caused the accident holocaust of the past several years. At the time of the introduction of House Resolution 210, I dwelt somewhat on the unsafe, unsanitary, and unhealthful condition of express cars and equipment and this situation is so widespread and deplorable that I am now introducing a bill "to promote the safety and health of employees engaged in baggage, mail, or express train service in interstate commerce by requiring common carriers by railroad and any express company to install and maintain all such cars and equipment used or furnished by them for such purposes in safe and suitable conditions for use in the service for which they are put."

Mr. Speaker, a grave injustice is being continued, an unparalleled condition of willful neglect and indifference is forcing express messengers, helpers, and guards to carry on their work under conditions not fit for dumb beasts to contend with.

I am advised by Mr. George M. Harrison, grand president of the Brotherhood

of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees that as a result of a questionnaire addressed to every express messenger in the United States, it was found that replies were received covering the period of July 15 to August 5, 1946, concerning the condition of 3,517 cars in express service. Only 1,738 of these cars were equipped with toilets or not quite 50 percent of the total number of the cars surveyed and that only 422 of these toilets were enclosed and only 133 were flush toilets. The number of cars with clean toilets were 488 and 1,227 had dirty toilets.

Another shameful condition met with was that of water supplied to these cars. Out of a total of 3,476 cars it was found only 1,713 were equipped with water containers and 1,763 were not so equipped, or above 50 percent of the cars examined. As to the condition of the containers, 1,663 were examined for any structural defects of which 1,094 were found in good condition and 569 in need of repair. A total of 3,129 cars were examined as to their heating equipment. Of this total, 2,285 were found to have good heating equipment and 844 were found to have defective equipment, such as broken pipes, insufficient radiation, and other defects. The general cleanliness of the cars was also found to be quite bad. Of 3,489 cars examined as to cleanliness, only 784 cars were found in good condition, 1,689 in fair condition, and 1,016 in bad condition. It was also developed that 3,434 of these cars were held in terminals sufficiently long for cleaning before being taken out on trips. The fact that almost three-fourths of the cars originated at points where they were boarded by messengers provides clear evidence that the bulk of the cars could have been properly cleaned before being dispatched and leaves no tenable justification for the fact that more than three-fourths of the cars were in an unclean state.

Mr. Speaker, the attention of this House is directed to the fact that leaky toilets and water containers, defective heating equipment and uncleanliness of these cars is not only a menace to the health of these express employees, but also endangers the public health as perishable foodstuffs transported in these cars is in danger of contamination, not only due to dirt accumulation from ordinary use, but also from the leavings of animals and the rot and slime from decayed fish, vegetables, and other foodstuffs.

The attention of the railroads and the express company has been directed to these conditions, but very little has been done about it. Grand President Harrison appealed to the Interstate Commerce Commission by filing an informal petition but the Commission notified him under date of June 5, 1947, that it did not possess the authority under the Interstate Commerce Act to make an investigation of these conditions. Therefore, Mr. Speaker, it will be necessary to enact legislation empowering the Commission to make an investigation and to be further empowered to take the necessary corrective steps to eliminate these abuses. The bill introduced by me today is designed to accomplish these objectives.

Atlanta Constitution Urges Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the July 2 issue of the Atlanta Constitution, as follows:

STATEHOOD FOR HAWAII

Perhaps no event since the war so well illustrates the demise of the old theory of isolation, as well as a certain degree of smugness, as the overwhelming vote in the House of Representatives in favor of admitting Hawaii as the forty-ninth State. The vote, yet to be concurred in by the Senate, is nothing more than the fulfillment of a pledge to the people of Hawaii when it became a Territory in 1900.

If the Senate concurs, and we believe it will see the wisdom of so doing, Hawaii will become the first State outside the continental limits of North America. The action will serve as a precedent and give hope to the people of Alaska and Puerto Rico, who also would like the privileges of statehood.

The population of Hawaii is approximately 519,000, considerably greater than the populations of Arizona and New Mexico when they were admitted into the Union in 1912. Hawaii is rich; it has a fine school system and its citizens made notable contributions, often at considerable sacrifice, to Allied victory in World War II.

Before reporting favorably on the statehood bill, the House Committee on Public Lands took considerable testimony and asked opinions from the War and Navy Departments as well as the Department of Interior. While the War Department, evidently regarding the matter as outside its sphere, declined to render an opinion, the Navy Department went to considerable lengths to laud the Hawaiians for their cooperation during the war. Even though a large percentage of the population is of Japanese ancestry, not a single act of sabotage was committed by a person of foreign extraction, the Navy said. Fleet Admiral Chester Nimitz, testifying as a private citizen, admitted that prior to the war he had doubts as to the loyalty of American citizens of Japanese ancestry. But the war dispelled his doubts and Admiral Nimitz now favors statehood.

The Army's Maj. Gen. Charles D. Heron, retired, a former commander of the Hawaii Department, told the committee:

"What I found of the people there was good. Civil leadership was thoroughly patriotic, and cooperation with the Army and Navy was the rule, though often expensive and highly inconvenient to the islanders."

The Interior Department said the ability of the islanders to govern themselves as a State "has already been amply evidenced by, for example, the mass of progressive and intelligent laws on the statute books of the territory, its advanced school system, and the wise management of its fiscal affairs."

It seems to us that statehood for Hawaii would lend substance to our affirmed policy of extending democracy and granting the right of self-determination to all peoples everywhere. Thus, we cannot agree with Georgia's First District Representative PRINCE H. PRESTON, Jr., who told the House that admitting Hawaii would give Russia a chance to accuse the United States of imperialism. We would like to ask Mr. PRESTON if it be imperialistic to accept, finally, on an equal basis a people who for 47 years have not been considered good enough for equality?

We believe statehood should be granted and further, that the Senate should find time to act at this session rather than postponing any longer a matter that should have been attended to many years ago.

Tax Reduction

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. SPRINGER. Mr. Speaker, many articles have been written upon the proposed tax-reduction bill, and much speculation has been indulged with respect to that measure, but I am constrained to believe that the article which has been written by David Lawrence sets forth some very cogent reasons for the passage of that measure. The fact is, the people are demanding a tax reduction, and it is the legislative function of the Congress to grant that needed decrease; since this can and should be done, I am constrained to believe that this present tax-reduction bill will be passed by both Houses of the Congress, and it is my hope that the President will coincide with the view of the Congress, and approve it. This legislation if and when passed will do much to aid in the rehabilitation of all kinds and types of business in our country, and it will materially increase the purchasing power of all of the people, who would otherwise have lost that power of purchase. The article to which reference is made contains a splendid analysis upon this subject.

Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I include the very enlightening article by Mr. David Lawrence, which follows:

FIVE BILLION LEBT CUT HELD POSSIBLE IF NEW TAX BILL BECOMES LAW

(By David Lawrence)

More than $5,000,000,000 can be cut from the national debt while a reduction in taxes amounting to $1,500,000,000 can be made simultaneously if the new Republican-Democratic tax bill becomes law.

Colin Stam, staff expert for the joint congressional committee of internal revenue and perhaps the best-posted man in America on what the yield will be on tax rates, devotes his whole time to the needs of Congress on tax figures. He is authority for the estimate just given.

Mr. Stam points out that the reduction in tax revenues will affect only a half of the fiscal year which began July 1, 1947, and extends to June 30, 1948. Thus the full effect of the tax rates would not be felt in the fiscal year 1948, which is the one in which expenses are expected to be much higher than in the fiscal year 1949.

FIGURES TO CARRY WEIGHT

There are some experts who figure that, with favorable business conditions, the estimated loss of revenue due to tax-rate revision will not be as large as predicted, because when tax rates are reduced there is usually a stimulus to business and the total volume

of transactions increases. Mr. Stam, however, is making his estimates in the customary way and there is no allowance for a marked improvement in business conditions which could conceivably increase the gross receipts of the Government not merely from individual taxes but from corporations and from customs duties and excise taxes on beverages and various luxury articles.

The figures offered by Mr. Stam will carry a good deal of weight in Congress, because some Members who voted to sustain the recent veto of the tax bill did so because of a fear that the amount to be reduced would be at least $3,000,000,000 during the fiscal year that ends June 30, 1948.

So if Congress passes the new tax bill over an expected Presidential veto, the two Houses will, in effect, be adopting a compromise—half of the $3,000,000,000 instead of the full amount.

The plan to apply $5,000,000,000 to debt reduction presupposes that the tax receipts expected will exceed by that amount the Government expenses planned for the fiscal year 1948. This means that the drive for economy must be continued throughout this year and next. It means that Government appropriations must be pruned by the administration so that everything authorized will not be spent. Each year there is a balance of unexpended appropriations. In fact, there are huge sums now available for European relief which can be handled out of funds already authorized and made available from the grants of preceding years.

MARSHALL PLAN STUDIED

The prospect that America will be called on to furnish many billions to Europe is apparently not interfering with the plans to hold down the 1948 budget. This is because there are big sums available through the World Bank and through the Export-Import Bank and through unspent relief funds—all of which, if pooled, could help the European economy through the purchase by our Government of needed American goods for resale through loans to European countries.

Congressional committees have been studying the scope and possible cost of the Marshall plan. The sentiment on Capitol Hill is that whatever aid is given Europe will be of such an amount as the American Government can take in its stride without upsetting the plan to make some reduction in the national debt.

If it comes to a matter of ignoring reduction of individual taxes altogether or ignoring for a year a further cut in the national debt in order to help Europe, it may be taken for granted that Congress will feel that the debt can wait a year to help out Europe and that tax reduction will help maintain favorable business conditions in the United States and bolster the national economy.

Bishop Henry Althoff

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. PRICE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include an editorial from the Belleville (Ill.) News-Democrat, written by Hon. Robert L. Kern, editor and publisher, on the death of the Rt. Rev. Henry Althoff, D. D., bishop of Belleville.

Bishop Althoff died late on the afternoon of July 3 in Belleville at the age of 73. He was the spiritual leader of 81,000 Catholics in southern Illinois for 33 years.

The editorial follows:

BISHOP HENRY ALTHOFF

Seldom in our times has a death brought such a sense of sincere sorrow as has the passing of Bishop Henry Althoff, whose attributes of fine character endeared him to thousands of families throughout all southern Illinois.

Here was a man with vision and foresight, an aggressive champion of morality and goodness, a scholarly and wise leader, a community builder, who devoted his entire lifetime to emulation of the highest principles of human endeavor.

The spiritual mentor of more than 81,000 Catholics, his sphere of influence extended far beyond his own church, for his exemplary conduct provided inspiration to untold thousands more, regardless of faith and creed. Bishop Althoff was always looked up to, revered and respected, honored and loved. And that was as it should have been.

The outstanding qualities which characterized Henry Althoff were manifest early in his career. To their everlasting credit, his peers took cognizance of these when they selected him 34 years ago to succeed the late Bishop John Janssen as the second bishop of the Belleville diocese. The passage of time has conclusively proved the innate wisdom of their appointment.

Bishop Althoff always tempered his outlook with solid conservatism, but never to the point that it detracted from his breadth of vision. He understood fully that if his people were to achieve spiritual development, then they must also enjoy the benefits which grow out of a healthy, well-balanced, cultural, and social program, and he was ever guided thus.

Attesting his progressiveness and foresight are the many beautiful church edifices, excellent hospitals, and splendid schools and colleges throughout this diocese which his excellency caused to be built and which stand as perpetual monuments to his greatness.

Though as a mortal individual he has passed from our midst, the fine works of Bishop Althoff shall live on and continue to be felt and enjoyed. The memory of a good man, as Henry Althoff was, never dies.

Treasury-Post Office Appropriation Bill

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. BUCHANAN. Mr. Speaker, under leave to extend my remarks I wish to insert in the RECORD the following statement of President Truman when he signed the Treasury-Post Office bill, on July 1, 1947:

I have today approved H. R. 2436, providing appropriations for the Treasury and Post Office Departments for the fiscal year ending June 30, 1948, because it provides for continuing in part the essential activities of these departments. However, I would be remiss in my duty if I failed to bring to the attention of the Congress and the people the gross inadequacy of the funds made available for the collection of our revenue.

The administration of the taxing statutes should never be influenced by political considerations. People of all political faiths are called upon to support their Government through the payment of taxes and are entitled to adequate administrative controls to insure that the dishonest do not shift their share to the honest.

The employees who have been trained in the technical work of tax administration and who have done and are now doing an excellent job are civil-service employees. The training of this personnel has been paid for by the Government at great cost and this investment should not now be dissipated. Once these people are released it is not reasonable to suppose that they will be available for reemployment should additional funds be provided later. It will take years to restore the damage done by the failure of the Congress to support the current efforts of our tax-collecting agency.

I am advised by the Secretary of the Treasury and the Commissioner of Internal Revenue that the reduction of $20,000,000 in the appropriation for the Bureau of Internal Revenue will mean a reduction in personnel of 4,000 to 5,000 employees and will result in a direct loss of revenue of not less than $400,000,000 in the fiscal year 1948. There is at the present time with present personnel a backlog of 30,000 "leads" on tax evasions awaiting investigation.

The vast majority of our taxpayers are scrupulously honest in tax matters. Taxpayer morale is now generally high, but it will remain so only if the odds remain strong that the would-be tax evader will be detected and punished.

It is a fallacy to assume that the reduction can be absorbed without weakening the enforcement activities of the Bureau, because it is not possible to decrease materially the now inadequate number of employees necessary for the routine tasks of tax collection. Tax returns must be recorded and funds deposited, even though the returns are never investigated.

It is another fallacy that the work load of the Bureau of Internal Revenue has decreased since the close of hostilities. From a tax collection standpoint the present period resembles in many respects immediately following World War I. At that time the Congress appreciated the needs of the Bureau in the matter of meeting its accumulated load of wartime tax cases and provided increased funds commensurate with such burden. This policy was followed for almost 6 years after that war in order that the Bureau might be able to dispose adequately of such cases.

The action which the Congress has just taken fails to recognize the much greater task of tax collection resulting from World War II.

Taft-Ellender-Wagner Housing Bill

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. FORAND. Mr. Speaker, under leave to extend my remarks, I include the following resolution adopted by the City Council of the City of Providence, R. I., urging prompt and favorable action on the Taft-Ellender-Wagner housing bill:

Whereas it is evident that one of the most pressing problems confronting the Nation is the lack of adequate housing to shelter our people; and

Whereas veterans of World War II and millions of other American citizens are finding

it virtually impossible to find decent housing for themselves and their families; and

Whereas there exist in this city, State, and Nation blighted areas which constitute social and economic liabilities and require redevelopment in the interest of the health, safety, and welfare of our citizens; and

Whereas there is now pending in the Congress of the United States the Taft-Ellender-Wagner long-range housing bill to encourage construction of 15,000,000 city and rural dwellings in the next 10 years; and

Whereas the announced goal of the measure is "decent homes and a suitable living environment for every American family"; and

Whereas under the terms of the bill private enterprise in the construction industry would be encouraged to serve as large a part of the total housing need as possible; and

Whereas the bill provides Federal funds to clear slums and provide public low-rent housing to areas where needs cannot be fully met through reliance on private enterprise or local and State revenues: Now, therefore, be it

Resolved, That the members of the City Council of the City of Providence, realizing that there is a great need to provide decent and adequate housing for citizens of our city, State, and of the Nation, and believing that the proposed Taft-Ellender-Wagner housing bill can do much to alleviate the housing shortage, do hereby respectfully request the Senators and Representatives from Rhode Island in the Congress of the United States to use their good offices to secure prompt passage of said Taft-Ellender-Wagner bill, so-called; and the city clerk is hereby authorized and directed to transmit duly certified copies of this resolution to the Senators and Representatives from Rhode Island in the Congress of the United States, and to the Honorable Senators ROBERT A. TAFT, ROBERT F. WAGNER, ALLEN J. ELLENDER, to the Honorable ARTHUR H. VANDENBERG, President pro tempore of the Senate; to the Honorable JOSEPH MARTIN, Speaker of the House of Representatives; and to the Honorable JESSE P. WOLCOTT, chairman of the House Committee on Banking and Currency.

Matter of Principle

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. ROONEY. Mr. Speaker, under the permission granted me by the House, I include herein the following editorial entitled "Matter of Principle" published in the Washington Post of Sunday, July 6, 1947:

MATTER OF PRINCIPLE

Since the Labor Department's Conciliation Service is soon to be terminated, the Senate victory over the House in respect of its appropriation may seem academic. We, think, on the contrary, that it constituted a victory of essential principle. The House, at the instance of Representative FRANK KEEFE, had placed in its appropriation bill for the Labor Department a clause forbidding the payment of salaries to the director of the Conciliation Service, Edward Warren, and 100 other top officials. The Senate refused to accept this vindicative provision. Senator KNOWLAND in particular deserves credit for his insistence in conference on the Senate position that this provision was improper and inequitable. It would have amounted, indeed, as we have previously asserted, to a species of legislative blackmail and an invasion of the executive power to hire and fire.

Now that the House has yielded, agreeing to the appropriation of funds for the Conciliation Service until its transfer with no strings attached, Mr. Warren has submitted his resignation. The resolution of this House-Senate conflict constitutes complete vindication for him—a vindication which his personal integrity and the fidelity of his service to the Labor Department thoroughly warranted. He headed the Conciliation Service in a period when labor relations were peculiarly trying and contributed much to their amelioration.

Postwar Views

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 2, 1947

Mr. REED of New York. Mr. Speaker, I am inserting as a part of my remarks in the RECORD an article by Hon. S. Wallace Dempsey, a former very distinguished Member of the House of Representatives of the United States.

I assume that because my former colleague from New York had an active part in all postwar legislation following World War I, he sees the danger of pouring unearmarked billions of dollars of our taxpayers' money into the hands of irresponsible foreign governments, as in the postwar period following World War I, without the slightest prospect of its repayment. Those who lived through the postwar period of World War I are now witnessing a repetition of the same foreign propaganda and the same reaction to it on the part of those American citizens who feel no responsibility for the solvency of our own Government. I am sure that my former colleague presents his plan as a precautionary measure to prevent the waste of the billions of dollars which the Truman administration plans to pour into Europe and Asia.

The article follows:

A WAY TO SPEND OUR LOANS OR GIFTS TO FOREIGN NATIONS WHICH WILL BE MOST HELPFUL TO THEM AND PROMISES A RETURN TO US

To the Congress and to the Secretary of State:

(1) Our purpose in making these large foreign gifts or loans is surely not to support the beneficiaries, but to put them in the way to support themselves and need no aid from us.

(2) The only way the beneficiaries can be made self-supporting is by their producing in a modern and efficient way, so that they can market their products in the competition they will meet.

(3) Take England as an example: We are told that its principal industry is coal mining, but that an English miner uses such antiquated methods that he produces only one-sixth of the daily output of an American miner. This, of course, could be remedied by the installation of modern equipment and the use of present-day methods, and the result would be of enormous benefit to England.

What is true of mining is no doubt true of other English industries, although probably not in the same degree, although to a degree to make competition by England with other countries difficult, if not impossible.

England's production of wheat is surprisingly large, 33 bushels to the acre, and, while her food shortage is one of her most acute needs, as well as that of the west part of continental Europe, and it may be impossible to increase the amount produced very materially, the manpower needed may be reduced greatly by mechanizing the work, as we have west of the Mississippi, and releasing the workers to increase the production in industry. We have in a few years, largely through mechanizing, increased our growth of wheat from 800,000,000 bushels to 1,400,000,000 bushels, over 60 percent, with an important reduction in manpower per unit, a highly valuable result from both aspects. So, farming should be mechanized abroad where it would be really beneficial, as it has proved here.

Our country should learn of each country which asks financial aid what it really needs to put it on a basis where it can compete with other countries in producing and selling, and so become self-sustaining. Our country should then call in the representatives of the leading corporations in these various lines of production and ask them to undertake the modernizing of these foreign businesses in a purely business way, advising what is necessary in the way of new and different equipment, and methods as well, undertake each business just as if it were the business of our corporations and in the same way that our corporations have undertaken foreign business.

This would insure far greater efficiency than could be secured through the various governments. It would follow exactly what our corporations do abroad on their own account. We of this country believe in private and not Government operation of business: we believe that private operation is far more efficient, profitable, and far better for all who are interested. Why then should we disburse these monies through foreign countries instead of through their businesses as aided by our corporations? Why should we not follow entirely private improvement in equipment and procedure and under the direction of successful men in our corporations? In other words, why should we not follow practically the methods which have been followed by our great corporations in establishing and conducting their own businesses abroad?

While the Goverment would furnish the money, just how it should be secured is a question of some thought and study. Whether it should have a lien on the corporation assets or have stock in the corporation is a matter to be determined, probably in each case, and largely on the advice of our corporations which undertake the work, and they should, of course, be secured for what they do, probably by stock in the corporations.

Our Government would not wish, much less seek, to make a profit for itself out of these businesses, but the corporations which handle the matter should be given a reasonable but small profit for what they do.

There would arise the question of control during the reconversion period, but there should be no trouble over that, as our representatives would want only to reconvert and make profitable businesses badly in need of reconversion, both as to equipment and as to operation.

Just how the relations between our corporations which would undertake this work of improving the efficiency and lowering the cost of production should be made would be the subject of study in each individual case, but the general object would be for us to share the risks of the business and share also the profits when the business is put on a profitable basis.

There is nothing unusual in the method suggested. Numbers of our businesses have

carried on profitable businesses abroad, and there is no reason why they should not be able to make businesses which are to remain those of the foreign countries just as profitable as they have made their own business, and probably more so, because of local sympathy and cooperation with their own industries, lacking, of course, for branches of our corporations.

(4) The question involved is the method to be pursued in extending relief to these foreign countries. It has been by sending the money to the foreign country itself, and the intention is to continue this method, which it is submitted, is inefficient and unbusinesslike.

(5) The principal and supporting businesses of each country is well known, and the fact that their methods are antiquated, inefficient, and unprofitable is also well known, and it is that condition which is to be remedied. Instead of having the matter of relief won by our country sending money to the countries to be relieved, it is suggested that our Government call in leaders in our industries, of the kinds to be modernized in the foreign countries, and have them send representatives to the foreign countries to learn what is needed, and that when this is ascertained, our corporations be asked to do the work of modernizing the foreign corporations on terms acceptable to the foreign corporations and to our Government—such terms to be worked out according to the circumstances in each case, but preferably having our corporations undertake the work at their own expense—our Government loaning the necessary money and being secured by the corporations for which it is expended, and our domestic corporations taking security also for what they put into the ventures.

There is nothing novel in this procedure: almost all of our great corporations have branches abroad which are profitable, or they would not have them, and there is not only every reason to expect a like result with these foreign corporations, but a much better result than our corporations have attained, for the very good reason that the locality has no interest in or sympathy for our corporations and they would own and have the keenest sympathy with and desire for the success of these corporations of their own.

(6) The method suggested is simply the substituting of private for Government management of the monies to be spent abroad in the effort to help foreign nations. It is a suggestion that the relief of these countries is a matter of putting their business into modern, profitable, productive operation, and the suggestion is that this be done by business and not by Government—by the agency trained and qualified to do the work effectively and profitably.

Our country is not the most profitable one in the world simply because it has great natural resources, but because these resources have been converted into a manufactured product in a highly efficient way—because our manufacturers and our factory workers have used a high degree of intelligence in their work. And this, which has made us successful, is proposed to be used abroad in the expenditure of all monies sent there in the hope and belief that the industries there may be made so efficient that their people will be redeemed from need and made self-supporting on a proper standard of living. It is believed that this can be far more certain of accomplishment through the methods suggested than by expenditure of these funds by the foreign governments.

Ambassador Douglas expressed the opinion in his recent London speech that "Europe's problem is fundamentally one of increasing production," as urged throughout this article.

An editorial in the New Bedford Standard-Times, with the insight and foresight of that great newspaper and its constant and invaluable arguments for a correct determination of public questions, directed by its extremely able, active, and fearless Mr. Basil Brewer and his associates, forms a fitting conclusion to this article. We quote:

"If the United States, with Europe's help, can raise the issue of economic recovery above the level of politics, it will be a humane action which not only should strengthen Europe but also increase American prestige and advance the cause of peace and freedom."

S. WALLACE DEMPSEY.

JUNE 28, 1947.

Garrett Whiteside

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. TRIMBLE. Mr. Speaker, Arkansas lost one of her finest sons when Garrett Whiteside left us last Wednesday. He was a kind, sympathetic, understanding man, a devoted friend, a public-spirited citizen who worshiped his family.

My first contact with him came about while he was secretary to the late Senator Thad Caraway, of Arkansas. I had written a letter to Senator Caraway in behalf of a friend. It happened that the Senator was in Europe, as I remember, and Mr. Whiteside told me so in his reply to me, but said he felt sure the Senator would want him to comply with my request, therefore the job would be done even if he had to roost on the Treasury Department steps until it was done. A few days later the small claim for a refund came through to my friend. From that time on he and I were Garrett Whiteside fans.

In the years since then I never hesitated to call for him when I needed him and he never failed me. He was happiest when helping others. He also had the very unusual quality of being able to project himself into the position of his chief, whether as secretary to a Member of the House or as secretary to a Senator. When he wrote a letter for his boss to a constituent he put his heart into that letter, a warm, friendly piece of mail which went straight to the constituent's need and made friends for his chief.

In that happy Valhalla of public servants there is rejoicing today because Garrett Whiteside has come into his well-earned rest. I am satisfied that he is joshing some of the old leaders of the past right now, and is having the time of his life doing it.

Missouri Valley Authority

EXTENSION OF REMARKS
OF
HON. ALBERT L. REEVES, JR.
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. REEVES. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Kansas City Star of July 2, 1947:

TURNCOAT MVA CRUSADERS

Where, you might ask, are the MVA enthusiasts who made such an appeal for flood control and river development 2 years ago?

Answer: They are sulking in their tents, giving no aid to flood-control appropriations. They are denouncing the Pick-Sloan plan and trying to blame it for the floods when they know as well as anyone else that Pick-Sloan is a postwar program that is barely started and can't go ahead without appropriations. By their actions or inaction they are aiding the private power companies' efforts to block those appropriations and all river development. And they used to scream loudest about power companies. The story is in the reasons for such an amazing turn-about.

The story starts immediately after the war which Congress had a choice of two plans to control major floods. It was just a question of which plan it would take, Pick-Sloan or the Missouri Valley Authority.

The Pick-Sloan plan was put together from years of study by the Army and Reclamation Bureau engineers. It dared propose projects on a scale to handle the biggest flood of record.

The competing plan, the Missouri Valley Authority, claimed the same objectives. But it asked 2 years to let an MVA board make its own engineering proposals.

As far as anyone knows, an MVA board would have set up an engineering plan similar to Pick-Sloan, if not almost identical with it. Either one was a national commitment to the most sweeping flood-control and water-resources program in American history.

The only known difference between these two plans was administration. The Pick-Sloan plan was set up to work democratically through established governments and agencies. The MVA plan called for a three-man board with final authority over everything related to water resources in the whole Missouri Basin.

Today the Pick-Sloan plan is under way. Everyone knows the MVA could not possibly be revived and started for many years. So, probably for a decade, the Pick-Sloan plan is the one hope in sight.

Yet, the MVA crowd that was fanatical in its demands for vast river control under an MVA is sabotaging river control under the Pick-Sloan label.

For an explanation you have nowhere to look except the one point of difference—administration. Plainly this makes such a whale of difference to the MVA supporters that they would rather have no river control than river control under a democratic system.

For all their damage, at least the floods have succeeded in washing the innocent mantle off the MVA movement. Its whole interest was in spreading a new form of government by boards to replace government by the people.

This charge was made 2 years ago. The Star opposed the MVA plan because of the inherent danger of putting one board over the fundamental resources of nine States. But it believed that charges against MVA intentions were exaggerated.

Today, by their own actions, the MVA supporters verify the most extreme charges. Nothing short of a terrific, undisclosed intention could justify this amazing turn-about. If the MVA supporters had any real interest in stopping floods and preserving Missouri Valley resources they would at least support the Pick-Sloan plan until they could see a chance for their own.

Their message to the people of the Missouri Valley is this: Until you accept our plan to put an appointed board over your fundamental resources we will do all we can to keep you wallowing in your floods. We will try to block everything else.

This isn't just a wild charge of the power companies that are now working along with

the MVA people to block river appropriations. By their actions the message is delivered straight from the MVA supporters themselves.

The Nation That Invented the Steamship Must Now Use It

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. ROONEY. Mr. Speaker, I wish to call to the attention of the House the following statement of John Green, president of the Industrial Union of Marine and Shipbuilding Workers of America, CIO, with regard to the present situation of our merchant marine. This statement covers a subject in which I am and have long been vitally interested. I am at a loss to understand why our American shipbuilding program is at a virtual standstill while the shipyards of the other countries of the world are busier than they have ever been. This timely and convincing statement follows:

THE NATION THAT INVENTED THE STEAMSHIP MUST NOW USE IT—FINE WORDS, DEEP HOPES, CANNOT BRING US PROSPERITY OR SECURITY WITHOUT MODERN AMERICAN SHIPS ON THE HIGH SEAS

Right now, the American people have a choice of building merchant ships or not building them. Do you know what it will mean if we don't build them?

1. EVERYBODY BUT US

Every shipyard in the world today, except those in America, is now booked solidly for the next 4 years building modern merchant ships.

Within 10 years, America may be the only major nation in the world with an "old" merchant fleet—with old, slow, uneconomical ships unable to stand up, in world trade, with the modern ships now being built everywhere else in the world.

Will this make for world peace, for world prosperity, for world security?

Will this make for American prosperity and America's peace?

History says: No. No. No.

Yet the American shipbuilding program is virtually stopped right now.

2. BUT WHY BUILD NEW SHIPS NOW?

Why do we need new ships now after all the ships we built to win the war?

The answer is very simple.

Our wartime merchant ships were designed for war, not for peace.

These ships were obsolete the day they were built.

The vast majority of these ships are slow; are very uneconomical in their facilities for handling cargo; and are wholly unbalanced for our practical needs in postwar trade.

It would cost us more to use these ships today than to dispose of them.

We Americans don't think of using old railroad engines, old airplanes, old automobiles, old factories as the best way to make money.

What's different about old ships?

And the simple fact remains that—even with all these ships—our merchant fleet today is missing specific types of ships we badly need and haven't got today: passenger vessels, refrigerator ships, fast special-design cargo ships.

We didn't build passenger ships by the thousands during the war. So we must build a handful of them now.

We didn't build fast cargo vessels during the war. So we must build a handful of them now.

3. ONLY 59 NEW SHIPS NOW WILL KEEP OUR SHIPPING STRONG

We don't need thousands of new ships for peace.

We need only 59 new merchant ships started this year to balance our postwar fleet; to meet the demands of postwar trade; to keep American shipping strong and profitable.

We can build these ships now, and have them paid for out of profits, in 2 or 3 years of operation. American shipping is enormously profitable today, and is certain of profits for the next years to come.

And, by building these ships now, we prevent the ghastly mistake we made after World War I, when we let the American shipbuilding industry evaporate.

The emergency shipbuilding program of World War II cost us billions of extra dollars and thousands of American lives (waiting for the emergency yards and ships to get built). How many times do we have to make the same mistake?

Is America so rich that we can afford to see our shipbuilding industry evaporate again?

Our national prosperity and security depend on keeping all our major skills in use.

Shipbuilding is such a major skill. It takes skilled craftsmen to build ships and manage shipyards; men with years of training and highly developed, specific technical skills.

If there is any further delay in American shipbuilding, the small core of trained men we still have left, in both management and labor, will disappear into other industries.

And with them goes our shipping industry.

4. A STEADY PACE SAVES MONEY

Moreover, our feast-and-famine shipbuilding in the past has made our ships terribly expensive in peace as well as war.

A minimum steady pace of shipbuilding would make many economies possible.

Shipyard costs are greatly increased by the lack of continuous production; investment is curtailed; skilled management and labor drift off; technological improvements are blocked.

So, we desperately need a minimum adequate shipbuilding program continued in America.

Fifty-nine new ships started now will do it.

A normal replacement program of 60 to 80 ships a year will keep it going indefinitely in the future. This will require only 250,000 shipbuilding workers. (We had 1,700,000 of them during the war.)

And this means more jobs and dollars for all Americans.

Each shipyard worker keeps six and a half other Americans at work in other industries supplying material for the ships: material from 46 of our States—not only steel but other metals, electrical equipment, paint, lumber, etc.

And then the ship itself multiplies jobs and dollars, again and again, through the cargoes it carries—the exports and imports on which our prosperity and the world's prosperity depend.

5. MORE FOR POTATOES THAN SHIPS

Some people raise the question about the partial Government subsidies that are necessary for American shipbuilding.

Do you know how much you get for how little in these subsidies?

The subsidies required for American ships—for the ships that will make possible an American world trade of twelve to fifteen billion dollars a year—are a good deal less than one-third of 1 percent of the trade these ships help create; a good deal less than $50,000,000 a year.

The Federal subsidies for paved roads in America are over $180,000,000 a year.

And last year the Federal Government paid a subsidy of $80,000,000 for potatoes alone.

And ship subsidy money comes back. As much as $7,000,000 has been returned in a month. Since VJ-day American shipping hasn't cost the taxpayers one cent. Subsidies are returned after profits are earned by operators. And shipping is profitable.

The question of subsidies for ships might never have come up if shipping were just an industry and no more.

But shipping is a vital link in our Nation's network of transportation, an instrument of national policy, a servant of our commerce, indispensable to our future prosperity, indispensable to our security.

No American subsidy can buy so much for so little as the money invested in ships.

6. ARE OCEANS LESS THAN THE AIR?

We wouldn't think of keeping American planes out of the air, using foreign planes today.

Why should we think, then, of turning the oceans of the world over to foreign domination?

But the fact is this:

Before the war 75 percent of America's exports and imports were carried by foreign ships.

What should it be now?

More and more, the other nations of the world are becoming controlled economies.

This means their ships will be used increasingly as instruments of foreign national policies, not as neutral carriers of American goods.

We cannot hope to get the kind of world trade, and the amount of world trade we need—and the world needs—from controlled foreign shipping.

If we want to see the patterns of world trade follow those of free enterprise, we need American ships to do it with.

We need American ships to carry at least 50 percent of America's exports and imports.

Not all of it, just half of it.

No foreign nation will be hurt by this.

Quite the contrary. American ships on the high seas will help all the world because American energy and ingenuity. American production and demand, can create more trade for the entire world than any other nation can.

We cannot count on foreign shipping domination to do this for us, today.

7. AMERICA MUST DECIDE NOW

The question of what to do with our merchant marine is now up before the American people.

They must decide now whether, in 10 years, America will be the only major nation in the world with an old fleet—depending on foreign shipping for American prosperity and security.

They must decide now whether the world will really have a chance at security and prosperity or not. American shipping is the indispensable tool of such security and prosperity.

Fine words, deep hopes, and dollars alone cannot bring us either prosperity or security without modern American ships on the high seas and active American shipyards, keeping the American merchant marine young and flexible and strong.

JOHN GREEN,
President, Industrial Union of Marine and Shipbuilders Workers of America, CIO.
CAMDEN, N. J.

Speech by Congressman Thomas J. Lane

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 7, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a speech which I delivered at the twelfth annual State convention, Italian-American World War Veterans of the United States, Inc., on Sunday, June 29, 1947, at the Lynn State Armory, Lynn, Mass.:

Fellow veterans and friends, at the outset I want to congratulate you on the steady progress which your organization has made. A few men, blessed with an idea and the will to carry it out, are needed to bring men together in a society. In your case, it is pleasing to note that most of the original group of organizers came from New England. The size and enthusiasm of this State convention banquet of the Italian-American War Veterans of the United States is not only a tribute to their success but is proof that veterans want to continue and develop the associations formed in service to their country. In the Italian-American War Veterans of the United States, they have found such a vehicle of expression, and to it they are giving their loyal support. As the veterans of World War II become fully adjusted to civilian life, I predict that your membership will show a steady and gratifying increase.

In such communities as Boston, Lynn, Revere, and Lawrence, where those of Italian descent are making such important contributions to the pattern and pulse of American life, there is a fertile field for your endeavors. Truly yours is an organization with a promising future.

A young man came into my office the other day. At first I had difficulty in understanding him because of some impediment in his speech. But, as I oriented myself to his broken voice, I learned that he had been one of the first to fight in those early days when we had so little to fight with and the war was going against us. He was one of the thin line of men who tried to hold the Philippines against the seasoned army of the invaders. On Bataan, he had been shot in the throat and taken prisoner. And then, in the prison camp, weakened from starvation, he had been unable to move quickly enough in response to a command. The brutal guard swung his rifle butt down on the unfortunate prisoner's head. As he told his story to me, he took off his hat. There, across his balding head, I saw the ugly scar.

All this the veteran endured uncomplainingly. But when he came back to the States and felt himself a stranger among the people he had once known, that hurt more than the wounds he had suffered or the miseries of a prison camp.

"It's hard to explain," he said, staring out of the window, "but those people out there on the street forget so soon because they never knew what it was like out there. I feel that there's a gulf between myself and them which can never be bridged."

That in essence is the difference between a veteran and a nonveteran. The inequality of sacrifice can never be remedied until the folks who stayed at home exert themselves as unselfishly to win the battles of peace as the veteran fought and gave, to help his buddy, in the bloody challenge of war. The veteran learned the meaning of comradeship, and he knows how desperately it is needed to solve the problems of peace. And he will not be satisfied until the stay-at-homes measure up to the high standards of citizenship which he learned the hard way. The unity which you knew in time of war, and which you preserve and perpetuate through your veterans' organizations, is part of that greater unity which we the people of the United States must work for in order that we may go forward in peace and progress and happiness.

The veterans do not forget. It is to their everlasting credit that they work untiringly to bring comfort and joy to their disabled comrades in the hospitals who once helped them. There is no other group in the United States which can compare with the veterans in loyalty and helpfulness to its members. It is a lesson in humanity, which others would do well to learn.

But those veterans who are not in hospitals have certain problems of their own which must be met. It is for these purposes, also, that organization among veterans is necessary to formulate and support a legislative program. Veterans were paid a mere pittance during their service, while the folks back home were getting high pay and furthering their careers. The fact that years of service seriously interrupted the normal lives of veterans, put them at a disadvantage when they returned to the job-competition of peacetime life. Although the general interests of the veterans cannot be separated from those of the community, there are certain special problems which arise out of their service in the armed forces, which must be remedied through legislation.

It is plain, for all to see, that the American Government is not only aware of its debt of gratitude to the veterans, but is determined to implement this with a practical program of assistance. The GI bill of rights is the most generous plan to help returning service men and women ever put into operation anywhere by any government.

But the task is huge, involving millions of veterans, and a complex variety of problems. It is for this reason that continuing legislation is necessary to amend the original bill to iron out inequities and provide for situations which could not be anticipated.

Veterans' organizations know veterans' problems better than any other group can possibly know them. It is their responsibility, therefore, to study these problems with a view to corrective action, to advise their friends in Congress, and to give us every support at the hearings of committees which consider the bills which we present.

In the field of compensation and pension, the present law provides that a veteran must appeal from an adverse ruling of the Veterans' Administration concerning the adjudication of his claim within 1 year of rejection. Too often, however, competent medical evidence is not always available within 1 year in order to indicate the chance of success on appeal. Oftentimes, the condition which the veteran claims to exist does not become evident until the lapse of a longer period. To remedy this situation, a bill has been filed in Congress providing that the time for filing appeals shall be extended from 1 to 3 years.

The children of those veterans who are attending this convention will benefit by the education and the training which the Nation provides for you. Because these opportunities will increase your earning capacity, many of you in later years will be able to take care of the education of your children. Unfortunately, the children of those veterans who gave their lives for the Nation not only lose the material support and affection of a father, but will have little chance to secure an education. The meagre pensions paid to their mothers will not suffice to give them the type of education they might receive had their fathers survived the war.

All of us should be alert to support the legislation which recognizes that the eldest child of any man who died in the line of duty shall be entitled to receive by proxy the education or training beyond the high-school level which the father would have received if he were here with us, his living comrades.

Another piece of legislation which deserves your support is the bill to amend the Mustering-Out Payment Act of 1944. As it now stands, any member of the armed forces who did not serve overseas and who was discharged at his own request because he was over-age and could best serve the war effort in essential employment, has been denied mustering-out pay.

This act was designed to give the veteran a nest egg upon discharge, with which to buy suitable civilian clothes, furniture, tools, etc., in order to reestablish himself in civilian life. The man who was discharged because he was over age needed this money the same as any other veteran. But he did not get it. Clearly this provision discriminates against the older veterans and violates the basic purposes of the Mustering-Out Act. It must be amended so that all veterans who served honorably get a square deal.

I also believe that veterans should work for the extension and amendment of the Nationality Act of 1940. To all intents and purposes this expired on December 31, 1946. Hence many veterans who were aliens were never informed of their right to become naturalized immediately because of their honorable service in the armed forces, and lost out on the benefits of this act. These men measured up to the highest obligations of citizenship and earned it thereby. They should not be forced to go through the red tape and delay required of those who never did anything for our country but who are now clamoring to get in. The alien veteran should be taken care of first.

A final goal in legislation concerns social security. This act must be amended to provided that every veteran of World War II shall be considered to have paid the maximum social security tax for each month he served in the armed forces. The present act was put into operation as of January 1937. Since 40 quarter years are required for an individual to obtain the full benefits for his dependents, it is plain to see that millions of veterans who would have been fully qualified by January 1947 have been held back by the time spent in service, which was not credited to their accounts. It will be possible to make up for this deficiency without raising the tax rate or substantially increasing the public debt, because of the ample reserves in the social security fund.

You, the Italian-American world war veterans of the United States, now wear your uniforms only on such festive occasions as this, but you are still fighters in the cause of our developing democracy.

Starting with Gunnery Sergeant John Basilone, the Marine of Guadalcanal, who gave his life at Iwo Jima, the list of those Americans of Italian descent who were awarded the Congressional Medal of Honor, which is the highest award our nation can give, is long and illustrious.

Certain it is that Italians take to the American way of life more readily than other people, because it is consistent with their love of freedom, their natural happiness, and their urge to expression. In turn, with a generous spirit of loyalty and sacrifice, they have served our Nation valiantly in its hour of need. It is no exaggeration to predict that when these United States reach their cultural maturity they will owe much to the vitality and variety which the sons and daughters of Italy contribute to the life-stream of this our beloved country.

You are proud, as you have every reason to be, of the services which you have given. You have formed this organization to perpetuate those ideals for which you fought and to become the living voice for those who did not return.

In this connection I am happy to report that the House Judiciary Committee, of which I am a member, is considering H. R. 1442, the bill to incorporate the Italian-American World War Veterans of the United States under a Federal Charter. I am giving my active support to this, and I can assure you that the day is not far distant when you will be fully recognized.

Before I close, I would like to speak of that true school of democracy where you and I and all who ever wore a uniform of the United States learned to know and respect and help one another. There we learned the meaning of that comradeship which brings us together tonight.

It is the true Americanism which enabled us to defeat those who would enslave us. It is the priceless asset upon which we must depend to build a happier and more prosperous Nation in a world at peace.

I am grateful for this opportunity to appear before you and I want to congratulate the Italian-American War Veterans of the United States for the strength and enterprise of your Massachusetts Department. In reunions to come, we shall renew the pledge of fellowship which unites us in common service to that nation which is the hope of the world.

The memory of our departed buddies is close to us tonight. I am confident that it will inspire us with the faith and courage to win through to our objectives. For we are the bridge builders moving from the past toward the shore of the future. With the torch of comradeship held high and lighting the way we clearly see the job that must be done.

The future of America is in the hands of her veterans, who must, and will, lead her forward.

The Tragic Truth About Our Jury System

EXTENSION OF REMARKS
OF

HON. ROBERT J. TWYMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, July 7, 1947

Mr. TWYMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to submit an article by Judge Julius H. Miner, of Chicago, which appeared in the July 1947 issue of Coronet magazine. I feel that this article should have widespread circulation and, as there are so many Members of the legal profession serving in both Houses of Congress, I am sure they will find this of unusual interest:

THE TRAGIC TRUTH ABOUT OUR JURY SYSTEM—A JUDGE DEPLORES ITS ABUSES AND OFFERS A FIVE-POINT PROGRAM FOR ITS REFORM

(By Judge Julius H. Miner, of Chicago)

Some day you may face a jury, perhaps accused of a crime you did not commit. Or you may be serving as a juror, sworn to pass on the innocence or guilt of one of your fellow citizens.

In the first case, could you expect a fair and impartial trial? In the second case, would you know how to administer that same fair and impartial justice to the accused?

As a judge of several years' experience in the Chicago Circuit Court of Appeals, my reluctant but honest answer to both these questions is "No!"

For instance, it is on record that a citizen of Bangor, Maine, sat on a jury for days before it was discovered that he was stone deaf. And the judge of an Arkansas municipal court reports that one jury foreman in his court read a verdict thusly: "We, the jury, find our client, the defendant, not guilty."

In an important eastern case, the jury voted six for conviction and six for acquittal. Rather than debate the issue for two or three days, the jurors decided to draw a number between 1 and 100. The juror whose age came closest to that number would make the decision for all.

Recently I presided over a murder trial in which both prosecution and defense refused to call the only eyewitness to the crime. Both lawyers feared that he might unduly influence the jury. In other words, both sides were unwilling to trust the jury with the truth.

Daniel Webster said: "Justice is the great interest of man on earth." And in pursuing his great interest, man has established the jury system as a special safeguard against injustice. Yet, today, trial by jury is a farce * * * a mockery of justice * * * a thing frequently of sound and fury, signifying nothing.

Why has trial by jury fallen so low? Part of the answer lies in the low caliber of the jurors themselves. The men and women chosen to listen and weigh and consider are generally unqualified for the task. In fact, many prospective jurors would be rejected for ordinary duties by private employers. Why foist them on a court and expect intelligent results?

National and State laws specifically exempt many citizens ideally suited for this work. Doctors, government officials, clergymen, lawyers, school teachers, newspapermen, and many others are exempt from jury duty. Further, our indispensable men who don't relish a few dollars a day for jury service usually present perfectly legitimate reasons for being excused.

Getting an eligible man excused on some pretext has become an invaluable asset of small-time politicians. Judge Robert Stewart Sutliffe, famed jurist of New York City, wrote: "Jurors are a lot of men picked from poll lists who have not enough political pull to get off, or who are out of a job and want to pick up a few dollars a day."

If by chance an intelligent group of men and women are stuck with jury duty, even then justice and truth are elusive. Is it reasonable to expect 12 untutored, legally naive jurors, straight from the kitchen, shop, or office, to deal wisely with involved principles and technicalities of the law? It would be just as foolish to summon a judge or lawyer to an airplane factory to decide a problem in aerodynamics.

In one case, after 5 days of trial of a desperate gunman, the jurors passed a note to my bailiff: "What does the judge mean when he says 'sustained' and 'overruled'?" Unfortunately, this amazing ignorance of the basic vocabulary of a law court is common.

One judge instructing a jury said: "If you find the defendant did, with malice aforethought, project, propel, and/or otherwise with force or violence, insinuate the aforesaid bullet in, on, against, and within the body of the corpus delicti, then you must bring in a verdict of guilty."

In reply, one of the baffled jurors blurted: "Okay, Judge, but what if we just find that the guy sitting over there shot and killed the other guy who ain't here?"

It is downright scandalous to expose 12 well-meaning but naive citizens to sharp, high-powered, battle-scarred lawyers who are masters at the art of appealing to human sympathies and prejudices. Under "solemn obligation" to their clients, these shrewd barristers in a criminal case will hammer away at such things as "reasonable doubt," "moral certainty" and "presumption of innocence" until there is unconditional mental surrender by even the hardiest juror.

Not long ago a jury awarded $10,000 to the plaintiff, but the decision was such an obvious miscarriage of justice that the judge set the verdict aside and admonished the jury. When asked how they arrived at such a patently ridiculous decision, one juror replied frankly:

"We couldn't make head or tail of the case, or follow all the messing around the lawyers did. None of us believed the witnesses on either side, anyway, so we just made up our minds to disregard the evidence on both sides and decide the case on its merits."

Court-wise defense lawyers follow a pattern aimed at confusing the inept jurors by beclouding the real issues. They assail the police as vicious and corrupt; they ridicule the state's attorney as an ambitious tyrant trying to make a record of convictions for political advantage; they imply that if the defendant is found guilty the judge, an unmitigated sadist, will give the poor, wronged angel the maximum allowable punishment.

Continually I am amazed at how this "underdog" technique works, even if the defendant is guilty beyond all doubt. Finally the attorneys wind up waving the flag, crying that to do otherwise than return this man to his wife and children would be to negate the American guarantee of life, liberty, and the pursuit of happiness.

A wife, a child, or an aged parent is always an asset to a man charged with anything from picking pockets to murder. Pretty faces, shapely figures, hospital cots, and crutches are flaunted.

One lawyer asked the jury to look at the defendant's white-haired mother, sitting up front in the courtroom. This angelic little lady won the day for her son, for no jury would ever believe that she could possibly have given birth to a murderer. "Mother" was later discovered to be a waitress in an underworld night club.

Defense attorneys prefer their clients to be tried during the Christmas season, when the quality of mercy is particularly unstrained. Jurors have a way of passing out Christmas gifts of freedom or light sentences to criminals who at other times would be sent up for years. And if one of the jurors has a birthday during the trial, his fellow jurors help him to celebrate by going easy on the defendant.

In one trial, an expectant father succeeded in getting a fast acquittal for an obviously guilty man because the other jurors agreed that "it wasn't fair" to keep the anxious father-to-be waiting around while they tried to reach a verdict.

One of my colleagues tells of a jury composed of many nationalities, a most sentimental jury which in an entire term of listening to cases hadn't returned a single verdict of guilty. Finally an Italian appeared before them for trial, accused of grand larceny, and the evidence against him was so conclusive that the jury voted 11 to 1 to send him up.

The lone hold-out was a fellow Italian who spoke up bitterly: "You have been acquitting Irishmen, Germans, and Jews right along. Now an Italian comes along and you want to send him away. No." The 11 abashed jurors hastily rectified their "injustice."

The law that all 12 jurors must reach unanimous decision has produced a bookful of "unusual" pronouncements from all

parts of the United States. In Easton, Pa., an impatient judge who had been waiting for a verdict warned the jury that if they took much longer he would lock them up overnight. The jurors quickly reached the verdict, but it developed later that two of them, unable to make up their minds, had decided the issue by tossing a coin.

Some lawyers and even judges contend that the answer to the abuses of jury trial is to eliminate juries altogether. That is out of the question. The system is too deep-rooted in our American philosophy of life and law. It is the greatest guaranty for a fair trail yet conceived, and no one who truly believes in a free society should advocate its abolition or the diminution of its power.

Yet there are certain common-sense changes in the system that would alleviate most of the abuses I have pointed out. Here is a list of minor reforms that I believe would reimplement the jury as an instrument of justice:

1. Abandon the requirement for unanimous agreement of 12 jurors to reach a verdict. A majority of one in our electoral college elects a President—the majority principle determines the outcome of all elections. And yet it requires a unanimous verdict of 12 to convict or acquit a moron or vicious gunman. This rule of unanimity is nothing less than legalized coercion. It condemns an honest difference of opinion; it makes jury service disagreeable; it is an incentive to corrupting jurors.

2. Judges should be empowered to strip courtroom procedure of its confusing side issues, keep the language understandable, and restrict lawyers in their befuddling techniques.

3. Judges should further be empowered to assist in and accelerate the selection of jurors, while the practice of lawyers to resolve on the least intelligent, instead of the most intelligent, jurors should be curtailed.

4. Jury duty should be broadened to include many classes of citizens now excused from serving. Furthermore, the ease with which men escape jury duty should be stopped. Jury service is a sober civic responsibility, and every American citizen should be required to take his turn.

5. Lastly, and most important, all jurors should be required to undergo a short, intensive course in legal terminology, procedure, obligations, and duties. This school should be administered by neutral representatives of the bar association, law schools, or the courts, and should cover points which have relevancy to a trial. In fact, a brief course in jury service could easily be conducted in our public schools. After all, we train dispensers of liquor behind the bar. Why shouldn't we also train dispensers of justice before the bar?

Chief Justice John Marshall once wrote: "The judicial department comes home in its effects to every man's fireside; it passes on his property, his reputation his life, his all." The jury is an indispensable part of that judicial department. But unless it functions efficiently, our liberty is insecure and the administration of justice a mockery.

If justice is not to be found in the courts, then the American way of life is in jeopardy. A few minor reforms in our jury system will speedily remove much of the danger, and perform for our citizenry a good that is far in excess of the slight energy required to effect the changes that experience and common sense dictate.

In order that you may have some information relative to the background of the author, I wish to include the following brief statement:

Judge Julius H. Miner, the originator and director of the annual Constitution Day Observance, is currently assigned to the criminal branch of the Circuit Court of Cook County, in Chicago. He is a graduate of the Kent College of Law, has a master's degree from Northwestern University Law School, and for 10 years has been on the faculty of John Marshall Law School. Admitted to the bar in 1917, he served as master in chancery of the circuit court for 16 years, ascending the bench in 1940. As judge and lawyer he has had ample opportunity to study the appalling defects of the American jury system. In this outspoken article he tells what those defects are and how they can be overcome to make the jury system a true instrument of justice.

Independence Day Address of Gen. Dwight D. Eisenhower at Vicksburg, Miss.

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. WILLIAMS. Mr. Speaker, on July 4, 1863, the valiant defenders of the city of Vicksburg were forced to surrender to Gen. U. S. Grant of the Union Army.

On July 4, 1947, the city of Vicksburg surrendered again to another Yankee general. But this time it surrendered its heart to the boyish smile of General of the Armies Dwight D. Eisenhower as it celebrated Independence Day for the second time since the fall of that historic city.

Eisenhower took the city without firing a shot, and received the greatest ovation ever given a Union general south of the Mason and Dixon's line.

In 1863, Vicksburg ate mule meal. In 1947 the menu was hot dogs and mustard, pink lemonade, and fried chicken. It was quite an improvement after all. Vicksburg had quit mourning its Civil War losses in 1945 when World War II turned right for the Allies under the leadership of General Eisenhower, and her memorable celebration of Independence Day, 1947, is but an indication of the South's intense desire for the continuation of American democracy

Therefore, Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith the brilliant address of General of the Army Dwight D. Eisenhower, Chief of Staff, at the Carnival of the Confederacy, Vicksburg, Miss., on July 4, 1947:

I am signally honored by your invitation to meet with you of Vicksburg on the anniversary of the American Declaration of Independence and on a day of such significance in the history of your State and city.

On July 4, 1863, the sun of the Confederacy passed its zenith. That day, the gallant hosts of Lee started wearily back to Virginia, their ordeal at Gettysburg behind them, and only their courage to sustain them through almost 2 years more of bitter fighting before they came at last to Appomattox. On that same day the epic of Vicksburg reached its end, but not until there had been given to the world, on the ground on which we stand, imperishable proof of Americans' subborn will to sacrifice and endure and to die for the right, as they see the right.

For all who fought under the Stars and Bars, the eighty-seventh anniversary of the Declaration of Independence was a dark and bitter day. But their bitterness would have been lessened, their gloom would have been lightened, could they have looked forward through the years to the sequel of their struggle as clearly as we can now look back. Scarcely could any of them have hoped that the sons and daughters of a reunited Nation would gather at the places immortalized by their valor, to commemorate the sacrifices they so freely made for the cause in which they believed.

Few could have foreseen that America's fighting men of a later day would be sustained in battles against tyranny by the memory of men, in the Gray as in the Blue, who counted not the cost when all by which they lived was at stake. And still fewer could have realized that the very conflict they waged would—by removing forever from our national life problems that appeared unsolvable—result eventually in a firmer Union, one against which the hordes of the Kaiser, the Mikado, and the Fuehrer would later dash themselves and their false ambitions to destruction.

United ourselves, we now seek to unite a world lately released from the agony of global war and still divided by economic, social, and ideological differences. We see that unless the United States helps plan and build a world structure for peace humanity may suffer the Golgotha of a third world war. The problems ahead are many; their solution obscure. But because the human future is a projection of the past and present, we can profit from the study of the accomplishments, the failures, the lives of our forefathers.

For us who live more than 80 years later, the Confederacy's fall and its causes reveal a truth that is valid today. The southern cause was sinewed by potent elements of victory—courage to win, a stubborn endurance that steeled even the youngest child and the feeblest elder, magnificent armies whose superb leadership and heroic performance have never been surpassed. But though the South had all these, it was blockaded, isolated, cut off from intercourse with the rest of the world by an ironclad net around its coast. Wealth of spirit and the skill and stamina of its armies were outweighed by a fact that must—and especially by us today—be accepted as an axiom of world relations. It is:

A nation's success in war and in peace demands participation in the community of nations. Commerce and communication with others, the exchange of goods and of knowledge, the play and interplay of human activity—such international partnership is required for national vitality and strength. Just as the Confederacy could not stand alone, there is today no people so rich in resources, so stout in action, that they can live alone and by themselves achieve richness of human life. More than this, no nation can in the absolute sense attain by itself even physical security.

Present facts, however, and the possibility of insane attack on those who work for peace cannot be ignored. We do not dare, now, to neglect the relative security that resides in strength—military, moral, and economic strength. Until all others are ready, with us, to substitute the council table for the battlefield we must parallel and support our efforts toward world stability with a unified purpose to guard ourselves well and to maintain an effective strength that compels respect for our peaceful intent.

But this cannot be our final goal. Fear of war and its consequences impedes spiritual and material progress and, at the least, compels vast diversions of our toil and sweat to

unproductive processes. Though a people, accepting barren existence, should devote all their substance to maintenance of arms, they would finally reach, in their fearful and sullen isolation, a point in deterioration where bankruptcy within or attack from without would mean collapse.

Either the nations work together for the common good or one by one they will perish; slowly in withering decay; or quickly under the impact of total war, as is more likely the way of the future. Industrial development and atomic science have left no limits to global conflict, either in scope or destructive result. Many, nevertheless, disparage world unity as visionary and impractical because national loyalties tend to stifle international action. But in the reunion of our States that had been divided by internal conflict, deepened by a bloody civil war, a problem comparable in intensity and kind was surmounted.

In the generations following that decisive struggle, service to the Nation demanded no lessening of loyalty to the State. The Mississippian of today is just as proud of his heritage, is rightly as devoted to the welfare of his State, as any of the men who defended the redoubts of Vicksburg. It is clear to him today that the well-being and full security of the State can be achieved only within the larger concept of national interest which comprehends at the same time the welfare of all of the States and all of their citizens.

In an interdependent world, the ultimate good of any part can be attained only with full regard to its relationship with the whole. Americans we proudly are—never will we turn by a hair's breadth from our devotion and duty to country—but we must realize that self-interest and our country's good demand that our words and deeds reflect the understanding there can be no prosperous America in a starving world—there can be no real safety if others are ready, in savage envy and hatred, to pounce upon us at the first propitious opportunity.

We must admit that international machinery with the strength and status required to adjudicate dispute and back up decision is still in the future. But even if distant, effective world cooperation is still the logical goal ahead. It is the only goal that will permit men to live side by side and prosper on this earth once more. Security and justice for all nations, with each given the opportunity for a reasonable livelihood, is an aim dictated by common decency. It is dictated also by valid concern for our own peace. Conflict between nations in the world of today quickly overflows borders to every nook and cranny of the world and involves hapless millions who know nothing of the war's causes.

Leadership toward the goal of international cooperation is partly a matter of convincing others that their self-interest points in that direction. Tangible proofs are being offered to the world of the sincerity of our own convictions. After fighting a war, with stupendous cost in lives and treasure, we are still extending ourselves to feed, clothe, and minister to the wants of many peoples. We are moved by charity and by the knowledge that starvation and misery are sterile ground for the seeds of cooperation. However, this can be emergency action only—no country can permanently carry others on its back. Millions are still in want and will not reach full sufficiency until they are able, with such help as can be given, to solve their own great problems. Basic to that solution is their freedom from fear of domination.

Another element in our leadership for peace is our successful demonstration of the cooperative method. If we believe that the American system, extended to world-wide practice, would be the salvation of us all, then it is incumbent upon us all to make the system work at home. Cooperation means to work for the good of all. If we—if each of us is concerned with promoting cooperation in the world, then we will measure every contemplated action in terms of the national well-being, rather than by narrow and selfish interest. Industrially, economically, socially, and politically we must cooperate for the good of America.

In striving for world action, we cannot blueprint the future just as we cannot predict the factors it will introduce. Even a plan for the present will rise or fall on the willingness of the nations involved to make it work. Our own heavy responsibility lies in our position as the most powerful and prosperous of those nations that with us uphold the dignity of the individual and the freedom of men in the exercise of fundamental rights.

Our course through these critical years must embrace wisdom and charity. A prosperous peace, which fosters the development of human betterment, is the only wise peace. Wisdom in the face of opposition requires fairness, patience, and a visible competence to defend ourselves. And regardless of the drains upon our patience, the irritations aroused by accusations directed at our honesty of purpose—even at our acts of charity—we will never falter if we recall the alternative to world order. We must abide by the words of one whose spiritual greatness is the common heritage of North and South—"With charity toward all, with firmness in the right as God gives us to see the right, let us strive on * * * to do all which may achieve and cherish a just and lasting peace among ourselves and with all nations."

Thus guided ourselves, we shall more surely lead others to a better future. From war's havoc, death, and destruction, some permanent good to humanity shall be reaped. Just as Vicksburg was a crucible where differences were fired and joined into a strong and inseparable national unity, so the last war, which ended with an inferno of destruction, can be the start of a world union for peace.

As a soldier I salute the memory of all who fell, during our years of internal conflict, battling for what they believed to be right. Whatever their uniform, they contributed to the America whose strength and unity gives hope to the world. Even for Pemberton's army the siege of Vicksburg was a failure only in fleeting sense. Long since it has become a symbol of American endurance, a bright chapter in a volume of glorious traditions. More than this, in terms of history it was a memorable part of a great transformation that has brought America to a destiny of opportunity and responsibility that involves all—everywhere—who seek to live in peace, respectful of their neighbors' rights as they are jealous of their own.

Reds Have an Idea

EXTENSION OF REMARKS

OF

HON. C. JASPER BELL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, July 7, 1947

Mr. BELL. Mr. Speaker, in view of the recent indication by Dr. Townsend, when he addressed his followers at the Uline Arena here in Washington, that he was going to join up with other left-wing elements and support Henry Wallace in a third-party movement, an article appearing in one of the Washington newspapers a day or two ago entitled "Reds Have an Idea," I think, will be of interest to Americans. I am inserting the article herewith, as follows:

REDS HAVE AN IDEA—THEY ADD LABOR ACT TO FOREIGN POLICY AND GET THIRD PARTY

(By Lyle C. Wilson)

American Communists pulled a new one today in their nonstop effort to sabotage United States foreign policy.

It is an attempt to hitch opposition to the Taft-Hartley Labor Control Act to Soviet foreign policy. The party line now is that labor cannot expect to change the act until it has changed United States foreign policy.

Joseph Starobin hit that theme in the Worker, New York Communist organ.

"Because Truman broke from the path of FDR in foreign affairs," Starobin wrote, "the Taft-Hartley bill could not be defeated by last-minute pleas in the Senate.

"And if American labor learns anything from the experience, it will have to learn the domestic fight for democracy can't be won until it becomes a fight for a progressive foreign policy."

From Starobin's standpoint a progressive foreign policy is one which goes parallel with the Soviet foreign policy.

William Z. Foster, Communist Party national chairman, carried on the argument.

"It is an attempt," Foster wrote, "to weaken the people's opposition to big capital's program of world imperialism and warmongering."

Between them these two Communist spokesmen charged their own country with imperialism abroad and fascism at home and called on labor to force changes in our domestic and foreign policy.

For the more naive they tossed in some third party bait. Milton Howard, another Communist writer, carried the third party torch. His heroes are Senator CLAUDE PEPPER (Democrat, Florida), and Henry A. Wallace.

"On all sides," wrote Howard, "both from trade-union leaders and from such Democrats as Senator PEPPER, for example, as well as from Henry Wallace, the talk is boldly and vigorously in the direction of a third party."

The Communists are shooting for 1952 or later. They link American foreign policy and the Taft-Hartley bill, the GOP tax bill and related measures to a bi-partisan development. Their theory is plain.

It is that party lines—Democratic and Republican—are on the way out. They foresee a realignment which would break the solid South tie to the Democratic Party. There would emerge conservative and radical parties here, and the Communists hope to ride the radical party's driver's seat.

Don't Let Utilities Backslide

EXTENSION OF REMARKS

OF

HON. JOHN J. ROONEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, July 7, 1947

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include the following editorial published in the Washington News of Wednesday, July 2, 1947, entitled "Don't Let Utilities Backslide":

DON'T LET UTILITIES BACKSLIDE

The electric utility industry, sobered up, a respected member of the community, its shady past almost forgotten, shows signs of a relapse. It would do well to jerk itself up fast, recall the 1920's, and take the pledge all over again.

Twenty years ago the public was just waking up to the fact that utility stocks were of questionable value because utility accounts were so full of water and write ups; because holding companies were draining so much from operating utilities in charges for this, that, and the other; and because the utilities had found a way to operate in a no man's land between State and Federal regulation where it was impossible to check on what they were doing.

After a 10-year battle, this situation was corrected. Changes in the Federal Power Act brought about regulation in the field beyond the power of the States to reach. The water was wrung out of company accounts—$1,250,000 worth of water. And when it was out, financial pages began bragging about the soundness of the whole procedure and the strong fundamental position of the utilities.

Another act gave the SEC power to break up great holding company pyramids, and the companies that wept most bitterly over their fate in 1936 are more prosperous today than ever before.

Government-developed power furnished a yardstick for rates and showed companies the way to larger profits through wider markets. Again, what the companies thought was ruin turned out to be rosy prosperity.

But memories are short and greed is eternal.

The utilities are backing half a dozen bills in Congress designed to put them back where they were in the twenties. They aren't suggesting repeal of the Water Power Act—just amendments. But the amendments, innocent-sounding, cut away all that's important in the act. They once more would leave things up to the States, and the States once again would find themselves groping in an interstate no-man's-land, confused and impotent.

Other proposed bills are planned to force an end to cheap power rates, and end to demonstrations that the cost of a project eventually can be written off and cease to be a charge to the consumer, an end to the use of power sales as a means of developing the West.

Hearings are being held quietly and in unseemly haste. It's time for the country to take a long, penetrating look at the whole business.

The great tears being shed by the power men, their pleas that they seek only a chance to survive, would be more impressive if they hadn't said it all before—and if it were not for daily stock-market quotations. Taking the cure made the utilities sleek and prosperous and was good for the national economy. Congress will be foolish and reckless if it doesn't keep them that way.

Independence Day Address

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include therein the following speech delivered by me over radio station WMEX, Boston, Mass., on Thursday evening, July 3, 1947:

Ladies and gentlemen of the radio audience, this is the night before the Fourth.

It is a time of celebration—of fireworks and roman candles and bonfires.

It is a night which belongs to the youth of America, for the spirit of the young is of the essence of independence.

The joy of this festival reflects the happiness of our forefathers when they declared their independence of foreign rule and set out to build, starting from scratch, the strongest and most prosperous nation on earth.

The American people accomplished this miracle without sacrificing the freedom of the individual.

In fact, ours is the one last nation on earth where liberty is a reality and not a memory.

The shrine which marks the beginning of these United States is called Independence Hall and it is located, fittingly enough, in Philadelphia, the City of Brotherly Love.

Its cornerstone was laid in the year George Washington was born.

Until the Revolution it served as Pennsylvania's colonial capitol.

It was the meeting place of the Second Continental Congress, which, in the year 1775, made Washington Commander in Chief.

In 1776 it gave birth to the Declaration of Independence—one of the most inspiring documents ever written by man—and the charter of our material and spiritual greatness.

Eleven years later, with Washington presiding, the Constitutional Convention gathered in this hall and made the United States a nation.

Since that time the building has been regarded with reverence by all Americans.

The Liberty Bell which hung in the old tower has become the symbol of our independence.

Day in and day out, tourists visit the hall.

In the quiet they can almost hear the voices of the past, calling upon the best in every man and woman for the building of a society in which there shall be no ruling class but the people themselves.

And they leave this temple of Democracy with the feeling that we must try to equalize the opportunities and responsibilities of individuals, so that the family which we call the United States may develop in peace and prosperity and happiness.

Visitors from other countries who travel across the great distances of the United States see a world in miniature.

From the industrial east, across the fertile prairies, over the vast natural resources of the Mountain States to the lush climate of the Pacific coast, they meet variety.

And they are amazed that in this diversification we have found a basic unity which has enabled us to solve every crisis in our history.

Repeatedly, they misunderstand us.

From the competitive clamor and activity of American life, which we report and debate without censorship, they assume that we are forever on the verge of breaking up.

Nothing could be further from the truth.

Because America is young and strong, it thrives on doing things.

Sometimes our vigor, needing a safety valve, escapes in sharp and hasty words which other nations misinterpret as signs of an unbridgeable split among us.

But the divisions which they expect never happen.

Our heated disagreements on public issues, are evidence of abundant energy.

We give and take, but we go forward.

Each man and woman in the United States is at once a challenge to and a controlling influence over his fellow-American.

Our efforts are guided by compromise.

They are never dulled by regimentation.

The wide and tragic gap between "haves" and "have nots" which has torn apart the social fabric of many nations will never happen here.

To a lesser extent than other nations we have such a problem, and we do not blind ourselves to it.

There is no hardening of the political arteries in America, separating us into stubborn and inreconcilable camps.

Opposing groups strive to win their special objectives, but, in the long run, it is public opinion whch decides the issue.

There is no room in our Nation for government by any one group, one party, or one man.

I have mentioned the unity which we achieve in time of war.

Apart from the civil conflict of the 1860's, our country has enjoyed domestic unity through all the years of its development—that is, until today, when we face new problems for which there is no precedent to guide us.

In this age of mass production, where a few men control vast areas of our economy, more and more people are dependent for their livelihood upon decisions made by men whom they have never seen and over whom they have no control.

Behind the restlessness of our age and the intense search for security many people feel that they have lost their independence.

There are even a few, a despairing few, who would surrender all freedom of mind and spirit and opportunity in exchange for the promise of material security.

This is a strange and disturbing trend which is foreign to our American traditions.

On this night before the Fourth, as we prepare to celebrate that independence which our forefathers fought so hard to win, it is well for us to ask, what are we doing to promote the greatest development of individual liberty, consistent with the public welfare?

The men of 1776 lived in a society that was largely agricultural.

The men and women of today live in one that is industrial and complex.

We have just come through a war to protect our independence as a Nation from foreign aggression.

But here at home, we are faced with problems and tensions which unless we solve them in the American way, might result in the loss of independence through our own mistakes and excesses.

Much as the background of 1947 differs from 1776, the need for positive citizenship is the same.

Vision and courage and the pioneering spirit are demanded of each and every one of us to maintain our basic liberties, as we adjust our society to meet the requirements of a new age.

In previous broadcasts, I have spoken to you about various public issues, such as the reorganization of Congress.

I have advocated the establishment of a Merrimack Valley Authority in order to develop its potential energy for the benefit of the people.

I have recommended the extension of the social security to provide coverage for more of our elderly citizens.

I have brought you information on the problems of monopoly, communism, and housing.

In Colonial times ours was a Nation of 4,000,000 people.

Today it has more than 135,000,000 members.

In the old days we heard much about State rights.

Lines were arbitrarily drawn across a map, theoretically separating some people from others.

In recent times, however, we have come to see that a river, for instance, does not begin or stop at a State line.

It drains and erodes and sometimes floods vast areas beyond its visible banks.

To meet the problems of rivers, and to utilize them more completely in the public

interest, the States are seeing the wisdom of joining up in regional compacts with Federal assistance, and in doing so have made remarkable economic progress.

The point is there are new groupings of power in the making within our country.

New rights and obligations are appearing on the scene.

In this shifting pattern, our task is to work out a system of checks and balances among these forces, preserving the vitality of each, without allowing any one to become all-powerful.

One of the most important groups in the Nation today includes all those who have served in our Armed Forces.

They are the ones who gave up some of the most precious years of their lives to save our independence from those who would crush it.

Ours was a global Army, Navy, and Air Force, taking our young men and women to all corners of the earth.

They saw and endured much.

They had a chance to compare the lot of other people with that of the folks back home.

It was a stern and realistic education for the youth of America, which made them do some hard thinking.

All the cobwebs of illusion and complacency were brushed away.

When they came back they were still young in years but quiet in a mature and serious way.

The veterans of the United States appreciate independence because they have seen the misery of those who lost it.

Sometimes they wonder if we take these blessings for granted.

They know that freedom must be fought for here at home during peace as well as war.

Democracy does not stand still.

It is dynamic, and there is always the danger that the liberties which our forefathers won, and succeeding generations have fought to preserve, may slip away if we sit back and fail to participate in the making of our Government.

Realizing the great sacrifices which the veterans were called upon to make, while the rest of the population was called upon to give so little, the Congress has tried to narrow the inequality by generously providing educational, job training, and many other benefits for our ex-service men and women.

It wants them to catch up in terms of normal living with the years they have lost.

In the haste to help our veterans, on a scale never before attempted, certain obstacles were bound to arise.

One of these concerned the Armed Forces Leave Act of 1946.

This bill provided for payment to veterans for furlough time coming to them, at the rate of 2½ days for each month of service, which many veterans, particularly those overseas, did not have a chance to enjoy in actual time taken off from their military duties.

Officers were paid for unused leave, so this bill corrected a long-standing discrimination.

Rather than pay the men off in cash, which would result in a huge outlay which the veterans might spend immediately, thus contributing to inflationary pressures, a compromise was worked out.

Veterans were paid in cash up to the first $50 of the amount due.

For the remainder, they were issued terminal leave bonds bearing 2½ percent interest and maturing 5 years from date of issuance.

Except when used as premium payments in connection with the conversion of their service life insurance, these bonds could not be put to use for any practical purposes.

This worked a hardship on many veterans who needed the money and not a promise to pay.

As of June 16, 1947, the Treasury had issued more than $1,830,000,000 worth of these bonds.

This is a part of the national debt.

Cashing them now, will reduce the debt that much.

Furthermore, the Government would save a considerable amount in interest.

The President has stated that there will be sufficient income during the fiscal year just ended, to apply to a reduction of the public debt.

I know of no better way to accomplish this purpose than to pay off this obligation to the veterans.

And so I am pleased, at this broadcast, to bring good news to our ex-service men and women.

Your terminal-leave bonds are going to be paid off in cash.

The sentiment in Congress is in favor of such enabling legislation and it will become fact within a matter of days.

On this night before the fourth, when this young Nation of ours with youthful enthusiasm celebrates the independence which has since inspired our great progress, it is well for us to pay tribute not only to the founding fathers, but to the sons of their spirit, the veterans of today, who have preserved our freedom.

In peace as in war they will protect the Nation from the tyranny of power in any form.

As Franklin D. Roosevelt said, and I quote: "Democracy can thrive only when it enlists the devotion of those whom Lincoln called the common people. Democracy can hold that devotion only when it adequately respects their dignity by so ordering society as to assure to the masses of men and women reasonable security and hope for themselves and for their children."

Our veterans know the devotion of those who work together for a common cause.

The patriots of 1776 won for us the Bill of Rights.

The veterans of 1947 will lead in the struggle to win economic justice.

The neighborliness that unites individual men of good will must extend to the groups within our Nation and unite them in understanding and cooperation.

This is the goal which all freemen are working for.

With God's help we shall reach it.

Truman Chose Lesser of Two Evils in Approving the Rent Bill

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. ROONEY. Mr. Speaker, under permission granted me earlier today, I include the following editorial published in the Brooklyn Eagle on Tuesday, July 1, 1947, with regard to the rent decontrol bill which this Republican Congress has legislated and which today is causing pandemonium throughout the country:

TRUMAN CHOSE LESSER OF TWO EVILS IN APPROVING THE RENT BILL

President Truman had no alternative to approval of the rent-control-extension bill which became law yesterday. Existing restraints ended at midnight. The President was accordingly placed in the position of choosing the lesser of two evils.

In these circumstances, a weak law is better than none at all. President Truman will not, and, of course, should not, be held responsible for what happens to tenants throughout the country in consequence of the provisions of this new law. In the words of Senator HATCH, the law has placed a club in the hands of landlords. It will be strange, indeed, if they do not use it.

Surely, there is nothing in the record of the housing tragedy up to date to suggest that some of the real-estate interests will display restraint and consideration in exercising the new power at their command. They have been a factor in obstructing adoption of the Wagner-Ellender-Taft housing bill. Their influence has been thrown to the effort to break down rent controls.

Use of the term "voluntary" in connection with the 15-percent rent raise permitted under certain circumstances injects a humorous touch into an extremely grim situation. The landlord is enabled quite effectively to whip the tenant into line, as the President indicates in his characterization of the arrangement as "voluntary only so far as the landlord is concerned." Over the head of the tenant hangs the threat of eviction within 30 days, not 6 months, as provided by the law.

This law is unjust and unnecessary.

Los Angeles, the Incomparable—It's Stupendous, It's Colossal

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. McDONOUGH. Mr. Speaker, those of us who live in Los Angeles and have seen it grow from a population of 750,000 to 1,800,000 in a few short years know what a great city it is and what a great future it has.

We saw the great surge of people from all over the United States and from all parts of the world who came to Los Angeles, the City of the Angels, following World War I. So many thousands came that we could not build enough homes, schools, highways, and other facilities to take proper care of them.

When along came World War II, many more thousands came to build aircraft and ships, to refine petroleum, to make synthetic rubber and rubber tires, to refine aluminum, to make steel, and to produce foodstuffs of all kinds to help win the war.

Thousands of servicemen came to Los Angeles to train for service in all branches of the Army, the Navy, and the marines. True, many other cities have had similar experiences, but none have had so many come and stay to make their homes as has Los Angeles.

The city of Los Angeles, with an area of 450 square miles, has the largest area of any city in the world, and is situated in Los Angeles County with an area of 4,450 square miles blessed with fertile soil and an all-year outdoor climate suitable for recreation, industry, and diversified agricultural production. Its future growth is assured, and it is freely predicted it will become one of the greatest metropolitan areas in the world.

Here is an Associated Press story written by Hal Boyle about present-day Los Angeles:

This is a big tomboy town still able to laugh at itself.

What other world city can? London is too sedate, Tokio—or what is left of it—is too serious. So is Moscow. Paris has circles under her eyes. New York is getting them—a flip femme with a middle-aged wisecrack.

San Francisco, St. Louis, and New Orleans—they are full blown ladies who like their fun, but don't go in for kidding. Chicago is a prosperous beef salesman bellowing self-confidently on the country's windy crossroads.

But Los Angeles, well, she's just a big sprawling gal beginning to get her curves—an adolescent with the promise of a clear-skinned beauty showing through her pimples. And, of course, some of the older women—the other cities—think she's putting on the lipstick too soon. They know she's competition.

She has grown so fast she doesn't quite know what to do with herself. She's all arms and legs and no direction, and where she'll stretch next is anybody's guess. She wears smaller diamond and rhinestone communities like a gawky schoolgirl with a charm bracelet.

She is capricious, lusty, and immature, and no other civic youngster in our time has held out such gargantuan promise for good or bad.

The sun shines vitamins and languor on her all year round, and she is Mediterranean in her extremes—bone poor and Croesus rich. She is the tomb of at least three civilizations, and the womb for every creed and political belief that men put faith in.

Los Angeles is a new battleground between people who think this is the best of all possible worlds, and other people who concede the world may be round—but are sure that it is never square to them.

Los Angeles is one of the last American frontiers—urban rather than rural—for the latter-day Daniel Boones who travel in search of greener pastures in jalopies instead of afoot.

Los Angeles is a mixing bowl for many races—that show no signs of melting until the temperature cools.

Los Angeles is a place where the horse is more of a sign of affluence than the motor car. A beggar needs a car here to get from his room to the place where he holds out his hand for a living.

Los Angeles is the world film capital, spinning artistic cotton candy 29 days out of the month and on the thirtieth a web of Shakespearean grandeur.

Los Angeles is the one city left on the globe where every fool, crackpot, zany, and zealot can have a hearing and find a following. The hospitable slogan: "We've got 'em all."

Los Angeles is the vaudeville heaven where 42d and Broadway went to when it died. Out here they renamed it "Hollywood and Vine."

Los Angeles imports people and water and exports canned entertainment and airplanes.

Los Angeles changes so fast that a man going up life's escalator here can shake hands with himself going down.

Los Angeles is where old settlers have a hard time keeping up a conversation with newcomers who park an astrology magazine in their library next to a first edition of Milton.

Los Angeles is so full of outlanders that when you meet a native son you lift your eyebrows. It's like New York—you never think of anybody ever really being born here.

She's a sort of municipal Texas—Los Angeles is—girdled by mountain, desert, and sea. She's America's last civic tomboy, and about all you can be sure about her is—she's here to stay. And she expects the world to be her beau.

Jews in American Wars

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. JAVITS. Mr. Speaker, under leave to extend my remarks, I am inserting an excellent review on the book Jews in American Wars, by Leon Dick, editor of the Uptown Observer, a community newspaper in my district.

JEWS IN AMERICAN WARS, A HIGHLY INFORMATIVE BOOK

(By J. George Friedman and Louis A. Falk, 149 pp. New Jersey: The Terminal Press)

As a documentary and statistical account of the part the Jews have played in the making of and fighting for the United States of America, this book serves to contradict adverse propaganda. It is enlightening to realize how deep are the roots of his forefathers.

The detailed account of Jewish-Americanism from the time of the landing of the Pilgrims to the present is a testimonial of great faith and the authors apply themselves to this task, but with a thorough understanding.

While the authors' approach is and must, of its nature, be factual, it possesses an intrigue which carries the reader from one absorbing chapter to the next.

Messrs. Friedman and Falk have divided their book into nine logical chapters; from the time of the American Colonies, which they so aptly titled "A New Nation Is Born," to chapter nine, "The Generals and the Admirals."

Each chapter, in itself, embraces a definite period of American history in progression and gives a thorough report of the contributions by Jews in behalf of Americanism.

For example, it is an exciting revelation to know that there was a Jew who sat at the signing of the Declaration of Independence; one, Dr. Benjamin Rush, of Philadelphia.

The part played by Jews in the following three decades is fully explained in chapter 2, The Star-Spangled Banner.

During this period, the young Nation underwent great changes. Agriculture, trade, and industry developed and prospered, and American merchant ships made their bid for world commerce.

When Tripolitanian pirates tried to enforce levies on American commerce, an American expedition into Tripoli harbor was planned and executed. One of the 10 seamen volunteering for the suicidal task aboard the American frigates *Nautilus* and *Constitution* was Midshipman Joseph Isreal.

In the War of 1812, Haym M. Salomon, son of the renowned Haym Salomon, was captain of the Tenth Brigade, One Hundred and Fifteenth Regiment.

The roll call of Jews in the service of our country at even so early a period in our history numbers in the thousands. From Commodore Uriah P. Levy, one of the most spectacular figures in American naval history, to the late Maj. Gen. Maurice Rose, of World War II, an outstanding field commander, the list of military men of Jewish faith is both enlightening and a source of inspiration.

The remarkable similarity of the history of the United States as compared with this documentary is amazing. It proves conclusively and without a doubt that the Jew has dedicated himself to the service of his country since the first colonial forces were established.

There are a number of interesting letters, poetry, and summations in this volume: Among them a letter from the late Franklin Delano Roosevelt to the Jewish War Veterans of the United States; The Fighting Jew, a poem by the late Damon Runyon; and summations of both World War statistical records.

Address of Hon. James H. Fay

EXTENSION OF REMARKS
OF
HON. ARTHUR G. KLEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. KLEIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include therein an address made by my friend and our former colleague, James H. Fay, who served in the Seventy-sixth and Seventy-eighth Congresses.

Congressman Fay addressed a joint communion breakfast of the General Duffy Post, American Legion, which he founded, and the Denis Metcalfe Post of the Veterans of Foreign Wars on Sunday, May 25 last.

These two posts are located in the district which I have the honor to represent in Congress.

Jim Fay served with honor in the Fighting Irish Sixty-ninth Regiment in World War I. He bears the wounds of battle sustained in the Argonne Forest and has always been a great champion of veterans and their families.

The address follows:

Mr. Chairman, Reverend Father Larsen, commanders of the General Duffy Post, American Legion, and the Denis Metcalfe Post, Veterans of Foreign Wars, fellow Comrades, ladies and gentlemen.

Once again we meet at our annual communion breakfast to pay our respects to our dead comrades in arms who gave their lives that our Nation might survive, not for one creed or race, but for Americans all.

Today, as last year, we are joined by our comrades of World War II, all in a common bond and a solemn resolution that war shall never come to our shores again.

We must not forget the men who suffer the pains of war for they are a living example of the ravages of war. It was with this thought in mind that I introduced a bill in Congress early in 1943 for the construction of a $5,000,000 hospital and outpatient department immediately adjacent to Bellevue Hospital. I then pointed out that skilled surgeons and physicians of Bellevue give their services free to our residents and they certainly would do the same for our wounded and sick comrades. I am sorry that they did not act upon my bill then, because now there would be erected this great institution. However, I have been informed that the Veterans' Administration on their own program have acquired the property on First Avenue and Twenty-fourth Street and very shortly work will be commenced for a veterans' hospital.

It was in the same year 1943 that Commander Naftalison did all the research work for me in the introduction of a bill for the creation of a Cabinet post for veterans. Up to the present, no action has been taken

but in my opinion, and it is shared by many, the problems of the veterans will never be properly handled until one agency takes over the 10 or more that are administering to the postwar affairs of the men and women who served.

Today, both our posts are looking forward to the new development which will bring over 12,000 families into our neighborhood. From all reports, veterans and their families are being given first consideration. When that time comes, the grand ballroom of the largest hotel will find it hard to accommodate us for our communion breakfast.

While our World War II boys were away fighting it out all over the world, fighting in the bloodiest battles history recalls, we, of World War I were doing our civic duty on the home front. It can be said of Metcalfe and Duffy Posts that when air-raid wardens were wanted, when war-loan drives were opened, we at home were doing our share in our small way, always mindful of the sacrifices you young men and women were making for us.

Permit me to thank you for this opportunity of addressing you this morning as I have for many years past. May we meet again next year when I hope and pray the destinies of world affairs will be settled.

Proposed Tax for the Support of Liquor Clinics

EXTENSION OF REMARKS
OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, July 8 (legislative day of Monday, July 7), 1947

Mr. CAPPER. Mr. President, I send to the desk and ask unanimous consent to have printed in the Appendix of the RECORD an excerpt of a statement by Dr. Clinton N. Howard, of Washington, D. C., before the Senate District of Columbia Committee.

The subject matter mentioned in this excerpt has to do with a proposal to tax liquor advertising for the support of liquor clinics.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Mr. Chairman and gentlemen of the committee, my name is Clinton N. Howard, general superintendent of the International Reform Federation, incorporated 1895, and editor of its official publication, Progress, with headquarters in Washington.

Our federation wishes to go on record as favoring the establishment of clinics for the rehabilitation of alcoholic addicts. In support of S. 757 we wish to propose an amendment to provide funds for the maintenance of said clinics.

The bill as drawn proposed a gallonage tax to be paid by the consumers. There is another and in our judgment a better source of income than from the sale of liquor, that runs into the millions, which is entirely untaxed, and that is the income of the newspapers from liquor advertisements.

The amount spent for advertising by the distillers of the larger producing capacity is $75,000,000 annually, and by beer of the larger breweries $25,000,000, besides their income from retail stores, night clubs, cocktail lounges, and restaurants operating bars, perhaps a total, including beer and wine broadcasts, of $150,000,000. These figures were definitely brought out in the hearing on the Capper bill, S. 265, on Tuesday, May 13, 1947.

IT PAYS TO ADVERTISE

The purpose of all advertising is to increase the sale of the commodity, and the liquor trade recognizes this stupendous sum paid to the newspapers as a good investment. It would be preposterous to affirm that $100,000,000 spent in advertising any commodity did not increase its sale, particularly in a commodity which creates a morbid appetite upon what it feeds. Millions in excess profits, and countless fortunes have been made in advertising from chewing gum to beer and rum.

That the daily papers in Washington get their share is evidenced by the scrap books of liquor ads which we have on file at our headquarters. Let me give you a few recent examples. The Washington Post in a single issue had 31 columns of liquor advertising, and in a pre-Christmas issue it had 51 columns of liquor ads, more than all the department stores put together.

By contrast the New York Times in an edition double in size had only 14 columns on the same date, while the papers published by the Gannett string of 21 daily papers with a total circulation of nearly 1,000,000 do not publish any liquor advertisements and never have.

There are today 8 magazines with 1,000,000 or more circulation, 4 with between 500,000 and 1,000,000 circulation each, 24 with more than 100,000 and less than 500,000, and 44 smaller magazines that accept no alcoholic-beverage advertising. The total circulation of these magazines is more than 43,765,000. The Reader's Digest, with 10,000,000 circulation, accepts no liquor advertisements.

Then there are the Curtis publications: Country Gentleman, Ladies' Home Journal, Saturday Evening Post, and Holiday, with 10,800,000 guaranteed circulation and no alcoholic-beverage advertising. The Reader's Digest, with 10,000,000 circulation and no liquor advertising, leads the list.

There are 90 leading farm papers, 2 with 1,000,000 circulation each and 18 with more than 100,000 circulation, ranging up to 980,000 circulation, that take no alcoholic-beverage advertising, exclusive of the Country Gentleman, with 2,200,000 circulation, listed among the Curtis publications.

HONORABLE MENTION

The following metropolitan dailies accept no alcoholic-beverage advertising:

	Guaranteed circulation (1947)
Chicago Daily News	491,046
Christian Science Monitor (Massachusetts)	155,302
Deseret News, the (Salt Lake City)	41,597
Des Moines Register and Tribune (morning, evening, and Sunday combined)	838,143
Harrisburg News and Patriot (combined)	84,083
Kansas City (Mo.) Times and Star (morning, evening, and Sunday combined)	1,076,238
Minneapolis Tribune, Star, and Times (morning, evening, and Sunday combined)	779,112
South Bend Tribune (evening and Sunday combined)	171,062
Topeka Capital (daily and Sunday)	116,337
The Gannett chain of 26 daily and Sunday papers in 19 cities of New York, Connecticut, New Jersey, and Illinois	888,531

HORACE GREELEY HOWARD

In addition there are at least 180 daily newspapers and approximately 4,000 weekly newspapers that refused all alcoholic beverage advertising, including 4 papers published by my youngest son, Horace Greeley Howard, in New York State, continuing the policy established by Horace Greeley, founder of the New York Tribune, of never accepting an advertisement to promote the sale and consumption of intoxicating liquors, beer, wine, or spirits.

"MAKE BOYS BEER CONSCIOUS"

On the contrary is the damnable example set by a Philadelphia daily in its issue of May 29 and since with a full page beer ad, to carry out the policy announced at the National Brewers' Convention at Chicago to "make boys beer conscious." The full-page ad is addressed in bold type "To the 10,000,000 young men who have never tasted a great glass of beer." Philadelphia, once known as the cradle of American liberty has become the cradle of journalistic degeneracy.

We believe that the newspapers of the country who are accepting millions of dollars from the brewers and distillers, said to approximate a hundred million dollars, in creating the habit of drinking intoxicants by the boys and girls of America, and increasing their consumption among those who have already formed the habit, from two billion to eight billion dollars in less than 10 years, should pay the cost of the clinics to rehabilitate the addicts.

In his testimony on the Capper bill to eliminate liquor advertising from interstate commerce, Frank Gannett testified that he estimated his annual loss at $1,000,000. It does not seem unreasonable therefore, to suggest that the papers of Washington which have an income of millions annually from promoting the sale of liquor should bear a part, if not the entire cost, of maintaining the clinics for rehabilitating the drunkards they helped to make.

MOUNTING CONSUMPTION

As a result, despite the falling off in the population due to the return of soldiers to civil life and the dismissal of Federal employees, the consumption of alcoholic liquors continues to increase. At the hearing before this committee May 15, it was testified by Guy W. Pearson, the district tax collector, that his office had sold stamps for 4,650,000 gallons of whisky, rum, gin, and brandy in the first 10 months of the current fiscal year which exceeded the total for the fiscal year 1946 by 183,000 gallons.

THE PRICE SOCIETY PAYS

This is further confirmed by the increase in arrests for drunken driving, more than 100 percent since the 1st of January, and most startling of all is the number of deaths from drinking poison alcohol. Up to May 14, the morgue reports 25 deaths in the District since January 1. We feel that these staggering results are due to the high-pressure liquor advertising on the part of the Washington press, and we suggest an amendment to this bill which will require that at least 10 percent of the gross amount received by the newspapers from liquor advertisements shall be contributed to maintain the cost of clinics for the rehabilitation of the liquor addicts they helped to make. Why impose the cost upon the consumers only who reap no financial profit, but suffer physical, mental, and financial loss?

SUGGESTS TWO AMENDMENTS

Such an amendment to the pending bill will more quickly, easily, and cheaply accomplish the same result, and, at the same time, cut off or reduce the supply of drunks that is making Washington a hissing and a byword from ocean to ocean.

BANISH THE WINDOW DISPLAY

As a further method of reducing the number of liquor addicts, as well as to reduce the number of new recruits from the generation that must take the place of the addicts who are cured by these clinics, we suggest an amendment that will prohibit the pernicious and alluring display of bottle intoxicants in the 500 liquor stores of Washington, which

never was permitted anywhere in this country in the old saloon days that brought about prohibition. Window displays are an important factor in increasing sales, as the crowds ogling these whisky windows indicate.

HOOCH ITS OWN HANGMAN

If prohibition comes back, as is now indicated by the vast increase in dry territory all over the country, including Kentucky, where, despite its 70 distilleries and 6 breweries, 93 of its 120 counties have voted out the sale of whisky, wine, and beer, with the rest soon to follow, and if prohibition comes back, the liquor men will have only themselves to blame.

Thirty years ago I campaigned in nearby every county in the Blue Grass State with Col. George W. Bain, of Lexington, known as the silver-tongued orator of Kentucky. We began the campaign at Paris, the capital of Bourbon County, the home of that famous brand of whisky. Night after night Colonel Bain won his audience with the slogan, "Kentucky, Kentucky, the State where I was born; where the corn is full of kernels and the colonels full of corn."

Should Colonel Bain return to Kentucky now, he would add to that slogan an amendment:

"Where the distillery on the hillside now is still,
And the men they take their tipple from the ripple of the rill,
And the boys they come home sober, and the mothers do not cry.
Glory, hallelujah, Kentucky's going dry!"

Address by Hon. Alexander Wiley, of Wisconsin, Before Townsend Convention

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, July 8 (legislative day of Monday, July 7), 1947

Mr. WILEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me before the Townsend National Convention in Washington, D. C., June 28, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HOPE AND SECURITY FOR AMERICA'S AGED

Mr. Chairman, ladies, and gentlemen, you will notice that I am speaking to you from a manuscript. I am not like the minister who, when he rose to speak, said:

"Friends, I regret that I left the copy of my sermon at home. So, today, I will have to use the words that God puts in my mouth, but next time, I hope to do better."

I am grateful for the opportunity to speak to you folks today, including so many friends from my own State of Wisconsin. This assembly reminds me of a previous occasion when I addressed a Townsend group in Buffalo, N. Y.

You have assembled here today in an hour of history when we should all pause and take stock of our blessings and should evaluate our challenges of the future.

I am sure that you men and women have come from many distant places in order that you might, in this beautiful Capital City, "charge your souls anew" with the love of country and the love of principles which have made her great. I know that each one of you who has performed a lifetime of work in this blessed land is grateful for the blessing of being an American. At the same time, you recognize that we have many problems, which we must meet head-on with adequacy, and one of those problems is, of course, security for America's old folks in these inflationary times.

OLD FOLKS' RESPONSIBILITY

You and I know that the elderly folks of America, who have seen America's wonderful growth during their lifetimes, are guardians of our precious freedom. The flag that floats so near us all today reminds us that we but recently celebrated Flag Day. I remember that many years ago one of my youngsters taught me a lesson on the meaning of the flag. She came home one day from school and said, and her words made me bless her teacher, "Mommy and daddy, this flag is you and me and grandpa and grandma and all of us."

OUR FLAG

I was deeply thrilled by the wonderful lesson which this child had learned. So, too, this flag here is you and I—and all the elderly folks of America and young folks of America, and the generations yet unborn. It is what you and I choose to make it now and what they will make it in the future.

Several weeks ago it was my pleasure to deliver a flag-day address to the citizens of Wisconsin on the meaning of the flag in this atomic age. I stressed the fact that we here on this continent are more blessed than anywhere else on earth, that the bomb released at Hiroshima has ushered in a new age—the atomic age. I pointed out that we had been raised to leadership of all nations of earth, and with the leadership, has come responsibilities to our own citizens and to the citizens of the world. I pointed out that ours was the function of a good samaritan to help the war-weary, the war-ravaged, the hungry, and the diseased abroad, so that they could become competent to help themselves again.

OUR DOMESTIC RESPONSIBILITY

But you and I remember the fact that, as St. Paul said:

"If any provide not for his own, and especially for those of his own house, he hath denied the faith and is worse than an infidel."

That means that we must be adequate to the needs of our own citizens, too, and, in particular, to the needs of our old folks—those living on inadequate pensions and annuities, while the cost of living is rising.

WORLD OUTLOOK

Yes, as we look abroad for a moment before returning to our domestic issues of today, the world has indeed been contracted in this technological age. Jet planes, guided missiles, and atomic weapons have made the earth very small. As one scientist said to me not long ago, however, "We are still only touching the hem of a new world of amazing discoveries which are to be ours."

As we scan the globe today, we realize that war has not brought peace, but has brought only new and difficult problems. We are in a position today where we must be adequate to our international challenges. There are tremendous differences between ourselves and the other leading power on earth today—the Soviet Union—political, economic, social, racial, spiritual, historical differences, making for a vast gulf between our way of thinking and Russia's way.

But I say that in spite of these differences I have faith that we can make the United Nations succeed. I have faith that if we can live the lives that we should in this land, we will be holding up a standard "to which the wise and the honest may repair." But we must be ever vigilant. We must remember that "Eternal vigilance is the price of liberty." We cannot fall asleep to the foreign realities as they exist. We must exercise keen judgment in conduct between ourselves and foreign nations, but we must have that faith that "moves mountains," that the differences between us can be resolved peacefully. It is my prayer that reason and judgment will be born anew so that these differences to which I have referred will be ironed out. You ladies and gentlemen have seen many wars in your lifetime. You want no war in the future for yourselves or your children.

THE YOUNG FOLKS HERE

I am happy to speak to you many young folks. You and I know that it is not the gray of the hair that makes for age. It is the condition of the heart; or, as the poet puts it:

"Age is a quality of mind;
If you have left your dreams behind,
If hope is cold,
If you no longer look ahead,
If your ambitions' fires are dead—
Then you are old.

"But if from life you take the best,
And if in life you keep the jest,
If love you hold;
No matter how the years go by,
No matter how the birthdays fly—
You are not old."

Yes; age does not depend upon years. Some folks never grow old. As I look around me, I am sure that you have learned the art of growing old gracefully and happily. You know it has been said that no one grows old who can keep "the heart of a child," and perhaps you recall that the ladies of Greece counted their age from the date of their marriage rather than from the date of their birth.

SPIRIT OF MAN

The spirit of man, in contrast to the body of man, is eternal. The spirit of man knows none of the limitations which mortal thinking is prone to talk so much about. So long as you and I keep active in thought, so long as we are always ready to adopt new ideas, to get rid of synthetic thinking, of foggy thoughts, so long as we are dissatisfied with the wrong and content only with the right, so long as we enjoy the art of realizing the best that is around us and within us, just so long will we advance to ever new horizons and be forever young.

OUR PROBLEM HERE TODAY

My friends, I have touched on the foreign situation and on the spiritual side of our problem because I know these matters are close to your hearts. Now, let us turn to the direct problems of our old folks.

I want to address you very briefly on this matter which has had my serious consideration ever since I came to Congress. It relates to compensation for lives well spent. Yes, it is the subject of security for those citizens who have lived their lives in a constructive fashion for the Republic, and have contributed to its maintenance and building up. I am speaking of you elderly folks who have worked for America and have faith in the future of America, in its free political system, its private economic system. I am speaking of those who want their children and their children's children to continue to live in the home of the free and the land of the brave.

MY PREVIOUS EFFORTS FOR OLD-AGE SECURITY

Almost 8 years ago, in 1939, with regard to the Townsend bill, I stated in the Senate, "I would like to see Congress pass Senate Joint Resolution 145, which provides for an amendment to the Constitution giving Congress the 'certain' right to levy taxes for old-age pensions. There are those who claim Congress has that right. There are those who say Congress has not that right. If this joint resolution, amending the Constitution, were submitted to the people, it would enable the people to decide whether they

wanted the Congress to have that certain right. The problem of old age is one of the serious problems confronting the Republic."

Since that day in July 1939, when I stated these thoughts, the situation of our old folks has changed, in many cases, but not for the better. War came, and many old folks joined the war factories and made an invaluable contribution to our military effort. But, with the end of the war and competition much keener in the labor market, many elderly folks have found it impossible to compete with younger workers and with increasing mechanization.

One of the problems which the postwar era has brought us is the problem of inflation brought about by underproduction and underconsumption.

MY JOINT COMMITTEE RESOLUTION

Just 8 months ago, in the United States Senate, I reintroduced Senate Concurrent Resolution 13, which provides for a 14-member Joint Committee on Social Security.

I had previously introduced this resolution in 1943, but, unfortunately, it had not been acted upon then. I am hoping and working so that the Eightieth Congress will take action on it.

If it does take action, then the Townsend legislation in the Congress, introduced by Representative ANGELL and many other Congressmen, and all other social-security legislation, would go to the new joint committee for its evaluation. This committee would have a deep and abiding interest in the social-security problems of our elderly people.

NEED FOR CAREFUL STUDY OF SECURITY BILLS

As you know, H. R. 16 is now pending before a House Ways and Means 5-member social-security subcommittee. I believe, however, that the Townsend bill and other legislation should be reassigned to a special Joint Social Security Committee, consisting of 13 or so men of both Houses.

I believe that both Chambers should assign men with the keenest interest and the most expert background on the subject of social security to this proposed new committee, in order that we might assure justice for the Nation's old folks.

The members of the Joint Social Security Committee, which I propose, should be men who are aware of the vast ramifications of the social-security problem. They should consider the matter of health of elderly folks, of adequate hospital care. They should consider, too, such realities as the national indebtedness of our Nation, now standing at some $260,000,000,000. They should be men who understand that a particular piece of legislation may often involve, upon close inspection, vast areas of other legislation which must be carefully borne in mind in these changing times.

H. R. 16

You and I know that the legislation of your own organization has changed somewhat throughout the years in order that it might be adequate to the changing scene.

Representative ANGELL'S bill entitled "The Business Employment and Security Insurance Act," affects our Nation's production, distribution, and employment in as wide and extensive a manner as any single piece of legislation in the Congress today. That is why it deserves the most detailed consideration of the Congress.

Since I am not a member of the Senate Finance Committee, this bill could not presently come up within my own jurisdiction, but naturally I am keenly interested in it and in all other pending legislation on this subject. H. R. 16 would, as you know, provide every adult citizen of the United States with equal basic Federal insurance and would permit retirement with benefits at the age of 60, in addition to covering total disability from whatever cause for certain citizens under 60.

CONGRESS AND THIS LEGISLATION

There may be honest differences of opinion on this bill and related legislation.

We have in the United States Congress 435 Representatives and 96 Senators. Every one of those men and women is an individual, different from one another in background, be it economic, educational, social, political, religious, or geographical background.

The congressional process is a lengthy and detailed one in which bills can be amended to meet the requirements of particular legislators.

These facts should be borne in mind as you consider the future for your own legislation.

Men may differ on legislation, as I have said, but they cannot differ on the obvious facts and realities of the old folks' difficult conditions today.

INADEQUACY OF PRESENT SECURITY SET-UP

I would like to quote briefly from my Senate address of April 2 on the problems of our old folks.

"It is obvious that in these years, when prices have gotten far out of line and the purchasing power of the dollar has declined, that our present system of old age compensation, of unemployment insurance, of aid to widows and orphans, of aid to the blind, must be reevaluated. * * * Surely, if there is any single issue on which any party can gain the unyielding admiration of the American people, it is on the issues of promoting the security of our citizens in an insecure world, the issue, of course, of not making loafers of any Americans but productive workers who can look forward to enjoying reasonable security. My recommendation (for a joint committee) is but the first small step. Let that step be taken.

"The effects of that step in helping to ease the worry, the anxiety, the care of countless folks throughout the Nation may be incalculable. At least, they will know that the Congress is on its toes eager to explore the whole subject of social security with adequate, integrated resources—with an open mind, with a sympathetic heart."

Just this month I introduced another bill, S. 1403. The purpose of this bill is to permit retired workers, widows, and dependent children, receiving old-age and survivors' insurance, to increase their outside earnings without losing their pensions. This bill obviously affects only one small phase of social-security legislation and yet, I believe it would make for justice for our old folks.

FAITH OF OLD FOLKS

We recall the words of Robert Browning:

"Grow old along with me!
The best is yet to be,
The last of life, for which the first was made."

We recall the words of Walt Whitman in his Song at Sunset when he spoke of "The grandeur and exquisiteness of old age."

But the best has not been for countless men and women of advanced years. Even in our blessed America, they have suffered the torments of insecurity, the woes of poor housing, lack of adequate nourishment, lack of adequate medical care for their ailments, because the few dollars that they receive in social-security aid has virtually lost their meaning in these inflationary times.

But, looking upon you today, I know that you men and women are not discouraged and that millions of other folks of advanced years are not depressed. You know that justice will be done for you. You have faith which, as St. Paul stated, is the "substance of things hoped for and the evidence of things not seen." What you are hoping for is security for old folks. That is the thing which you do not "see" now except in your mind's eye, but which assuredly will come to pass.

It is as if I can almost hear you saying the words in the Book of Psalms, "Now when I am old and gray-headed, O God, forsake me not." You will not be forsaken. The Congress of the United States is not unmindful of the problems of the insecurity of old age.

As you know, there is a vast amount of legislation pending before the Senate and the House of Representatives. Much of it cannot be considered prior to the adjournment of this first session sometime late next month, but I am hoping that if it is not taken up now, this problem will certainly be taken up within the second session of the Eightieth Congress, and will be adequately handled.

CONCLUSION

My fellow Americans, I have been grateful indeed to be with you here today. It has been a pleasant experience which I will long remember.

We have briefly reviewed the foreign situation. We have touched upon the spiritual nature of man. We have considered the problem of our old folks and the legislation which your own organization is sponsoring, in addition to some of my own measures along this line.

I know that you will carry back to your communities fond recollections of your stay in Washington. I know that you will indeed have been filled with "light" on this problem, and that you will have been charged anew with love of our blessed land.

You will know, more so perhaps than ever before, that the "best is indeed yet to be."

Labor-Management Relations Act—Questions and Answers

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Tuesday, July 8 (legislative day of Monday, July 7), 1947

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a list of questions and answers which I have prepared, relating to the effect of the Labor-Management Relations Act of 1947.

There being no objection, the questions and answers were ordered to be printed in the RECORD, as follows:

QUESTIONS AND ANSWERS RELATING TO THE EFFECT OF THE LABOR-MANAGEMENT RELATIONS ACT OF 1947

(By Hon. ROBERT A. TAFT, chairman, Committee on Labor and Public Welfare)

RIGHTS OF EMPLOYEES

Question. Is it true that the act removes large groups of employees previously covered by the National Labor Relations Act from the protection of that statute?

Answer. No. The new act only exempts supervisors, employees of Federal Reserve banks, and of charitable hospitals. As a matter of fact, the Labor Board has never held that hospitals were engaged in interstate commerce, or that Federal Reserve banks were covered by the existing exemption with respect to public employment, so this amendment was largely for clarification.

Question. Does this apply to supervisors?

Answer. Under the new act foremen, to the extent that they are given general managerial authority by their employers, will not be deemed employees. This was the holding of the National Labor Relations Board for

several years, and the sponsors of the legislation believe that it was the intent of Congress at the time the Wagner Act was passed. They believe that the minority opinion of Mr. Justice Douglas in the Packard case, with which three of his Supreme Court colleagues concurred, correctly stated the law. The new act defines the term "supervisors" precisely, drawing the line clearly between bona fide representatives of management, and the group having negligible supervisory duties like straw bosses and set-up men, who are left subject to the act.

Question. Are professional persons excluded?

Answer. Professional persons employed by firms whose operations affect interstate commerce are still given all the rights which other employees enjoy under the Wagner Act. They are protected from being outvoted by employees in industrial units or clerical units by a provision which gives professional employees a right to have a voting unit of their own. They are still free to select as a bargaining representative, however, either a union whose membership is confined to professionals or a general trade union.

Question. Do plant guards still enjoy the rights of employees?

Answer. Yes. They were not exempted from the coverage of the Wagner Act. The only restriction upon plant guards is that the organization which the Board may certify as their representative shall not include persons other than guards.

Question. What rights does an employee have, if his employer discharges him for belonging to a labor union?

Answer. The same as today. Either he or his union may file unfair labor practice charges under title I and obtain an order of reinstatement with or without back pay in the discretion of the Board.

Question. But if an employer told a dismissed employee he was being discharged for breaking one of the plant rules does he have any remedy under the new act?

Answer. It makes no difference what an employer tells a dismissed employee. Just as under the present law, the employee can file an unfair labor practice charge, and the Board decides the real reason of his dismissal. The new act does make it clear, however, that if he was really discharged for cause, the mere fact that he is a union man and that his employer may not happen to like unions does not make him immune from all discipline or from discharge. The Board as today has to determine the real reason for his discharge.

Question. Does an employee have any rights if he is discharged for not joining a union?

Answer. He would have the same rights (unless there is a valid union-shop contract in effect) that the union man would have in the converse of the situation. The new act, like the Wagner Act, prohibits discrimination both to encourage or discourage membership in a labor organization.

Question. Does the new act give an employee any additional rights?

Answer. Yes. He is protected from coercion by labor unions and their agents. He is protected from losing his job even if there is a union-shop contract if he is willing to pay union dues. He is given a definite right to insist on nondiscriminatory treatment from any welfare fund established. He is protected from personal legal liability for the illegal acts of labor organizations. Other protection is given against both employers and union leaders.

Question. Against what kind of coercive conduct by unions is an employee protected?

Answer. He is protected both against physical and economic coercion. For example, in the absence of a valid compulsory union-membership contract if a union compelled a man to join it or to sign an application card by threatening him with loss of his job, this would be economic coercion. Both threats of violence and threats of this kind are prohibited.

Question. Does this cover mass picketing?

Answer. Yes. It will cover intimidating conduct or physical force used by union agents on a picketing line to prevent a man from going to work.

Question. What is an employee's remedy under those circumstances?

Answer. The employee could file an unfair-labor-practice charge and obtain a cease-and-desist order from the National Labor Relations Board. This could be made a matter of a court injunction if necessary.

Question. Suppose a union forces an employee out of a job.

Answer. Unless the union has obtained a union contract requiring membership in that union as a condition of employment, the union is prohibited from causing or attempting to cause an employer to discharge an employee whom the union does not like.

Question. But suppose although the employer is reluctant to fire him, the union nevertheless procures his discharge by strikes or threats to strike.

Answer. Such an employee is still entitled to reinstatement in a complaint case before the Labor Relations Board. Moreover, the Board, since the union was the moving force, can order the union to compensate him for the loss of wages.

Question. Are any contracts under the new act legal which require an employee to be a union member?

Answer. Generally speaking, what is known as the closed-shop contract, that is, one which permits the union rather than the company to choose the employee, is no longer lawful, unless it is negotiated and executed before August 22 and then only for 1 year. What is known as the union-shop contract, namely, one requiring employees to become members of the union after 30 days, is still lawful even though negotiated after that date, provided a majority of the employees to be covered by such contract have given the union a right to ask for such a clause in a secret ballot conducted by the Labor Board. A maintenance of membership agreement is also lawful if preceded by such an election.

Question. May employees who are now covered by the closed shop, union shop, or maintenance of membership contracts drop out of the union if they see fit?

Answer. Not if these contracts were in effect on June 23. Such contracts can be enforced until their expiration date. New contracts of this character made prior to August 22 may also be enforced for a period of a year. Also new contracts for union shop made under the act may be hereafter enforced.

Question. Does the new act give individual workers more voice in the running of their unions?

Answer. The new act does not police the internal affairs of unions, but it does require the union to give full information regarding its methods of election, methods of operation and financial transactions. A knowledge of these facts will give individual workers more opportunity to express their opinion. They are more free to express their opinion and urge policies contrary to the wishes of the union leaders because, although the union may expel them, they would still be entitled to hold their jobs even in case of a union-shop contract.

Question. Is this true even with regard to union-shop contracts made after August 22?

Answer. Yes; because the law simply requires a worker covered by such a contract to tender his dues and initiation fees. If the union refuses to admit him or expels him for some reason other than failure to pay such dues or initiation fees, the union cannot compel his discharge.

Question. Suppose an employer makes a contract with a union after August 22 which requires all the employees to become members within 30 days, but at the end of that 30-day period the union refuses to accept an employee's application either because of some racial rule or because the union's quota is filled?

Answer. The contract then becomes inapplicable to such an employee; and if the union tries to get him fired, it engages in an unfair labor practice.

Question. Can unions still impose political assessments on their members under threat of making them lose their jobs?

Answer. No; because even though a union makes the payment of such an assessment a condition of membership, an employee can still hold his job by paying his regular dues.

Question. Could a union get around this by raising its dues with the purpose of using the increased revenue for political purposes?

Answer. If a union used funds collected as dues for political contributions or expenditures, it would violate an amendment which the law has made in the Federal Corrupt Practices Act and the officers responsible for the diversion of such funds would be committing a crime.

Question. Suppose a union, in order to limit employment to present members, raises its initiation fees by several hundred dollars, thus making it too expensive for nonunion employees in shops where that union has a union-shop contract to join.

Answer. The new law makes it an unfair labor practice for a union to charge excessive initiation fees if it has a union-shop contract. It does not expressly state what is excessive, but leaves this to the Board. Obviously, if the purpose was discriminatory and out of line with the practices and customs of that industry, the Board would be compelled to hold the union guilty of an unfair labor practice unless it reduced the initiation fees.

Question. If there is nothing about compulsory membership in the union agreement, does the individual employee have any more voice in his union affairs?

Answer. The law does not give him any direct rights under those circumstances, but since it requires unions to file financial reports and copies of their constitution and by-laws, and to supply copies to their members, the membership would become aware of improper conduct by union leadership and could take appropriate steps within the union constitution to bring about appropriate reforms.

Question. If a union which was using its funds improperly concealed this from the membership by making misleading quarterly reports to the Government in its statements, has the Labor Board or any other public agency the right to check on such irregularities?

Answer. The Labor Board does not have any such authority, but the filing of a statement, which contained fraudulent representations or concealed material facts, is a violation of section 35 (a) of the United States Criminal Code. For violations of this section the Federal courts can impose fines as high as $10,000 and prison sentences for as long as 10 years.

Question. Suppose an individual member knew that the union treasurer's report was false, how would he bring this to the attention of the proper authorities?

Answer. Since the Criminal Code is enforced by the Department of Justice, such an employee could take up the matter with the United States Attorney for his district or to the FBI.

Question. What protection are union members given against seizure or control of unions by racketeers?

Answer. Only the same as today. If the majority of the members of a union really want to get rid of a leader, I believe they can do so and that the courts will protect their right to a fair election. Of course, if these so-called racketeers engage in racketeering, they would be subject to prosecution for misappropriating union funds. Also, they might

be guilty of extortion under title III of the new act, or they might be guilty of coercion against employees.

Question. Can union racketeers compel proprietors of small shops who have no employees to join their unions?

Answer. Not if they apply any economic force to such independent proprietors, such as refusing to transport goods to their shops or interfering with their suppliers.

Question. What redress does a small businessman have against such practices?

Answer. He can bring an action for damages against the persons or organizations responsible and can also file a charge with the Labor Board. If the regional office of the Labor Board finds the charge has merit, it is authorized to obtain an injunction to prevent continuation of such practices until the case is ultimately decided.

Question. After a union contract expires may a union still bargain for higher wages or shorter workweek and compel the employer to bargain with it?

Answer. Yes. An employer is compelled to bargain with the union which represents the majority of his employees.

Question. Is there anything in the law which would prevent an employer from saying no to such demands?

Answer. The law provides that an employer's duty to bargain does not necessarily mean that he has to make any concessions.

Question. If he refuses to make any concessions, is the union precluded from striking?

Answer. No. The law does not prohibit the right to strike after the expiration of the contract, provided 60 days notice of the contract termination or the requested change is given to the employer.

Question. Does this apply to union demands for welfare funds?

Answer. A union can still ask an employer for a welfare fund, but an employer is still free to say no. If the employer agrees to such a fund, however, the contract must make him jointly responsible for the administration of the fund, and the plan under which the fund is created must contain provisions which make it a genuine trust fund.

Question. How does the law affect the check-off?

Answer. The check-off is still legal, but under new contracts written authorization must be given by each individual employee, as is usually customary today.

Question. If an employee refuses to give an employer such an authorization can he be compelled to do so if the contract provides for a union shop or maintenance of membership?

Answer. No; neither the employer nor the union can compel him to give such an authorization. If he refuses to pay his dues directly to the union, however, and the union expels him, he can then be discharged, provided he is one of the employees covered by the contract.

Question. Over what period of time does the law contemplate that unions already having contracts containing compulsory membership provisions shall establish their right to continue such contracts?

Answer. Existing contracts are valid until the end of the contract period. Any contracts which come up for renewal or extension after August 22, 1947, will have to be preceded by a Labor Board election if they are to contain compulsory membership provisions.

Question. How will these elections be handled by the Labor Board, in view of the fact that it is estimated that there are some 50,000 union locals which have, or desire to have, such clauses in their contracts?

Answer. It will be the duty of Congress to see that the Labor Board is given sufficient appropriations to enable the various regional offices to handle these requests for elections. under the law, no hearing is necessary, so the Board should be able to handle them as expeditiously as it handled the strike elections under the Smith-Connally Act; that is, within a 30-day period after the notice or petition has been received.

Of course, these 50,000 contracts will not all expire in the same month, so that in the average month the Labor Board would probably not have to conduct more than 4,000 of these elections. During the wave of strikes last year the Board handled almost this number of elections under the Smith-Connally Act.

Question. Is it true generally that State laws take precedence over the provisions of the new Federal labor act?

Answer. Only where purely intrastate industries are affected. In interstate matters, except for the provisions with respect to compulsory membership agreements, the new act takes precedence over State acts which are in conflict with it.

Question. Is it necessary for a union to have a strike ballot before employees can be called away from their jobs?

Answer. This is not required except in a national emergency strike situation. If such a dispute has not been settled 60 days after the injunction is issued, the Labor Board is then directed to poll the employees with regard to the last offer of the employer. In less important strikes, the Mediation Service may also employ this technique, but it is not mandatory.

Question. Will enactment of State legislation be necessary in any cases to amplify or strengthen provisions in the bill?

Answer. No. State legislation will not be necessary unless the State desires to have legislation applying to purely intrastate industries. States may also pass laws completely prohibiting union shops if they desire to do so.

Question. Does this apply to State mediation boards?

Answer. No. There is nothing in the section of the new law dealing with mediation which would be in conflict with the functions of State mediation agencies. Moreover, the new act encourages State mediation by requiring the parties engaged in a dispute over the prospective termination of a contract to notify both the Federal and the State mediation conciliation services of the existence of the controversy.

Question. Are there any provisions in the act which curb a union's right to strike where such a strike is not a breach of contract?

Answer. In general, the act does not restrict a union's right to strike for wages, hours, and working conditions when the contract has expired. If a union fails to give notice 60 days before the end of the contract of its desire to modify the contract, there may be no strike until 60 days has been allowed for collective bargaining. Also, strikes in the nature of a secondary boycott, and jurisdictional strikes, are outlawed. In the case of strikes of an entire industry, or a substantial part thereof, which endanger the national health and safety, the President may obtain an injunction against a strike for 60 days and until an election can be held.

Question. Does this mean that a strike on an industry-wide basis is illegal?

Answer. No. The strike would not become illegal until the court enjoined it after finding that it affected the national safety or health. In such a case violation of the injunction would be illegal.

Question. May unions strike for recognition?

Answer. Yes. Unions may strike for recognition unless another union has been certified by the labor board as the bargaining representative. An employer, however, does have the right if he receives a demand for recognition to petition the labor board for an election and certification.

Question. May an employer refuse to recognize a union if it is Communist dominated?

Answer. In order to use the machinery of the Labor Board either for the purpose of becoming certified or filing a charge, a union must submit affidavits signed by each of its local and national officers to the effect that such officers are not members of the Communist party. If such affidavits are submitted employers must treat that union like any other union.

Question. What would happen if the employer refused to bargain on the ground that the affidavits submitted by union officers were false?

Answer. The duty to bargain would still exist if the Board decides that the union was the majority representative, but the officers filing the false affidavits would expose themselves to prosecution under section 35A of the criminal code.

Question. If the union officers refused to file affidavits what remedy would an employer have?

Answer. He then could refuse to recognize the union and be immune from proceedings before the National Labor Relations Board because the Board is instructed not to entertain a charge by a labor organization unless its officers comply with these legal requirements.

Question. May an employer discharge a Communist employee?

Answer. Yes; if that is the real reason for discharging him.

Question. Can a group of nonunion employees secure an election after a union has obtained a contract?

Answer. Any contract negotiated with a union having a majority at that time will continue to be valid until its expiration date as the election rules provided by the act do not interfere with contract rights.

Question. If an employer is operating a nonunion plant, may a union man in another factory refuse to handle the non-union-made products?

Answer. The new act makes it an unfair labor practice to refuse to process goods made in another plant in order to force the employer in that plant to recognize a union.

Question. What remedy does the nonunion employer have under such circumstances?

Answer. He can sue the union for damages or he can appeal to the National Labor Relations Board for an order against the boycott.

Question. Suppose the union, instead of refusing to handle his goods in other plants which that union has organized, urges the general public not to buy products of nonunion manufacturers?

Answer. This is not forbidden by the act, since it is merely persuasion.

Question. If a craft union strikes because certain work which it claims should be given to it by its employer is being performed by another craft, has the employer any protection?

Answer. Yes; for, generally speaking, jurisdictional strikes are declared to be unfair labor practices by the new act unless the employer is refusing to comply with a decision of the National Labor Relations Board.

Question. Will this prevent jurisdictional strikes in the construction industry?

Answer. The construction industry ordinarily would be intrastate commerce and would not be affected by the act. Of course, there are instances where it is interstate commerce, and in such cases the employer can obtain a decision from the National Labor Relations Board settling the jurisdictional dispute.

Question. Suppose the employer does not discharge a Communist employee in a plant where there is a union-shop agreement, does the union have to permit him to obtain or retain membership?

Answer. No. The act does not impair in any way the right of the union to make whatever rules it sees fit with regard to the acquisition or retention of union membership.

Question. Does the new act do anything with respect to a common complaint of em-

ployers, namely that they have been denied free speech under the Wagner Act?

Answer. The new act is written so that it insures freedom of speech both to employers, employees and labor organizations. It permits the expression of any views, arguments or opinions which do not contain threats or promises of benefit.

Question. Do you think there is any basis for a complaint by employers to the affect that under the Wagner Act the courts have merely rubber stamped the decisions of the Labor Board thereby preventing them from having any real appeal to the courts?

Answer. Yes. Almost every circuit court of appeals in the country have said as much since under the Wagner Act the court could not reverse the Board if its findings were supported by any evidence.

Question. Does the new law remedy this situation?

Answer. Yes. Congress took two steps to correct this in the passage of the new act. It is required that the hearings be conducted in accordance with the rules of evidence prevailing in the Federal courts to the extent that this is practicable. In judicial review the Board's findings are no longer conclusive unless supported by substantial evidence on the record considered as a whole.

Question. Do you think there is any basis for the President's assertion that the division of functions between the Board and the new general counsel created by the act will make it very difficult for the law to be administered efficiently?

Answer. This should not impair the administration of the act in the slightest degree for it merely relieves the Board members of duties which now interfere with their judicial functions. By transferring the responsibility for issuing complaints and prosecuting them to the general counsel the Board should be able to keep abreast of their judicial docket.

Question. But does not this place a tremendous amount of power in the hands of one man?

Answer. The General Counsel is merely responsible for initiating prosecutions. The power of making ultimate decisions still resides in the Board. It should be noted that the prosecuting power given the General Counsel is far less than that possessed by the Attorney General since the Attorney General can initiate criminal as well as civil actions, and against any person or corporation in the United States.

Question. Does the new act abolish the present Board?

Answer. No. It merely enlarges it from a board of three to a board of five. The present members of the Board may still retain their offices.

Question. How does the new act affect Government employees?

Answer. Government employees were never accorded any rights under the Wagner Act and the new law makes no change in this respect. It does contain a provision, however, forbidding strikes by Government employees.

Question. If Government employees are not covered by the Labor Board how is this provision to be enforced?

Answer. A Government employee engaging in a strike becomes subject to discharge and becomes ineligible for employment for a period of 3 years.

Question. Do you think the new law will be effectively enforced?

Answer. Yes. I have every confidence that the men appointed and confirmed by the Senate together with the present Board members will effectively enforce the law.

Question. Can Congress do anything to see that these men perform their duties effectively?

Answer. They are subject to Senate confirmation. Moreover, the act provides for the creation of a joint committee of Congress to study the labor problems not covered by the act. It is expected that this committee will scrutinize carefully the operation of the new law not only to see that it is effectively enforced but also to remedy any defects which are disclosed in its active operation.

World Recovery

EXTENSION OF REMARKS
OF
HON. RAY J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. MADDEN. Mr. Speaker, the thoughts set out in the July 3, 1947, editorial by H. B. Snyder of the Gary Post-Tribune, Gary, Ind., reveals that our duty is first to avert another war if possible, and protect the next generation, regardless of the present cost. Had we followed through our world obligations after World War I, we might not today have the burdensome debt and the aftermath of the World War II confronting us.

The editorial follows:

WE CAN PAY ANY PRICE FOR WORLD RECOVERY

While we have no more desire to give away American goods than others, we see little good in the talk about estimating what we have to give away before we make any offers to help world recovery. If we were to get into a war tomorrow no one would even think of making an estimate of what we could afford to spend.

Yet the purpose of giving American dollars and goods to the devastated countries in order to make world recovery possible is about as important as winning a war. For our participation is not being considered merely because of our wish to help, but chiefly because world recovery means continued prosperity here rather than possible deep depression.

By now we should have learned that we do not live alone and that our economy does not operate in a vacuum. While the volume of our exports is only a small percentage, not over 10 percent, of our total production, yet a much larger percentage of production in some industries enters export channels.

Some of these industries would lose a large part of their sales if our foreign business is cut off and would be forced to lay off large numbers of employees with a resulting serious effect on all employment. Large scale unemployment in this country could not be prevented if world trade breaks down.

Yet this is precisely what Communists are playing for, because out of this paralysis of production would come their opportunity for advancing their interests everywhere. For communism is a product of economic misery.

This is the reason the Russians could agree to no plan at Paris which the western nations could accept. They could only accept a plan which would give them something they want as long as it does not make for recovery elsewhere. Their policy of all take and no give is basic and there is no present reason to expect a change.

Therefore it is apparent that our first need is to win the recovery the Soviet leaders don't want us to have. Recovery means world peace and the recession of communism, for with a return of normal living Europe disarmament will become much less of a problem than it is today. Communism is a world specter only in a world that has lost its way.

And so it is not a question of whether we can stand the cost, but of whether recovery can be attained by any means. Even if we do not know that we can secure recovery by costly methods, we still can hardly hold back from the experiment.

Ever since the end of the war we have been fumbling around trying to find our way out of the maze in which our lack of vision has led us, and yet many still do not want to make an all-out effort to escape.

This is not a choice between war and peace or between freedom and totalitarianism, because no one knows that we have a choice. However, it probably is the only way left by which the world can try to win back the normal processes of living.

It is a decision we have to make, and all the talk about estimating cost is strictly beside the point. We can pay any price for peace and freedom.

Antilynching Bill

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. CASE of New Jersey. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith the following report of the Gallup poll on the antilynching bill which was published in the July 2, 1947, issue of the Washington Post:

THE GALLUP POLL—ANTILYNCHING LAW FAVORED BY MAJORITY IN SOUTH, NATION

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N. J., July 1.—In the wake of the Greenville, S. C., lynching trial, public sentiment throughout the country endorses the idea of a Federal antilynching law, judging by the results of an institute poll.

A majority of the voters polled in the 13 Southern States say they would approve having the Federal Government step in and take action if local authorities fail to deal justly with a lynching.

To measure the general public attitude toward the principle of Federal action, the institute questioned a true cross section of voters in all the 48 States on the following:

At present, State governments deal with most crimes committed in their own State. In the case of a lynching, do you think the United States Government should have the right to step in and deal with the crime if the State government doesn't deal with it justly?

The vote:

	Percent
Yes	69
No	20
No opinion	11

Voters polled in the South showed a smaller vote in favor, as follows:

Southern voters

	Percent
Yes	56
No	35
No opinion	9

The majority of voters feel that a Federal antilynch statute would serve to discourage lynchings and thus reduce their number. This belief is shown in response to a second question:

Do you think this would reduce the number of lynchings in the United States or would it make little difference?

	Percent
Would reduce	60
Little difference	24
No opinion	16

In the South, however, opinion is more closely divided about the effectiveness of a Federal law in reducing lynching.

Southern voters

	Percent
Would reduce	48
Little difference	37
No opinion	15

In a companion poll, the institute sounded the reactions of all sections, including the South, to the recent Greenville lynch case, in which a group of 31 defendants accused of lynching a Negro were acquitted.

It was found that three out of every four voters had heard or read of the Greenville affair. When asked their opinion of the outcome of the case, voters in South and in the rest of the country expressed disapproval of the acquittal verdict.

	All voters	South only
	Percent	Percent
Disapprove of verdict	70	62
Indifferent	3	2
Approve of verdict	12	21
No opinion	15	15

Robot Machine Forecasts Possibilities of Weather

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Christian Science Monitor of July 1, 1947:

ROBOT MACHINE FORECASTS POSSIBILITIES OF WEATHER

WASHINGTON.—A robot is a leading character in a new Weather Bureau service. It gives businessmen a map showing the possibilities on the weather.

The new service is called applied climatology. It was developed during the war, when generals demanded knowledge of weather conditions far in advance.

It has been discovered that weather conditions follow a pattern. This pattern may be found if weather statistics for a number of years are studied carefully.

It also has been found this pattern may be projected far into the future—not in the form of a positive forecast, but in terms of the mathematical possibilities that certain weather conditions will prevail.

A circus may plan to visit Illinois. It has a choice of two towns for the first week of September. A study of the weather pattern shows the chances are 50–50 it will rain in Quincy, Ill., say the first week in September. In Decatur the chances are 90 to 10 it won't.

The odds are based on statistics gathered throughout the Northern Hemisphere since 1899. Some regional statistics are more than 100 years old.

DATA ASSEMBLED

To obtain the weather pattern for any locality, a team of meteorologists assembles the data concerning that locality on punched cards.

The cards may contain such information as extremes of temperature, ranges of humidity, winds, solar energy, dust content of the air, rainfall, depth of snow, or combinations of wind, ice, and snow.

Statistics for one locality, gathered for 60 years, might fill a freight car, but the weathermen punch only those that relate to the particular problem they are trying to solve.

When the punched cards are completed, the robot takes the spotlight. He is similar to many of the business machines used in offices. The punched cards are fed to him. He digests the statistics, adds, subtracts, divides, and multiplies. Then he turns out his map.

It may contain the names of 50 or more towns in a certain region. Beside each town the robot has printed a numeral. The number beside one city may be "50." This means the chances are 50 to 1 the weather will be suitable for the business project that is being studied.

VITAL NEED

The method in some instances has been found 90 percent accurate. Its possibilities for farmers, businessmen, and industrialists seem virtually unlimited.

More than 1,000,000,000 items of information are available from the weather records of the Northern Hemisphere.

Weathermen long ago recognized their value in estimating future-weather patterns, but it was an almost impossible task to use them on a wide scale when pen and pencil or adding machine methods alone were available. A complicated problem might have taken months when weeks counted.

Now it will be possible to carry on studies on a wholesale basis. The service is being developed slowly, however, and it will be a long time before it can be widely expanded.

The chief of this new section, Dr. Woodrow C. Jacobs, was the chief civilian meteorologist for the Army weather service during the war.

Military leaders who wanted to save men in beach landings and win air battles demanded to know far in advance what the weather risks would be.

The Allied High Command wanted to know, as early as 1942, where and when the best weather conditions would prevail for an invasion of the Continent.

EISENHOWER HELPED

Dr. Jacobs says the climatologists, armed with European weather records, were able to tell Gen. Dwight D. Eisenhower the odds were 24 to 1 against "ideal" conditions for a Normandy landing in May 13 to 1 in June, and 50 to 1 in July.

By the time the Allied armies were ready for the invasion in 1944, the generals had had their weather information for months. They waited until the last day in the "favorable-weather" period designated by the climatologists, June 6. Dr. Jacobs says the weather behaved in just the way the weathermen had predicted.

This freshly developed skill also greatly increased airmen's chances of good weather over targets. The weathermen were quick to realize it also could help businessmen and farmers in peacetime.

Dr. Jacobs emphasizes that this new climatological service has nothing to do with another department the Weather Bureau has set up. The job of this other department is long-range forecasting. It forecasts the weather days in advance.

The climatological service doesn't pretend to be able to say, weeks ahead, that it will or will not rain on a given day. It simply states the chances.

Only one of the machines now is at work, at New Orleans, La. Eventually it is planned to have at least seven major climatological centers, with climatologists assigned to all large cities. It may take 10 years to expand to that size.

Because this service isn't of benefit to the whole public, the businessmen or the group of farmers or industrialists who want it have to pay the cost.

Address Before Marine Corps League

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the Marine Corps League, Gardner, Mass., on July 6, 1947:

It is not only a great honor but a high privilege and a genuine pleasure for me to be with you this evening as your remarkable convention draws to a close. I was also honored to participate in the parade on the Fourth of July and wish to state here publicly that it was most impressive and most fitting, coming as it did on one of our great national holidays. Let me congratulate all your officers and members upon a most successful convention in this beautiful, progressive community. Let me also congratulate the many citizens of Gardner, its public officials and its patriotic and civic organizations as well as all the people of the city itself who helped to make your historic annual gathering so agreeable, so pleasurable, and so constructive.

I yield to no one in the high regard that I have for members of the Marine Corps and the Marine Corps League but frankly I think that this high regard is shared by all the American people. And why not? Since its inception early in the history of our country the Marine Corps has been one of the great and powerful arms of our fighting forces. Its history is replete and rich with deeds of gallantry and heroism. In my humble opinion there is no aggregation of fighting men in the entire world which has made a better record, which has served and sacrificed more nobly, which has made more substantial contributions to the cause of American liberty and human freedom than the Marine Corps.

I will not recount here the glorious story of the exploits of the Marines, their unsurpassed loyalty and devotion, their supreme efforts and accomplishments, in behalf of democracy because these matters have been amply discussed and elaborated during the course of this convention by many able speakers. But I do wish to emphasize, as strongly as I can emphasize, the superlative record of achievement in war and peace of the fighting men of the Marines. As a Nation we would be derelict in our duty not to express the profound gratitude which every true American feels for the untiring energy, militant loyalty, superb gallantry and the bitter sacrifices crowned by innumerable glorious victories which the Marine Corps throughout the years has unselfishly rendered to perpetuation of American institutions and the destiny of free men and women.

I have noted with satisfaction the fine purposes of this great organization. They are American purposes. They are purposes of freemen. They are designed to serve the welfare and interests of the country in time of peace just as unselfishly and gloriously as the Marines have served the country in time of war. To preserve the traditions and to promote the interests of the United States Marine Corps is a lofty aim and I know

you will never be swerved from it by the blandishments of supermilitarists who have been covertly planning either the absorption or the severe limitation of this gallant corps. It may well be that in this atomic world of streamlining and modernized military equipment and weapons of terrifying strength and power that it will be necessary for us to revise and readapt the organization and composition of our armed services. We may well have to unify and integrate and bring into closer coordination the activities of various branches of the armed forces though I am proud to say that the American team we put on the field during the recent great war composed of the Marines, the Army, the Navy, the Coast Guard, and all other components, the team that conquered the enemy in Africa, Italy, France, Germany, and the far reaches of the Pacific from Guadalcanal to Okinawa and beyond gave a very good account of itself. Every branch of the service must be credited for conspicuous valor and accomplishment. If modern war demands additional streamlining, additional consolidation, additional coordination of combat units on land, sea, and air, let us make sure in the first place that no such plan of unification, no such plan of merger of the armed services, shall be permitted to liquidate or limit the Marine Corps. That is a very real and worthy service we can render to the dauntless men and women of the corps to whom the Nation owes so much for its present security and peace.

Your service in war has been glorious and magnificent. But there are other tasks just as urgent and compelling remaining before you. As an organization, it is not only appropriate but meritorious that you should band together with those who served with you to promote the ideals of American freedom and democracy, to build more responsive citizenship, to preserve the sacred history and memory of those of your fellows who have given their lives to the Nation, to foster love for the principles and objectives they fought for, to uphold the American institutions which they died for and to perpetuate the luster of the name United States Marines. I am sure you are also conscious of the equally vital obligations which we all owe to your gallant comrades who fell or were wounded in battle and to their families and dependents. Keeping their sacred memories alive, let us not fail to do our part in enforcing the Government's debt to all our veterans, to provide proper hospital and medical care, proper compensation, housing, education, and broad decent opportunities to get ahead in their chosen professions and lines of endeavor. That is a most important duty which devolves upon all of us and which must be performed in the name of justice and peace as well as to insure effective civilian leadership for the future.

Secondly, inspired by the great marine motto, "Semper Fidelis," let us be ever vigilant in the protection of American institutions. Let us remember that free democratic government and free unfettered American initiative combining together have forged this mighty Nation of democratic-minded peoples. Many years of struggle and bitter sacrifice by countless American generations were required before we were able to achieve the fruits of democracy and free enterprise. Let us vow that we will not stand idly by and watch any group or groups, acting in defiance of the most precious American ideals, move to attack, undermine and destroy the patterns of freedom and the traditional methods of democracy which Americans cherish. We have overwhelmed and defeated the tyrants of wartime. Now we must overwhelm and defeat the tyrants of peacetime—who are working feverishly to accomplish destruction of our free government and establish communism or some other equally undesirable form of totalitarian rule. I know that this organization will never cease to challege the subversive elements which are presently threatening the very existence of free government here and in many other lands.

There is one more subject I would like to bring to your attention and that is the question of world peace, as it relates to our present position as a nation and the very disturbing conditions that currently exist throughout the world. It is not pleasant for Americans to see all our war aims of peace, democracy, self-determination, freedom, and world security being flouted and subverted by a certain world power and her associated puppet governments. In fact, it is a source of great disillusionment, not only to our own people but to peace-loving peoples everywhere.

The time has come for us to make it very clear to every great nation and every great power that we do not propose to see our peace and security threatened, that we do not propose to see communism spread over the whole world and aim its poisonous venom at our own country. As you well know, war is a horror that should be banished from the earth. It has no place in civilized life or in a civilized world where men of reason and judgment should settle their problems around the conference table rather than by resort to armed force. No thinking citizen and certainly no thoughtful representative of the people would ever consciously advocate or support policies that would lead the Nation into another war. Let us seek peace as zealously as we sought victory in the war, however discouraged by current happenings in Europe and the Orient. Let us strive with every ounce of our energy to bring about a peaceful world. There are many weapons short of force available to us. This great powerful Republic with its great resources and unmatched production and vital economic strength has means, I am convinced, if we would but employ them intelligently and forcefully, to exert not only moral suasion but the full power of that economic strength against those who threaten the peace by constant agitation for communism and armed aggression. Let us mobilize the decent-thinking peace and freedom-loving peoples of the world on our side without being deterred by veto powers or diplomatic stalling. Let us take a firm decisive stand now and throw our influence on the side of peace, law and order, and justice, and democracy as against every evil force which threatens the perpetuity of the sacred ideals in whose name and for whose perpetuation you boys fought and so many of your comrades died.

I deplore the existence of huge military establishments for many reasons. But unfortunately if they are necessary in this disordered world until some semblance of order comes out of the chaos of the present, we must maintain them and they must be strong, well-organized, and all-embracing. Until conditions change we must maintain the national defense in all branches and departments, including by all means, our immortal Marine Corps, so that we may be fully prepared not only to defend ourselves, but to fulfill our international commitments and our destiny as a great democracy. Until conditions change, let us be sure that at all times we have unquestionably strong, powerful armed forces ready to spring into action at a moment's notice—striking forces capable of guarding our Nation and commanding the respect of all our potential enemies whoever or whatever they may be.

I have no doubt whatever that this great organization, inspired by the sacrifices of the past as well as the hopes of the future, will continue as a sustaining force of the integrity of our Nation in peace as in war and will protect, defend, and preserve the American institutions under which its members lived, fought, and died so gloriously for God and country.

Making Air Travel Safer

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. GATHINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Josephine Ripley from the Christian Science Monitor of July 2, 1947:

MAKING AIR TRAVEL SAFER

(By Josephine Ripley)

WASHINGTON.—The urgent need for prompt development and installation of air-safety aids to keep pace with the rapid growth of air travel is clearly indicated in the early reports of investigators into the recent series of disastrous plane crashes.

New take-off regulations for the big four-motored ships have been recommended by President Truman's emergency Air Safety Board.

If the proposed regulations had been in effect before the United Airlines plane crashed and burned at La Guardia Field, no take-off attempt would have been made and the accident avoided, according to authorities. Findings of the Board indicated that the big plane was not only overloaded but attempting to take off from a comparatively short runway.

As a result, the President's Board has recommended that loads be reduced, either by taking on less gasoline or fewer passengers, and that four-motored planes hereafter be restricted to 4,000-foot runways.

In the crash of the Capital Airlines C–54 on the last hump of the Blue Ridge, findings of investigators indicate that the pilot had apparently underestimated headwinds which had slowed him down and believed himself to be over the Potomac Valley when he was still over the mountains.

Aeronautics officials recently flew over the same course in a plane equipped with the new Hughes air-line radar warning device to see if that type of equipment would furnish the answer to the hazards of blind flying over mountainous territory.

These officials expressed themselves "intensely interested" in the device, but apparently were not quite ready to accept it without further investigation as the complete solution to the problem.

Another test at Wright Field recently had a direct bearing on the problems of maintaining sufficient altitude over high obstacles.

It showed that 100 experienced fliers required 7 seconds to read a regulation altimeter and that the pilots tested made errors in 15 percent of the readings, some as much as 1,000 feet.

This test was cited as an indication of the need for a revision and simplification of air instruments.

It has been estimated that about one-half of all plane crashes are due to personal error, mainly by pilots. This fact has resulted in considerable pressure for an improvement in personnel training.

One of the reasons why such training has been delayed in some cases is the tremendous upsurge in air travel during recent months. More and more planes have been pressed into service. During the first 5 months of the year, the average number of airplanes employed monthly on the lines rose from 463 to 666.

The development and installation of air-safety aids meanwhile has not been able to keep pace with the tremendous increase in equipment.

There was little for the investigators to go on in the crash of the Eastern Airliner in Maryland, but the finding of a defective bolt from the tail assembly of the plane led to a preliminary verdict of structural failure due to improper maintenance.

The success with which Army Air Forces in the Azores threw its ground control approach radar equipment into action recently and safely brought in 12 storm-tossed planes illustrates one type of aid which can cut down some of these bad weather hazards.

This equipment picks up approaching aircraft on a radar screen and plots its approach as operators in the control tower talk back and forth with the pilot and guide him into a landing.

The Civil Aeronautics Authority has favored the VHF (very high frequency) radio beam and the instrument landing system over the Army method, and there seems to be a dispute among aeronautics authorities as to which is the more efficient.

This undoubtedly is one of the problems which needs to be ironed out in the necessary revamping and development of air-safety codes, practices, and equipment.

Much will depend, also, upon the generosity of Congress in making funds available for these improvements, the economy drive already having cut air-safety funds rather drastically.

Meanwhile, however, all of the various investigations are bringing the obvious needs into focus and paving the way for proper action.

Free Speech for Government Servants

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. KEFAUVER. Mr. Speaker, I think the time has come when more Members of Congress should come to the defense of the right of free speech. It seems ludicrous that so basic an American right should have to be defended. But let us consider the matter a moment. The action of some members of congressional committees indicates that they do not want Government employees to have original or independent thoughts; that they do not want any employee to express an opinion at variance with their ideas.

In the Appropriations Committee considering the legislative appropriation bill aspersions were cast on the character and loyalty of several trusted employees of one of the most valuable services available to Members of the House, the Legislative Reference Service. I do not know in detail about the charges hurled at all of the persons involved but from the analysis made by Jerry Kluttz in the Washington Post of July 6 they were all without foundation. But none of the charges could have been more thoughtless or unjustified than the attack on Dr. Jack Levin, a Government researcher with a long and honorable public service record. Dr. Levin's value to the Legislative Reference Service is presumed to have been compromised because he was associated with me in the study I made on the reorganization of Congress. There are many men in both the House and in the Senate who believe in some or all of the proposals advanced in my book entitled "Twentieth Century Congress."

It is true, as I so notified Dr. Ernest Griffith, head of the Legislative Reference Service, and also Mr. JOHNSON, the chairman of the subcommittee, that Dr. Levin did not participate in the policy statements that went into this volume. They were my own. Furthermore, the research work he did for me in connection with this book was all done before he was employed by the Library of Congress. He was not connected with the Federal Government in any way during the time he helped me with this study. But even if he had participated in the policy statements in the volume I see no reason why that should impair his work in the Legislative Reference Service. To the contrary, when any of us seek data from Dr. Griffith's unit concerning the functions of Congress I think we should be happy that there are employees there who have an interest in this vital issue and who have read widely in that field and know where to lay their hands on the material Congressmen may request.

The same type of innuendo—that something is wrong because an able citizen and a capable public servant does not think our present organization on Capitol Hill is perfect—was hurled at another brilliant student of Government, Dr. George Galloway. Dr. Galloway was also extremely helpful to me in the preparation of Twentieth Century Congress. He is a deep student and authority on congressional procedures and organization.

If we continue pursuing our present course, an editor or newspaperman who has ever criticized Congress, even though his criticism was justified, will be ineligible for Government service. If our Government service is not to be reduced to a mass of unthinking, spineless robots, let us have an end to these senseless inquisitions that besmirch the names of honest citizens. It should be noted also that these capable Government workers have no redress when charges are made against them in congressional committees. It is true that we are in an ideological conflict with communism but we cannot afford to work ourselves into a hysteria over the Communist menace. The impact of the police states such as the Soviet Union on our democracy must be met with intelligence and firmness but not by the adoption of the same kind of police methods used to keep 170,000,000 peoples of the U. S. S. R. in complete mental and physical subjection.

In our Government service, and this is especially true in the Legislative Reference Service, we need substantial citizens and real scholars. The type of inquisition that has been carried on by some members of a few congressional committees is driving good men away from Government service and is making it unacceptable to many whom we need during these difficult days. My experience has been that Dr. Evans and Dr. Griffith have secured capable scholars in the Library of Congress who are rendering splendid assistance to Members of Congress. Their exercise of freedom of speech and individual thinking should be encouraged and not made the basis for grueling inquisitions.

Export of Steel for Ship Construction

EXTENSION OF REMARKS
OF
HON. CHRISTIAN A. HERTER
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. HERTER. Mr. Speaker, in the year 1946 the United States exported to the principal shipbuilding countries of Europe nearly 800,000 tons of iron and steel mill products suitable for use in ship construction. At the same time these same countries of Europe were carrying on the construction of 122 ships which in tonnage and speed compared very closely with similar vessels now in long supply in the Maritime Commission-owned fleet. In other words, during this time of great steel scarcity, coal scarcity, and labor scarcity in Europe we have exported steel from the United States to construct ships of a type of which we have a surplus. It seems to me that one of the problems, perhaps not a major problem but nonetheless an important problem on which the nations of Europe should focus their attention immediately, is whether or not this use of steel does not constitute a terrible economic waste which could well be avoided. It is a problem which should command the attention immediately not only of our Government but of each European government concerned.

In connection with the above, under leave to extend my remarks, I insert in the RECORD at this point a letter from the Chairman of the Maritime Commission addressed to me on this subject, together with two tables which were attached to his letter:

UNITED STATES MARITIME COMMISSION,
Washington, July 1, 1947.

Hon. CHRISTIAN A. HERTER,
House of Representatives.

MY DEAR CONGRESSMAN HERTER: In response to your telephone request for information regarding shipbuilding abroad and United States steel exports, there are transmitted herewith two tabulations: one showing construction abroad as of March 31, 1947, of vessels comparable on the basis of gross tons, deadweight tons, and speed with those vessels in long supply in the Maritime Commission owned fleet together with approximate amounts of invoice steel going into the construction of these latter vessels; the other showing United States exports of iron and steel mill products which might be used in ship construction exported in the calendar year 1946 to important shipbuilding nations in Europe.

The Technical Department of this Commission which provided the information on the amount of invoice steel going into the construction of Maritime Commission design type ships advised that their figures were based upon practices which obtained during the World War II but that it was believed under normal competitive conditions steel requirements for various types of vessels in the United States would be somewhat less because the scrap would be less. Moreover, the Technical Department pointed out that since the degree to which welding is used varies considerably between this country and some European countries the weight of steel going into vessels built in countries not using welding to any great extent would be increased about 15 to 17 percent.

Sincerely yours,

W. W. SMITH, *Chairman.*

United States exports of selected iron and steel mill products suitable for use in ship construction to important shipbuilding nations in Europe, calendar year 1946

[Tons of 2,240 pounds]

Far East's Brightest Hope Arises in Philippine Republic

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith an article by Mr. Ralph Donaldson, of the Cleveland Plain Dealer:

FAR EAST'S BRIGHTEST HOPE ARISES IN PHILIPPINE REPUBLIC

The new Republic of the Philippines, which came into being last July 4, is a shining star of hope and inspiration in the Far Eastern firmament. It is the one place on the western frontier of democracy where a representative government, elected by the people and dedicated to individual liberty and the maintenance of free enterprise, is operating under its own power.

The United States can take a bow if this venture proves to be successful over a period of time for we have been tutoring the Filipinos and helping them to prepare for independence for more than 40 years, and their government and philosophy are patterned after ours.

If the Filipinos are successful in governing themselves and in achieving a comfortable standard of living, they will provide an example and an inspiration to their neighbors in the Far East, and the Philippines will become a solid barrier against the spread of communism.

But if the venture should fail, the cause of democracy and free enterprise would suffer a mortal blow in that part of the world and American prestige would decline. Consequently, we still have a vital stake in the outcome of the venture as well as a moral obligation to help the infant republic.

NEED FOR AID RECOGNIZED

The Filipinos are aware that they will need considerable help from the United States in the next few years, but it is pleasant to report that the Philippine Government is proceeding vigorously with plans which will enable it to stand on its own feet at the earliest possible moment.

This is largely due to the outstanding ability and vision of President Manuel Roxas. The impression he made on our group of visiting editors and publishers was one of complete sincerity, a thorough knowledge of the problems facing him and a willingness to discuss them with engaging frankness.

The Philippine Republic has its share of economic problems, political turmoil and social maladjustments, as what nation has not, but Roxas has charted a course for the future which, he is confident, will result in prosperity and security.

PROGRAM SEEKS PROGRESS

Among his objectives are an expansion of Philippine industry and agriculture, the development of natural resources, the establishment of the Philippines as a center of trade in the Far East, a continuation of friendly cooperation with the United States and a balanced budget by 1951.

On the latter subject, Roxas delivered a special message to the Philippine Congress on February 11, which is worth quoting, in part, because it contains language which has not been heard in the American Congress for many a year.

"I have set a goal of a balanced budget for 1951," he said. "When I say 'balanced budget,' I mean exactly that. I mean that by 1951 we must be able to pay all costs of government, ordinary, extraordinary and special, with our current revenues. We must be able to service the public debt and to make the necessary payments on loans which we have contracted and will contract."

BALANCED BUDGET SOUGHT

"This is one necessity which we must frankly meet without evasion. We must get our financial house in order and operate the government on a pay-as-you-go basis. Thus even in the years immediately ahead of us when we face an inevitable deficit, I must insist that we restrain our expenditures to the sum total of our revenues, plus loans which we can logically expect to contract and which, in all good conscience, we can expect to repay," Roxas continued.

"The fact that we shall be functioning in part on borrowed money must constitute a constant spur to reduce expenditures, to eliminate those which are not absolutely vital and to make every conceivable effort to increase our revenues. We should not expect to live in luxury on borrowed money. The wise man considers borrowed money as money which is untouchable except for the essential purposes of existence.

"Every centavo spent must answer the questions: Will this expenditure increase our ability to obtain greater revenues in the future? Will this expenditure improve the vital conditions essential to the expansion of our economic facilities? Will this expenditure aid directly in the rehabilitation of the vital instruments of national endeavor?"

FRILLS OUT OF QUESTION

"We dare not make provisions for extravagant conveniences or comforts. We dare not provide services that would be helpful but are not essential. We dare not even increase Government salaries and wages even though such increase might be justified.

"We must seek to obtain in Government revenue every possible peso without interfering with the productive expansion of the nation. We must encourage new capital to enter the Philippines. We must give every stimulus to local capital to invest in productive enterprise. We must discourage the dissipation of capital in luxurious living. We must do all these within the framework of our system of free enterprise founded on freedom and democracy."

Roxas has been largely instrumental in discouraging the growth of an anti-American sentiment which developed in the early days of independence, partly from exuberance over that event and partly as a result of unavoidable friction between American soldiers and Filipinos in crowded Manila.

ARMY CHIEF COOPERATES

In this he has had the cooperation and wise counsel of Maj. Gen. George F. Moore, who commanded the garrison on Corregidor at the time of its fall and who has since returned to the islands as commanding general of the Philippine-Ruyukus command.

Under an agreement recently concluded, the United States is to have 15 permanent land, naval, and air bases in the Philippines, but these are to be located outside the large cities, in order to minimize friction between members of the American forces and the Filipinos. These bases are to enable us to carry out our responsibility for the defense of the Philippines and also to support our other outposts in the Pacific.

COMMERCIAL INTERESTS CLASH

However, there are bound to be clashes of interest between the Philippine Republic and the United States. Here is one example. The Philippines could produce and sell in the United States large quantities of coconut oil, which is badly needed for the manufacture of soap. But dairy interests in the United States will not agree to the importation of coconut oil for fear it would compete with American dairy products.

President Roxas sought to obtain a clause in the American-Filipino trade agreement to permit the export to the United States of denatured coconut oil, which is not fit for human or animal consumption, but which could be used to make soap. But Congressmen from the dairy States "wouldn't even listen to me," Roxas said.

However, the trade agreement permits the unlimited importation of copra, from which coconut oil is made. But copra takes up more shipping space and the cost of processing it in the United States is greater than in the Philippines. Consequently, it is probable that American soap manufacturers will expand their business in the Philippines, instead of enlarging their American plants.

The Italian Debt to the United States

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. RANKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I made in the House on January 15, 1926:

Mr. COLLIER. Mr. Chairman, I yield 8 minutes to the gentleman from Mississippi [Mr. RANKIN]. [Applause.]

Mr. RANKIN. Mr. Chairman, it was rather amusing to hear the gentleman from Connecticut [Mr. Tilson], the Republican leader, in his speech a few moments ago, refer to this Italian debt settlement proposition as a nonpartisan question, and in the same breath mildly admonish the membership on the Republican side of the House to stay on the reservation. A nonpartisan measure seems to be a strong Republican proposition that is put through by a combination of reactionary Republicans and misguided Democrats. [Laughter.] It reminds me of the Negro preacher who explained to his congregation that, while the Bible did say that the lamb and the lion lay down together, it never gave any account of the lamb ever getting up. [Laughter.]

We are asked here to support this "nonpartisan" measure which will amount to a cancellation of more than $2,000,000,000 of the Italian debt to the United States. Some of you may deny that it amounts to an absolute cancellation; but I want to call your attention to the fact that it extends the payment of the part not canceled for a period of 62 years, and that in all the history of civilized governments no international debt has ever been paid that was extended beyond the life of one generation. No man in this House can deny that statement, or point to a single instance in history in which a debt owed by one nation to another, and extended beyond the life of one generation, has ever been paid. You are simply canceling the entire debt. You are giving to Italy more than $2,000,000,000 which they owe us, and for which we have outstanding bonds which the American people must pay.

But even the advocates of this measure, putting it in the most favorable light, admit that the passage of this bill means the cancellation, in effect, of more than $1,500,000,000. Or, as has been said by the gentleman from Tennessee [Mr. Hull] in his able argument on yesterday it means the cancellation or giving back to Italy an amount equal to about $7,000,000 to every congressional district in the United States. When you vote for this measure you are passing back to your people a bond issue amounting to $7,000,000 to each congressional district, or more than $40,000,000 to the average State, to be paid by your people, their children, and

their children's children throughout the years to come.

Some men in the course of this debate have asked what would have happened to the United States had it not been for Italy during the World War. I ask you what would have happened to Italy if it had not been for the United States? [Applause.]

They told us that we were fighting the war to make the world safe for democracy. That was the international slogan. It was an inspiring phrase that originated with the President of the United States and echoed throughout the world, even down to the front-line trenches. It even went beyond our lines and found a responsive sentiment among the soldiers of the enemy that finally burst forth in the German revolution that hastened the close of the war. But today, instead of the world being safe for democracy, Italy is in the grip of the Fascisti and is absolutely ruled and controlled by Mussolini, one of the most consummate dictators of modern times. He even sneers at democracy. He is quoted in an Italian paper as saying:

"We must never give the enemy a moment's rest; we must smash and tear down all the dizzy nonsense of our opponents * * *. We have shown the impotence of the old parties, and they have no right or reason to exist any longer. * * * We must forever give battle to democracy."

In an editorial in the New York Evening World on January 8, 1926, we find this striking statement contrasting the American attitude with that of Mussolini:

"We stand for free speech, and Mussolini does not; for a free press, and Mussolini does not; for constitutional government, and he does not; for representative government, and he does not; for the subordination of the military to the civil authority in times of peace, and he does not. We are a democracy, and he has established a tyrannical autocracy."

He has attempted to destroy every institution that he could not control, and has especially directed his vengeance at organized labor and the Masonic fraternity. If we were in Italy under the Mussolini regime, more than 300 Members of this House and about 60 Members of the Senate would not only be debarred from holding office, but you would not even be permitted to vote, merely because you happen to be members of the Masonic fraternity.

The Brooklyn Daily Eagle of January 4, 1926, speaking of the protest of American Masons against the outrages of Mussolini, says:

"So far as we know, this is something without precedent in the annals of Masonry or the annals of diplomacy. Members of the order have been beaten, have been murdered under Mussolini. Lodge rooms have been raided and wrecked by Fascist mobs. Masons have been disfranchised by the dictatorship, which, of course, means giving a free hand to the mobsters."

One instance is given in which 18 Masons were killed by the Fascisti mob at one time. I wonder if it ever occurred to those Members who have been appealing for the passage of this measure, and emphasizing Italy's sacrifices in the war, I wonder if it ever occurred to them that those very men who fought so valiantly in that conflict are being outlawed and murdered and their sacred institutions destroyed by the bayonets of the Fascisti mobs.

But Members tell us that we should not consider the question of humanity in this transaction. They say we have nothing to do with their internal affairs. But the American people have never hesitated to protest in behalf of persecuted humanity. It seems to me that when we appeal to other nations to put a stop to the commission of outrages against any people or any class, we manifest a higher degree of magnanimity than we do when we confine our policies within the circumference of a silver dollar. [Applause.]

What is the object of this measure? It is to enable Mussolini to borrow money in New York with which to perpetuate his regime. We are doing this to strengthen the hands of Mussolini after all our struggles to make the world safe for democracy.

The Fascisti, you understand, consists of only a small band of Italians of which Mussolini is the head. It is a closed corporation. They do not want any more members, and they will not admit any more. So those who are on the outside of this select ring must suffer whatever indignities the Fascisti desires to impose.

But Members tell us that we should not refer to these things in connection with the passage of this measure. That we have no right to discuss the internal affairs of other nations. But, Mr. Chairman, this is not a settlement with the Italian people. The chances are that it will not redound to their benefit. Instead of thus helping Mussolini at the expense of the American taxpayers to continue his dictatorship and carry out his boasted plans to restore the glory of ancient Rome, I believe we should follow the policy advocated by the gentleman from Tennessee [Mr. Hull] to grant a moratorium for a limited number of years until the people of Italy can restore their Government and their country to their former conditions of peace and confidence, in order that whatever settlement we may make with the Italian people may not be rushed through by some financial power at home or abroad, but that it may be based upon a common desire to promote the best interest of both nations and to contribute to the progress and happiness of mankind. [Applause.]

The CHAIRMAN. The time of the gentleman from Mississippi has expired.

Housing

EXTENSION OF REMARKS
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. FORAND. Mr. Speaker, the need for additional housing is being felt throughout the Nation. There is pending before this Congress the Taft-Ellender-Wagner bill, enactment of which would be a long step forward to relieving the situation.

I offer as a part of my remarks the following telegram addressed to the chairman of the House Committee on Banking and Currency by Miss Elizabeth M. Smith, acting administrator of the department of social welfare of my home State of Rhode Island, which sets forth two examples which prove the need for additional housing:

PROVIDENCE, R. I., *June 24, 1947.*

Representative JESSE WOLCOTT,
Chairman, House Committee on Banking and Currency,
House Office Building,
Washington, D. C.

Consideration of Taft-Ellender-Wagner housing bill essential. Failure to provide sufficient dwellings causes deplorable conditions in our State. Examples: Families living in unventilated cellars, 4 families of 17 persons living in 4 rooms, disturbed veterans completely without privacy and a single room to call their own.

ELIZABETH M. SMITH,
Acting Administrator.

The Future of the Navajo

EXTENSION OF REMARKS
OF
HON. RICHARD F. HARLESS
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. HARLESS of Arizona. Mr. Speaker, under leave to extend my remarks in the RECORD, I include two articles of Mr. Jerry McLain which appeared in the Arizona Republic, June 12 and 13, 1947:

[From the Arizona Republic of June 12, 1947]

ORAIBI, June 12.—The economic future for the Hopi, who live on a reservation within a reservation, appears as dismal today as that of the Navajo surrounding them, says 34-year-old Karl Johnson, postmaster and village governor of New Oraibi.

A lessening demand for the products of their weavers, Government-ordered stock reductions, and drought which haunts their farms in the barren western section of the big Navajo reservation are combining to play havoc with the Hopi livelihood.

Like many Navajo leaders, Johnson blames the Government's failure to educate the Hopi young for some of his peoples' present difficulties. But he also claims that encroachment of the Navajo on Hopi lands, "without challenge from the Interior Department," has handicapped the tribe.

The Hopi by Executive order in 1882, he says, were given approximately 2,500,000 acres as a grant. But in recent years, Johnson declares, that area has been cut until about one-quarter of the original acreage is being used exclusively by the Hopi today.

"Economically," says Johnson, "we are at a standstill. Hopi farmers are trying to make a living on sandhills, with their future at the whim and caprice of the weather, for they must depend entirely on rain. Even if there is rain, a summer wind whipping up a sandstorm can damage their crops."

He told of visiting Washington last March to present facts on the Hopi plight to the House Public Lands Committee. Smiling, Johnson declared he invited "some of those armchair strategists who decide our future to come out and live awhile with us on these sand piles and rock piles."

He claims that when the Hopi were forced to reduce their stock to the carrying capacity of their small range, the Indian Service provided nothing to replace the income source lost to them.

Many families subsequently found it necessary to sell their diminishing stock in order to survive in lean prewar days.

Temporary relief came in wartime employment off the reservation and increased demand for their weaving.

But the situation is different now, with war jobs a thing of the past and off-reservation employment dwindling. And war workers and Hopi veterans are "coming back to nothing," he insists.

Fifty-five sheep units are the most any person can possess in the third mesa area, which encompasses the villages of Hotevilla and Oraibi. Since a horse or cow represents five sheep units, a family could own only nine head of cattle and two horses in lieu of sheep.

Many of the Hopi now are engaged in farming, but Johnson declares the Government has done little to increase crop production. He points out that the average Hopi family is large (Johnson has six children and also provides for his mother and two brothers-in-law) and the need today is great for agricultural education and training in land conservation and management.

He estimates Hopi schools can accommodate about 90 percent of the eligible children—a far higher percentage than on the Navajo reservation. But Johnson claims educational standards are low. Hopi young people, he avers, are willing and eager to learn if only they can be taught things useful to them.

The Hopi weaving art has suffered, he believes, with the younger generation taking less interest because of the dwindling market. He says also that old-timers, proficient as weavers, have found the new type wool from improved sheep herds more difficult to spin and cord, which he sees as another detriment to the growth and expansion of Hopi artistry with the looms.

Johnson, who was educated in mission schools in New Mexico and at Ganado, is village governor of New Oraibi, which is clustered at the foot of a mesa on which stands Old Oraibi, oldest of the Hopi villages and largest continuously inhabited community in North America.

[From the Arizona Republic of June 13, 1947]

KEAMS CANYON, June 13.—Increased instead of decreased Government assistance, or the end of severe drought conditions, are the only factors which can save the Navajo and the Hopi in the Keams Canyon area, say the McGee brothers, who as trading-post operators have done business with the red men for 18 years.

Under present circumstances they see no way in the world for 80 percent of the Indians in their vicinity to exist through farming and stock raising.

On the other side of the plateau, at Jeddito, some 6 miles to the east, Wilmer C. Roberts, a trader 29 years, views the plight of the Indians as serious because "they do not even have the modest existence that kept them going in prewar days."

Roberts believes the time is coming when the Federal Government will turn the care and supervision of Indians over to the States in which they reside. He would welcome that in Arizona, and believes the Navajo here would progress under State rule.

But he doesn't believe the Indians successfully can be taken off their reservation.

Concerned by the congressional proposal to slash Indian Bureau budget requests by about one-third, W. E. McGee, Keams Canyon, declares "If the Government continues to cut its services to the Navajo and Hopi, it soon will have a bunch of hungry Indians to feed, and that will cost just as much anyway. Seems to me the Government might better go ahead and help them now."

Best evidence to McGee that off-reservation jobs are rapidly diminishing is that several weeks ago two truckloads of Navajo men were sent to work on the Santa Fe railroad. About 60 percent soon were back home because they found no jobs.

McGee, who with his brothers, Cliff F. and Ellis D. McGee, operates the Keams Canyon store, says Indians now bring in a small saddle blanket for which they are paid $4, and they take as long to trade out that $4 as they used to require in spending $40 because they realize they must buy only necessities.

The McGees say the Indian always will survive because he can get by on little or nothing. Many wouldn't ask for help if they were hungry. But the traders believe unless jobs and new income are provided the reservation will see hard times and possibly trouble, with the Government being required to step in.

Any further decreases in schools they view as a blow to an educational program on which the Government has been working 30 years. Money spent on the reservation schools would be lost, and a successful effort to show the Indians the value of an education would have been in vain.

Instead of decreases, they contend educational facilities should be increased, pointing out that present buildings will accommodate only about one-third of those in this area who desire to attend. The Keams Canyon and Pinon schools turned down a number of pupils this past year.

Hospital facilities also are nowhere near large enough to take care of the area they must serve, say the McGees. Consequently, some Indians in need of hospitalization must be sent back to distant homes after being treated. Field doctors and nurses are needed to travel to isolated villages generally reached only by missionaries and traders.

Roberts, the veteran Jeddito trader, scoffs at the idea of the Navajo leaving their reservation.

"Take the Indians off the reservation? Impossible. Put them where? The white people don't want them. Their cities already are overcrowded. Even if such a plan was feasible, you couldn't induce the older people to leave. They're perfectly happy on this reservation as long as they can make a living with their primitive farming and grazing."

He sees two sides to the question of what has happened to the Navajo. He doesn't blame the Government for reducing the herds, which he says was necessary. Recalling when grass was high enough to be cut with a scythe, he declares not only overgrazing but the added factor of drought has depleted the ranges.

When war came the Navajo still was existing, though his herds of sheep or cattle were shrunken. Then he forgot the stock, selling or slaughtering it for meat, as the allotment checks began to arrive from the boys in uniform, and there were high-paying jobs in war industries which were crying for any kind of manpower.

"Now there is virtually nothing for the Indian to come back to," says Roberts. "Not even the modest existence of prewar days. The herds are run down, or gone. Drought still stalks the farmer, along with the grubworms and pack rats, and the wind which brings sand.

"Some of your white farmers should see how these Navajo and Hopi crop growers get down on hands and knees in the fields to battle worms and rodents in order to raise a little corn."

Roberts believes increased Government assistance will be a necessity, but insists it should not be a dole. He says many Navajo who held war jobs must be educated to the fact the "honeymoon is over." They were happy before the war to work for $1.25 per day on the reservation, he points out, but now prefer to loaf unless they can get salaries commensurate with high pay showered upon them in war days.

Education is a great need, but education of a type the Navajo can find useful in his own land rather than having to compete with white people in semiskilled or skilled trades. He says, too, that education shouldn't be forced on the Indians; they should be shown its value.

Roberts points out that the Navajo and Hopi are peaceful and law abiding. He says they have their little squabbles and fights, occasionally even a murder—"but turn loose 50,000 whites in this vast area with as little policing as we have, and see how many murders occur."

State rather than Federal control of the Navajo would be advantageous to the Indians, he believes, though he agrees it would create new problems, including the right of Indians to vote and to decide for themselves the prohibition question.

He believes if the question came up for vote today, the Indians would call for prohibition. And he says he fears for the tribe's survival if ever liquor is permitted on the reservation, declaring many a young Navajo employed outside the reservation squanders on liquor—always seemingly available while his funds last—the money with which he should be helping his family at home.

Chinese Feel United States Deserts Them, Does Not Understand

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith an article by Mr. Ralph Donaldson, of the Cleveland Plain Dealer:

CHINESE FEEL UNITED STATES DESERTS THEM, DOESN'T UNDERSTAND

A 2-day trip to China affords an opportunity only for a series of fleeting and kaleidoscopic impressions. For example—long before our party of touring publishers and editors reached the coast line of China on the 4-hour flight from Seoul, Korea, to Nanking, we had a glimpse of one of the basic causes of China's troubles, a cause which antedates the era of recorded history.

Our route was over the Yellow Sea, and it actually is yellow and muddy looking, even in the bright sunlight, in contrast with the deep blue and greenish hues of the Pacific Ocean and the Sea of Japan. That yellow pigment represents a large portion of the lost wealth of China—its eroded topsoil.

A quick drive through Nanking's muddy streets brought us to the American Embassy, where we had a talk with Ambassador J. Leighton Stuart followed by another drive to the residence of Generalissimo Chiang Kai-shek.

Members of our party were ushered into a comfortable living room. The leather chairs and divans were covered with tiger skins, while on the floor in front of the blazing fireplace there was a giant panda skin rug. We were instructed to take seats, but to leave two chairs in opposite corners of the room vacant.

CHIANG APPEARS MILD

In a few moments a military aide announced "Generalissimo and Mme. Chiang Kai-shek." We all stood. When the introductions were completed the generalissimo took one of the chairs that had been reserved and Mme. Chiang took the other.

Chiang does not look like a ferocious war lord, as he has sometimes been depicted. He seemed to be mild-mannered and unobtrusive, more like a poet or scholar, an appearance which was difficult to reconcile with a report in Nanking that day that he had just ordered the execution of two of his generals for not being on their toes in recent clashes with the Communists.

But what Chiang seemed to lack in personality was more than provided by Mme. Chiang, whose beauty, charm, and graciousness are known throughout the world.

The interview with Chiang, conducted through an interpreter who at times had the assistance of Mme. Chiang, was off the record. But, to tell the truth, the generalissimo said nothing that was startling or sensational. Practically everything he said has since been reported in Chinese newspapers, either officially or unofficially.

ALL ADMIRE MARSHALL

The Chinese have great admiration for Gen. George C. Marshall, who spent a year in a fruitless effort to mediate a peace agreement between the Nationalist Government and the Communists, but they feel they have been let down by the United States. They fear that Americans do not realize their predicament, that, after 8 years of war with Japan, VJ-day did not bring peace to China but, on the contrary, was the signal for the

renewal of civil war between the Nationalists and the Communists.

There is no doubt that the collapse of the peace negotiations was due to the Communists' refusal to accept the liberal concessions offered them by Chiang Kai-shek.

The Nationalist regime is not a democracy, under any American interpretation of the word. But it has been moving toward representative government. The Kuomintang is still the predominant political group, but other parties and groups have been given a voice in the government.

NEW CONSTITUTION READY

On December 25 a new Constitution will go into effect under which the people, including those outside the areas controlled by the Nationalist government, will be given an opportunity to elect representatives to the various governing bodies, or Yuans.

Observers believe Chiang Kai-shek is sincere in his desire to bring about unity in China and to establish a form of government which not only will meet the current needs of the Chinese people but which will last beyond his time and will not depend solely on his personality for its strength and survival.

Failure to attain this goal could lead only to chaos, which would give the Communists an opportunity to move in and take over.

An interview with Dr. T. V. Soong, then Prime Minister, and dinner at the residence of Wang Shih-Chieh, China's Foreign Minister, concluded our stay in Nanking. We took the night train to Shanghai.

SHANGHAI APPEARS FANTASTIC

Shanghai is a city that has to be seen to be believed. Driving from the railroad station to the Broadway Mansions, at the junction of Suchow Creek and the Whangpoo River, it seemed as though our jeep could not avoid killing at least 10,000 women and children. The narrow streets were full of pedestrians, darting this way and that, and vehicles of all kinds ranging from hand-pulled carts and rickshaws to 1947 Studebakers. Over all was a constant bedlam.

There is a feverish hustle and bustle about Shanghai today, but it does not create the impression of being a healthy business activity. On the contrary, there is a feeling of tenseness and impending doom, a fear that money will be worthless tomorrow, a rush to buy something—anything—as a hedge against inflation, a fierce struggle just to survive, to live through the day, with no thought of tomorrow until tomorrow comes.

The day we were in Shanghai the price of newspapers went up from $500 in Chinese currency to $1,000. The black-market rate of exchange, which a few days before had soared to $19,000 in Chinese currency for $1 in American money, had dropped back to a rate of 12,000 to 1, a figure which has since been made official.

Tax-Reduction Bill

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 8, 1947

Mr. KEFAUVER. Mr. Speaker, I am constrained to vote for the new tax bill, H. R. 3950, which the House is considering today. We are now far enough along with the appropriation bills for the fiscal year beginning July 1, 1947, to have a fairly clear picture of the fiscal outlook of the country. The present picture is that with payment of more than $2,000,000,000 on the national debt a tax reduction can still be made and the budget kept in balance. I would prefer to have a smaller and more equitable tax reduction, with more emphasis placed on tax exemptions, but this bill appears to be the last and final opportunity Congress at this session will have to enact any tax-reduction measure. An important consideration is that this measure goes into effect next year, and not this year, as was provided in the previous bills. Furthermore, when I voted against the original tax-reduction bill I understood the administration would propose in this Congress a measure to take effect next year. No such proposal has been forthcoming, and we now have no assurance that it will be.

The determinative reason I feel that some tax reduction is in the public interest for next year is the necessity of supplying risk capital for new and enlarging businesses. During the war and up until recently small business organizations could secure operating capital or capital for plant expansion from various governmental agencies. Units of the Army and Navy made capital available, the Defense Plants Corporation did financing for war purposes, the RFC, the Smaller War Plants Corporation, and other agencies furnished capital to new or expanding enterprises where it could not otherwise be secured. Most of these agencies have now been abolished. Lately the RFC Mortgage Company and the Smaller War Plants Corporation have ceased to exist. Small business cannot now secure RFC participation loans. Recently I have had several substantial small businessmen complain about the inability to secure capital to carry on their business or to put through an expansion program. They say that Government financing is not available and that they cannot secure the necessary funds from private sources. It is my opinion that some tax reduction will make more risk capital available for these small businesses and to sustain our economy it is highly important that they be able to secure the financing they need.

American Veterans' Committee

EXTENSION OF REMARKS

OF

HON. RAYMOND E. BALDWIN

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, July 8 (legislative day of Monday, July 7), 1947

Mr. BALDWIN. Mr. President, I ask unanimous consent to have printed in the RECORD the annual report of Charles G. Bolte, retiring national chairman of the American Veterans' Committee (AVC), given at the organization's second annual convention in Milwaukee, Wis., on June 20, 1947.

The American Veterans' Committee (AVC) has excited considerable comment, so I believe that this report which gives in detail the record of the organization in the past year and the policies it has followed should be of interest.

The report indicates that AVC is prepared for continued expansion in the coming year. I am glad to note that Mr. Bolte said:

We oppose the methods and objectives of the American Communist Party. We are determined to maintain the independence of AVC. We are entitled to expect this forthright statement of independence at every level of leadership in AVC, as we are entitled to expect an active leadership which believes passionately in freedom and uses it to build an ever-improved life for all. For the rest we can do nothing more but go on to prove by our actions the fundamentally American nature of our program and its independence from anybody's party line.

I may say that Mr. Charles G. Bolte is a resident of my own State of Connecticut.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

[American Veterans Committee, national chairman's report, second national convention, Milwaukee, June 20, 1947]

This second national convention is another milestone in the history of AVC. More importantly, it is a springboard into the future. We have already shown our concentration upon that future by our activities yesterday in the AVC workshops. I should like now to report briefly on the activities of the past year, and suggest something of our future as I see it.

AVC has grown substantially in the past year. The growth of a new organization such as ours has to be measured in terms of character, activity, and direction rather than in terms of membership and dollars. But even in membership and dollars, AVC has grown importantly. Membership has more than doubled, from just 50,000 to more than 100,000. The number of chapters has grown from 515 to 943, State councils from 3 to 18, area councils from 10 to 23. More than 50 women's auxiliaries have been founded, and the rate is increasing rapidly.

This growth has been accomplished because of the forthrightness of AVC's program, and because of the vigor with which AVC members around the world have forwarded that program. It has been accomplished despite a severe retrenchment in our national staff, from its high of 86 last June to its present 36. Of that 36, 25 are in the national office; 6 are in Veterans' Administration service offices; 3 are in the Washington legislative and public relations office; and 2 are in field organization.

Financial limitations made this drastic cut-back in staff essential. In the face of this situation, your national officers have carried forward an aggressive campaign to further our program and expand our membership. Nationally directed field organization has been limited to the west central region, in which your national planning committee established an experimental field office which has developed new organizing techniques. Many of these techniques have been written down and distributed to chapters throughout the Nation; nearly one and a half million pieces of literature have been mailed from the national office in the past year, designed to help chapters with program and recruiting.

As for our growth in dollars, we are considerably better off than we were a year ago. We have more cash in the bank. Our system of accounting is more conservative. Our budgeting is sound. Our budget control, in fact, has reached that point of careful balancing where we have not only kept within the budget estimate for the past 6 months, but have actually spent less on many items.

Last summer's stringent economy measures have produced results which are shown

in the two financial statements before you—one for the year 1946, the other for the period ending May 31, 1947. In this latter 5-month period, we have accumulated an operating surplus of more than $20,000. Our current assets are approximately sufficient to meet our current liabilities. To state it simply: AVC, after an extraordinarily difficult year, is a solvent and going concern.

A word of explanation is needed as to the largest deficit item in the financial statement, that for prepaid dues. This appears as a deficit under our accrual system of accounting. Under this system, the dues of each member are divided into 12 parts, 1 part to be spent for each month of the year. While the accrual system makes the deficit appear large, it has the advantage of projecting our financial status clearly into the future. And, most important of all, this is money we owe to ourselves; we are not spending anyone else's money but our own.

Two further financial items are of interest for the year ahead.

First, the successful conclusion of a special fund-raising campaign finds us with outstanding pledges totaling $50,000.

Second, a general mail appeal to the membership has now gone out, at the direction of your NPC, asking for contributions so that the new administration will have a war chest large enough to begin the new year with full confidence. I hope the delegates here will go back to their chapters and push this drive. AVC is 100,000 of us. If AVC has meaning for us, we will provide the means with which to expand it. A test mailing suggests that this appeal may bring in $25,000.

These two items taken together—pledges and the mail appeal—will enable the national office to render maximum service to each and every chapter. I cannot overemphasize the importance of this. Too frequently, in the past year, our projected and current activities have been hamstrung by the report from the business office: "We just don't have the money." If we can maintain the present renewal rate of more than 75 percent, if we can expand the rate of new memberships, we will have the money we need in the coming year. Faced as we are with vast problems of organization and program, we cannot afford to be without it.

Our sacrifices in other departments this year did enable us to expand into a new field: that of direct veterans' service. Accreditation by the Veterans Administration last fall opened the door to this vital endeavor. We now have two full-time and two part-time service offices in operation. We must bend every effort in the year ahead to opening more of these offices, so that they can give the aid they need to all veterans, nonmembers as well as members.

This service to veterans has occupied an increasing portion of our time and energies in the past year, as it surely will continue to do in the year to come. Our program, guided by the mandates of our first convention platform and by the decisions of your NPC, has been designed to make it possible for all veterans to become citizens once again. Since housing has remained the veterans' No. 1 problem, it has remained in our No. 1 campaign. With the national office coordinating local activities, we have campaigned vigorously for passage of the Taft-Ellender-Wagner bill, for the maintenance of rent controls, for the expanded production of prefabricated housing units, for the development of community techniques to meet the crisis, and for the elimination of the black market in housing materials.

On other fronts affecting the veterans peculiarly, we drafted the compromise settlement which produced terminal leave pay for enlisted men, and the revision of national service life insurance. Our campus chapters across the country have led the drive to increase subsistence pay for veterans attending college, and to raise the ceilings in the on-the-job training program. Finally, the national office has now produced a pamphlet setting forth in detail AVC's recommendations for immediate overhauling of the Federal Government's program for veterans, designed to achieve "better administration and more equitable allowance of the benefits which presently exist for veterans of World War II." All of this work has been done within the general framework of our motto, "Citizens first, veterans second."

In the broader field of national affairs which affect veterans as citizens, who campaigned valiantly, though fruitlessly, for the maintenance of price controls. We made thoroughgoing recommendations for overhauling the antiquated methods of military justice, and opposed the imposition of universal military training in peacetime as a step which is certainly not yet essential for our national security. We urged Federal aid to education, and a comprehensive national health insurance plan, as two steps which quite certainly are essential for our national security. And we continued the unceasing struggle to guarantee the basic rights of our democracy by working for a national Fair Employment Practices Act and Federal anti-poll tax and anti-lynching laws, by working against the viciously restrictive Taft-Hartley labor bill, and by working for David Lilienthal's appointment as head of the Atomic Energy Commission.

The world situation deteriorated sharply during this year, and we as veterans of what we prayed was the last war felt ourselves deeply concerned. Our basic policy set forth a year ago in Des Moines, remained steadfast. We worked for a policy of peace, not war, through strengthening the United Nations. Your NPC met the recurrent crises of the year forthrightly. We called for a meeting between President Truman and Premier Stalin to resolve the differences between the United States and the Soviet Union. We spelled out those changes required to give the United Nations the power of law effective to enforce disarmament and prevent war. We urged our Government to use our resources abroad in the restoration of war-ravaged economies and the strengthening of democratic forces—objectives, we declared, which could only be realized by offering a positive and hopeful alternative to totalitarianism of both the left and right.

I have summarized AVC's national activities of the past year. But the vital story of AVC is untold: The story of the chapters, the area councils, the State councils. For this year of growth and progress has been above all the members' year. We have learned that the community is the center of our lives and efforts. We are still forming the character of our organization. While that process continues, as it will for a while longer, we cannot expect miraculous growth or overwhelming influence. What we can expect is that, with our character already formed in its major outlines, we should give tangible expression to it. That expression will take place increasingly in the communities of our Nation.

The experience of the past year shows that there are three main channels through which we may most fruitfully express the character of AVC: service to veterans, community projects, and social activities.

Service to veterans is essential to AVC's future. We have contributed greatly, I believe, to the national thinking by our insistence on our motto, "Citizens first, veterans second." We have never let this motto blind us to the fact that there are still many veterans who are displaced persons, who need houses, who need decent jobs, who need a thousand different things. We of AVC are peculiarly qualified to help these needs, as a fellowship of veterans who know the problems of our fellow-veterans. Here is a continuing responsibility we cannot shirk.

The carrying out of worth-while community projects is equally fundamental to us. AVC is strongest today in the communities where chapters have demonstrated in action their continuing concern for the welfare of all the community. Our strong chapters do not merely pass resolutions denouncing racial intolerance and the housing shortage. They work positively to eliminate discrimination in housing projects they themselves have helped to start. By such work we demonstrate our conviction that we are members of the community, not a group standing outside of it.

This integration with the community is aided when we make social centers of our chapters. One of the best chapters I visited last winter had a clubhouse, where the members gathered in friendly comradeship, where they planned a drive to increase the pay of the school teachers of the town, and where the bulletin board gave details of the national letter-writing campaign on maintaining rent controls. I may add that the members seemed not less passionate in their work for housing because beer was served on the premises.

Through these three means—veterans' service, community projects, social activities—we meet the veterans where they live. We demonstrate our survival value through the chapters which are building for the future by working in the present. From this will grow the strong, independent organization which will command attention when it speaks up for constructive national and international measures designed to assure that more hopeful future for which we fought. The very practicality of our activities will broaden the base of our membership, attracting to our ranks the hundreds of thousands of new veterans who share our hopeful vision of the future but who are not yet converted to a sharply defined body of political, economic, and social beliefs.

This road will not be an easy one, in the year just ahead. The direction we would choose for America runs in frank opposition to the direction now being taken by the dominant forces in our national life. We can console ourselves that this dominant direction—which is as much a drift chosen by default, as it is a deliberately selected course—is only temporary, the aftermath of war, the natural desire to forego greatness and retreat into isolated privacy. We in AVC have deliberately chosen greatness. We have set ourselves firmly against the tide of apathy, fear, and uncertainty. We know that this tide swirls downward, unless checked, into depression and war. We know that inaction, even more than reaction, ends finally in these fatalities.

The very existence of AVC is a challenge to the forces which are propelling our world toward its destruction. With vigor and determination, AVC can become a great instrument for moving our world toward survival. For this one reason if for no other, we may be attacked in the coming year. These attacks may come from some leaders of the old-line veterans' organizations, who see in us a threat to their monopoly of veterans' affairs. They may come from spokesmen of the extreme right, who see in us a threat to their campaign of returning this Nation to the nineteenth century. They may come from some of the uninformed and apathetic, who see in us a threat to the realization of their slothful dream of a "normalcy" which never existed outside of their dreams. These groups will attack us precisely because our promise is their downfall: to further the never-completed mission of democracy. For demanding peace, jobs, and freedom in the coming year, we shall likely be denounced as Reds.

Nothing we do or say will silence all the denunciations; for it is a leading trait of neurotic immaturity to single out a scapegoat on which to blame one's own misfortunes and failures.

We do have a simple answer; we oppose the methods and objectives of the American Communist Party, we are determined to maintain the independence of AVC. We are entitled to expect this forthright statement of independence at every level of leadership in AVC, as we are entitled to expect an active leadership that believes passionately in freedom and uses it to build an ever-improved life for all. For the rest, we can do nothing more but go on to prove by our actions the fundamentally American nature of our program, and its independence from anybody's party line.

I would not deceive you by underestimating the tremendous scope of the job which lies ahead of us. We must think, plan, and organize well, both in our deliberations here and in all our actions of the coming year. Our job is to build our organization, so that we may exercise decisive influence in achieving property and place. We know that our country has the power to do both. We in America have vast means available for the planning of full employment and full production, for the achievement of full democracy, for the reversal of the suicidal drift toward war with the Soviet Union, for the development of the United Nations into a federation capable of enforcing world law. Our present difficulty is that we as a nation lack the will and the plans for using these means to these great ends. Our task in AVC is to help draw the plans and provide the will. Our immediate task is to build the organization which will give weight to our decisions.

Now I come to the end. I take my leave with a full heart. I know you will guard this work well, and build strongly for the future. I know you will move forward in the spirit of one of our members, a great American who died last month after expending himself in the service of democracy and his country. In words, which are as true today as when they were written a year ago, Evans Carlson said:

"As events are shaping up today I believe we will have to assume an increasingly strong progressive position if we are to continue to serve the interests of the broad mass of the people, which are identical with the interests of our membership. The disposition to dominate, to dictate, and to exploit is equally as vicious and as impervious to reason as the disposition to conquer. Neither can be stopped except by creating conditions which make it physically impossible to continue. In other words, democracy as a practical political, social, and economic philosophy can be preserved and made to work only by the united will of a solid majority of the people to make it work and to resist every effort to impose tyranny on the people. It would be most unrealistic to stick our heads in the sand and refuse to recognize the imminence and importance of the struggle between those who would govern by force and domination and those who believe in government by the people in the interest of all the people. * * * AVC is already committed to the latter course. We can fulfill our destiny only by continuing to champion the cause of all the people."

I know you will plan carefully for building AVC in the spirit of these words. I know you will draft a challenging platform designed "to achieve a more democratic and prosperous America and a more stable world." I know you will elect officers who are vigorous, forward-looking, responsible men, united in their devotion to no loyalty outside the principles of AVC. I hope they will be men experienced in chapter affairs, capable of building AVC in all the thousands of our communities.

I will not say good-by. We shall always be together, united in the faith of AVC, wherever our private lives take us. I am happy in the thought that we will be together, working in that faith, however separate our endeavors seem. I thank you for the priceless gift you have given me: renewed belief in our generation, renewed hope for the future. It is an honor to have served you.

Missouri River Floods

EXTENSION OF REMARKS
OF
HON. GLEN H. TAYLOR
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Tuesday, July 8 (legislative day of Monday, July 7), 1947

Mr. TAYLOR. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial from the Chicago Sun on the Missouri River floods.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

Once more, floodwaters have been destroying lives and wealth throughout the Missouri and Mississippi Valleys. Once more, outraged citizens and alarmed Congressmen have been saying that something must be done.

When the roof leaks, everybody is in favor of patching it. But when the sun shines and the floods recede, the sense of urgency evaporates.

On the Missouri and its tributaries, destructive floods come along with depressing regularity every 4 or 5 years. June is the peak month for melting snow from the Rocky Mountains to reach the Great Plains through the Missouri system. When torrential rains downstream coincide with the crest of the mountain flood, rivers burst out of their banks, the rich top soil is filched from the plain, bridges, homes, barns and towns undergo disastrous inundation.

Every time this happens, the desperate survivors cry out angrily for help. As they shovel the stinking silt from their homes and set about the repair of the soil, they resolve that before the next flood hits, they must be ready.

FIASCO OF FLOOD CONTROL

Consider what has happened in the Republican Valley, a tributary of the Missouri system which runs through southern Nebraska and northern Kansas. Twelve years ago this stream and all its feeders rampaged through the valley. More than 100 persons died and millions of dollars' worth of property was destroyed.

The people of the valley demanded Federal aid in flood control. A plan was developed and many chambers of commerce heard interesting speeches on hydrography. But after 12 years the Republican River is still untamed, and last week its waters again took lives.

During the interim, a jurisdictional dispute had developed over river control. The Reclamation Bureau of the Interior Department wanted to harness the Missouri system in its way, for irrigation and power as well as flood control. The Army engineers wanted to harness it their way, for navigation as well as other purposes.

Each bureau had its own congressional claque, its own powerful lobby. Each was implacably opposed to the few voices raised in behalf of river development by a single regional agency.

In the end the two bureaus, frightened by the possibility of a Missouri Valley Authority, got together and divided up the river. By this arrangement, reclamation is to build upstream dams, the Army is to build downstream dams and levees, and the country is to pray that the system will work.

WHAT EACH DELUGE PROVES

But you do not break a horse by committee, and every new flood proves that MVA is basically the most logical, the most simple, and in the long run the most economical technique. MVA would unify the control of the river and insure the beneficial use of its waters for all purposes.

MVA would start on the hills and slopes where the first rain falls, in the mountains where the first snow accumulates. It would follow the streams down through the basin, damming them here, diverting there, building levees elsewhere, coordinating locks and power plants and canals. It would impose the will of man with single unyielding pressure on the wild force of the waters, and substitute for the annual June terror an ordered use of a great natural resource.

The Missouri Valley will come to an MVA in time. Every year of delay before that inevitable decision only increases the social cost of an untamed river system.

World Peace Is Not an Economic Problem; It Is a Question of Moral Integrity—Russia as Usual Does Not Agree

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. McDONOUGH. Mr. Speaker, the frantic search for peace throughout the world is on the wrong track. Those to whom we have delegated the task of establishing the peace seem to think that peace can be obtained by applied economics, by the use of money and material things, by giving away dollars, and agreeing to new boundary lines for new states.

They seem to have forgotten that peace is not and never was settled by economic means; that peace is a moral problem of the highest order and calls for the highest degree of moral integrity. All attempts to seek peace by the use of material things to settle differences between nations will and have failed.

Russia has consistently demanded more and more of the material things, and insisted more and more that world peace can be established on an economic basis. She seems to have convinced some of our representatives and those of other countries of the world that that is the one and only way to bring about peace, while she grows strong at the expense of other nations and they become weak under the spell of her false theories.

Why is there no peace in the world today?

Is it not because of Russia's negative and arbitrary attitude toward the rest of the nations of the world?

Name any other nation that has asked for—yes, even taken more without asking than Russia and her satellites. She wants more gasoline, more oil, more tin, more steel, more rubber, more land.

Where and when has she ever shown good grace and displayed high moral integrity in her dealings with the other nations of the world in the search for peace?

Russia's attitude at Paris in opposing the Marshall plan for rehabilitating Europe is apparently her last stand against world peace. She has taken about all she thinks she can get. She has been preparing for this day, when she could threaten the rest of the world, safe in her own selfish but false belief that the world would shudder at her threats.

She is wrong. Russia is now the world isolationist which she charged against others when they did not rush to her aid when she was weak. She is weaker today than she realizes. The greater value of moral forces, moral integrity, and intellectual honesty as compared to the use of material things and applied economics in establishing world peace is shown in the following Associated Press release by the Commission on a Just and Durable Peace:

FREE SOCIETY VERSUS POLICE STATE HELD NO. 1 ISSUE

NEW YORK, July 1.—The Commission on a Just and Durable Peace, headed by John Foster Dulles, Republic foreign-affairs adviser to Secretary of State Marshall, said today that the supreme issue of our time is that of free society versus the police state.

* * * * *

"The fundamental issue is not the economic issue of communism versus capitalism or state socialism versus free enterprise," the statement said. "It is that of the free society versus the police state."

* * * * *

"A casual observer of American conduct might conclude," the statement said, "that our national affairs are operated on the assumption that war is so probable that it is not worth while to take a chance on the possibility of peace."

The statement said the American people should make clear that "they do not put primary reliance upon military defense," but that "our chief reliance is a moral offensive."

* * * * *

The amount of aid should be measured "not alone by dollars," but also "by production and delivery of needed goods," the statement said.

* * * * *

Regarding moral force, the statement said that "our people need to do much more than they are doing to demonstrate their conviction that the greatest forces in the world are moral forces and not material forces, and that with God all things are possible, even peace.

"We utterly reject the idea of inevitability of war and we oppose all national policies which have that presupposition."

A United Freedom Front

EXTENSION OF REMARKS
OF

HON. CHARLES R. ROBERTSON

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 8, 1947

Mr. ROBERTSON. Mr. Speaker, it seems to me that it is regrettable that we cannot discover some formula by which we can measure men in public life as to whether they are right or left. It is perfectly characteristic of many of our would-be liberal orators to announce to the world that the United States is following an imperialistic policy, or perchance that they stand in the very vestibule of financial collapse.

Times without number these days we hear our leftist friends make the statement that the capitalistic system under which America operates has failed. Let us look at it for a moment. Has it really failed? Is it not the envy of all the other nations of the world? And is it not true that they come to America in countless numbers almost daily for help?

We can never deny that by virtue of our system, which includes the capitalistic system, ours is today the leading nation of the world. Yes; we are even the envy of Russia, and we outdistance them by great accomplishments.

Our orators of the leftist variety are constantly making references to the common man. No one is being fooled by this innuendo. We all know there are vastly more common men in the world than uncommon, and the reference to these common men is always in a spirit of solicitation in a desire to help them gain a loftier place. No one quarrels with that philosophy, and I for one should like to see all common men enjoy a better position in life, and I subscribe, Mr. Speaker, to attain this goal. It can only be attained through the assistance of uncommon men. The United States will furnish the leadership of the world today with uncommon men, and at the same time will enhance the sphere of the common man throughout the world.

I like to think of an individual who by his own ingenuity, his ability, and industry, has made a success of his own private endeavors. And then having made that success he has been called in to play a great role in the general welfare of the country in a public service, if you please. And I think of no one who more completely symbolizes that particular individual than Mr. Eric Johnston, president of the Motion Picture Association of America. Mr. Johnston recently while traveling in Europe gave a great address to the Belgium-American Society at Brussels, Belgium. Mr. Speaker, I include herewith this address given by this distinguished American citizen:

A UNITED FREEDOM FRONT

Europe recently had a distinguished visitor from the United States, Mr. Henry Agard Wallace. He left you with some very bad misconceptions about my country. He gave you some very bad advice about the United States and its role in the affairs of the world today.

It is not my intention to attack Mr. Wallace or his motives. But I am going to attack some of the things he has said. I do so in the interests of world understanding and world peace. It would be tragic if Europe and the rest of the world were to be misled by the false preachings that America is going to misuse its political and economic power in the world today.

Mr. Wallace has given the world three great misconceptions about the United States:

That the foreign political and economic policy of the United States today is imperialistic.

That the United States today is the world center of reaction.

That the United States is heading into a cataclysmic depression, economic chaos, and financial collapse.

Let's look at misconception No. 1—this charge that the United States is embarking on a program of imperialism.

That's a phony. The spirit of imperialism simply does not exist in my country. There are strong reasons—good, practical reasons—why it doesn't exist. We covet nothing. We don't want anybody's territory.

If we're imperialistic, we're going about it in a most peculiar way. Does an imperialistic nation cut appropriations for its armed forces? We did it.

Does an imperialistic nation allow its wartime conscription laws to lapse? We did.

Does an imperialistic nation voluntarily grant independence to one of its possessions? We did. We have just saluted the flag of the new Philippine Republic.

I never heard of an imperialistic nation giving away territory or cutting down its armaments. I never heard of an imperialistic nation being so magnanimous as we have been to distressed people all over the world.

The sublime absurdity of the charge of imperialism lies in the fact that we are simultaneously accused of isolationism and indifference to the fate of the rest of the world.

Sometimes it seems to us that on Mondays, Wednesdays, and Fridays the United States is accused of being an aggressive, swaggering, blustering, imperialistic nation, busily grinding its swords to hack the world in half, and that on Tuesdays, Thursdays, and Saturdays we are charged with isolation and indifference to what happens anywhere outside of our own borders. On the seventh day of the week all is confusion.

Actually, there is nothing mysterious or sinister about the foreign policy of the United States. It is simply a policy of self-help.

My country has been inescapably placed in a position of world leadership. She has adopted a bipartisan foreign political and economic policy of helping free nations and free people to remain free—to rebuild their economies and restore stability in their affairs.

There is no precedent in all history for this American policy. We have poured out billions in food, dollars, and materials to help a stricken and prostrate world get back on its feet.

Our policy is the exact contradiction of policies pursued down the ages by imperialistic nations. Imperialism taxes, enslaves, plunders, and exploits. It takes; it drains the substance of the less powerful; it feeds on whatever misery it can find or create.

We are taking nothing. We are putting in instead of taking out. We are taxing ourselves to aid others. It is not wholly altruistic because we know there can be no peace or prosperity for the United States unless there is a peaceful and prosperous world.

Today, our policy of self-help happens to collide with what we feel is the expansionist policy of Soviet Russia. Russia to us in the United States looks like a huge glacier, moving steadily from East to West, smothering and pulverizing whatever may lie in its path.

We in the United States ask this question: "Is this another ice age on the way, and this time made by man instead of by nature?"

If Mr. Wallace had looked East instead of West when he was in Europe, he might have found some cause to worry about imperialism in the world today.

Now let's look at misconception No. 2—that the United States is the world center of reaction.

Mr. Wallace would have you believe that the United States today is a hard, ruthless enemy of the common man's welfare everywhere.

How can you call reactionary a nation which, in a single generation, has fought two wars it neither sought nor inspired for the right of man to live a free life in a free society?

How can you call reactionary a nation in which ownership is so widely diversified and where all the people have such a big stake

and status in the system under which they live?

Let me document that for you.

Thirty million people in the United States are the owners of American industry. They own the stocks and bonds of American industrial and business concerns.

Fifty million Americans are putting capital to work. They have savings accounts in our banks.

One hundred and fifty million life-insurance policies are in force in my country. Those policies are building security for millions of our people.

Those millions who own stocks and bonds, who have savings accounts, and who hold life-insurance policies are owners as well as workers. They share in capitalism; they benefit from capitalism. In short, they are capitalists.

I'm proud to be a believer in the American kind of capitalism. Our kind of capitalism is flexible, and can correct its faults. Under a total state system the individual has no alternative but to adapt himself to the system. Under our kind of capitalism the system can be shaped and adapted to meet the needs of the individual.

I am proud to call myself a capitalist because ours is a participating capitalism which enriches the lives of the many instead of making just a few men rich. Our kind of capitalism is making the common man in the United States uncommonly happy and uncommonly prosperous.

Do I sound like a salesman for American capitalism? Let me assure you I'm not. It needs no selling. The United States is a success.

If Mr. Wallace can find any place on earth where the common man has more of the good things of life than in the United States, then Mr. Wallace is right and I am wrong.

How can you call reactionary a nation so fanatical in its devotion to the ideal of individual liberties? One of the first American flags in our Revolutionary War was the emblem of a rattlesnake and a motto: "Don't tread on me."

For ourselves, we insist on freedom of choice for the individual and we can't imagine taking away the freedom of action of anybody else. We don't want anybody to tread on us, and we hate to see anybody, anywhere, tread on anybody else.

Human life is precious in my country. It is cloaked with great dignity and great protections. In America, men are more important than machines. Human rights take precedence over property rights whenever they come in conflict.

If Mr. Wallace can find any place on earth where the common man has more personal liberties and more individual freedoms than in his own United States, then Mr. Wallace is right, and I am wrong.

Let me take one final pot shot at this charge that the United States is reactionary.

I am afraid Mr. Wallace may have forgotten to remind you that his privilege to attack his own country even outside its own borders is one of the civil liberties and personal freedoms which belongs to Mr. Wallace and to me and to all Americans. Certain countries which Mr. Wallace considers progressive deny this freedom of expression. If Mr. Wallace had been a citizen of one of them he could not have returned safely after his attack on his own land. He would have had to become an ex-Vice President in exile.

Now let's examine misconception No. 3—that the United States is headed for an economic collapse.

Mr. Wallace gave you a doleful picture of America's future, but how reliable an economic prophet has Mr. Wallace been proved to be?

When he was Secretary of Commerce, Mr. Wallace predicted there would be 8,000,000 unemployed in the United States immediately after the war.

What happened was quite the contrary. Instead of having 8,000,000 unemployed, we had a manpower shortage, and employment in my country has moved steadily forward since the war to an all-time high.

I would be less than candid, however, if I didn't concede that so long as we have a dynamic, free competitive, capitalistic system, we are always going to have some ups and downs. Adjustments are normal in a free economy. They are natural in a dynamic economy.

But this you should know, and I doubt if Mr. Wallace mentioned it: Industry in the United States, management, and labor, and agriculture, the men who make the economic decisions, are economically conscious as never before.

We learned something from our economic depressions of the 1930's. We have made certain definite moves by legislation to bolster our economy in slack times.

We have adopted what we call a Full Employment Act, and when we did that, the United States abandoned the policy of complete laissez faire. In so doing, we combined private initiative with cooperative action. It marked the opening of a new chapter in our economic life.

Under the act, we have established a national council of economic advisors which keeps its fingers consistently on the pulse of the Nation's business, checking every symptom and reporting its state of health to government and to the people. A comparable group has been established in the Congress of the United States to study and watch the Nation's economic health and to recommend positive actions to make sure that ups and downs do not become booms and busts.

And by other actions, we have prepared more cushions against a sharp fall in business activity. We have adopted a program of liberal unemployment compensation; we have guaranteed bank deposits. We have adopted a social security system under which old age benefits are paid, and there is no doubt in my mind that the base of the system will be presently broadened to take in more and more people.

We have minimum wage legislation, and we have stabilized ourselves against a collapse in agriculture by putting floors under the prices of farm products.

I am wondering if Europeans knew we had taken all these steps to avoid severe periodic depressions. I wonder if they knew how seriously we are tackling the problem of boom and bust. Mr. Wallace didn't tell you these things. But I want you to know them, because I want you to know the facts about my country.

Briefly, the truth about the United States is this:

The United States has embarked on a foreign policy based on partnership and reciprocity. It wants to help free and independent nations help themselves. That is not the road to imperialism.

The United States is progressive, liberal and democratic; it has twice poured out its blood and its treasure for the ideal of individual liberties and freedoms. That is not the road to reaction.

The United States is building the greatest system of participating capitalism the world has ever seen. That is not the road to economic collapse.

I have tried to dispel the great misconceptions which Mr. Wallace has planted steadily in the course of his grand tours because those misconceptions damage the moral standing of America in the world and hurt the cause of peace and recovery.

American businessmen are eager to help the businessmen of Europe. Our great, dynamic labor unions—one of the great strengths of our kind of capitalism—are conscious of their fellow workers' problems in Europe; our great agricultural organizations feel kinship to the farmers of the older world.

We are conscious that when men are hungry and cold, when life is a constant struggle for bare existence, bread takes precedence over freedom. We are conscious that the immediate job is to provide bread so that men will not be forced to trade away their freedom.

Free men and free nations are our ultimate goal. It is the goal we must everlastingly seek with all our ingenuity, with all our resources, with all our might. Even the fact that our economic systems differ is no barrier to building a united freedom front.

Don't let anybody tell you that the only great issue today is capitalism versus communism. That's important, but it's not the whole story.

The supreme issue of the hour is the secret ballot versus the secret police; free men versus enslaved men; freedom of actien versus a return to something worse than feudalism.

One of the great instruments for building a united freedom front around the world is the motion picture. Its power to enlighten, to bring people closer together, has been demonstrated. It is a powerful link between the United States and Europe; one of the strongest ties that freedom has. It can be an increasingly powerful link to widen freedom. I want to see the screen used for psychological welfare and never for psychological warfare.

Ever since my association with the industry I have advocated, and will continue to advocate, a greater, freer interchange of films among the nations. You may say it is easy for me to advocate that policy because our American film industry is the biggest in the world. But we have no guaranty that our predominance will last forever. Hollywood has no immunity from competition and should have none. But we do want the channels kept open for the best pictures of the world, no matter where they are made.

This magnificent film festival in Brussels is proof to me that the motion picture is steadily gaining in artistry, popularity, and importance with people everywhere.

I hope there can be one single, great world motion-picture festival every year from now on. I would like to see them planned for many years ahead of time, so that all the world film capitals would have their turns as hosts. I believe the greatest good would result from an annual international festival. It would bring together the best in motion pictures from all over the world. It would strengthen the ties of friendship and understanding among us.

I have wanted only to tell you the truths about my country. I have wanted to dispel some of your doubts and fears and uncertainties. I have wanted to bring you a message of promise, encouragement, hope, and faith.

These are desolate, foreboding times, and it is easy for men everywhere to be depressed and discouraged. But the world has had dark times before. The lamp of freedom has been dimmed before only to blaze brighter than ever later on. Fields have been scorched and burned before, and men have been cold and hungry. Disappointment, despair, and the sense of defeat have plagued the world before.

All those things have come to pass—and in their time have passed away. We in my country are determined that the days of relief from hunger and respite from fear and recovery from economic disaster shall come faster than in times gone by. We are determined to do what we can to speed the rebirth of the world; to build on the wreckage of the past a better, healthy, wholesome, peaceful world society.

Reduction of Taxes and Government Expenditures

EXTENSION OF REMARKS
OF
HON. WAT ARNOLD
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. ARNOLD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement with regard to the position of this the Eightieth Congress in its effort to keep the promise of cutting Government spending and reducing taxes. A part of this was included in a circular sent out by the Thompson-Hayward Chemical Co., of Kansas City, Mo., under the heading "Let's practice what we preach." It would be well for each and every citizen of these United States to take note of his own responsibility in this postwar period, to see wherein he might contribute to the stability and peace of the world, as unselfishly as he did to the war effort.

LET'S PRACTICE WHAT WE PREACH

There is almost a universal demand for a decrease in National Government expenditure.

The same demand exists for decreased taxes by business and individuals.

Yet Congress is besieged by pleas from various sources urging that certain appropriations be not cut.

Why? Why? Why?

Because—

Farmers don't want subsidies and crop guaranties discontinued.

States want hand-outs for road construction.

Cities want donations to expand airport facilities.

Veterans want expenditures which are growing by leaps and bounds.

Localities want Federal aid for school lunches.

Federal agencies refuse to reduce their specialized activities, and enlist favored blocs to scream at the prospect of being cut.

We could continue, but you get the point.

What further do we see?

Every State, every city engaged in a mad competitive rush to expand.

Citizens all demanding more services, which cost money to create and more taxes to maintain.

Never were so many bond issues being proposed by every metropolitan city for new projects at a time when money will buy less tangible results.

Educational agencies all out raising funds to expand for an emergency condition again with highest costs for accomplishment.

So it goes.

How can taxes be reduced unless we exercise some self-restraint, self-denial, and self-discipline.

A. As citizens, we must resolve—

1. To vote against additional bonds in our own communities when it is not sound to do so.

2. To be willing to forego many improvements.

3. To be hardy enough to stand some inconveniences and discomforts if our pocket books are not able to pay the price of the bill to eliminate them.

B. As communities—

1. To stop looking to Federal aids for donations and help.

2. To only undertake projects the community can properly pay for.

3. To be willing to expand on a realistic and orderly basis.

4. To stop starry-eyed competition with other communities and be content with doing the best we can with what we have.

C. As States—

1. To eliminate duplication of Federal programs such as veterans' bonuses, and paternalistic programs.

2. To restore to their local communities their local responsibilities.

We can't have our pie and eat it too. The New Dealers have proved this to us in our debt load.

Lower taxes can only come with less expenditures.

Let's practice what we preach.

America: The Envy of the World—California: The Envy of America

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. McDONOUGH. Mr. Speaker, everybody in Europe wants to come to the United States. Everybody in the United States wants to go to California. Everybody in California wants to come to southern California and Los Angeles County, and that by logical deduction, or rather by accumulation, puts Los Angeles County and southern California right on the spot.

At the rate of increase of population in southern California, of which Los Angeles County is the metropolitan center, most of these people are on their way; many have already arrived.

Those of us who have the responsibility of representing this area are worried about these people finding suitable and profitable employment to take care of themselves and their families and keeping them employed. We fully realize the drastic and serious results of an employment recession.

The following is part of a recent report by a member of the board of editors of the United States News on the situation in southern California:

Migration into southern California is continuing, but at a slower pace. New factories are rising, but in smaller numbers than in 1946. Construction continues to boom, but there are signs of a slow-down. Industries are pouring out goods, yet there are signs of trouble in motion pictures, aircraft, shipbuilding, clothing.

Employment remains high, 60 percent above the prewar level, but down a little from the peak. Unemployment is noticeable here and there. Old houses are selling much more slowly and at an average price 5 to 10 percent below the high point. Retailers in this part of the country, as elsewhere, are buying with caution. Money is not being thrown around wtih the same abandon as a year ago. Population growth continues to confound the experts. War workers who poured into this region during the war have not left on any large scale. Some who did leave have come back. Other people keep coming in to seek new opportunities or just a better place to live. Automobile counts at the State border indicate that only 10 to 14 percent fewer people, counting tourists as well as migrants, are arriving now than a year ago. It is estimated that Southern California alone has a population of about 5,350,000, or well over 1,000,000 more than in 1940.

A flow of new people into California usually has preceded by a year or two an expanding industrial growth. New residents have found jobs in the trades and services until industrial jobs became available. It appears that somewhat the same pattern will apply this time.

Tourist business, which helps to sustain industry, agriculture, and trade, is to be smaller this year than last, when nearly 3,000,000 visitors spent a record $500,000,000 in southern California. Tourists, however, will bring much money into the region this year, to be spent for living quarters, food, gasoline, clothing, and recreation.

Branch plants of eastern and middle western manufacturers were coming in on a big scale last year, but investment in these plants and in other new factories has slowed one-third. Investment of this kind totaled $15,000,000 in the first quarter of 1947, compared with $45,000,000 in the same period a year ago. New-plant investment, however, still is eight times as large in dollar amount as the 1940 outlay.

Revival of the boom in branch plants, if there is a revival, is likely to wait until prices for building and plant sites come down. Good sites near Los Angeles are commanding prices ranging from $5,000 to $30,000 an acre.

Motion pictures also are having their troubles. Movie producers, who have an element of stability in good and bad times are feeling the pinch of shrinking box-office revenue in film theaters throughout the country. Revenue from abroad is hit by political discontent, inflation, and nationalistic restrictions in other nations. Retrenchments now being made in the industry, however, are not expected to be too painful.

Women's clothing, one of California's largest new industries, apparently is heading into less of a slump in the southern California area than in the rest of the country. This is because much of the output is high-grade sportswear, which is less affected than other lines by consumer resistance to high prices.

Outside the field of sports clothes, makers of coats, suits, and dresses are running into some trouble. Falling sales have prompted a rush of redesigning of clothes with a view to recapturing some of these sales. Most coat and suit factories are shut down for the present, and the majority of their 4,000 employees will be laid off until mid-June, when production of autumn models begins.

Retail outlets have caught up with the growth in population, and no longer are multiplying. In Los Angeles County retail stores increased in number from 75,000 to 105,000 between 1939 and 1946. Now the trend is probably the other way. Sales at retail are holding up better than in some other parts of the country, but department stores have slashed their orders for goods as much as 50 percent from a year ago.

In the heavy-goods field contradictory situations exist. Aircraft production and shipbuilding, large employers of labor during wartime, are down to a fraction of their previous size. Employment in Los Angeles and San Diego airplane plants has dropped to 86,000 from a high 250,000, and further layoffs threaten to reduce the number to 35,000 next year. Steel production, on the other hand, is being expanded from high wartime capacity. Nearly all producers are enlarging their facilities to meet increasing demands for steel.

Tire making, which is another big business in southern California, appears to be heading into a slump. Signs of a buyers' market are showing up, although plants are producing twice as many tires as before the war and are operating at near capacity.

That is the situation so far as industry is concerned. In the field of agriculture, a big

source of income in southern California, prospects are for a prosperous year.

Farmers and growers may pocket $1,000,000,000 in cash income in 1947—as much as they took in last year—even if an expected price drop occurs. In 1939, their income was only one-third of that amount. As a result, farmers are spending liberally, reducing indebtedness, and building up cash reserves. There is little of the reckless mortgaging of farms to buy more land at inflated prices that occurred after the First World War.

In the face of this prosperity, farmers, too, are in for some readjustments. Specialty crops such as fruits and nuts are sensitive to price declines, and are not among the crops that the Government is required to support. Orange growers, for example, are likely to find this year's incomes considerably lower than they had expected because of the competition between bumper crops here and in Florida. A recent drop in price reflected that situation.

Construction is being slowed down by high prices, although a turn in the price situation is developing.

Home building is heading into a buyers' market, though later and less abruptly than in some other parts of the country. Builders are finding resistance to new houses that are priced at double prewar figures. Prices are falling slightly, but not enough to increase sales perceptibly. Nevertheless, many new homes are going up. Total sales of all real estate in Los Angeles County are off a third from a year ago, but still are 75 percent above the prewar rate.

Industrial building is held back by high costs. A typical case is that of an oil company which deferred building a new plant when estimates jumped from $15,000,000 to $30,000,000. Most concerns with plants for expansion are delaying construction.

Labor supply is easing, though the situation is spotty. More workers are competing for jobs in industry, yet skilled workmen, qualified office workers, and domestic servants are scarce. Maids are being paid at a rate of $175 a month in Los Angeles, and some families are paying as high as $250 or $300 a month for cooks. Factory employment dropped from 252,000 to 242,000 in Los Angeles County between December and the end of April, but unemployment has not yet become a problem.

All in all, this region seems able to absorb without too much shock whatever setback is immediately ahead, and can look forward expectantly to a reasonably prosperous year.

Terminal Leave Cash Pay Bill

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, July 7, 1947

Mr. PHILBIN. Mr. Speaker, I have been an ardent supporter of this legislation since it was first proposed. In addition, I have actively participated in efforts to bring it before the House for passage. Yesterday when the measure was pending in the House, I was unavoidably detained while en route to the Capital from Massachusetts and therefore regret that I was not in a position formally to vote for the bill when the roll was called.

However, there was never any question concerning the passage of this meritorious measure. The unanimous vote of the House not only indicated that there was no controversy at that stage of the bill, but manifested the recognition by every Member of this distinguished body that the enactment of the measure, long and unwarrantably delayed, had, as it should have had, the unqualified and undivided support of the House.

There can be no possible objection to this measure. It was unanimously reported by the Armed Services Committee, of which I have the honor to be a member. It enjoyed the support of all our service organizations. It was endorsed by many civic, industrial, business, and patriotic groups. It undoubtedly had the almost unanimous approval of the American people. On its merits and in principle and logic, it should have been adopted long ago. It merely seeks to adjust an inequitable situation affecting the enlisted personnel of the armed forces, to equalize their position with that of officers of all ranks. Thus the bill is the fulfillment of ordinary justice by the Congress to our gallant boys and girls of enlisted rank in all our armed services who so loyally and unselfishly served the Nation in time of peril.

The bill as written and enacted actually saves the Government money in interest charges on the bonds heretofore issued under the provisions of previous legislation authorizing payment of terminal leave pay in bonds. It is estimated that about half of the eligible personnel will avail themselves of the provisions of this measure and cash their bonds. This sum of money will not materially affect current inflationary trends; in fact, it will help many of our finest young veterans to solve pressing personal financial problems. My regret is that this bill was so long delayed, though I am very glad that the leadership of the House brought it to the floor before the adjournment of Congress. There are other bills affecting veterans presently pending in committee which ought to be considered and passed before Congress adjourns and I propose to bring some of these vital matters to the attention of the House, I hope, in the near future.

Though the vote on the bill was unanimous, I am nevertheless sorry that it was not possible for me to have been present to vote in its favor at the time of the formal vote. By that act I could have given final expression to my many efforts and strong support of this proposal.

Speech of Ivan Allen on Anniversary of Foundation of Warm Springs Foundation

EXTENSION OF REMARKS
OF
HON. A. SIDNEY CAMP
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. CAMP. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Ivan Allen, chairman, Franklin D. Roosevelt Warm Spring Memorial Commission, on the twentieth anniversary of the founding of War Springs Foundation, and Little White House dedication ceremonies, June 25, 1947, WSB, on the air:

Welcome.

The great Roosevelt, before he was Governor of the State of New York, before he was President of the United States four terms, came here to these simple, rural, rustic surroundings in pursuit of health, and here also found happiness and friends. In solitude and tranquillity, here he had humanitarian dreams, and planned a Government with a soul. Afterward these dreams and plans were enacted into laws. Through the years these laws have not been materially changed.

There is being dedicated here today a national, yes, an international shrine, a sanctuary of glory, an altar of liberty. It shall light the pathways of the generations to come.

On this 3,000-acre reservation is a mountain called Dowdell's Knob. Mr. Roosevelt bought this mountain and built a private road to the top. It was his favorite picnic grounds, and here he entertained his visitors and neighbors. Here he could look over the countryside for 50 miles in all directions. Shall we, his followers, build there on this eminence the Franklin D. Roosevelt Peace Tower, higher than the Washington Monument, more elaborate and more beautiful in design, modernized with radio, television, chimes, elevators, equipped to broadcast messages of inspiration to the world? Shall it be built with funds from all 48 States? Yes, and from all the other nations of liberty-loving people. In the very words of the great Roosevelt: "This generation has a rendezvous with destiny." God give us heart and will to take this mission forward to a new, more daring future, a new world of peace.

Monopoly on the March Again

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. CELLER. Mr. Speaker, there is pending, in the Senate, S. 1461, which seeks to extend certain powers of the President under title III of the Second War Powers Act. Thereunder there would be continued the present method of controls over export and import of fats and oils, including soap and soap powders.

This plays right into the hands of the three largest soap manufacturers, Lever Bros., Colgate-Palmolive-Peet, and Procter & Gamble. These three entities manufacture practically 90 percent of all soap products in this country. They spend vast sums of money for advertising their brand and have made the housewife brand conscious to such a degree that the small soap manufacturer has little chance to sell his wares. The only opportunity that the small manufacturer has to sell his products, is to sell abroad. There is very little he can do in the domestic market and unless he can get an outlet for his goods through exports abroad, he will find it difficult to maintain himself. He will be squeezed between the upper and nether stones, the three big companies which practically

monopolize the soap business in this country and the passage of S. 1461, which would shut off the opportunity to sell abroad.

These controls play into the hands of the same big three. Quotas allotted to them for export are determined upon the so-called base period before the war. The small soap manufacturers are given little or no quotas.

There is specific authority in S. 1461 to control the export of fats and oil, including soap and soap powder, oil-bearing materials, fatty acids, and butter, for the purposes of exercising import control and of establishing priority in production and delivery for export.

It is declared that the policy of controls should be the protection of domestic economy. It can hardly be said our domestic economy is protected if the small soap manufacturers are pushed around like pawns on a chess board. It can hardly be called the protection of domestic economy if the control of export of soap and soap powders strengthens the already existing monopoly of the three soap companies. These three companies want to continue their monopoly over export. S. 1461 provides for the lifting of these controls June 30, 1948. This is only a facade. The monopolists want to continue their export monopoly far beyond 1948.

What I say concerning soap and soap powder has no application to other products mentioned in the bill, to wit, tin and tin products, manila, antimony, and others of which we are in short supply. The words "soap and soap powder" should be stricken from the bill.

It is rather anomalous that many articles which are made with fats and oils in part are not included in the restrictive provisions. I refer to rubber balls, rubber toys, candles, crayons, synthetic tires, and hundreds of other articles which are manufactured out of fatty acids. As a matter of fact, I am informed that a hundred million pounds are used in the manufacture of synthetic tires. Why are these articles omitted and only soap and soap powder included? Is it because the manufacturers of rubber toys, tires, and so forth, do not have the power of the large soap manufacturers—do not have as strong a lobby?

I herewith submit a very interesting and illuminating letter sent to me by the Kamen Soap Products Co., Inc., with a plant at Barberton, Ohio, and general offices at the Woolworth Building in New York City. It indicates the difficulties under which small soap manufacturers now labor, which difficulties will be magnified if the provision covering soap and soap powder is not stricken from S. 1461.

There is sufficient supply of fats and oils to supply the domestic and foreign demands. Any restrictions to the free flow of trade in soap and soap powder engender uncertainty and instability, encourage abnormal market fluctuations, smother production, and tend to build up monopoly. To adhere to the controls of soap and soap powder for another year or beyond will create naught but maladjustment and greater and greater difficulties for the small soap manufacturers.

KAMEN SOAP PRODUCTS CO., INC.,
New York, N. Y., July 7, 1947.

Hon. EMANUEL CELLER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN CELLER: May I call your attention to bill S. 1461 extending import-export controls to June 30, 1948.

A. This bill would tend to continue the present method of controls over export and import of fats and oils including soap and soap powders.

B. Just why soap and soap powders are included in this bill is very obvious. The very few large soap manufacturers, who control over 90 percent of the soap business in the United States and who spend approximately $30,000,000 annually to advertise their brands, prefer controls on export because that would tend to kill the competition they have with about 1,100 small soapers who divide less than 10 percent of the soap sales in this country. The large soaper has no trouble in selling his soap today at a high price because of the extensive advertising he does, whereas, the small soaper has to depend on government contracts which are very small at present or other highly competitive business that can only be obtained through bidding and maintaining low prices.

C. If exports on soap were free, the small soaper could maintain his operations by exporting to other countries and maintain employment in many small establishments now located throughout the country.

D. If soap and soap powders are included in the restriction of fats and oils, why not include rubber balls, rubber toys, candles, crayons, and a hundred other items manufactured out of fatty acids which come from fats and oils. The reason is that the other industries do not have a strong lobby as do the large soap manufacturers to protect them against domestic competition.

E. Since fats and oils have been reduced in price to about 33⅓ percent of what they were 2 months ago, many small soapers have reduced their prices by that proportion, whereas large soapers, because of their extensive advertising, are still maintaining high prices in this country and have no trouble keeping their plants running to full capacity while the small soaper must shut down his plant, first, because of his inability to sell in this country against the advertised brands, and second, because of the restrictions put on by our Government against export.

F. Daily, our company and many other soapers receive large demands and inquiries for quotations for export. Europe as well as South and Central American countries including the Philippines are in terrible need of soap. Soap is next important to food and should definitely not be restricted. Many soap companies could manufacture soap for export with as little as 10 to 25 percent fats and oils, but with restrictions under S. 1461, they would be prohibited. Cleanliness to humanity in other countries should be considered and no restrictions on soap for export should be permitted.

G. We repeat. Here, three manufacturers controlling 90 percent of the soap business should not be able to kill the complete industry by putting them out of business for lack of orders, and at the same time, overcharging our own citizens because of the monopolistic advantages they have. This is your opportunity to help the small businesses who are singled out because of the ability of a few.

H. An investigation will show that there is more soap manufactured today in this country than is needed, but the only ones who benefit from this industry are three manufacturers, whereas, approximately 1,100 small soapers are in terrible condition for lack of business.

We trust you will vote against these controls.

Very truly yours,
KAMEN SOAP PRODUCTS CO., INC.
A. L. KAMEN, *President.*

Labor and Collectivism

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edna Lonigan, published in Human Events, Washington, D. C.:

LABOR AND COLLECTIVISM
(By Edna Lonigan)

The fight over the Taft-Hartley Act has left a bitterness which, unless exorcised, will rise to plague us later. A campaign of brilliant and reckless misrepresentation has persuaded many workers that their fellow citizens have deserted them. Ambitious demagogs are taking advantage of everything that will widen the cleavage.

It is not enough to have made this bill into law over the President's veto. For those who care about American unity, it is important to find the common ground on which all reasonable people can unite to give this law their full support.

For years workers have been led to believe that the Wagner Act was a charter of liberties. Powerful Government and party propaganda has said that it was good. But good for whom? What exactly were the effects of the Wagner Act, and how have they helped labor?

The Wagner Act, as the New Deal administered it, in effect transformed American labor unions from simple associations of the traditional type to a form resembling the more complex structure of continental unionism.

In origin, American unions, like nearly all American joint activities, were free associations. Free associations are joint activities which are private and voluntary, with no fixed status or place. They get no help or hindrance from the state but are wholly dependent on their participants for their strength.

Free associations represent the power of citizens, not governments, and obey the will of citizens, not that of officials.

Under the New Deal free American unions became rigid associations, held tightly together in a hierarchical cartel, in which the membership was powerless, and in which power was exercised by the few.

If we read the Taft-Hartley Act with care we see that, despite a few weak spots, its purpose is to help American labor unions regain their rights as free associations responsible only to their members.

This is not an issue in which the interests of labor are on one side, and those of the general public on the other. It is an issue in which union members will decide—for all of us—whether we take the road to freedom or the gradual descent to collectivism.

II

The Wagner Act began as a promise. It promised to workers the same civil rights—of free speech and free association—in dealing with their employers that they enjoyed in dealing with Government.

That promise was broken. It was lost when an executive agency was set up to supervise civil rights. Civil rights are superior to the executive power. No Government bureau supervises freedom of speech or of religion. The protection of the courts is enough. By setting up the National Labor Relations Board, proponents of the bill abandoned the American idea that civil rights inhere in the individual, and are inalienable, for the European idea that rights are state bestowed.

The right to vote for union representatives is comparable with the right to vote for Representatives in Congress, but in the climate of the thirties the administration was called in to supervise. A Federal bureau made the rules for union elections. It decided the bargaining unit, which is the voting constituency. We would not let a President rewrite election laws, nor gerrymander congressional districts, but in effect we gave him just that power over labor elections.

The union approved by the NLRB was the sole bargaining agent for all members—but it could not ever be unseated by the members. The defeated side lost all minority rights. It lost all funds, all means of expression, all power to call meetings. Its adherents could not even talk to their employers. The case was one of winner take all.

By ruling in favor of industrial unions, and union-wide bargaining, the NLRB greatly increased the size of the disfranchised minority. By ruling that workers could be represented by the union hierarchy at headquarters, instead of by their local union or national union, the Administration concentrated the power over unions at a few key points. So the unions came to be controlled by political, not labor leaders.

Labor has been bitterly criticized for its excessive power. Its spokesmen insist that it has not received any such power. They are right. It is not union power that waxed so strong.

The Administration early began to put its key men in the powerful but invisible second-line positions, especially in the CIO. Old line union leaders stayed on in front positions but they were dependent on favors they received from the White House. Political favors, however, must always be repaid. The city vote was the pay-off.

John L. Lewis challenged administration dominance in 1940, but after the election the permanent secretariat of the CIO removed him from office. Individuals were helpless. Those who protested against political use of union funds were soon out of a job.

This is not collective bargaining but collectivism, for which labor did not bargain. All that saved the workers of the United States from total absorption in one centrally-controlled mass organization was the split between the cartelized CIO and the still decentralized A. F. of L.

III

The Taft-Hartley Act dismantles this monolithic pyramid, and requires unions to operate again as free associations.

The right to work is restored as an individual right, which no organization can take away. Workers regain the right not to join a union. It is as contrary to free association to compel a man to join the CIO as it would be to compel him to join the Mormon Church.

Unions can no longer control nonunion men through the closed shop. When unions were tiny oases in a vast area of nonunion firms the closed shop was a natural defense. The right of the dissenter to work was then protected by the unorganized firms. When unions cover a whole industry or locality the closed shop means that the worker is subordinated to a collective power.

Closed shops have permitted union officials to punish a member for dissent by depriving him of his job. That is as severe a punishment as the courts impose on some convicted criminals. The forcible collection of dues from all workers is also now ended.

Without the power to compel outsiders to join, to tax all workers, or to punish dissent in the union, labor officials again become answerable to unionists. Unscrupulous leaders can no longer build a union hierarchy and turn it into political power. Nor can officials now launch class warfare strikes to which their membership is opposed.

Officials are also compelled to report what they do with joint funds. It would have been better if the new law had required financial reports to union members only, for the insistence upon reports to Government is a survival of the Wagner Act philosophy. It is none of Government's business what unions do with their money, within the law.

Shorn of its absolute powers, no union hierarchy can so readily dominate local and national unions. Communist opposition to the new act is naturally intense, because the Communists are the chief losers. Lacking the powers given them by the Wagner Act, the demonstrated Communist ability to exploit American unions has been sharply reduced.

Even in the clause requiring union officials to sign a statement that they are not Communists, the Taft-Hartley Act keeps strictly to the principle of free association. Our objection to the Communists is not because of their opinions. It is because they use force and fraud to promote their opinions. No union is penalized by this requirement for a sworn statement. But it does facilitate the penalty of perjury for Communist leaders who pretend not to be Communist.

IV

For Congress to have untangled much of the spider web of Government control over unions and to have restored the lost freedom of the worker, is a great achievement in constructive political action. But the Taft-Hartley Act does not settle the underlying question. American unions must still choose whether they wish to be free associations or wards of the State. It must be realized that whenever unions are dependent on Government, police powers will be used by Government to prohibit strikes, secure injunctions, and impose compulsory labor.

Labor under the New Deal made as little lasting gain as the German workers under the Weimar Republic. The vitality was then sucked out of German unions by government benefits. Union leaders had nothing to give the workers. The unions lost inner strength. It was not Hitler but Weimar that turned German labor into a pillar of stone. When Hitler came in, he had only, as Stolper said, to throw a switch.

The crisis of our time turns on whether individuals can remain free of state power, keeping their own voluntary, citizen-managed associations, or whether these tools of freedom can be captured by the state, leaving the individual powerless. Obviously free associations do not function perfectly. But our real hope is to strengthen free organizations, and increase the power of the participants in each.

The ascent to freedom was hard but the descent is easy. Once free associations in labor, in industry, in medicine, in education, are bound to Government, resistance to the executive power quickly becomes hopeless, and the road is open to totalitarianism.

The storm center of this millennial crisis is in the labor unions. Workers gained the most from the shift to free association, and they will lose most from a shift to State control. But they are still tempted by the siren song of the welfare state.

If American workers want freedom they will not let their unions be recaptured by the state. And if they win the fight for freedom for themselves they may well have won the decisive battle for the rest of us.

Taft-Hartley Labor Bill

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 8, 1947

Mr. HAND. Mr. Speaker, under leave to extend by remarks, the Vineland Times Journal has recently printed an excellent editorial on the Taft-Hartley labor bill, which I am inserting in the RECORD as a matter of interest to the Members of the House.

The editorial follows:

TAFT-HARTLEY LABOR LAW

The Senate adoption of the Taft-Hartley labor law, over the determined effort of President Truman to kill the bill via the veto, showed both Houses of Congress at wide variance with the Chief Executive.

The most disturbing aspect of this new law, which revises the Wagner Act, is that it must be enforced by an executive department which has stated over and over again its hostility to every part of it, which has claimed that it is unworkable and that it will cause harm to the country at a critical time.

President Truman took the same line as the national labor leaders in offering no help whatever in the deliberations in congressional committee or in floor debate—the line being that no change should be made in the Wagner Act. The national labor leaders asserted the Taft-Hartley bill is a "slave labor bill," which, of course, it is not. It is evident that this line did more than anything else to defeat the veto, and even the personal effort of President Truman in talking to the country over the head of Congress and calling in a group of legislators just prior to the Senate vote, failed of its purpose.

The evidence points to the conclusion that Truman's course was as much politically inspired as it was a sincere effort at national leadership. A majority of Democrats in both Houses were in disagreement with him on the bill. His own actions in the railroad and mine strikes were proof enough that he believed some changes in the basic labor laws were necessary, yet he completely reversed himself in the present instance.

The first test for Truman will come when he appoints two new members to the National Labor Relations Board and a General Counsel for the NLRB. It will not do the country any good if the appointees are hostile to the law, which largely removes the administrative authority of the NLRB, gives it a status of a legal court through the appointment of a General Counsel, increases the membership from three to five, and ups the salaries of members from $10,000 to $12,000 a year.

The Taft-Hartley law, officially labeled the Labor-Management Relations Act, 1947, provides for outlawing the closed shop, regulation of the union shop, suspends rights of unions with Communist officers, requires registration of pertinent data such as financial statements and denies recognition of foremen's unions under the law, although it does not bar such unions.

The law replaces the Federal Conciliation Service with a new Federal Mediation Service within the Department of Labor; sets up emergency machinery for handling strikes which paralyze the Nation's health or safety; regulates welfare funds and the check-off system, bars strikes by Government employees, and sets up a joint congressional committee to observe the workings of the new law.

Opponents of the Taft-Hartley law contended that it would not serve to bring about more peaceful labor-management relations, and in fact would only cause greater dissension. More conservative elements were of the opinion that it would result in greater confusion, as recourse to the courts would be more frequent to test the law's provisions. More radical elements denounced the law as striking at the heart of organized labor, as the first step toward destruction of labor unions, and as a step toward fascism and reaction.

That Congress is itself not certain of the workings of the law is demonstrated in the provision for a joint congressional committee whose task it will be to observe the actual workings of the law and to recommend changes to the Congress as time goes on.

The law starts on its course very inauspiciously, and will be handicapped by the fact that in its making there was no meeting of minds between Members of Congress on the one hand and the executive department and national labor leaders on the other.

MAX LEUCHTER.

Assistance Needed for Our Aged Citizens

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. McGREGOR. Mr. Speaker, day after day we are appropriating and sending American taxpayers' money to help people of Europe, some of whom not many months ago were killing our American boys and girls. Yet, when we ask for a more adequate program to take care of our own aged people—a group of loyal Americans—we find that our program is seemingly blocked. I certainly would like to know why and I think the American people want to know why.

I contend, Mr. Speaker, it is the responsibility of our Federal Government to help attain security for our people, and immediate action should be taken to definitely establish this program.

Does This Situation Make for Fair Competition Between the Railroads and the Air Lines?

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. VAN ZANDT. Mr. Speaker, recently the following news dispatch by the Associated Press appeared in newspapers throughout the Nation:

SAFETY DEVICES FOR RAIL LINES—ICC ORDERS PLACING OF AUTOMATIC SIGNALS ON FAST RUNS

WASHINGTON.—The Interstate Commerce Commission Wednesday ordered railroads to install automatic safety devices on 45,000 miles of track over which trains are run beyond certain speed limits.

The order resulted from an investigation instituted by the ICC into train accidents and their relation to scheduled speed of passenger and freight trains.

The Commission said the devices should be installed on trackage where freight trains are operated at 50 miles an hour or more or passenger trains at speeds of 60 miles an hour or more.

The order provides for the installation of automatic train-stop or train-control or automatic cab signals on 27,156 miles of track and the installation of manual or automatic block systems on 18,586 miles of track.

While the above news article was being widely circulated the necessity for air safety was becoming more acute due to air-line accidents that aroused the American people.

According to an article by Albert Douglas in the Wall Street Journal of June 19, there is quite a squabble now in progress between the Civil Aeronautics Authority, the air lines and the armed forces on the subject of air-safety equipment. All agree something must be done in the way of providing new and better safety devices, but what suits one group does not fit with the ideas of the other.

And—it says here—there is another, perhaps greater problem—who will foot the bills?

The CAA complains it cannot get from Congress the millions of dollars needed for ground installations alone. To date the CAA has built 10 very high-frequency omnidirectional ranges—which, coupled with air-borne radar, tells a pilot where he is—and hopes to build 500 of them by the end of 1948 if Congress provides the money. Nobody, so the story goes, has an answer to how costs shall be divided between taxpayer and air line. However, if past performance is a criteria, the answer to that one is obvious. The taxpayer will pay.

At a meeting of airport users held in Washington May 19 and 20, under the auspices of the National Aeronautic Association, Robert Fenton Craig, head of the department of commercial aviation, University of Southern California, said that the national airways and airport program from 1920 to date represented in Federal expenditures approximately $1,160,000,000. The taxpayers, he said, had paid the bill, and the States, counties, and municipalities had shouldered their share of the costs of airport installations as their contribution to the growth of this fine new industry. Mr. Craig said that total expenditures for airports from 1925 to 1944 were estimated loosely at $1,027,159,416, of which Federal funds accounted for $740,705,000, State sources provided $10,155,000, municipalities $192,950,000, and commercial and private capital $83,349,000.

At the same gathering, Theodore P. Wright, Civil Aeronautics Administrator, told the airport users present that the airport-building program for 1948 was uncertain because of budget conditions; adding that 2,550 new ports at a cost of $378,900,000 in sponsored and Federal funds would be required to make airport programs meet aeronautical needs. Under the Federal Airport Act passed in 1946, said Mr. Wright, funds had been allocated to more than 800 cities and towns for construction or improvement of airports at a cost of approximately $40,000,000 in Federal funds. A total of 4,431 airports at a total estimated cost of $985,800,000 must be improved or added to the airport system to meet anticipated future needs of air commerce, he said.

In contrast to this national air-transportation policy, let us take a look at our national railroad transportation policy.

As a step toward improving the excellent safety record of the Nation's railroads, the Interstate Commerce Commission this month isued an order requiring the roads to install additional signaling devices on approximately 45,742 miles of track. And they were given until December 31, 1952, to complete the job.

Unlike the CAA, the ICC did not complain that they could not get money from Congress to do the job. There is no question of who will pay. As in the past, it will be the railroads themselves who foot the bill. The taxpayers can relax on that one.

Railroads were ordered by the Commission to install automatic or manual block-signal systems on lines over which any passenger train is operated at a speed of 60 miles per hour or more or any freight train is operated at a speed of 50 miles per hour or more, and automatic train-stop or train-control systems or automatic cab signal systems on lines over which any train is operated at a speed of 80 miles per hour or more. The Commission's report stated that the block-signaling phase of the order will affect 18,586.5 miles of passenger track and a relatively small additional mileage over which passenger trains are not operated at speeds of 60 miles per hour or more but freight trains are operated at 50 miles per hour or more; the requirement with respect to train-control or cab signals will affect 27,156.3 miles of track.

The Commission itself recognized that the cost of such installations would not be insignificant. Averages of estimates before that body indicated that automatic block signals cost approximately $6,000 per mile of road for single-track lines and $4,000 per mile of track for multiple-track lines. The cost of intermittent inductive train-control was put at $400 to $700 per mile of track in addition to the cost of the block signals, plus $2,000 to $2,300 per locomotive. The only estimate on cab signals was that of the Pennsylvania, which put the cost, in addition to the cost of automatic block signals, at $5,000 per mile of track for single-track lines and $4,000 per mile of track for multiple-track lines, plus $2,260 per locomotive.

It is impossible to say just how much this order will cost the railroads by the time it has been complied with. However, a little simple multiplication of miles of track, times the cost per mile, plus additional costs for locomotive installations will give you a figure that is in the proximity of $300,000,000. The railroads, whose net income for the entire year 1946 was $288,534,467, will have to dig up that $300,000,000.

Does this situation make for fair competition? If not so intended, will it then strengthen our great national transportation system? Could it be that

our need for an over-all national transportation policy based on equality is greater today than ever before?

What is the import of past safety records that bring us to this disparity of treatment toward so-called private enterprise?

According to figures of the ICC and the Civil Aeronautics Board, the passenger fatality rate on railroads, even including persons killed in getting on and off trains, or falling from trains, as well as those killed in collisions, derailments and other train accidents, was 0.16 for each 100,000,000 miles traveled in 1945. The fatality rate on scheduled domestic air lines in the same year was 2.17, or more than 13 times as high. In the 3-year period 1943–45, the average annual number of passenger fatalities on the railroads was 0.25 per 100,000,000 miles traveled and on the air lines 1.97, or 8 times as many. In the year 1946, the latest for which figures are available, the rate of passenger fatalities on air lines was 7 times as high as on railroads.

This is not the whole story. Railroads work at this safety business every day in the year, with every dollar they can muster. They are buying all the new rail that can be produced today. It is more than four times as resistant to breakage in service as was the rail of two decades ago. And every year, as a double check, electric or magnetic detector cars inspect approximately 200,000 miles of track, locating and marking hidden defects which might later cause breaks. And even now, automatic signal systems are being installed and extended with such speed that manufacturers of the signal equipment cannot begin to keep up with the railroad's demands. The automatic features of these signal systems already installed represent the most up-to-date traffic control in the world of transportation. And every part is installed, paid for, maintained, and operated by the railroads.

If there is any logical connection between the past performance of the railroads, their present improvement programs, their future plans, and the inequitable treatment they are receiving in matters of transportation policy—it would appear that there is a great penalty placed on progress.

The statement in the Interstate Commerce Act of the national policy with respect to transportation cannot be misinterpreted. Its essential point is that all forms of transportation shall be given a fair and equal chance to do that part of the transportation task which it can do best—in other words, equal treatment and equal opportunity.

Experience in two world wars has further bolstered the old American premise that essential transportation service is best performed by privately financed, privately operated companies engaged in the transportation business on a self-supporting, tax-paying basis. The railroads were built on this basis and are so operated today. If they are to continue to provide adequate service in peace and war, there must be established soon a public policy with respect to transportation based on the principles of equality set forth by Congress under the Interstate Commerce Act. Such a policy will enable each carrier to accomplish its mission of furnishing this Nation with the most adequate and economical transportation it has ever possessed.

Fascism in Action

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 8, 1947

Mr. McDONOUGH. Mr. Speaker, I favor the passage of House Resolution 83, which will make Fascism in Action a House document. In view of the recent action we took when we approved an appropriation to publish Communism in Action, I think the public is entitled to a comprehensive review on both of these important subjects. The people in the United States do not agree with either of these extreme forms of government or philosophies. We should acquaint the public with the dangers of both communism and fascism. There is no place in the United States for either. We are a republic as declared in our Constitution. We believe in the dignity of the individual. We believe he was created with certain inalienable rights, and our form of government here in the United States is designed to protect and preserve these rights.

Our citizens should be fully informed of the dangers of the totalitarianism of communism and fascism, and their philosophies of subordinating man to the state, and denying his individual rights. The House should adopt this resolution, and if it does not completely and comprehensively cover the subject it should be revised from time to time. It should be given the widest circulation in the same manner as we circulated Communism in Action.

I urge the House to approve House Resolution 83.

In Commemoration of the Fiftieth Anniversary of the Tragic Commencement and Triumphal Conclusion of the War With Spain—A Speech by Mr. Tony Siminoff

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 8, 1947

Mr. GEARHART. Mr. Speaker, it was with pleasure and gratitude that I learned that my good friend, Mr. Tony Siminoff, a widely and favorably known veteran of the Spanish-American War and an outstanding citizen and publicist of Washington and Los Angeles, had in a forceful speech which he delivered to a gathering of veterans of all wars vigorously endorsed the measures which I recently introduced to commemorate the fiftieth anniversary of the tragic commencement and triumphal conclusion of the War with Spain, one, H. R. 3396, to authorize the issuance of a commemorative postage stamp, and, the other, H. R. 3397, to direct the minting of a souvenir 50-cent piece of appropriate design.

As Mr. Siminoff's remarks contain much not only of passing interest but of historical importance, I am constrained to offer the text of his address for inclusion in the CONGRESSIONAL RECORD, for, indeed, he should have a wider audience than the one that gathered about him on the occasion to which I have made reference.

Mr. Speaker, the address of Mr. Tony Siminoff to which I have alluded, is the following:

SOME OF THE HIGH LIGHTS OF OUR WAR WITH SPAIN IN 1898 THAT NOW BELONG TO HISTORY

My fellow citizens, it is well that the people of America know some of the high lights of our war with Spain in 1898. As a prelude to discussing its decisive character, permit me to briefly review the various wars in which this Nation has been engaged in order that the far-reaching consequences of the war with Spain may be properly evaluated.

Our first war was the War of the Revolution, which was fought by the Colonial farmers and the British troops, aided by Hessian mercenaries. Despite this bitter opposition the Colonists succeeded in accomplishing their objectives, successfully setting up our present form of Government. For this they have the undying gratitude of the American people.

The next war was fought in 1812. That war was fought largely upon the high seas and in the South. Following this great struggle came the purchase of the Louisiana Territory, which, when added to the territories of our young Republic, almost doubled its landed holdings. That was purely a continental affair since its effects were not felt outside this hemisphere for years to come.

The next war was that of 1847 known as the Mexican War. That, too was a continental affair, a military task which was quickly and most effectively accomplished to the greater glory of our fastly growing country. The Mexican War did not last long. In its larger aspects, it can be said that it resulted in the acquisition of California and a number of other Southwestern States, adding new stars to our glorious constellation.

The next war was the War Between the States, better known as the Civil War, fought during the years of 1861 and 1865. All of its major battles, as well as its skirmishes, were fought east of the Rocky Mountains, and that, too, was of but hemispheric effect, for the time being at least.

After a long struggle of nearly 4 years the war came to a close as a consequence of negotiations between the commanding generals of the two greatest armies ever assembled up to that time, Gen. U. S. Grant for the Union Army and Gen. Robert E. Lee for the Confederate Army. Though this great struggle resulted in a decisive military victory for the Northern States, the people of our country remained divided, to curse and revile each other, until our war with Spain, fought 122 years after our present form of government had been established, reunited the people of the North and the South in a common cause, healing for the first time the ever-festering wounds of the conflicts of 1861–65 and of the tragic decade which followed.

This short but brilliantly fought war smashed many old and established many new international precedents that the preceding wars did not do. I will endeavor to point to a few. It was the first time in all

history that a war was fought in such widely separated parts of the world. It was fought in the Atlantic Ocean, in the Caribbean Sea, and in the Pacific, in Cuba, Puerto Rico, and the Philippines. It was the first time in our country's history that a western power had ever sent a battle fleet into the heart of Asian waters to give battle to the foe.

On the morning of May 1, 1898, under the command of the then Commodore George Dewey, later Admiral Dewey, the American Fleet sailed into the harbor of Manila and not only gave battle to the Spanish Fleet, but there completely annihilated the sea power of Spain. From that day to this, the battle flags of the ships of Spain have remained furled, never to be seen again upon the high seas, so complete was the American triumph over its ships of war, once considered a constant threat against the commerce of all nations whose ships plied the seven seas.

In the late part of April 1898, the battleship *Oregon* picked up anchor at San Francisco Bay and proceeded to sea From the California coast, she made her way in record time around Cape Horn to join the Atlantic Fleet, then readying itself for battle. On her way, she was met by Spanish ships and she not only gave them battle and subdued them, but brought rich prizes of war into port, won in battle line. That was a stellar role our Navy played in that war.

The major land battle in the Philippines was fought on August 13, 1898. Along in the afternoon on that day, the occupation of Manila took place, followed by the surrender of the Spanish Army to the American forces. A new chapter was written in history. The American Army, gracious in victory, extended to the defeated hosts every consideration, supplying, among other things, food to our vanquished foe. On that same afternoon a guard was placed on the streets of Manila to protect the civilian population against the looting and other atrocities that generally follow in the wake of war. The organization that did the guarding of that city was the First Battalion of Eighteenth United States Infantry, an organization with long years of experience in the ways of peace as well as of war, thus demonstrating to the world that the American Army did not come as a conqueror but as a liberator, to free all the people in the islands from bigotry, tyranny and intolerance.

On the afternoon of December 15, 1898, a German battleship known as the *Helena* sailed into the harbor of Manila. The German boat passed our fleet without rendering the international courtesies or deigning to take notice of its presence, which was contrary to the established customs of the sea. When they had proceeded to a position opposite the cruiser *Olympia*, which was the flagship of our fleet, one of the guns opened fire. The German ship was immediately placed under arrest and held under durance until it was finally released following diplomatic negotiations. All of which demonstrated before an awed world that our Navy was capable of maintaining the honor and dignity of this young Republic of the west in the face of a challenge of any European power however great.

When the war with Spain was over, a conflict which spread over 4 years, if the Philippine Insurrection and the Chinese Relief Expedition are to be considered a part of it, many events of international repercussion followed in quick succession. The then President of the United States proclaimed that the commercial interests of the United States, now extended to all parts of the world, would require the shortening of the ancient sea routes. And plans for the construction of a trans-ocean canal across the Isthmus of Panama were announced. Congress approving, the construction of the Panama Canal was soon under way under the dynamic leadership of the very great President of that day, then familiarly known to the American people who idolized him as Colonel Teddy Roosevelt, colorful leader of the famous Rough Riders of the war of 1898. The great American who actually built the canal was Maj. Gen. George Goethals, an engineering officer of the war of 1898. The great American who freed the Caribbean from the ancient scourges of typhoid, malaria, and yellow fever was none other than Maj. Walter Reed of the Medical Corps of that same war, the war of 1898. Their grand service to their country was matched only by the heroic hospital men, numbering into thousands, who cheerfully offered themselves as guinea pigs to help in the scientific fight against these terrible tropical diseases which all but compelled the abandonment of the project.

The events which precipitated the war with Spain were in a nutshell these: On February 15, 1898, there lay in the harbor of Habana, Cuba, the U. S. S. battleship *Maine*, there on a special mission by the order of the President of the United States. On that particular night an explosion took place in which 266 brave American officers and enlisted men of our Navy went down to an untimely grave in the waters of the harbor of Habana. A shocked and enraged Nation arose as a single man to demand vengeance and vindication of that valiant crew that had died so gloriously in the service of the Republic. The people were so completely united and feeling was running so high that a purely volunteer fighting force was raised almost overnight. This is the only instance on record where a war was fought from beginning to end between two great powers in which every man engaged, soldier, sailor, and marine was a volunteer. This is the highest tribute that can be said to the men who took part in that war, to those now living or to our honored dead. For every man accepted ten or more were rejected. The aroused spirit of America vowed that this type of atrocity must not happen again. A determined America demanded that our ships in time of peace must be safe in any harbor the world over, respected wherever they might be.

It is also well to note that these volunteers who fought a war without the aid of draftees received little or no pay for their services from their government, in defense of which they offered their all. The pay in those days was only $13 a month for a private. The Congress later increased it 20 percent, which brought it to $15.60. Out of this meager stipend these heroic fighting men of the Regular Establishment, our Regular Army, donated 12½ cents each month towards the maintenance of the National Soldiers' Home, located in Washington, D. C. The Government made no provisions for any special hospitalization for these veterans after the war, gave no bonuses, provided no educational program. Though war was declared April 21, 1898, the first recognition of their valiant service to their country in its time of peril that these veterans received was on June 20, 1920, when, 22 years after the successful conclusion of the war, a pension of $12 per month for the ordinary soldier and seaman and a $30 allowance for the totally disabled were provided. Many of the veterans of the war with Spain did not avail themselves of this opportunity, but instead waited for many years before making applications for the $12 pension which they had so richly earned. That is why we style ourselves as veterans of a war of most unusual character, this because of the manner in which the war with Spain was fought, the vast territories acquired and the many other incidents so unusual and unprecedented.

Nineteen years later we were called upon to fight another war, the war of 1917 and 1918. In that war there were 100 divisions engaged. It is most interesting to note that each of these divisions was commanded by a major general, and each major general was a veteran of the war of 1898, including the commanding general of all American armies, Gen. John J. Pershing, who served as a cavalry officer in Cuba and the Philippines.

These great men made ready this Nation for greater things to come. America is greater today because of them.

At the present time, there are two bills before Congress, one known as H. R. 3396 and the other as H. R. 3397. The first calls for the issuance of a postage stamp to commemorate the 50th anniversary of our War with Spain, and, the second one, the coinage of a 50-cent piece to commerate the same event. These meritorious proposals are sponsored by Representative BERTRAND W. GEARHART of the Ninth District of California, a veteran of World War I who is, incidentally, an honorary life member of General Jacob H. Smith Camp of the United Spanish War Veterans of Fresno, Calif. His introduction of these most timely measures compliments every veteran of the War with Spain. His bills should be promptly passed.

It is also well to remember that today there is in the Far East, situated in the Southwest Pacific, a new and vigorous young Republic of the Philippines, a Republic of Free Men modeled after our own Republic of the United States of America, a monument to the courage and sacrifice of the intrepid veterans of 1898. The infant Republic in the Philippines, the only Christian race in the Orient, is the direct consequence of the hard fighting which was dedicated and consecrated by the letting of the blood of American soldiers and their native Filipino comrades in arms.

The great credit for the establishment of this young Republic belongs to these veterans. Let us all hope that some day this fine camaraderie of these two great Republics will be an effective contributing factor in reestablishing peace and good will to all of the people of this sorely distracted world. That it will, I am confident.

Most Rev. John J. Wright, D. D.

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 8, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the complete text of the sermon preached by Rev. Gerald Groveland Walsh, S. J., editor of Thought, and former instructor of Bishop Wright when he was a student at the Gregorian University in Rome, at the elevation ceremonies of His Excellency, Most Rev. John J. Wright, D. D., auxiliary bishop of Boston.

"To me the least of all the saints is given this grace to preach among the gentiles the unsearchable riches of Christ. And to enlighten all men that they may see * * * that the manifold wisdom of God may be made known * * * through the church." (Ephesians 3: 8–10.)

In the solemn moments of this splendid liturgy memories are being made that we shall take with us to the grave—memories that will remain with us even in the blessedness of our immortal life.

In the first place, we shall never forget that the day chosen for his consecration by Bishop Wright was the day chosen by the church for the commemoration of St. Paul, the vessel of election, the teacher of the nation, the doctor of grace, the passionate lover of our Lord, the "least of all the saints" (as he called himself) to whom was given the grace to preach "the unsearchable riches of Christ."

Whenever we repeat the new bishop's magnificent motto, Resonare Christum, to make the name of Christ resound around the world, it will be impossible for us not to link in our minds this motto with the parallel motto of St. Paul, Investigabiles divitias Christi praedicare.

This link with St. Paul will be but the first of many memories. Who of us, for example, will ever forget that hushed moment, already sculptured indelibly in our memory, when Archbishop Cushing and his assistant bishops placed their hands on the head of the bishop-elect and uttered the sacramental words, Accipe Spiritum Sanctum, receive the holy spirit? For in that moment we realized that God's spirit of light and love came into Boston Cathedral as truly as He came into the upper room, in the form of parted tongues as it were of fire, on the first Pentecost Sunday. We realized, in that moment, that a flame of sacerdotal grace broke into a very blaze of supernatural light, into the fullness of the priestly character which makes a new successor of the Apostles—an authoritative teacher of the nations.

There is another moment still to come that will remain no less indelibly in our memries—the moment when we shall watch the mitre being placed on the new bishop's brow. We shall never forget that scene; and still less shall we forget the symbolism of that scene. For, in a sense, the mitre is a symbol of a Doctorate in Divinity conferred by Christ Himself, the very Light of the World. The Church's prayer will remind us of the miracle that made the face of Moses, after he had spoken with God, brighten with a double flame of clarity and truth. For of that double flame the pointed peaks of the bishop's mitre are a symbol. From now on, it will be impossible for us ever to see the new bishop in his mitre without remembering that he too, like another Moses, has become, by the grace of God, awesome to all enemies of truth—terribilis adversariis veritatis.

And yet I think that, more than all else, we shall remember the exultant moment when our beloved archbishop intones the Te Deum. Today, more than ever before, we shall realize that the Te Deum is the noblest song that man has ever sung since David set his harp aside. We shall never forget our heartfelt share in the singing of that song. "We praise Thee, O God; we hail Thee as our Lord; all earth and heaven, the seraphim and cherubim, with unending song cry out: Holy, holy, holy * * * Thou, O Christ, art king of glory * * * Save Thy people, Lord * * * In Thee, O Lord, is my hope; never, never shall I be confounded."

There is not one of us who will not join in filling this great cathedral with loud echoes from the very depths of our souls. We shall want to make the Bishop's motto come to life—Resonare Christum, to sing with all our hearts the name of Christ, to make the name of Christ re-echo in our hearts and minds and souls.

The hearts even of those of us in this great throng who count ourselves among the last and the least of the Bishop's friends will fill to overflowing in that moment of thanksgiving and of prayer. And then there are those older friends who have known John Wright from childhood. There are those who sat with him in the same high school, college, and seminary classrooms, in Boston and in Rome—those who can recall the brilliant mind and golden tongue of the scholar and debater who was, even then, terrible to the enemies of truth, who was already marked out as an apostle of clarity and truth. And what of those who were his teachers and are here today—those who may humbly claim some little share in the shaping of his conscience, intelligence and taste, in the fashioning of his faith, in the fostering—under God—of his priestly vocation?

And then there are, thank God, those two dear souls whose hearts will ring forever with the echoes of today's Te Deum—that strong father and sweet mother who gave, and still give, their greatest gift to God, who poured out with the reckless generosity of St. Mary of Bethany, from the vase of their single parental heart, this precious perfume to cool the burning feet of Jesus Christ. Their tears of joy will tell us more than words the meaning of the motto, Resonare Christum—to sing the name of Christ with all one's heart and soul.

Leading us all in that exultant song will be the dear father and friend, counselor and consecrator, who is to intone the opening words Te Deum laudamus. Our beloved Archbishop Cushing, whose single and undiluted passion it has ever been that all the world may know Thee—ut cognoscant Te—Thee, the one true God and Jesus Christ whom Thou hast sent—how shall He not rejoice that today another mitered apostle of divine clarity and truth has been given to help him in the task of teaching man's muddled and troubled world God's way and truth and life?

And yet in no heart here will the great song of Thanksgiving and petition echo quite so deeply as in the heart of Bishop Wright himself. More than to all others God will give him the grace to sing the "inexhaustible riches of Christ"—resonare Christum. The Te Deum that he will sing will fill his apostolic soul, his scholar's mind, his human—and no less humanistic—heart, with a flood of prayer and thought and joy and resolution.

And thereby hangs a tale—a tale that must be told however briefly. It is the tale that links the bishop's motto, "Resonare Christum," with the author of the Te Deum as we shall hear it sung today. It is the story of St. Paulinus of Nola and Nicetas of Remesiana.

Paulinus and Nicetas lived in the fourth century, in the Golden Age of Christian humanism, in the age of Basil and Augustine, of Ambrose and John Chrysostom, of Gregory of Nyssa and Gregory of Nazianzen, and of a score of other bishops and doctors of the church who managed somewhow, by the gifts and grace of God, to pray like mystics and toil like saints, to think like philosophers and write like scholars, to dream like poets and yet to make decisions with the energy of statesmen. God gave lavishly of His supernatural graces to the bishops of that age; but there was something magnificent too, in the way these saints, merely as men, nurtured their human nature. They paved the way, as it were, for the supernatural inspirations of the Holy Spirit by a Roman and stoic discipline of their wills. They flung every door wide open to the supernatural illuminations of the word of God by turning the keys in the last recesses of their minds. They adorned what was to be the supernatural temple of the Blessed Trinity by the human carpets and tapestries of feeling and of fancy. They kept their whole beings alive and alert by the minstrelsy of song.

In a word, Paulinus and Nicetas were bishops who believed that it is good and pleasing to God to be not only saints but likewise poets, scholars, friends. Paulinus lived in Nola in Campania, not far from Naples on the Via Latina, one of the great high roads of Roman culture and civilization. Nicetas, his friend, was a hard-working, apostolic bishop living amid the snowclad mountains of what is now the wild and troubled land of Yugoslavia, sacred in our consciousness today as the scene of the persecution of the heoric Archbishop Stepinac. Periodically he came to Rome to visit the tomb of St. Peter. There with Paulinus he would kneel and pray; and afterward the two friends would rest and jest, as only saints and Christian humanists know how, under the shadow of the basilica that Paulinus had built in Nola. It was during these hours of holy yet human friendship that Nicetas would hum the melody of a new hymn, the Te Deum. And when at last he came to leave; to face once more the hard task of bending the wild wills of barbarians to the sweet yoke of Christ's ways and truth and life, Paulinus would send along a farewell song written in the lovely Sapphic meter of a Latin ode.

One of these farewell songs remains; and from this song Bishop Wright has taken his splendid motto, resonare Christum. "Go if you must," Paulinus pleads, "but leave your heart behind you." I memor nostri remaneque vadens. It is a line in which you can feel the careful felicity and playful humanity of Horace himself. The poet bishop pictures the long and dangerous voyage of his friends; he prays that our Lord may clear the skies and calm the sea; he imagines that the rough sailors of the Aegean, listening to Nicetas singing the Te Deum, will want to abandon their own rollicking songs of the sea; then he turns to the epic greatness of the apostle working among barbarians whose heads and hearts are harder than the ice on their mountain tops. Nevertheless, he sings, it is these barbarians who will learn to sing with all their hearts the name of Jesus Christ, Barbari discunt resonare Christum.

That is the lovely line from which Bishop Wright has taken his episcopal motto. Like that other familiar motto, ut cognoscant Te, it is the motto of a bishop in love with clarity and truth. It is the motto of a man who, like Moses, has talked with God and has come away from meditation with his heart and head aflame. It is the motto of a bishop who understood the symbolic meaning of his mitre. It is the motto of a bishop who has not only received but has been filled with the Holy Spirit, who has heard in his heart a sound from heaven, as of a mighty wind coming, who has felt in his soul a parted tongue as it were of fire, who will want to speak, as the Apostles on the first Pentecost spoke, in such wise that all can hear, each in his own tongue, in a language each can understand, the wonderful works of God.

It is, I think, this last pentecostal and pauline grace that Bishop Wright has particularly prayed for—the grace to speak a language that each can understand, that the modern world with its babel of tongue can understand. Like St. Paul and like St. Paulinus he wants so to sing the name of Christ that the song will find an echo in the hearts and minds even of our non-Catholic contemporaries.

In taking a motto that has in its very sound an overtone of the spacious spirit of the age of Paulinus, he is reminding us that the Catholic apostolate for Christ particularly in this capital of American culture, must remain faithful to the tradition of Catholic humanism, in which sanctity and song, supernatural life and human learning walk hand in hand. It is, in St. Paul's phrase, the "manifold wisdom of God" that He wants to "be made known * * * through the church." He prays today, and he asks us all to pray, that to him will be "given the grace to preach among the gentiles the unsearchable riches of Christ." That, I feel, is the meaning and the motive of his motto, Resonare Christum.

Displaced Persons

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. FISHER. Mr. Speaker, under leave to extend my remarks in the REC-

ORD, I include the following letter printed in the Washington Times-Herald July 8, 1947, written by Marvin Klemme:

I have just seen the moving picture, Passport to Nowhere. In fact, I was so interested in it that I went back to see it the second time.

I want to say that, in my opinion, this is the biggest piece of propaganda from the screen since Mission to Moscow.

I have just returned from Germany myself after spending over 2 years with UNRRA looking after these very same displaced persons. At least 80 percent of this film is misrepresentation in that it will lead an uninformed person to believe something that is not true.

These people are not wandering around over the country as this picture shows. They are living in large camps mostly, but some are living in requisitioned Germans' hotels, resorts, and private homes.

Their living standard is considerably above that of the Germans because, in addition to receiving the German ration scale, they also received additional food, clothing and amenity supplies through UNRRA and other agencies.

If they do not keep clean it is their own fault. I will say though that in the majority of the camps they do keep clean and that this picture is a misrepresentation.

The children shown digging in garbage dumps are more likely to be German or Italian children for there is absolutely no excuse for DP children to be doing this.

In order to get Congress to pass the Stratton immigration bill a lot of phony information is going out. This movie, as well as miscellaneous printed propaganda, would lead the American public to believe that the 850,000 DP's in Germany were all victims of Nazi slave labor and concentration camps.

This is simply not true.

The statement that about 80 percent of these people were in Germany when the war ended is very misleading. The 175,000 Balts (Estonians, Latvians, and Lithuanians) are almost entirely refugees from Soviet Russia, although they did arrive in Germany before the war ended. This is largely true of the Ukrainians and the more educated classes of the Poles.

The Yugoslavs are known as King Peter Yugoslavs and are afraid to go home as long as Tito has control of their country.

So far as the almost 200,000 Jews are concerned, probably less than 30,000 of them were in Germany at the time the war ended. One of the UNRRA officials at Belsen, where there are about 11,000 Jews, told me that they had been unable to find more than 100 who were there when the war ended.

The great majority of these people came in from Poland, Russia, and other of the central and southeastern European countries. They were all on their way, or so they thought, to Palestine, and with the help of Russia.

It may interest our Congress to know that large sums of nice new German paper money, apparently run off by the Russians with those plates that we loaned them, were found in the possession of these people.

The British blockade of this "second exodus to Palestine" left most of them stranded in the United States zone. Our military people want to get rid of them, and they don't care particularly where they go.

Checks indicate that well over 90 percent of them want to go to Palestine. The United States is second or third choice with them and if they are permitted to come over here they will still want to go to Palestine.

If I were a Member of the United States Congress I would certainly vote against the Stratton bill as it is now drawn up. I would probably vote for it if it were amended somewhat as follows:

1. To take a reasonable number of orphans or unaccompanied children.

Actually the number available will be small because children over there are in demand and most of those countries are competing with each other to prove claim to them.

2. Blood relatives—fathers, mothers, sons, daughters, brothers, and sisters of people who are now citizens of the United States.

3. A reasonable number of agricultural and forestry workers to take the place of so many of our young people who are flocking to the cities because farm life is too monotonous for them.

It appears to me that if this concession could be made and considering the fact that we have already taken a couple of hundred thousand of these people in one form or another, as well as furnishing large sums for relief, that we will have done more than our share.

There is a limit to what any country can do.

MARVIN KLEMME,
Formerly Forestry and Agriculturist Adviser with UNRRA in Germany.

Radio Address to My Constituents

EXTENSION OF REMARKS
OF
HON. EDWIN ARTHUR HALL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. EDWIN ARTHUR HALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio address delivered by me over Station WNBF on July 5, 1947:

Dear friends of the Triple Cities, and my congressional district, another brilliant week-end is at hand with several important speaking engagements in our patriotic area to be met.

The Fourth of July always presents an opportunity to emphasize Americanism. This year we must be ready not only to stress Americanism but to champion it. All we have to do is to look at those who hate our representative form of government and we realize how serious the challenge to us is becoming.

You will find that those who are against America are against just about everything that is worthwhile in this life. They are likewise against religion; they do not believe in any god. They are against progress; they do not want to see industrial or domestic peace. They are against a decent standard of living for the American people. Lastly, they are against tolerance and freedom of the individual.

These enemies much prefer to see chaos and disorder, poverty and unhappiness, misery and want. They would rather gloat over an American shambles than to yield one degree of their hatred.

They would pull down the temple on their own heads if, by so doing, they could destroy our liberty and justice.

Our duty, of course, is to fight back. We must resist to the limit all suggestions of discrimination of race or religion. We must blot out intolerance, regardless of where it raises its murderous head.

All we have to do here in America is to abide by the Golden Rule, which says, "Do unto others as you would like them to do unto you." That is the true essence of Americanism, and that is why our kind of living will triumph over all the rest.

There has been a great to-do recently in Binghamton about the elimination of certain candidates for public office because of their apparent failure to present adequate and proper designating petitions. The technicalities of the various laws on this subject of filing petitions are many and enough to baffle even persons most familiar with them.

Personally, I believe our laws governing such technicalities ought to be revised so everybody can understand them. After all, no one should be deprived of seeking public office, at least if he or she is a citizen in good standing.

In the past few years, I have read of much agitation on the part of civic groups and community leaders everywhere calling for better people to aspire to public office. The only way you will obtain better candidates is to get more candidates to seek election.

The solution, then, is to encourage, rather than discourage, those who are energetic enough to aspire to office. If they are to be barred by laws which act as a hindrance rather than an incentive to letting people run for office, then something is wrong. I say, make the American election system work by simplifying the procedure a candidate must go through to get his name on the ballot. That is the fair, impartial way and should be carried out. It is not the case of anybody being at fault. The law is merely a little complicated.

To you veterans who responded so overwhelmingly when I asked your views about terminal-leave bonds, I extend thanks. Your letters are a tower of strength to me.

Of course, I knew all along what you were thinking. I realize that 99 percent of you want those bonds paid off in cash. But I wanted to show the wiseacres that you aren't kidding.

Few will argue that the enlisted men of World War II received the worst deal of their military service when they were denied cash for the terminal leave in the first place. Everybody knows that what policy is fair for officers is fair for buck privates.

The officers got their terminal leave in cash. Why shouldn't the GI?

But there are some, unfortunately, who look down upon the common soldier. They think he is dirt under their feet. That is, until a war comes.

Then the sky's the limit. Nothing is too good for him. We'll pay him double time and give him the GI bill of rights and a bonus besides, they cry. All this, they promise while the war lasts.

But as soon as peace comes, they settle down, put tongue in cheek and hand in pocket and forget about any promise they ever made.

I suppose the same kind of people existed in Kipling's day for you will recall the lines he wrote about the British soldier:

For it's Tommy this an' Tommy that, an' "Chuck 'im out, the brute!"
But it's "Savior of 'is country" when the guns begin to shoot.
An' it's Tommy this an' Tommy that, an' anything you please.
But Tommy ain't a bloomin' fool. You can bet that Tommy sees.

Thank you.

Facing a Practical Problem on FBI Personnel

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. HAGEN. Mr. Speaker, more and more thinking people are coming to realize that we are faced with a practical problem in dealing with one of our great

arms of national defense—the Federal Bureau of Investigation.

A few days ago the House passed a bill, H. R. 2826 and S. 715, previously approved by the Senate, which would meet this situation, but discomforting reports are afloat as to the fate of the bill at the White House. This bill has to do with improved retirement security.

Last evening the Washington Evening Star commented:

It is hard to credit reports that President Truman may veto the bill to liberalize retirement benefits for special agents of the Federal Bureau of Investigation.

Pointing to the heavy loss being suffered by the FBI whose agents are turning to private industry, the Star editorial says:

The FBI so far has had no difficulty in securing replacements, but the new men must be trained at great length and they lack the fund of information which the departing men carry with them.

It is my pleasure to introduce this measure in the House and the authors of the bill in the Senate were Senators STYLES BRIDGES, of New Hampshire, and WILLIAM LANGER, of North Dakota.

This morning, Mr. George E. Reedy, popular commentator for radio station WOL discussed this problem at length, and under unanimous consent, I submit for the consideration of my colleagues his statement on this important subject.

It follows:

A disquieting rumor has been floating through the halls of Congress for several days. It is, that President Truman may veto the recently approved bill to set up special retirement benefits, for agents of the FBI.

It is difficult to see how a veto of this bill, could be justified. For it is not a measure designed just to afford a better living, for a group of Government workers. It is a bill, to help us maintain intact, one of our most vital, defense agencies.

The legislation has been urged by both Attorney General Tom Clark, and Chief G-man, J. Edgar Hoover. They are both, frankly worried, at the high rate at which FBI men are leaving the service, to enter private industry.

A better retirement system, they believe, may be one method of slowing down this rate. Their arguments were sufficiently convincing to induce Congress, to pass the bill without a dissenting vote. No opposition could be drummed up against it.

It is not hard to find the reason that the agents leave the service in such large numbers. Their work is difficult and dangerous, and many find themselves unable to carry on, past a certain point. They are simply burned out, while still relatively young.

Coupled with that, is the fact that the FBI demands the very highest qualifications of its recruits. They must have a law degree, or be certified public accountants. Either requirement, is something that a man can meet, only at considerable expense to himself.

Inside the agency, they receive training that makes them highly valuable, to private industry. It makes them so valuable, that they are often presented with a job, paying three or four times as much, as the highest salary the FBI can offer.

Many of the agents who have left the service, say they would have turned down these offers, if they could have been guaranteed security. The money was attractive, because it offered a surety, that their families would be cared for, after they were past working age.

Up to this point, the FBI has had no difficulty securing replacements. However, each man that goes, means the loss of valuable experience. It takes several years to train the man who will take his place—several years, and at least $6,000.

The bill now on the President's desk would make it possible for special agents to retire at 50. Actually, most of them would stay in service beyond that point. The compelling inducement is that the security is there if they become unable to work.

In view of the tremendous performance turned in by the G-men, during the last war, improved security benefits is a cheap price to pay for a stable staff. We already know they are vital to the defense of our country.

Only one argument has been advanced against the bill. It is that other agencies such as the Narcotics Division or the Secret Service are entitled to similar benefits. It is said that this legislation would be discriminatory.

The argument that the other services are entitled to similar benefits, may have some merit. That is something that could be determined only by a thorough investigation. However, it is difficult to see what this has to do with the FBI bill.

The legislation is now before the President, and it is too late to amend it. Whatever happens, nothing further could be done at this session of Congress. Meanwhile, we are faced with the practical problem of maintaining the agency as a going concern.

Gratitude alone should be a sufficient reason for enacting the bill into law. There are, however, compelling arguments for those looking for practical motives for legislation. The simple truth is that we need the kind of FBI we have built up in this country.

We need an agency of efficient, highly trained men, who realize that in a democracy they must do their job without becoming a Gestapo. We have that kind of an organization now. Any legislation that will continue it, deserves the approval of all Americans.

Government Corporations

EXTENSION OF REMARKS
OF
HON. WALTER C. PLOESER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. PLOESER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement made by me before the Subcommittee on Government Corporations of the Senate Appropriations Committee:

Mr. Chairman, it is my privilege to give testimony to the committee on the subject of H. R. 3756, a House appropriation bill covering the fiscal year 1948, containing section 308, an amendment to the Government Corporation Act of 1945. This section brings under the Control Act certain mixed Government corporations. One of these is the Federal Deposit Insurance Corporation to which I address myself in particular, Mr. Chairman, due to the fact that the directors of that Corporation have passed out certain statements in an effort to lobby against this action on the part of the House of Representatives.

In one such statement which was handed to the chairman of the Banking and Currency Committee of the House, and subsequently handed to me for reply, the FDIC attempted eight arguments. I shall take these arguments as they were listed, quote them, and express my opinion on each for whatever benefit it may give in assisting this committee to approve the House action.

1. Argument of FDIC: "The Federal Deposit Insurance Corporation cannot estimate expenditures required to pay deposit insurance claims in closed insured banks. Mortality tables for banks cannot be established."

I agree that the FDIC cannot estimate expenditures required to pay deposit insurance claims in closed insured banks. The FDIC is an insurance company which insures banks' deposits. In a broader sense, it has virtually assumed the insurance of the assets of these banks. Being an insurance company, claims cost should not, and as far as our committee is concerned, would not be considered administrative expense. Claims cost should and would comprise two principal items: pure loss and claims expense. I cannot help but believe that any competent insurance company administrator would concur with this statement. The statement on the part of the directors of FDIC that mortality tables for banks cannot be established, would have no effect upon the good judgment of the Congress in appropriating for administrative expenses of the Insurance Corporation.

2. Argument of FDIC: "If deposit insurance expenditures could be estimated, they should not be made public as such action would, in effect, be predicting bank failures and thus would undermine confidence in banks."

To asume that the Congress intends to make public contemplated losses and thereby imperil the banking system of this Nation is to impute an unworthy motive to the Congress and a degree of carelessness which, in my experience, I have never witnessed. This argument is closely related to the first and I think properly answered—in the only sense that it is an argument—by my first statement.

3. Argument of FDIC: "To impose annual limitations on the Corporation's expenditures would, from the public's viewpoint, place deposit insurance on a year-to-year basis and would destroy its permanent character and impair public confidence in deposit insurance."

It is not in any sense true that congressional appropriation placing limitations on corporation expenditures for 1 year in any way or fashion imperils the permanency of the corporation's character, or would it in any degree impair public confidence in insurance. Some have assumed that this insurance corporation is a mutual. Search of the statute does not reveal any definition of mutuality, but does very clearly reveal that the liability of the Federal Government is greatly beyond that of its original capital of $150,000,000. The liability of the insured banks is limited to an annual assessment of one-twelfth of 1 percent of the average difference between total deposit liability and the total uncollected items included in such deposits. Reference is made to United States Code VII, title 12, section 264, paragraph (o) (1), (2), and paragraph (h) (1). It is somewhat difficult to define legally the limits of the liability of the Federal Government as expressed in this particular paragraph of the statute. There may be some doubt as to what the legal limit of liability is, but it may be assumed from these paragraphs that the liability is limited legally to somewhat in excess of a billion dollars. From a practical standpoint, however, there is little doubt that liability is unlimited since the public believes that the Government stands 100 percent behind these deposits. In view of this circumstance, it is very doubtful whether there should ever be a time when the Federal Government relinquishes its capital stock interest or its annual review.

To assume that an annual budget, which surely these directors made for themselves, is a year-to-year estimation of life, is to say that the Army or the Navy or the Treasury or the Interior Department has only a 1-year life; therefore, the confidence of the public

in these departments of the Federal Government is imperiled. This argument is of a somewhat careless nature. As a matter of fact, the great confidence in the FDIC by the public is due to the assumption on the part of the public that the Federal Government at least morally guarantees the Insurance Corporation's obligations. Yet the directors of the Corporation would have its status be one of governmental moral obligation and lack of fiscal review on the part of the responsible legislative branch.

4. Argument of FDIC: "Fixing budgetary limitations solely on administrative expenses would not work because the administrative expenses of the Federal Deposit Insurance Corporation are inseparably tied to direct insurance expenses."

Their fourth argument as stated was answered in my reply to their first argument.

5. Argument of FDIC: "If blanket authority should be given in an annual appropriation, there would be no point in submitting a budget."

This assumes that the Congress, if it made a blanket appropriation, would do so without reviewing the budget. This Corporation, operating free and independent of congressional review, apparently is not aware of the obligation which has been assumed by and between the appropriating authority of the Congress and various Government departments to keep faith as nearly as possible with their budget justifications.

6. Argument of FDIC: "The Corporation's expenditures do not come out of the Treasury. They are paid out of the permanent insurance fund for insuring deposits established by law into which insured banks pay assessments. None of the Government capital invested in the Corporation has ever been used. There is pending a bill to authorize repayment of Government capital to the Treasury. When the Government capital is repaid, there will be even less basis for these restrictions and controls."

The argument that the Corporation's expenditures do not come out of the Treasury, of course, is an argument which might be applied to Government corporations in the main; and if such argument was assumed good and conclusive, there would be no reason whatever for the Government Corporation Control Act of 1945, which, in turn, of course, is the sole reason for H. R. 3756—an appropriation bill. The statement has been made that none of the Government capital invested in the Government Corporation has ever been used. I do not know what is meant by this statement. If there is no need for this corporation structure, then good management on the part of the Director would have recommended its return to the Treasury. I certainly am not assuming that there is no such need. If and when the time arrives when the subscribing banks repay the Government capital invested in the Corporation and the FDIC becomes an entity owned wholly outside the Government, it would not come under the Government Corporation Control Act and should not, in my opinion. But concurrent with such a time, both legal and moral obligations of the Federal Government should clearly be defined. If either are to exist, then it becomes congressional responsibility to review fiscal control. I believe that congressional responsibility exists today and it has been the unanimous opinion of the House subcommittee; the unanimous opinion of the House Appropriations Committee; and the unanimous opinion of the House by vote in the passage of H. R. 3756.

7. Argument of FDIC: "It would take away the broad powers of the Corporation and would impair the ability of the Corporation to take prompt action in an emergency."

This statement is without foundation and is an argument drawn from the imagination entirely.

8. Argument of FDIC: "The banks have paid assessments into the fund for more than 12 years in reliance on the broad powers given to the Corporation and its ability to perform effectively the functions for which it was established. To now place it on a year-to-year basis would be a breach of confidence with the insured banks and the 90,000,000 depositors who were led to believe that the Corporation would always be in a position to pay insured deposits without restriction or delay."

The broad powers of the Corporation in its function and integrity as an insuror are not, in any fashion, imperiled by this legislation. The opposite is quite true. The confidence between the insured depositors and the Federal Government, in my opinion, would be greatly strengthened—not weakened—by this action. There have been some banks which have used the arguments handed out in the lobbying activities of the Directors of the FDIC, yet I think their fears have been stirred only by the activity of FDIC which has left obviously a false impression in some places. The public has every right to have continued confidence in the FDIC with an increased degree in its feeling of security because of the annual review by the Congress. The activity of the Directors of the FDIC need not cause any question in the mind of any depositor. It is the common custom in Government in Washington for various bureaus, departments, or even Government corporation managers to assume that they are without error. No one has the right to assume that the Directors of any Government corporation are immunized against all nature of mistake which we find so human in the rest of us.

The capital stock owned by the Federal Reserve System does not carry any voting rights in the FDIC. The capital stock owned by the Federal Government does not carry any voting rights. The three-man directorate is appointed by the President of the United States and they assume full authority without review for the operation of the Corporation under the law. The statute provides many privileges which go beyond the mere issuing of insurance and could have a controlling effect upon the very banking system of the Nation. This power is granted to three appointees of the President and these appointees say that the representatives of the people who are responsible through their tax revenues for the full liability of the insurance corporation should not review that for which they are liable. It should be stated that section 307 in H. R. 3756 does not impair the corporate contractual or loan authority of any of the Government corporations. The same is true of those corporations included in section 308.

This case is parallel to another insurance corporation and principally owned by the Federal Government which is under the control of the Government Corporation Control Act, and that is the Federal Savings and Loan Insurance Corporation. It is, furthermore, similar in its insurance aspects to the Federal Housing Administration, which is a mutual insurance corporation owned by the Federal Government. Has public confidence in either of these been breached by congressional fiscal control? And I dare say they both bear reputations equal to that of the FDIC.

The status of other Government corporations as effected by section 308 is explained by repeating what I had to say on the House floor on June 11.

Mr. Chairman, in certain provisions of this bill, part of title III, the committee, of course, recommended and sought to accomplish extension of the same congressional controls over certain mixed Government corporations as has been extended over wholly owned Government corporations, the purpose being that there is really no difference in interest. The majority stock of these corporations is owned by the Federal Government, in one case the overwhelming majority; as much as 99 percent is owned by the Federal Government; so the same rule of congressional appropriation guidance and control should apply to these corporations as would apply to one that is 100 percent owned by the Government.

In order that the RECORD might be more informative, under the same privilege to extend my remarks, I am going to include at this point in the RECORD a chart of the comparative ownership percentages of Government and other enterprises in these mixed corporations:

Ownership of capital stock in mixed-ownership Government corporations

FEDERAL DEPOSIT INSURANCE CORPORATION

U. S. Government (Treasury Department)	$150,000,000.00
12 Federal Reserve banks	139,299,566.99

NOTE.—This represents the original subscriptions and paid-in stock of FDIC as of January 1, 1934. There has been no change and the figures are still correct today.

CENTRAL BANKS FOR COOPERATIVES

June 30, 1946:	
U. S. Government	$76,500,000
Borrowers (cooperatives, etc.)	1,197,000
Total	77,697,000
Apr. 30, 1947:	
U. S. Government	76,500,000
Borrowers (cooperatives, etc.)	787,300
Total	77,287,300

DISTRICT BANKS FOR COOPERATIVES

June 30, 1946:	
U. S. Government	$102,000,000
Borrowers	5,285,000
Total	107,285,000
Apr. 30, 1947:	
U. S. Government	102,000,000
Borrowers	[1] 7,585,600
Total	109,585,600

FEDERAL HOME LOAN BANKS

June 30, 1946:	
U. S. Government (RFC)	$123,651,200
Member institutions	79,559,450
Total	203,210,650
May 31, 1947:	
U. S. Government (RFC)	122,672,200
Member institutions	94,935,200
Total	217,607,400

[1] Plus $70,800 paid into guaranty fund.

Mr. Chairman, this bill does deal with vast appropriated sums. Other supply bills seem to dwarf this by their amounts. But this bill is most significant in that it deals with functions of Government which influence or control the credit structure of the Nation's economy.

Total assets of all wholly owned Government corporations—including Commodity Credit Corporation, Federal Crop Insurance Corporation, and the Reconstruction Finance Corporation—as of June 30, 1947, are estimated to be approximately $11,800,000,000. The total unobligated borrowing authority of these corporations as of March 31, 1947, was approximately $18,600,000,000. The value of all assets and unobligated borrowing authority at present is approximately $30,400,000,000. This figure $30,400,000,000, can be said to represent the total amount of money, including assets valued in terms of money, which wholly owned Government corporations have under their control at the present time.

Could any bill be more significant in its effect upon the economy? Because of the national and international impact of this vast credit operation it is imperative that the Congress take and hold authority of both

expenses and assets of these corporations. In the past it has become a lost responsibility. When this bill becomes law it will properly be a current responsibility. These assets—and what is equally important—the liabilities of the corporations are the assets and liabilities of the people through their Government. The only board of directors in this Government which directly represents the people is the Congress. It is our duty and we must, in my opinion, and the opinion of this committee, carefully assume the performance of such duty.

Robert Kirkland Henry

MEMORIAL ADDRESS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 19, 1947

On the life, character, and public service of Hon. ROBERT KIRKLAND HENRY, late a Representative from the State of Wisconsin

Mr. DAVIS of Wisconsin. Mr. Speaker, on May 19, which was set aside for memorial services for our departed Members, I was privileged to say a few words to express my admiration and respect for my predecessor in this House from the Second District of Wisconsin, the Honorable ROBERT K. HENRY.

Today, I would like to add to the RECORD the words of a resolution which was unanimously adopted by the Wisconsin State Republican convention at Madison on June 21, 1947. Mr. Speaker, the people of Wisconsin will not forget the fine record of public service of this great, good man.

The text of the resolution is as follows:

Resolved, That the Republican Party of Wisconsin in convention assembled, does hereby pause in recollection of the late ROBERT K. HENRY, deceased Congressman from the Second Wisconsin District, and in memory of his service to the Nation, to our State, and to the Republican Party; and

Resolved further, That a copy of this resolution be forwarded by the chairman of the Republican Party of Wisconsin to Mrs. Henry.

John Paul Jones

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following article which appeared in the Boston Sunday Post, July 6, 1947, by Henry Gillen, on John Paul Jones:

JOHN PAUL JONES
(By Henry Gillen)

John Paul Jones was the raging easter, John Paul Jones was the knuckled pine, high on the hill by the endless ocean, America's sinew and bone and spine, brashly brave with a brave man's caution and ingenuity of the wise, and over it all the contemplation of lone men under the lonesome skies.

John Paul Jones was the landsman's laughter; give him the sea and he found his place, the silencing sea with the long horizon, fenceless and free for those who pace, bright and brimming and skyward sweeping, rolling or rough with tips of chalk, prairie-wide for the full-sail gallop, yet narrow enough for a ship to stalk.

They will dance today in the highland heather, the pipes will sing on the bonny road, as men with medals and kilt and bonnet, parade to honor the wee abode, the stonehouse known as the "Gardener's Cottage," where Jonathan Jones first came to earth, twenty decades ago this dawning, sweet by the side of Solway Firth.

It's an humble place in the land of castles, a Scotch log cabin and yet the home, of the rival of Drake and even Nelson, the nest of the fledgling raised to roam the continents and the many oceans, through thirty-odd summers and thirty-odd springs, mariner bold and the mighty captain, the lance of freedom and bane of kings.

He was only 12 when he left the lintel and only 12 when he sailed away, apprentice-boy in the stout craft *Friendship*, and nobody now to recall the day, whether he wept at the bitter parting, or whether his eye was on a star, and he thrilled alive to the long sea going and the land that beckoned, America.

There are years between when he rode the slavers, cabin boy, able and mate at last; there are years between when he watched and brooded, on men in shackles before the mast; and years between that are dark with flogging, mutiny, murder, and decks run red, and years between when he called on courage and those who tested it soon were dead.

He was no muscled or shouldered stalwart, but 5 foot 6 and wiry thin, plain of face in a manner homely, yet the eyes could tell of the blaze within, the glowing fire and sparkling daring, the swift resolve and the temper taut, the spur of the lash of always winning, and never quitting which foes forgot.

Beached on the shore of a little township, jobless, jackless and hand-to-mouth, living it out on the generous pockets, of lovable friends in our kindly South, who would have dreamed that a highland stranger, plucked by destiny, named by fate, would raise our flag to the Ranger's masthead, in the middle of freedom's great debate?

As many a good man then and after, he found himself in the knock-down league, where petty carpers and politicians, would tear him down with their grim intrigue; but Jones was a man who cleared all hurdles, in one or another way so smart, he swept beyond them and left them gnashing with angered looks and an envious heart.

Fathomless, how could they hope to fathom genius, courage and fearless gall? Poetical, how could they probe a poet who fought with a sword so lyrical? Philosopher, how could they find his measure, who charmed a Franklin, Adams and all? Troubadour, how could they match the singing, the Bonhomme Richard sang one fall?

Under the moonlight, golden moonlight, etched in that moonlight with scarfs of cloud, how could the skipper of the *Serapis*, know of a head that was never bowed, know of a man who would not surrender, when any old ship would have run in fright, know of a man who wrecked and shattered, shouted, "I haven't begun to fight!"

But the people knew in the little Nation, seeking freedom and unafraid; John Paul Jones was their heartlight burning, John Paul Jones was their accolade; John Paul Jones was the bonfire blazing, John Paul Jones was the speaking gun, lifting a starlit, blood-born banner, high to the skies of a foreign sun.

Raise him aloft for the world to see him; hold him on high to the morning light; here is a sailor who was a nation, salt of the earth in freedom's flight; here is a man who is now an epic, history shrine him and bless his bones; unto our children now we give him—gallantry—greatness—John Paul Jones.

The Housing Shortage

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. KENNEDY. Mr. Speaker, the housing shortage in this country is becoming more critical daily. I believe that before this House adjourns, we must enact a strong housing bill—the Taft-Ellender-Wagner housing bill.

BOSTON, MASS., *July 1, 1947.*
Hon. JOHN F. KENNEDY,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: Now that Congress and the President have made the rent-control bill a law, and my landlord is not willing to offer me a lease, even at a 15-percent increase, I would greatly appreciate any suggestion you may care to make as to where I can find a place for my wife and children to live after next February.

Yours very truly,
WESTON W. ADAMS,
USNR, 1942–46.

BOSTON, MASS.
The Honorable JOHN F. KENNEDY,
House of Representatives Office Building, Washington, D. C.:

DEAR MR. KENNEDY: We unanimously endorse the Taft-Ellender-Wagner bill (S. 866) and urge its immediate passage.

FOURTH METHODIST CHURCH.

Strong Medicine for UN

EXTENSION OF REMARKS
OF
HON. WILLIAM E. HESS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. HESS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Jack Ramey from the Cincinnati Enquirer of June 15, 1947:

STRONG MEDICINE FOR UN
(By Jack Ramey)

The most constructive proposals yet advanced for eliminating the weaknesses hamstringing UN may be found in the quota force plan devised by American Legion, Post 218, Middletown, Ohio, and now being promoted by the American Legion as a whole.

Most critics rant against UN with good reason. But, after they cry out against the veto, after they insist upon organization of a genuine world police force, after they list Security Council failures, the critics crawl back into their holes, curl up and go to sleep. Nothing constructive is proposed to save UN, prevent the atomic war.

The Middletown Post's quota-force plan, endorsed by the Ohio State House of Representatives, is constructive throughout. Once in effect, it would prevent the land-grabbing and government-grabbing technique being practiced by Russia.

Should the program be promoted full-heartedly, as it should be, by every American Legion post, it is not difficult to conceive it becoming a United States plan, then a plan accepted by other nations, and then emerging as the plan to reform UN into the organization it should be.

Quota force would reorganize the United Nations Security Council and the World Court. It would place 10 members, 2 each from the United States, Britain, and Russia, 1 each from France and China, and 2 selected by the remaining member states, on the Security Council.

It would abolish the veto right of major states in cases of aggression or preparation for aggression. In cases involving aggression, Security Council decision would be made by a majority of 6 out of 10. In matters other than aggression, the five major powers would retain their right to veto.

It would define aggression and preparation for aggression. Aggression would be an attack with weapons of violence by the government of a sovereign state, or by its citizens with its acquiescence, against the territory of citizens of another sovoreign state. Preparation for aggression would be production of scientific weapons beyond agreed quotas, or refusal to submit to authorized inspection, or the massing of troops at another nation's border.

The World Court would be revised with power to interpret the revised UN Charter and to determine when preparation for aggression existed. Its composition would be similar to the Security Council except that its members would serve long terms, perhaps life terms. Its decisions, by majority vote, would be binding upon governments, corporations, and individuals.

The Security Council would be empowered to suppress aggression and to control heavy and scientific weapons, including the atomic bomb, with the World Court to interpret the powers.

An Atomic Development Authority would be responsible for control of atomic weapons along the lines of the Baruch proposal. The Authority would be responsible, too, for prevention of biological or chemical warfare.

The Security Council would be empowered to limit the total quantity of warplanes, warships, rockets, and heavy artillery produced in the world each year and to allot to each of the five major powers an individual production quota, and to allot to the remaining member states a collective production quota to be produced by a nonprofit armament authority operated by the Security Council.

Suggested armament production quotas: United States, Britain, and Russia, 20 percent each; France and China, 10 percent each; the smaller member states, a collective quota of 20 percent.

The Security Council would maintain staffs of inspectors and establish branches of the Atomic Development Authority throughout the world.

Refusal by a member state to submit to the inspection or to recognize the authority of the Security Council and World Court would constitute an act of preparation for aggression.

A strong world police force would be organized and equipped to support impartially the powers of the Security Council.

The world police force would be comprised of an active international contingent and five national contingents ready to operate as reserves whenever needed.

The Security Council would establish and maintain under its direct control the active international contingent, composed of volunteers from the small member states only. The volunteers would be recruited in national units, to constitute a professional Army, highly paid, highly trained, and highly disciplined. The Army would owe allegiance to the Security Council only, and would be equipped with the collective heavy weapons produced by the Armament Authority in the smaller member states. The Army's heavy weapons would be 20 percent of the five major powers' production, or equal to that assigned to the United States, Britain or Russia, respectively.

The Security Council could cause the International Contingent to move against any state found guilty by the World Court of preparation for aggression. In event of actual aggression, the International Contingent should move immediately to resist the aggressor. The International Contingent could be stationed temporarily in German or any other occupied enemy territory as troops of occupation.

The national contingents would consist of the national armed forces of the five major powers, and would be equipped with the heavy weapons allotted to them in their respective quotas. The national contingents would help and reenforce the international contingent whenever needed, and the need would be determined by majority vote of the Security Council.

Should the national contingents not be sufficiently strong to repel an aggressor, other national contingents would be called out, with the consent of their respective governments.

The quota force plan, approved by the national executive committee of the American Legion, is being promoted from Washington by the national legislative committee of the Legion.

Its strong medicine could vitalize the spindly and weak-kneed United Nations.

Modernize Our Presidential Election—II. The Electoral College

EXTENSION OF REMARKS
OF
HON. CLARENCE F. LEA
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. LEA. Mr. Speaker, our electoral college is similar to a system of election established in the State of Maryland before our Constitution was adopted. The State of Maryland, by provision in its constitution of 1776, provided for the election of a body of men similar to our electoral college for the purpose of selecting State senators for Maryland. It provided that these delegates to select senators should be elected every 5 years; six of the senators should be from the east shore and nine from the west shore. The selecting body was to meet at Annapolis and choose the senators. That provision declared it was the duty of the delegates to choose men of the "most wisdom, experience, and virtue," who had at least £1,000 of property.

Under the Articles of Confederation which preceded the Constitution there was no Senate or President. Each State had not less than two or more than seven Representatives. Each State had only one vote in the Congress, and that vote was determined by the majority vote of the Representatives from that State. Where there was a tie vote in the delegation, the State had no vote.

When the adoption of the Constitution was under consideration, there was a bitter fight between the small and the large States as to the relative strength, or part, each should have in participating in the control of the Federal Government. The little States demanded equality with the big States, regardless of population. The big States demanded representation in proportion to population.

The compromise finally agreed upon made the Constitution possible. It provided for equal representation of the States in the Senate regardless of population. It gave to each State, as represented in the Senate, authority equal to that it had exercised in the House of Representatives under the Confederation.

The little States surrendered their equal representation in the House of Representatives. It was agreed that each State should have a number of Representatives in proportion to its part of the total population of the States, no State to have less than one Representative.

Each State was granted electoral votes equal to the number of its Senators and Representatives in Congress.

Under the system adopted the people of the United States have no constitutional right to vote for President. The legislatures of the States are given the privilege of appointing Presidential electors in whatever method they may direct. A very striking illustration of this authority of the legislature was exhibited in the election of 1812. The State of New Jersey had a law giving the people a right to vote for Presidential electors. The dominant political party in New Jersey feared that its vote was going contrary to its desires. So the Legislature of New Jersey, 3 days before election, for political reasons, changed the law, denied the people of their State the right to vote for President, and selected the electors representing that State in the election of 1812.

This plan of the Constitution makes the electoral vote a common unit of the States for the expression of the Nation's will in the election of a President. With the recurring census every 10 years, the relative strength of each State is readjusted to correspond to changes in its population in proportion to the whole population of the country.

Alexander Hamilton was a great exponent of the Constitution. Writing in the Federalist, he made this classical statement:

> It is not contended that the number of people in each State ought not to be the standard for regulating the proportion of those who are to represent the people of each State.
>
> It is a fundamental principle of the proposed Constitution that as the aggregate number of representatives allotted to the several States is to be determined by a Federal rule, founded on the aggregate number of inhabitants; so the right of choosing this allotted number in each State is to be exercised by such part of the inhabitants as the State itself may designate.
>
> The qualifications on which the right of suffrage depend are not, perhaps, the same in any two States. In some of the States, the difference is very material. In every State, a certain proportion of inhabitants are deprived of this right by the constitution of the State, who will be included in the census by which the Federal Constitution apportions the representatives.

The method adopted for the appointment of these electors reflected the purposes of those who wrote the Constitution. The electors were to be free as possible from the influence of all other

States. So it was provided all should meet on the same day; that they should meet not in a general assembly here at Washington, as does Congress, but in separate assemblies in their own State capitols, to be free from the influence of the rest of the country.

It was provided that they should vote by ballot, so that each man was given the opportunity of voting by secret ballot for the man he thought best fitted for President. The electors were chosen for this one purpose, with no other duties to perform. They were to be independent like a juror that is called into court to decide that one case; as free from obligation and prejudice as is possible. He renders that one service to his country, and then his function is complete; he is discharged.

It was provided that these electors should vote separately for President and Vice President. The Constitution provided they should vote by distinct ballots for the two offices. And then, to relieve the President of any obligation to members of the electoral college, it was provided that no officer of the United States should be a Presidential elector.

Then, finally, there was no unit vote in the electoral college as designed by those who wrote the Constitution. Instead of contemplating a unit vote of the electors, it was distinctly designed that every man should have his own vote, let his own discretion, his conscience, experience, and intelligence be his guide.

After the election of 1800 the exercise of the discretion by an elector disappeared from our electoral system. This change resulted from the fact that the people of the country, very naturally and properly, concluded that they should exercise their own discretion in selecting a President rather than leave that discretion to a limited group of intermediate agencies. This change was accomplished by party selection of electors pledged in advance to vote for their party candidates.

Thereafter it was still necessary to elect Presidential electors as required by the Constitution, in order to elect a President. The substantial reason for the existence of the Presidential elector had ceased to exist. The Presidential elector continued as a Constitutional necessity. There was little need for the perfunctory service he performed in casting a pledged vote without exercising his own discretion as originally intended.

As time went on after the adoption of the Constitution the right of the people to vote for electors was gradually recognized. In fact by 1832 it became almost the universal practice of the country to to select electors by direct vote of the people.

Up to and including the election of 1824, 80 legislatures had chosen Presidential electors for their States, without a vote of the people. In the following 52 years electors were selected by 11 legislatures, and none since then.

Within the State the individual voter is a common unit of expression of popular will. There the general rule is to accept election of candidates by plurality votes.

The constitutional provision of two electoral votes to each State regardless of population, as well as the disparity of voting population between the States, and within the States as between different elections, prevents a popular vote from being a common unit of expression on a Nation-wide scale.

The election of a President for the whole country, requires some constitutional common unit, by which the right of each State to participate in the election is defined and by which standard we measure the relative strength of each State as to every other State in such election.

There were two main reasons for the electoral college. The first was that the Presidential electors, at their own discretion had the duty of selecting the President of the Nation.

When the electors were deprived of this discretion, the purpose for which they were selected no longer existed, but it was still necessary that the President should be elected by votes cast by them. They served as figure-heads to cast their pledged votes in order to meet the constitutional requirement that the President should be elected by Presidential electors.

The other important purpose was that the electoral votes allotted to each State and cast by the electors carried out the constitutional standard by which the extent of participation of each State in the election of President was determined.

The electoral vote constitutes the constitutional common unit by which the right of each State to participate in the election is defined and by which the relative strength of each State in such election is determined. That constitutional standard provides two electoral votes for each State regardless of population and an additional number of votes to correspond to the number of its Representatives in Congress. It means, in substance, that each State has two electoral votes regardless of population and additional votes in proportion to its population.

This standard carries out the purpose of the Constitution so far as allotment of electoral votes to the State is concerned. The weakness of the Constitution in this respect is that it has no provision that provides for the allotment of electoral votes as between the candidates for President in the individual State. This defect makes possible the unit vote and lack of any logical system of computing the final results of the election under our present system of election.

House Joint Resolution 124, and other Resolutions pending before the Judiciary Committee of the House, propose to provide a constitutional method by which the electoral votes allotted to each State shall be apportioned among the candidates according to their respective popular votes within the State. Then, in the final count to determine the result, each candidate would be given credit according to the total number of his electoral votes in the Nation, without eliminating any minority votes from the count and without giving any candidate credit for votes he did not receive.

No practical or just system can be established which does not assure minority voters in each State that their votes as cast under State laws, shall be so computed as cast in determining the ultimate result of the election. The present provisions of the Constitution fail to do this. For that reason we have the indefensible unit vote. Under that plan, in an ordinary Presidential election, one third or more of the votes of the Nation are not credited to the candidate for whom voted. In effect they are computed as if cast for the opponent of the candidate for whom cast.

Eulogy at Funeral of Rev. James M. Kelly, O. S. A.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 8, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein the following eulogy delivered by the Reverend George S. Walker, O. S. A., pastor of St. Laurence's Church, Lawrence, Mass., at the funeral of Rev. James M. Kelly, O. S. A., Wednesday morning, July 2, 1947:

TRIBUTE TO FATHER KELLY

"Blessed are the dead who die in the Lord. From henceforth now, saith the Spirit, that they may rest from their labours. For their works follow them." Apocalypse xiv: 13.

Dearly beloved in Christ: St. Laurence's Parish, the city of Lawrence, the Augustinian fathers and the Catholic priesthood have suffered an irreparable loss in the passing of our good Father Kelly. Seldom has any priest during life succeeded in obtaining and holding so large a part in the affections of the people. All this we already knew and if any doubt lingered in our minds this assembly of priests and people by their presence and their tears should forever remove it.

I could this morning on this sad occasion talk to you who knew him so intimately and loved him so well after the usual manner about the universal law of death from which there is no escape. Speak of death that strikes down king and peasant, young and old, priest and people. But why should we, with death itself in all its stark reality before us?

Once more we are taught the lesson so easy to learn—so hard to remember, that we too whether priest or people must one day die, must give an account of our years, be they few or many, of our deeds done in the flesh. "For it is appointed unto men once to die and after that the judgment." "We have not here a lasting city but we seek one that is to come." "Who is the man who shall live and shall not see death."

Death is no respecter of persons or times. It comes in infancy ere the regenerating waters of baptism are hardly dry on the brow of innocence. It comes in youth, in the springtime of life, with its eager outlook to the golden future. It comes in the floodtide of manhood and womanhood when we are about to do, what many fondly think, our best work for God and neighbor. It may tarry, delay until the fire of life has burned down to gray ashes, but come it will.

But what of Father Kelly? Have we forgotten to speak of him on this his golden jubilee celebrated beyond the everlasting hills—not the golden jubilee of years but without a doubt the golden jubilee of good works.

Father Kelly was called by God, not after a long and lingering illness of wasting and

disease, but suddenly, in a flash—a gasp, a sign, the closed eyes, no last word, no goodby, just tired, just a little weary of this poor old world, just a longing for eternity.

Deep affection chokes back this morning much that could and perhaps should be said of our dear dead though he would desire no word of praise.

I knew Father Kelly intimately. I was master of novices and guided his ways into our order and province. This was the year 1917. His studies made at Villanova were all but completed when he decided to become a priest and religious. In 1919 he was ordained a priest. I preached on that joyous occasion of his first solemn high mass in his birthplace—Gardner, Mass. I go back on memory's wing this morning and fondly recall that great event and the honors bestowed upon him in the old home town that day.

Time marches on. Need I tell you, who know it so well, of his humble, tireless, patient sacrificing work among the people of St. Mary's; of his indefatigable zeal in the parish of St. Nicholas at Atlantic City? And then his return to Lawrence and St. Laurence's. Should I tell you, the people of this parish and this city, of his work in season and out of season; of the counsel and guidance so unselfishly and unstintingly given to everybody? There is an old Latin axiom that runs as follows: "De mortuis nil nisi bonum." "Of the dead nothing but good." And then his silver jubilee in 1944 and the wonderful demonstration on the part of all classes, races, and creeds. Again it was my great honor to preach the sermon on the occasion of his silver jubilee. Of the dead nothing but good. Of Father Kelly we can recall nothing but good, and so without apology we eulogize this day.

And now in 1947 again I speak over Father Kelly the final word. And what is it: "Blessed are the dead who die in the Lord." And this is a joyous occasion even in sorrow, for we confidently believe—and with every reason for this belief—that he is at rest. We know that his works follow him. Would you know what he has done? Ask the sick, the troubled, the discouraged. Go into the homes and the hospitals of this city and other cities today and let those who knew him and his kindly priestly ministrations tell the story.

To Father Kelly's family and friends our deepest sympathy and prayers go out today. Their loss is indeed great and no words of ours can describe it or render it less poignant, but our blessed Lord says: "Blessed are they that mourn for they shall be comforted" and "My grace is sufficient for thee."

It is a little hard to take to heart the lesson which this closing chapter in a priest's earthly life teaches us. But let no one reject it, for it is a mighty universal truth. From every priestly form from which death lets the panting spirit free, a thousand virtues rise, in shapes of mercy, charity, and love, to walk this weary, storm-tossed chaotic old world and bless it with their light. Of every tear that sorrowing mortals shed beside the open grave of priests, some good is born, some gentler nature comes. In the destroyer's steps there spring up bright creations that defy his power and his dark path becomes a way of light to our eternal home. "O death, where is thy sting, O grave, where is thy victory?"

And so we follow the body of our beloved Father Kelly and lay it to rest in Mother Earth and to him I would say:

"Green be the turf above thee
Friend of my better days
None knew thee but to love thee
Nor named thee but to praise."

We pray for the repose of his soul as Holy Mother Church would have us do for all of her children and we shall continue to make of our prayers one "Sweet sacrifice and lift his soul to God."

Father Kelly—"May the angels lead thee into Paradise, may the martyrs receive thee at thy coming and take thee to Jerusalem the Holy City, may the choirs of the angels receive thee and mayst thou with once poor Lazarus have rest everlasting."

An Address by George E. Allen Before the Mississippi State Bar

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1947

Mr. COLMER. Mr. Speaker, under leave to extend my remarks, I submit an address made by the Honorable George E. Allen, a member of the Reconstruction Finance Corporation, an outstanding Mississippian, and an adviser and friend to two Presidents.

The address was delivered by this distinguished Mississippian at a banquet attended by some 500 members of the Mississippi State Bar Association at its annual meeting at Biloxi, Miss., on June 27 last. The address was an able one by an able man. It deserved the splendid reception which it received. Mr. Allen's address on that memorable occasion follows:

It is indeed a pleasure to be back home in Mississippi for this occasion. It was exactly 30 years ago this year that I last attended a meeting of this organization. At that time your president was an illustrious lawyer from my home town of Okalona, Mr. A. T. Stovall, father of the equally distinguished son who is now your president. I was then making a most unpromising start in the law in Okalona and I remember drawing some inspiration from an association meeting at Greenville.

To say that the inspiration wore off and that I have strayed from the law in these intervening years is understatement. I have strayed so far, in fact, that I find it most embarrassing to address a group still learned in the law. I fully realize that my subject should be one of concern to the profession. But I also have respect for the rule that any speaker should know more about his subject than his audience. If I am to address this audience on any subject in which I have superior knowledge, that subject must be far removed from the theory and practice of our profession.

Since receiving your invitation, I have been looking, somewhat desperately, for a subject I would know more about than a group of Mississippi lawyers. I confess in all humility that I haven't found one. However, I have found the next best thing—a subject nobody knows and therefore one that I can claim to know better than you. You have probably guessed by now that my subject will be economics. None of you will be in a position to deny, with certainty, anything that I may have to say about the economic prospects of the United States of America in this troubled postwar period. You may dispute what I say but you won't be able to deny it.

As you, of course, know, economics have become a great, though relatively new profession—a sort of fifth estate in American life. Economists are everywhere, particularly in Washington. They assure us periodically in the deep, measured resonances of doom that our economic system is heading us for perdition or, at very least, that a dismal depression is just around the corner, where Mr. Hoover's prosperity used to hide. It is quite true that no two of them agree about the precise reasons for the impending collapse. But they do agree, whether disciples of Henry George or Maynard Keynes, that the outlook is dim and constantly fading.

I don't want you to get the idea from this that I am against economists as such. They are, no doubt, very useful citizens whose understanding of economic forces is growing and whose profession is gradually developing the disciplines which will make it, eventually, a great lighthouse to guide both Government and private business away from the shoals which were once called panics, later depressions, and more recently recessions. President Truman's Board of Economic Advisers, under the leadership of Dr. Nourse, already has become an enormously valuable adjunct of the executive branch of Government. It is the self-appointed, irresponsible saviors of our economic system—the Jeremiahs who keep making themselves seen in headlines and heard on the air—of whom I am, to say the very least, skeptical. The trouble is that the fraternity of economists has still found no way of disbarring these noisy false prophets.

I recently came upon a magazine article, printed back in 1939, containing a parable that may illustrate what I am getting at:

"There was a man who lived by the side of the road and sold hot dogs. He was hard of hearing so he had no radio. He had trouble with his eyes so he read no newspapers. But he sold good hot dogs. He was a firm believer in advertising so he put up signs along the highway advertising the merits of his hot dogs and he stood by the side of the road and cried, 'Buy a hot dog, mister.' (And people bought.)

"He increased his meat and bun order. He bought a bigger stove to take care of his trade. Finally business became so good that he brought his son home from the city to help him. Then something happened. His son said: 'Father, haven't you been listening to the radio? Haven't you been reading the newspapers? There is a big depression on. The European situation is terrible. The domestic situation is worse. Everything is going to pot.'

"Whereupon the father thought: 'Well, my son has been to college. He has lived in the city with big businessmen. He reads the papers and listens to the radio. He ought to know.' So the father cut down on his meat and bun orders, curtailed his advertising, and no longer bothered to stand by the highway and call out his wares. His sales fell off almost overnight. He said to his boy: 'You were right, son; we certainly are in the middle of a great depression.' "

Recently the New York stock market, which, so far as I have been able to make out, follows no rule of heaven or earth, started selling down security prices. As usual when this happens, falling stock prices were widely heralded as the precursor of the postwar recession. President Truman, at a recent press conference, expressed the opinion that the country faced a bright future. His words made somewhat less impression, I should say, than the stock quotations. The doomsday boys were loud as ever. To judge who may be right about the future, the President, whose sources of economic information are good and whose judgment in these matters must be respected, or the know-it-alls who try to rationalize stock-market reactions, it may be useful to go back to something that happened 2 years ago.

The war was still on then but the home front crawled with alleged economists who cheerfully predicted that the bottom would drop out of economic life in this country the moment the guns were silenced abroad. Specifically, these prophets insisted that as soon as the war would end America must

suffer heavy unemployment. After all, there were about 11,000,000 men and women in the armed services and, when demobilized, they surely would flood our labor market. This was the prevailing view, shared by labor leaders and various Government officials as well as professional economic experts, many of them highly respected in their field.

Let me cite a few outstanding examples of the pessimism of 1945. This is presented not in a critical spirit, but merely to reveal the thinking of that period. Among the labor leaders, a prominent CIO official, the PAC president, boldly predicted on August 14, 1945, that there would be no less than 10,000,000 unemployed within 6 to 8 weeks. The following day an important Government agency officially informed the President that:

"It is expected that there will be 5,000,000 or more unemployed in 3 months. By spring unemployment may reach about 8,000,000."

By October 1945, the president of the CIO warned the Congress relative to the full employment bill that unemployment could be expected to reach 8,000,000 by winter. In November 1945, the Administrator of the Office for Emergency Management predicted a peak of four to five million unemployed by the spring of 1946. Even Dr. Isador Lubin, Commissioner of Labor Statistics, and a noted authority in his field, flatly predicted in December 1945 that six to nine million would be jobless by the spring of 1946.

The top prize for pessimism, however, should go to a well-known economist of the A. F. of L., who came out in 1944 with a prediction that our postwar unemployment would soon reach a record total of 20,000,000.

Against this array of economic predictions, let us check the views of Harry S. Truman at that time. On April 7, 1945—just 5 days before the death of President Roosevelt—Vice President Truman made a speech in Buffalo, N. Y., in which he sought to prove that the current fear of heavy unemployment immediately after the war was groundless. In his own words, he declared:

"Fear has been expressed that when our fighting forces return, these new workers might flood the labor market and threaten us with heavy unemployment. In the first place, of the 11,000,000 in the armed services, about 5,000,000 will not be in the market for jobs immediately upon discharge from service."

He then stressed the fact that over half of the people in service were under 26 years of age. Therefore, about 2,000,000 should return to schools, colleges, or seek vocational training. (Actually by April 1947, the number of GI students totaled 2,100,000.) Another 2,000,000 veterans also would probably enter business or become self-employed, such as lawyers, doctors, farmers, etc. An additional million veterans would have special positions awaiting them, such as policemen, firemen, teachers, and necessary government workers. Therefore, according to Vice President Truman, these 5,000,000 veterans would not be "thrown on the labor market" as hostilities ended. To quote Vice President Truman again:

"Of the remaining 6,000,000 servicemen, approximately 2,000,000 may remain in service as a career, or be replaced by others, to man our new mighty fleets and outposts guarding America. This leaves only about 4,000,000 veterans available for civilian positions soon after hostilities cease."

(Actually by June 1946, there were still over 2,000,000 in the armed services.)

Mr. Truman then went on to cite an official survey by the Labor Department indicating that about one-fifth of our 18,000,000 women employees planned to return to their homes after the war. This alone should leave about three and a half million positions to be filled. (Latest Labor Department information indicates that between three and four million women have returned to their homes from wartime jobs.)

Furthermore, Mr. Truman pointed out that there were another half a million persons over 65 who were entitled to retire on pensions, and continued to work only to help the war effort. In addition, about two million boys, between 14 and 17 years of age, were permitted to work during the war, but should be sent back to school at the end of hostilities. To summarize this in his own words:

"In brief, about 6,000,000 people may be expected to leave the Nation's labor force when victory comes, while there are only about 4,000,000 veterans ready to step into their places. Modern scientific discoveries should give rise to new important industries. Therefore, if our high production is maintained, or increased to meet the demands of peace, America may actually experience manpower shortages for some time in certain localities."

Subsequent events proved this view to be the correct one.

The latest official Census Bureau estimate of gainful employment in America reached an all-time high of 58,330,000 in May 1947. When we add the 1,470,000 men and women with the armed forces, we had 59,800,000 Americans holding paying jobs last month—only 200,000 short of Henry Wallace's visionary 60,000,000. Surely our economic democracy seems to be on a solid and sound foundation of full employment. Fortunately, the fears of the pessimists, like the hopes of the Communists, are not being realized. When we consider his past performance, we might do well not to take President Truman's present predictions too lightly.

Employment is, of course, only one measure of our national well-being. But any other measure will show the same result. We are producing more goods, our merchants are selling more goods, our people are buying more goods at this moment than ever before in the history of this or any other country. Our free economy is functioning as never before. Of what, then are we so afraid? Why are we listening so intently to those who tell us that this happy state of affairs is illusion that will fade before our eyes day after tomorrow, giving way to another debacle like 1929? There are, to be sure, several valid reasons for some degree of uncertainty about the future. First, we know from bitter experience that the business cycle is a fact of American life; second, we must recognize that our own prosperity is based in part on foreign outlets for our surplus goods; and third, we know that there are isolationist forces in the country—forces which are growing stronger in Congress—which would withdraw this Nation from contact with the rest of the world and cut off this Nation's merchants from the world's market places.

Without reference to the niceties of the economic theorists, I simply refuse to believe that we shall allow any of these admitted hazards to interfere seriously with our prospects. It is certainly true that prices are now too high and that they must be shaken down in some lines—a process which will be painful to some but which need not be disruptive if we refuse to panic. I feel confident that labor-management relations are going to improve—that both sides have learned much in recent years of conflict about the give and take of collective bargaining and that both want a period of peaceful cooperation. I believe that prices will find their natural level gradually and without benefit of panic, depression, or even recession.

As for the foreign situation, nobody knows better than you leaders of the Cotton States how necessary it is for us, as Americans, to concern ourselves with the recovery and prosperity of the rest of the world. Enlightened self-interest demands that we help Europe to its feet. The recently enunciated Marshall policy, calling upon European nations to take the initiative in formulating a cooperative recovery program as a condition to financial assistance from this country, gives promise of accomplishing this. If it succeeds, our foreign markets will be assured for years to come. We can expect Soviet Russia, I believe, to play a disruptive game as it has ever since the end of the Second World War. But I also believe that we can organize the world without Russia, if worst comes to worst, and that, eventually, the men of the Kremlin will realize that they have more to gain from cooperation than from obstruction.

In closing, I remain confident that ultimately all peoples of the world must see the wisdom and necessity of working together to assure a just peace and economic prosperity in the atomic age of the future.

Futile Soviet Agreements

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Wednesday, July 9 (legislative day of Monday, July 7), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to incorporate in the Appendix of the RECORD an editorial entitled "Futile Soviet Agreements," which appeared in today's Washington Daily News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FUTILE SOVIET AGREEMENTS

The United States Senate recently ratified peace treaties with Hungary, Rumania, and Bulgaria in the hope that this would hasten withdrawal of Russian occupation troops and restoration of normal conditions in eastern Europe.

But the Kremlin has contrary plans. The Supreme Soviet in Moscow has adjourned until September without acting on the treaties. The plain intent is to keep Red army troops in Hungary until that country is communized.

The next Hungarian general election will be in September. With Russian soldiers controlling the polls, a Communist victory seems certain, even though not more than 10 percent of the Hungarians are affiliated with that party. The present ruthless suppression of opposition elements indicates the Soviets will tolerate no interference.

Hungary, nominally under control of an Allied commission, actually is powerless in the Red army's grip. American and British protests against Communist terrorism are shrugged aside by the Soviet military. Developments in Rumania and Bulgaria follow much the same pattern, with wholesale arrests and persecutions. The peace treaties with these countries will have become so much waste paper by the time Russia signs them, for the parties of the second part will have been absorbed into the Soviet Union.

The Russians' strategy in the Balkans shows why it has become impossible for us to do business with them. They enter negotiations with us only to gain time for their political police and fifth columnists to accomplish their real objectives, after which signed agreements are scrapped. That happened in Poland and Yugoslavia. That is happening in Hungary, Rumania, and Bulgaria. And there is much evidence that Austria may be the next victim.

We shall only kid ourselves if we assume that the Soviets will accept in good faith any German settlement that gives them anything less than a free hand in all of Germany. We will make a colossal blunder if we permit them to obtain any kind of foothold in Japan in the peace settlement there. At this time we control western Germany and all of Japan. Russia Shall Not Enter signs should be hung up in both places.

Refusal To Accept Government Subsidy

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Wednesday, July 9 (legislative day of Monday, July 7), 1947

Mr. WILEY. Mr. President, there is almost nothing as rare these days as a private citizen refusing money from the Government. Yet an instance has been brought to my attention by Mr. J. M. Baker, in which a prominent company has turned down a Government subsidy. In view of the fact that it would have worked at capacity with or without the subsidy, I ask that Mr. Baker's letter and a column on this subject be printed in the RECORD at this point.

There being no objection, the letter and a column on this subject be printed in RECORD, as follows:

MILCOR STEEL CO.,
Washington, D. C., July 8, 1947.

Hon. ALEXANDER WILEY,
United States Senate,
Washington, D. C.

DEAR SENATOR: On June 14 I wrote you a letter and enclosed an editorial which appeared in Lahey's syndicated column some weeks ago relative to Inland Steel Co.'s refusing to accept subsidies for the production of pig iron. I thought you might be interested in this, because Milcor Steel Co. is a subsidiary of this company and is located in your State.

You will note that Inland passed up $160,000 per month; also note that the pig iron subsidy program was around $9,500,000 at the time the program was to have expired on June 30. Such figures as this should go a long way toward helping to pay off our national debt instead of increasing the same.

A press release by the Office of Housing Expediter, dated June 27, 1947, states that "Government premium payments to pig iron producers who exceed their shipment quotas will be continued through December 31, 1947."

Sincerely yours,
MILCOR STEEL CO.,
JOE M. BAKER,
District Fireproof Sales Manager.

LAHEY SAYS: ONE STEEL FIRM SPURNS SUBSIDY FOR TURNING OUT PIG IRON
(By Edwin A. Lahey)

LOS ANGELES.—The Inland Steel Co. is a most peculiar corporation.

Its officers, Chairman Edward L. Ryerson, President Wilfred Sykes, and Vice President Clarence B. Randall, have such a stubborn belief in free enterprise that they won't accept a Government subsidy for making pig iron in their blast furnaces.

The Government, as I have perhaps stated too often in these dispatches, started paying subsidies last summer for "above quota" production of critical building materials.

The reason for the subsidies, of course, was to encourage production under price control. But when prices were decontrolled by President Truman early last November, the Office of Housing Expediter kept the subsidies going. The Government is still paying production bonuses on merchant pig iron and cast-iron soil pipe, on top of the price increases since last November.

While browsing around the swamps of Washington recently I found the names of two subsidiaries of United States Steel, seven plants of Republic Steel, two plants of Bethlehem Steel, four plants of the Interlake Iron Co., one plant of Youngstown Sheet and Tube, a plant of the Wisconsin Steel Co., and the names of a number of smaller companies on the list of those "participating" in the pig-iron subsidy program.

Inland Steel was notable for its absence from the list prepared by the housing expediter.

The reason is found in the recently published annual report of the company for 1946, wherein the officers declare:

"The company has elected not to apply for the premium payments offered with respect to merchant pig iron, for it is our belief that in the normal operation of our business in a free market we need not be paid a subsidy by the Government.

"This decision will have no adverse effect on the quantity of pig iron which will be produced for the housing program."

Inquiry reveals that Inland is producing 20,000 tons of pig iron a month at East Chicago for which it could claim a subsidy of $8 a ton if the officers were so inclined. This would amount to $160,000 a month.

The total cost of the pig-iron subsidy program will be about $9,500,000 when the program expires on June 30, according to Housing Expediter Frank R. Creedon. The cast-iron soil pipe program, which expires on the same date, will cost about $4,000,000.

The Housing Expediter will make public the names of the companies participating in these programs, and the total amount of the subsidies, but will not reveal the amount paid by the Government to any single company.

In reply to a letter asking whether this decision were governed by any law, Acting Housing Expediter A. H. Zwerner informed me that it was an administration decision, and that specific information would not be made public unless the case had some bearing on the exercise of the Housing Expediter's "administrative discretion."

Individual Income Tax Reduction Act of 1947

EXTENSION OF REMARKS
OF
HON. E. C. GATHINGS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. GATHINGS. Mr. Speaker, the time has arrived for tax relief. That relief is long overdue. During the war years, many bills were enacted into law which raised Federal income taxes to astronomical heights. I strongly supported these bills. These tax increases at that time were essential and necessary to meet the demands of a nation at war. Today the American taxpayer looks to this Congress to remove some of the burdensome load which he has carried so long.

To enact a tax-reduction bill at this time would be a tremendous stimulant to the business interests of America. Private enterprise cannot long survive under a system of prohibitive tax rates. The psychological effect on business and on the individual tax-paying citizen would inspire confidence and augment the initiative of our people.

Tax reduction and economy in government should go hand in hand. This Congress has made rapid strides in eliminating governmental waste and reducing duplications. To accomplish this, many thousands on Government pay rolls have been dismissed.

When H. R. 1 was before the House a few weeks ago, I supported it at that time. When the President's veto message on the measure was read to this body, I voted to override the veto. I believed then, and I believe now, that it is essential to cut the tax rates. We have reached a situation in which our citizens are losing hope. They cannot feel that it is worth the price to press forward and increase their profits. The attitude of so many of them is that it is needless to climb the uppermost rungs of the ladder as little would be left in earnings after meeting exorbitant taxes. A big volume of business is needed for the Nation's prosperity and employment, and the Nation's businessmen must be allowed a net profit which will make it worth while to them to create this necessary volume.

In this bill there should be included provisions for universal community-property-tax law. The States without such a tax law are at an obvious disadvantage, particularly if they border on States which have such a law in existence. We in Arkansas are acutely aware of this; we are bordered by Texas, Oklahoma, and Louisiana—all of which have the community-property-tax law. All of the States of the Union are entitled to have the benefits of the community-property-tax law. I hope that such a provision will be written into this bill before it reaches the President's desk.

Individual Income Tax Reduction Act of 1947

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. BEALL. Mr. Speaker, a great many of us were keenly disappointed and mystified because President Truman saw fit to veto H. R. 1, the income-tax-reduction program for 1947.

It is generally admitted that the best way to stimulate employment is to encourage individuals and business concerns to put money for expansion back into their own businesses. If this is done it naturally follows that we will have full employment with adequate wages for the worker. To sustain this statement all we have to do is to look back to the period after the last war

when in 1920 the Congress decreased the taxes and, much to the surprise of everybody, the budget was balanced in 1921. Then they reduced taxes again. The reduction in 1921 was for 1922 and 1923. Then another bill came along reducing taxes in 1924. Of course, they were not paying taxes currently then, and they reduced the taxes by 25 percent, applicable to 1923. Still the revenues increased. It became possible to pay a billion dollars on the national debt as a result of increased revenue from lowering the taxes, not only a billion dollars one year but to keep it up every year over a period of 10 years. That was not all. Industry increased, labor's wages increased, farmers who had been bankrupt came to Washington to thank the President of the United States for what he had done for the farmers. That was also true of several governors. They were not worried about tax reduction, not at all; they were getting all the benefits of tax reduction. The tax was reduced again in 1926 and in 1928—four times in all. Still the revenue increased. And every year from 1921, of course, the budget was balanced and there was a surplus for debt reduction.

In my opinion this legislation is just a year late in going into effect. I also feel that the reduction could and should be greater for those income taxpayers in the smaller brackets. I do think it is a step in the right direction and if it is enacted it will accomplish three things: First, lift the burden on 49,000,000 individual taxpayers; second, permit business to prosper; and, third, increase the gross revenue to the Federal Government.

Why Finance a European Transition to Socialism?

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1947

Mr. BUFFETT. Mr. Speaker, when American resources were poured out to Japan before Pearl Harbor, many people protested that foreign policy. Their protests were ignored.

Today, the administration follows a similar policy, with even more ruinous consequences indicated.

Truman and Marshall claim to be opposing Russian socialism in Greece and elsewhere, yet, at the same time, they are sending to England and France billions of our resources. This American wealth is being used in those countries to facilitate and sweeten a relatively peaceful transition to a Socialist economy.

Why? Should America finance socialism simply because it is approached by seduction, yet frantically oppose it if it comes about by physical assault?

The eventual terminus on either road is tyranny and oppression for the people—in other words, the police state.

Mr. Speaker, the savings of the American people should no longer be used to underwrite socialism—the forerunner of tyranny—in Europe. Disguising that policy by the claim that more outpourings are to resist Russian socialism is humbug, or worse.

I have discussed this subject in my weekly column of July 9, as follows:

WASHINGTON REPORT

(By HOWARD BUFFETT, Congressman, Second Nebraska District)

Recently a spending project for Greece and Turkey passed Congress. This outlay, declared Mr. Truman, was intended to aggressively oppose the spread of communism. The first installment amounts to $400,000,000.

Some skeptics declare the Greek-Turko aid scheme is simply global WPA boondoggling, created to prolong inflationary spending in America—because the President wants the war boom to last until the 1948 election is held.

Another observer declares that our handouts in Europe are not to resist communism at all. He says our billions are actually being used "to sweeten and subsidize the changeover of Europe from the free enterprise system to socialism, and that socialism and communism are the same thing." Is this true? Let's look at the facts.

For the facts on communism, the congressional document, "Communism in Action," should be authoritative. Its opening sentences read as follows:

"When the Bolsheviks seized power on November 7, 1917, they took over plants and industries as the first step in the establishment of the basis of socialism or communism. Throughout 1918 an increasing number of industries and activities were nationalized, including banking and foreign trade."

Since VJ-day we have loaned both England and France some billions of dollars. During this same period in France the privately owned Bank of France and branch banking institutions, the coal fields, the electric and gas companies, and 54 large insurance companies have all been socialized. Other French industries have been partially socialized, the Library of Congress reports to me.

In England since VJ-day, the privately owned Bank of England, civil air service, the coal industry, telecommunications, all transport, including railroads and trucking (effective January 1948), bulk cotton purchases, etc., have been socialized. And so part of your tax dollars and war-bond purchases is handed to foreign politicians to socialize their countries—while another part goes to other lands for an alleged attempt to oppose socialism. And at home this export of our wealth causes inflation—which plows the ground for socialism in America. It's a fine kettle of fish, friend, any way you figure it.

This Country Still Needs the Railroads in Its Business

EXTENSION OF REMARKS
OF
HON. ALFRED L. BULWINKLE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1947

Mr. BULWINKLE. Mr. Speaker, under leave granted to me to extend my remarks in the RECORD, I include an article This Afternoon appearing in the Birmingham Post, July 7, 1947, by John Temple Graves. This also appeared in 24 other southern newspapers.

This article deals with S. 110 and H. R. 221, known as the Reed-Bulwinkle bills. This article is worth reading. It follows:

THIS AFTERNOON

(By John Temple Graves)

"Across the parchment of the land
I write with hissing pen
The autograph of industry,
The manuscript of men."

"The railroads of this country," well says the Spartanburg Herald, "are under Government control. If they seek to avoid some of the threat of the antitrust laws in working out their problems, it is not an unreasonable request."

But it is unreasonable to expect politicians to give up an issue on which it is so easy to win friends and influence people. There was a time when fighting the railroads was brave business. Today, with the roads in trouble, with competition cutting in everywhere, with public regulation established and increasing, it's easy.

An indication that our American people understand how time has altered things with the railroads, however, is the huge majorities Congress gave the Reed-Bulwinkle bill exempting roads from antitrust laws on the grounds that railroading has natural monopoly aspects and is regulated by the Interstate Commerce Commission.

The majorities were too big to be just "vested interests." The vote was an expression of the common sense which tells our people the railroads are too important and troubled now either to be left alone or to be interfered with destructively.

The Reed-Bulwinkle bill is no invention of selfish interests. It is the proposal of the Interstate Commerce Commission itself, made annually for several years now.

"It is difficult," says the New York Times, "to recall any piece of legislation in recent years dealing with transportation on which informed opinion is so near unanimity."

It is true that the bill was opposed by the Justice Department, which seems to be unable or unwilling to distinguish between the economic position of a private industry on the one hand, and on the other, an industry which is subject to such complete regulation that it cannot change its rates or fares without permission of the Government; cannot sell securities until the Government has decided whether the price asked is the proper price, and cannot even go out of business by abandoning unremunerative mileage without official Government permission.

"In short, the Department's position seems to be that the railroads are entitled to enjoy all the disadvantages of private enterprise and none of its advantages."

How is it that politicians who are so hellbent on having railroads subject to both a regulatory commission and the antitrust laws should be asleep to proposed legislation eliminating Federal regulation of another natural monopoly—the electric utility industry? Pending amendments to the Federal Water Power Act would do away with much of the Federal control in that industry, yet no loud outcries are heard.

That there will be outcries eventually is sure, for this country is deeply persuaded that natural monopolies, especially utilities, must be subject always to adequate regulation, and one wonders at foolish advice which has led utility leaders to ask these amendments just as their industry is recovering the public favor it lost a few years back.

But how does it happen that there is so little present noise against relieving electric utilities of regulation and so much against relieving railroads of an antitrust law liability which exists in addition to regulation?

Nobody is proposing to abolish the Interstate Commerce Commission which regulates railroads, as it is proposed to abolish regulatory control of electric utilities. It is proposed only that the railroads be subject to single control, rather than double, one conception rather than contradictory two.

Nothing in sight says that the Nation's basic carrier isn't going to go on being basic. America's railroads face many changes, much new competition, and probably even more regulating—but this country still needs them in its business. The hissing pen still writes industry's autograph and the most continued story of passenger travel. What the railroads meant and did in the last war measures what they would mean and do in another. It measures, too, their peacetime worth. Before the war, they were in trouble financially. They may be coming to trouble again. That is a matter of concern to everyone. The day has passed when a Vanderbilt can say for the railroads, "The public be damned," but the day has passed, too, when we the people can say, "the railroads be damned."

It is as silly to make it out that railroads are villains of our American piece as to say they are whiter than snow. If the demagogs and special pleaders would stand aside and let a practical point of view prevail we could go about the vital business of seeing that our railroad system is preserved now as the ever more perfect instrument of our national economy it needs to be.

And the practical point of view is (1) that the American railroad system is a natural monopoly in so many indispensable respects that laws against monopoly cannot possibly apply satisfactorily to it and (2) that since it does indeed have a monopoly nature, public regulation under the Interstate Commerce Commission must never flag in science, courage, or keeping up to date.

There are enough flourishing, unregulated, unnatural monopolies in this country to be opposed without picking on a crippled natural one already subject to regulation.

The Hungarian Problem

EXTENSION OF REMARKS
OF

HON. CLAUDE I. BAKEWELL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 9, 1947

Mr. BAKEWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to have printed a memorandum of the American Hungarian Federation to the Secretary of State, concerning the recent developments in the unfortunate country of Hungary.

No nation has enjoyed a more glorious or more tragic history than has the Hungarian nation. Western Christian civilization will ever be the debtor of the Hungarians, for it was in Hungary and at the capital city of Budapest that an earlier invasion of the west by a power of the east was stopped when the penetration of Islam was halted at that great city.

It was also in Hungary that the eastward thrust of bolshevism was halted after World War I, when the Hungarian people overthrew the cruel dictatorship of Béla Kun and established a representative government.

After being freed from the Nazi yoke, they were in the process of forming a truly democratic government of farmers, small businessmen, and small landholders, when once again their efforts were halted by a superior force of a hostile government.

I am sure that this domination and repression of a free people is doomed to failure, just as were those of the Hapsburgs, of Béla Kun, and of Hitler. I believe that the fire of democracy and the love of homeland still burns in the hearts of millions of true Hungarian patriots.

It is unjust for us or for the other free nations to hold the Hungarian people responsible for the acts of an alien dictatorship which has imposed its rule by force, and which does not represent the will of the Hungarian people any more than did Hitler and his cohorts when they dominated this unfortunate land.

I also desire to have included herein, under leave to extend my remarks, an article from the June 30 issue of Time magazine, which lends credence to my theory.

The matter referred to follows:

MEMORANDUM OF THE AMERICAN HUNGARIAN FEDERATION TO THE SECRETARY OF STATE CONCERNING THE HUNGARIAN PROBLEM

Soviet Russia's continued aggression in Hungary culminated on May 30, 1947, with the seizure of power in Budapest and the definite subjugation of all Hungary to Communist hegemony.

This act of Russian totalitarian aggression was denounced by President Truman as an outrage and by Senator ARTHUR H. VANDENBERG as an apparent treacherous conquest.

For the second time in one decade the Hungarian people have been beaten into submission by a ruthless, overwhelmingly strong neighbor whose totalitarian domination they tried in vain to resist. As a consequence of the Munich Pact, southeastern Europe, including Hungary, was first handed over to the evil rule of Hitler from whose brutal clutch no country could extricate itself until the Nazi power was crushed. Today as a result of the Yalta and Potsdam pacts the same process is being repeated in that area.

When the first tragedy took place in Hungary, on January 7, 1941, after Hungary was compelled to sign the Axis Pact, we publicly declared that:

"It is our conviction that by the signing of this pact the Hungarian Government lost its power of independent action, that the people of Hungary are no longer free to express their will and that this pact is a direct threat to the ancient independence of Hungary, the country of our origin."

We also stated that "we considered it our duty to convey the thoughts and desires of the silenced people of Hungary."

Now, under similar circumstances we again declare, that as Americans of Hngarian descent, united in the American Hungarian Federation, we will voice the true feelings of the silenced Hungarian people, we will keep alive the vital interests of our land of origin which are: Independence, national unity, and true democracy.

In carrying out this freely assumed obligation, we wish to serve faithfully the basic American ideals and principles of equal justice and freedom for all, as set forth in President Roosevelt's declaration on the four freedoms and in the Atlantic Charter. We will also continue to refuse collaboration with all totalitarian ideologies, whether labeled National Socialist or Communist. We firmly upheld this point of view during the last war and we shall not deviate from it.

Hungary's thousand-year-old western and Christian civilization cannot be subjected to Communist exploitation without serious harm to American interests. This brutal violation by Soviet Russia of its international commitments, including the peace treaty with Hungary, will have a lasting effect on future world peace and certainly means much more than careless contempt on Russia's part for her western allies. Hungary's production and entire economy will be drained from now on in order to assist in building up the war potential of the Soviet world revolution. In all walks of international life, the voice of puppet Hungary will support Soviet imperialism aimed at the domination of all remaining free nations of the world.

Hungarian-language propaganda will spread Communist falsehoods and provocations, Communist-trained Hungarian agents will collaborate in wrecking democratic world order and in sabotaging reconstruction. The flower of the Hungarian Nation, its youth, will be forced into the Red army to serve as cannon fodder, or into labor camps to slave for the evil aims of a would-be world conqueror. And when, finally, the inevitable hour of reckoning arrives, official Hungary will stand again on the wrong side.

Must the Hungarian people generally be blamed again for all these crimes? Must they as a nation again be treated contemptuously and given undeservedly the rawest of all deals, as has been the case during the Second World War and at the recent peace conference? We wish to raise the question now, Did the Hungarian people choose to join the Soviet system, or have they been forced to do so against their will?

The answer to this question must be given now.

We wish to restate the undeniable fact that Hungary has wholeheartedly complied with the onerous terms of the Armistice Treaty and that she has faithfully carried out the conditions of the Yalta Agreement which entitle her to assistance in restoring her national independence, her democratic institutions, and her wrecked economy. In spite of the abuses of the Russian occupation force and of the foreseen cruel reprisals, the Hungarian people voted overwhelmingly at the November 1945 elections for true democracy and for continued adherence to their western ideals. They also have achieved remarkable recovery in spite of the wholesale looting, infiltration, and moral degradation inflicted upon them by the Soviets. They have accomplished, within a very short time, fundamental democratic reforms and have completed the distribution of land to the landless. If left alone, the Hungarian people certainly would contribute, as a peaceful and democratic member of the family of peace-loving nations. In view of these undeniable facts, our attitude toward the present unbearable oppression of the Hungarian people is that:

(a) The so-called government of Hungary is not a free agent. It is not representative of the Hungarian people and we do not accept it as the legal government of Hungary. It is an instrument of Soviet policy imposed upon the Hungarian people against their expressed will and completely against their interests.

(b) The Hungarian people have no responsibility whatsoever to bear for the seizure of power by the present Soviet puppet regime, nor for its acts, and its future conduct of Hungarian affairs. From May 30, 1947, on, all responsibility rests exclusively with the Soviet Government which, by infiltration, terrorism, and corruption, has destroyed the independence of Hungary.

In view of these basic facts, we believe it is the duty of our Government to make clear to the world that it absolves the Hungarian people from responsibility for the acts of the illegal and usurping regime now installed in Hungary.

Further, we ask our Government to withhold formal diplomatic recognition from this totalitarian regime.

We urge that immediate action be taken by our State Department to implement its proposal that a three-power commission examine this situation as a matter of great urgency.

Should any delay occur for any cause in the formation of this commission, we urge that our Government immediately refer the

problem to the United Nations, and that it press for prompt action.

[From Time magazine of June 30, 1947]

"MUNKÁSOK EGYESÜLJETEK!"

What does it mean when an orator says "in Russia's sphere of influence the civil liberties of non-Communists are suppressed?" Last week Time Correspondent Robert Low was in Szeged, a south Hungarian town famous for paprika and embroidered slippers, when Communist suppression became a dramatic reality. Low cabled:

"A gusty wind, sweeping up from the Banat plain across the Yugoslav frontier, seemed to heighten the nervous tension in the town. It snapped at the shawls and embroidered blouses of the peasants, sent newspapers and political handbills scurrying around the huge square in clouds of dust. Slowly the crowd gathered around the old-fashioned, three-storied, brown-stone hotel at the corner of the square. From windows the loud speakers monotonously blared out the announcement: 'At 6 o'clock a meeting of the Freedom Party.'

"At a marble-topped table, in an unswept, musty cafe, I sat discussing the meeting with the three anti-Communist members of Parliament who were scheduled to speak that evening. One of them, tall, hawk-nosed Vince Nagy, former Minister of Interior in the Károlyi government after World War I (no kin to exiled Premier Ferenc Nagy), said: 'A few days ago when [Dezsö] Sulyok, head of our party, said in Parliament there was no freedom of speech in Hungary today, the Communists called him a liar. Now we'll see.'

"Fifteen minutes later he had his answer."

SURPLUS FOOD

"Seven hundred people—peasants, workmen, other townspeople—jammed the hotel's auditorium to capacity. On the stage, the speaker's table was covered with the green, white, and red of the Hungarian national colors picked out in wild flowers. Everything looked peaceful enough. But the local secretary of the Freedom Party was worried. As he took me into the box overlooking the auditorium he said: 'Yesterday the Communists sent down a truckload of agitators from Budapest to organize things for this meeting.' He pointed out a group of 150 men bunched together, halfway down the side aisle. They looked tough all right.

"'We've asked the police to maintain order,' he said, 'but they say they'll only intervene if there is trouble. And if we organized the guards, they would accuse us of using Fascist methods. The guards are a political luxury that only the Communists and left-bloc parties can afford.'

"When the three M. P.'s walked on to the stage, they got a rousing welcome. But as Nagy stepped up to the microphone and started to speak, his first words were drowned out by shouts from leather-lunged Communists: 'Long live Stalin; long live Rakosi.'

"Immediately came the crowd's response: 'Long live the Hungarian Republic. Long live freedom.'

"Unruffled, Nagy began again: 'I appeal to the Communists who came here to break up this meeting. * * *.'" He was answered with a shower of eggs from the Communists.

"It takes a good man to find the mot juste at a moment like that, but Nagy was up to it. He cracked: 'I am pleased to see that the Communists find the food situation in Hungary good enough to use fresh eggs for political activities.'

"Suddenly the public-address system went dead, the lights went out. The main power switch for the district had been pulled. And that seemed to be a prearranged signal. Like a well-trained football formation, the Communists began pressing toward the speaker's stand, shouting: 'Munkások egyesüljetek!' (Workers unite!). It had the cadence of: 'We want a touchdown.'

"Out came blackjacks and brass knuckles. Two Freedom Party men went down under the onslaught. A roar went up from the crowd; in a moment hundreds of people were bearing down on the Communists brandishing chairs over their heads. One man went crashing through the glass to the ground, two floors below. Fury flamed up, then died out like a flash of powder. A couple of dozen casualties lay on the floor.

"But the Communists were forced out of the hall. A cheer went up from the crowd; the unbroken chairs were put back into place. The meeting would go on.

"YOU CAN'T WIN

"The Freedom Party secretary came dashing into my box. His eye was cut and his mouth was bleeding, but he shouted triumphantly, 'We've taught the —— a lesson—we've won.'

"But he spoke too soon. The Communists were back, and with them the gray-uniformed police, rifles at the ready. One Freedom Party man who attempted to defend himself from a renewed attack by a blackjack-wielding Communist was promptly arrested.

"Onto the platform stepped a fat colonel of police: 'In the interests of public order this meeting is closed.'

"While the injured were being carried out, the police calmly proceeded to arrest the disturbers of peace pointed out to them by the Communists.

"When Nagy and two other deputies appeared in the window of the hotel overlooking the square, a tremendous cheer went up from the crowd that had gathered there. But this was a short-lived victory, too. The police colonel spoke again, 'I warn you, if you appear anywhere in public, I'll arrest you for attempting to incite a riot.'

"Soon a hundred police were in the square dispersing the crowd of 8,000. They first drove a wedge down the center, then divided halves into quarters, until each group was small enough to deal with individually.

"Finally someone said, 'No free speech—but a lesson in tactics.'"

World Problems

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 9, 1947

Mrs. BOLTON. Mr. Speaker, in accordance with the permission given me, I am inserting an editorial from the Washington Post of July 7 entitled "Open Conspiracy" and another article from the same issue entitled "The Politburo's Choice." Both of these articles are timely discussions of the present world situation. They follow:

OPEN CONSPIRACY

President Truman's Independence Day speech, unlike Mr. Bevin's, was nicely calculated to encourage all Europe outside Russia to engage in what H. G. Wells would have called the great open conspiracy to unite Europe. The invitations are now out. It may be that delegates will be forthcoming beyond the iron curtain, though the Muscovites will doubtless strain every nerve to keep the willing Poles and Czechs away. The hardening brusqueness of the Kremlin makes one wonder whether the NKVD (which has always been insulationist) hasn't taken charge of affairs. This, we imagine, is how the situation will look to the satellites, for their surprise appears to be as marked as their present unhappiness over the denouement. Just as western Europe needs eastern Europe, so eastern Europe needs western Europe. In default of membership in the proposed economic concert eastern Europe would find itself progressively tied to the impoverished Russian economy. That would lower its living standards as well as western Europe's and incidentally would call for more aid from us for western Europe than otherwise would be needed. For both reasons the President was wise to bespeak the most comprehensive mutual aid association in Europe.

Molotov's refusal to commit Russia to the effort in Paris to develop a common plan for European reconstruction is the finest tribute we know to the Truman doctrine and to its first application in Greece. Mr. Truman was criticized for bypassing the United Nations. The critics parroted Mr. Gromyko's denunciation of our plan for Greece as "unilateral," though, if they had given the subject a moment's thought, they would have realized that an affirmative answer to a plea for help makes agreement bilateral. It was precisely on a par with the pacts that the Russians themselves had concluded over the head of the United Nations. During the last 2 years the Soviet Government has signed three treaties—with Poland, with Czechoslovakia, and with Yugoslavia—pledging the assistance of these countries in loans, arms, and military and civilian instructors.

Where Mr. Truman erred, as we said at the time, was in refraining from communicating his aid program to the United Nations at the same time as he sent it to Congress. But that was only an error in procedure, or, better put, tactics. If he had referred the harassed Greeks and Turks to the United Nations, it is now plain that the request would have been talked to death, as the Ethridge report pointing the finger at Russia's satellites for the responsibility for the border warfare in Greece looks as if it will be talked to death. Britain's Sir Alexander Cadogan is so disquieted by Russian procrastination on this latter matter that on Thursday he warned that failure to take action on the basis of the Ethridge report would be equivalent to tearing up the Charter and that the delegates might as well pack up and go home. Greece and Turkey knew that their request would be similarly treated, otherwise they would have applied for help to the United Nations. Now the world, as a result of the experience in Paris, shares that knowledge.

Just as clear as the President's wisdom in the matter of aid to Greece and Turkey is the British-French wisdom in keeping the mutual-aid program out of the United Nations Economic Commission for Europe sitting in Geneva. It is said that this was Mr. Molotov's initial proposal. Experience has shown that the United Nations is being used as a graveyard for the strivings of mankind for betterment and unity across national frontiers. A bear hug was awaiting the Marshall initiative at Geneva, but the British and the French, with needs that have become urgent, avoided this smothering embrace. At Geneva they had seen the Russians engaged in killing the few functional agencies left for reconstruction in Europe. They had seen the Russians insisting on decisions by a two-thirds vote so as to provide a Slavic veto power. We must now help the British and French go it alone—that is to say, in company, and ever closer company, with other like-minded nations. And not for the purpose of ganging up against Russia—for any grouping should be kept open—but for economic reconstruction and the preservation and improvement of our common civilization.

At Paris, Mr. Molotov proved the statement uttered as his valedictory by former Under Secretary Dean Acheson that Soviet Russia is "diametrically opposed to the new premises of international accord and recovery." It is the worm in the United Nations

which is eating it away. We must now prove in all our actions that we intend to meet negation with affirmation, and so mobilize our resources that the slump for which the Muscovites seem to be waiting, so as to pick up all Europe at what would then be a fire sale, will never happen. It is a very sober undertaking upon which the Russians have compelled us to embark, and President Truman, in his backing of the Marshall initiative and his emphasis on nonexclusiveness, struck exactly the right note. We must try to match our quest for interdependence with Russia's quest for independence and domination. Our success in achieving it will eventually wear down Russian insulation, and persuade the Russians that hermit states are unprofitable and intolerable in this shrunken and atomic world.

THE POLITBURO'S CHOICE

(By Joseph and Stewart Alsop)

Intelligence reports, so detailed that they can no longer be disregarded, have reached Washington to the effect that an international brigade, under Comintern auspices, is being organized to fight in Greece. Observers here recognize the preponderant long-term importance of the European reception of the Marshall plan. But they believe that for the short term the northern Greek border area is easily the most important and explosive friction point in the world today.

In Greece, the Soviets are faced with the same hard choice, on a much larger scale, as confronted them in northern Iran last autumn. In view of the immense risks of any other course, the politburo strategists can decide to cut losses and pull out, as they did in Iran. Or they can intensify the effort to capture Greece, using the now forming international brigade as their chief instrument. It would be difficult to exaggerate the gravity of the consequences if the politburo makes the second choice.

The key figure in the organization of the international brigade is the Greek Communist and guerilla leader, Nicholas Zachariades. Zachariades went to Moscow in the twenties, and there took the long hard Comintern schooling until 1935, when he returned to Greece. In the Soviet Union he knew and became friendly with such other Comintern graduates as France's Jacques Duclos, Italy's Palmira Togliatti, and Yugoslavia's Josef Broz, now Marshal Tito. These old school friendships are now standing Zachariades in good stead.

According to reports, Duclos is sponsoring the clandestine training of the international brigade which includes a sprinkling of veterans of the old international brigade which fought in Spain. Training is being carried on in the south of France—largely in the recreational centers of the Communist-run general confederation of labor. When preliminary training is completed, old school friend Duclos hands over to old school friend Togliatti. In small batches the men are shipped to northern Italy, usually Genoa, where Togliatti's organization takes over. They are quietly conducted across northern Italy to the Adriatic, where they are shipped to Yugoslav ports. Then it is the turn of old school friend Tito, who has at his disposal ample facilities for completing the men's training. A portion of the brigade is known to have arrived in Yugoslavia, but none of them has yet crossed the Greek frontier. That is awaiting the final decision of the politburo.

The trend of the politburo's thinking was perhaps reflected in a recent Communist strategy meeting held in Strasbourg, France, after Secretary Marshall made his historic proposal. Zachariades, who crosses borders without difficulty, was secretly present at this meeting. However, he allowed an aide, Porfyrogennis, to speak for him. Porfyrogennis announced that it might be necessary to establish a "free Greek Government" in a "free Macedonia" to counter the reactionary government in Athens. This pronouncement of an obscure Greek Communist is regarded in Washington with the utmost gravity. If carried through, it will mean that Gov. Dwight Griswold, the chief of the American mission to Greece, will face on his arrival, or shortly thereafter, an all-out civil war, backed more or less openly by the Soviets, through the employment of the Cominternorganized international brigade.

Zachariades is believed to have sponsored the formation of the brigade simply because there have recently been increasing signs of disaffection and loss of morale in the guerrilla ranks. The brigade would be designed to provide the necessary stiffening and leadership. If the politburo decides in the end to take the desperate gamble of throwing the brigade into action, the United States will then be faced with a crucial decision. Either this country can rely on the ineffective Greek Army to protect the American political investment in Greece, or the United States can itself take whatever measures may be necessary to protect that investment. That might well mean the sending of American troops to Greece. And it is all too easy to see where such a step might lead.

Yet competent observers here are fairly hopeful that this terrible choice may still be avoided. They lend the utmost significance to the Soviet reaction to the proposal of the United Nations Balkan Commission. Except for the Soviet and Polish members, this commission unanimously recommended that a United Nations border commission be established to guarantee the Greek frontiers. If the Soviets abstain from voting when the proposal comes up before the Security Council, this will be taken to mean that the Soviet leaders have decided, as they decided last autumn on Iran, that at least temporarily it is the better part of wisdom to abandon the drive on Greece. If the Soviets veto, this will be taken to mean that the drive is to be intensified and the international brigade is to be thrown into action.

The British delegate to the United Nations recently remarked that if the Balkan Commission proposals were set aside, the United Nations "might as well pack up." A Soviet veto of the proposals may have an even more ominous significance.

Better Government

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES

Wednesday, July 9 (legislative day of Monday, July 7), 1947

Mr. McCLELLAN. Mr. President, I ask unanimous consent to incorporate in the Appendix of the RECORD an editorial entitled "Better Government," appearing in today's Washington News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BETTER GOVERNMENT

President Truman has signed into law a measure which may—and we hope will—prove one of the most valuable achievements of the present Congress.

It is the Lodge-Brown resolution, sponsored by a Republican Senator from Massachusetts and a Republican Representative from Ohio, but passed with unanimous support of both parties in both branches of Congress.

This resolution authorizes a bipartisan Commission to study the organization of the Federal Government and to propose ways and means of bringing it up to date. The job is big and tough, but it urgently needs doing.

The Government has become too complex for the people to understand, for the President to supervise, or for Congress to control. Scores of different bureaus and agencies have a hand in each of its major functions. Its almost incredible duplications of effort and divisions of authority are baffling barriers to wise economy.

Congress, itself, never has made even a good start toward reorganizing the Government. On many occasions it has voted Presidents authority to draw up plans—and then rejected most, or all, of the changes proposed. The Lodge-Brown resolution is a new approach. Under it, Congress and the President will share the duty of seeing that a plan is prepared. That fact justifies hope that it will produce real and valuable results.

The Commission will have 12 members. President Truman will name 4 of them—2 from within the Government and 2 from private life. The Presiding Officer of the Senate will name 4—2 Members of the Senate and 2 from private life. And the Speaker of the House will name 4—2 Representatives and 2 private citizens. The resolution's intent is that the 6 private citizens shall be recognized authorities in the field of business management.

Everything will depend on the caliber and ability of the Commission's membership. Its task will be long. It will have to explore all the musty, cobwebbed corners of Government; analyze the operations of more than a thousand departments, commissions, bureaus, and other agencies; determine the opportunities for saving money and increasing efficiency. In January 1949 it will submit its report for action by Congress.

It is asking a great deal to expect a dozen able men to give this job most of their time for a year and a half. But if their work is thorough, if the plan they propose is a convincing answer to the problem, they will do the country a great service.

Chief of Engineers on Randall Dam

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 9, 1947

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpts from a hearing held by the War Department Civil Functions Appropriation Subcommittee on July 8, 1947:

Mr. STEFAN. Now, in reply to my questions on the floor you indicated there is nothing in that bill that would delay the work at the Fort Randall Dam. There was nothing in the form of an amendment in the bill to change the Army engineers' program on Fort Randall?

Mr. ENGEL. No.

Mr. STEFAN. Not at all. There is something in the report requesting them to make some studies.

Mr. ENGEL. To make a study; yes.

Mr. STEFAN. I would like to ask the General this question: Will that interfere with your regular program there? Will that delay work on Fort Randall?

General WHEELER. It is our view that the study that has been requested in the hearings before the House Appropriations Committee will be completed before the construction period on Fort Randall will arrive, so the answer to the question is that the study that we are making, as requested in the House committee report, will not interfere with the construction of the present Randall Dam.

Mr. ENGEL. Here is the difficulty we have. You have two dams, Randall and Garrison, which will cost approximately—if you figure a channel for navigation—$320,000,000; $133,000,000 for Randall and $28,000,000 for the channel and $158,000,000 for Garrison. Now, that will require a 6-year period, and the first of that 6-year period will require $15,000,000 apiece, or $30,000,000.

General CRAWFORD. Yes.

Mr. ENGEL. The second, third, fourth, and fifth year following will require $60,000,000 a year, which is approximately one-third of what the President allowed for the entire general flood-control program this year, before cuts. It will take another $30,000,000 for the sixth year.

The difficulty that we have, Mr. STEFAN, is trying to give you what you want and not take one-third of the total flood-control money allowed by the President for two dams.

Mr. STEFAN. I understand that very well. We have gone over that.

Mr. ENGEL. We have been very sympathetic.

Mr. STEFAN. All I want of General Wheeler and General Pick is the assurance that the study recommended by our colleague, Mr. CASE, for Fort Randall will not result in delay.

Mr. CASE. Supplementing that, is it not also true that the construction program contemplated for this year in the form of building access roads and railroads and completing the camp sites, the workers' settlement, will be needed in either event, whether you build a low dam or a high dam?

General WHEELER. Yes. I looked into that in detail in order to be able to answer that question. I can officially tell you that the study will be completed before any work will be needed on a different Randall Dam.

Mr. CASE. Mr. Chairman, you have stated that this hearing is executive. I think in justice to these men from Nebraska I should ask permission that this latter part of the testimony, starting at the point where Mr. STEFAN asks questions, be made available to the members of the committee so that these Nebraska people here can give that answer to their people.

Mr. ENGEL. I think so.

Mr. STEFAN. The reason for that is that our people are very much worried. I thank Mr. CASE for that. After all, they feel that the Army engineers are the best experts to decide whether they should have a high dam or a low dam, and they have a program going on there. They have the impression now that something has been done in Congress to delay this program at Fort Randall, and definitely nothing has been done to delay the program except the study, and General Wheeler assures us that there will be no delay, because the study is going right along, and if there is a change that will have to be made, that will have to be decided by the Army engineers, anyhow.

Mr. CASE. The work contemplated this year will be needed in either event, whether a high dam or a low dam.

Mr. BUFFETT. The study of the feasibility of the two types of dams will be finished by the time the committee meets again to appropriate money for the next year, which is the first appropriation that would go for construction; is that right?

General WHEELER. That is when we are hoping to get it finished, before the next appropriation can be made.

Mr. BUFFETT. You are reasonably sure that that can be done?

General WHEELER. Yes; we are.

Mr. ENGEL. Thank you.

Long Fight Brings Success to Terminal-Leave Legislation

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1947

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I am including herein an article written by Hon. John D. Pennekamp, associate editor of the Miami Herald, Miami, Fla., in which he discusses the subject Cash for Terminal Leave Bonds May Result From Long Effort. I am particularly pleased to place this article in the RECORD for the reason that it was from a former article written by John Pennekamp that called my attention to the discrimination and inequality that was practiced between commissioned officers and the enlisted men, ordinarily referred to as the GI Joe's, in the granting of terminal leave pay for unused terminal leave time. The officers received full pay for unused terminal leave upon receiving their discharge or separation from the service, whereas, the GI Joe's got only a good handshake as they returned to civil life. Upon reading the article heretofore written by John Pennekamp, I resolved that if humanly possible I would correct this unjust treatment and this discrimination by the introduction and passage in Congress of legislation that would give equal treatment to both officers and enlisted men and women. I was inspired by this editorial to do this job and I am glad to say now that this legislation is on its way to a successful termination and I predict that before this session closes the terminal leave bond payment in cash will be upon the statute books and that the boys will get cash for the bonds now held by them beginning September 1, 1947.

CASH FOR TERMINAL LEAVE BONDS MAY RESULT FROM LONG EFFORT

(By John Pennekamp)

Representative DWIGHT L. ROGERS' long fight to end the discrimination by which officers received terminal leave pay upon discharge while enlisted men did not, seems likely to bear early fruit.

More than 30 bills now are pending in committee, designed to do what the Fort Lauderdale Congressman, then a freshman, tried as far back as September 13, 1945. He then introduced a bill which would have paid to the enlisted men a lump sum for the leaves they lost during the war because of their assignments.

Such adjustments were made for the officers when they were discharged.

His bill, after some delays and circuitous routing, came to the floor of the House and was passed unanimously, the vote being 379 to 0. Approximately $2,700,000,000 of such pay is due the enlisted men.

However, when it reached the Senate the bill ran into so solid an obstruction that, in order to get any kind of a bill passed at all, ROGERS and the House had to accept an amendment providing for the issuance, instead of cash, of 5-year bonds bearing interest at 2½ percent annually. The bonds are nonnegotiable and cannot be transferred "by sale, exchange, assignment, pledge, hypothecation, or otherwise."

ROGERS, as soon as the present session began, introduced another bill which would have made the bonds redeemable in cash, a serious need of many veterans in this period of rising costs. It was bill No. 3 of the current session.

That, however, ran into additional obstructions. It became stalled in the Armed Services Committee, and objections developed on the grounds that it might disturb the cash position of the Treasury, prevent the balancing of the budget, and give a new lift to the inflationary trends.

Thereupon ROGERS introduced another bill, which removes these objections. It provides that the veterans may sell their bonds to private investors at not less than face value, plus interest.

This meets the objections of the economy block, because it calls for no Government expenditure until the bonds mature, which already had been anticipated; it does nothing to upset the budget balancing and it does not further involve the national debt.

The move, it is contended, will not be inflationary since it does not put additional money into circulation, but transfers it from one source to the other, just as it transfers the bond ownership.

In some instances, it is pointed out, it may mean a modest profit to the veterans, since the 2½ percent bonds are gilt-edge securities, and Government bonds, paying only 2 percent, have been selling above par.

Giving the enlisted men the 5-year bonds, ROGERS has pointed out repeatedly in his steadfast fight to restore the purpose intended in his original bill, "is like giving a soldier a gun without ammunition, or an old rusty musket whose trigger will not work.

"This prohibition against the use of the bonds for a period of 5 years is a distinct and flagrant discrimination against the veteran holding terminal leave pay bonds for the reason that there is no other bond issued by the Government that the owner cannot obtain cash on within 60 days to 6 months.

"I can see no valid reason why the terminal leave pay bonds cannot be used by the holder thereof. The withholding of the cash on these bonds from the veteran is a continuation of that discrimination which made the original act necessary."

Massachusetts Disabled American Veterans Favor H. R. 2661

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1947

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include herein a letter I have received from the department commander of the Disabled American Veterans, Department of Massachusetts, in which they unanimously support H. R. 2661, a bill to name the Veterans' Administration facility at West Roxbury, Mass., the William P. Connery, Jr., Memorial Veterans' Hospital:

DISABLED AMERICAN VETERANS,
DEPARTMENT OF MASSACHUSETTS,
Boston, Mass., July 7, 1947.

Hon. THOMAS J. LANE,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: At the regular meeting of the executive committee of the Department of Massachusetts, Disabled American Veterans, held Saturday, June 14, 1947,

it was unanimously resolved to support the enclosed bill.

The record of Comrade William P. Connery, Jr., is too well known to be repeated. But in view of his record and the precedents already established in naming the Edward Hines Hospital at Hines, Ill.; the Royal C. Johnson Veterans' Memorial Hospital at Sioux Falls, S. Dak.; the Murphy General Hospital at Waltham, Mass.; and the Cushing General Hospital at Framingham, Mass., our members of the Disabled American Veterans believe that we are not asking too much when we seek to enlist your enthusiastic support of H. R. 2661, which was introduced by the Honorable THOMAS J. LANE.

Very truly yours,

PHILIP V. LORY,
Department Commander.

Struggle for Italy

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1947

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Sumner Welles:

STRUGGLE FOR ITALY—JOB FOR VOICE OF AMERICA

(By Sumner Welles)

At this crucial moment when a two-world order looms before us, nothing could have been more tonic than Secretary Marshall's address of July 1.

For the first time the man who is directing American foreign policy has told the European peoples in concrete and simple terms exactly what the United States has done to help them since the end of the war. And for the first time, in language which can neither be distorted nor misinterpreted, he has pointed out the fundamental difference between the records of the Soviet Union and of the United States in their dealings with the independent peoples of Europe. It was high time that this contrast should have been drawn.

These facts must be brought home to the masses of the people.

As I have previously written in this column, the crisis which will decide whether Italy will adhere to the principles of individual liberty or become a Soviet-dominated police state will probably reach its climax during the coming months. There is no country in western Europe where American propaganda has been more hopelessly deficient. Notwithstanding all of the advantages which it has possessed, this Government has fallen down lamentably in getting across to the Italian people the nature of American policy and the extent of the help which this country has given them.

At the present moment less than one-third of Italy's 45,000,000 inhabitants support communism. Yet because of the ruthless fanaticism and ability of its leaders, because of its far superior organization and, above all else, because of the unlimited funds at its disposal, the Italian Communist Party is beginning to shape the thinking of a large majority of the Italian people.

The United States has time on the Italian radio networks. It has information centers in a few of the larger Italian cities. But desirable as this may be, the effects of such activities have so far been negligible in comparison to the impact on Italian public opinion of the six Communist dailies and of the 100 Communist weeklies now being circulated in Italy, of the propaganda being carried on by Soviet emissaries, and of the fact that the 6,000,000-member General Labor Federation is Communist controlled.

Communist agents have been maneuvered into key administrative positions in every branch of the Italian Government. In the earlier days when American supplies were being shipped to Italy in vast quantities, the local distribution of relief was frequently in the hands of these agents. They have led innumerable Italians to believe that the assistance coming from America was actually help rendered by the Soviet Union.

The State Department's information service has been inefficient. The qualifications of its administrators have been justly open to serious question, but at a time when it is more than ever essential that the truth with regard to this country be made available to other peoples, and particularly to those in Europe, it would surely have been the part of wisdom for the Congress to insist upon a radical overhauling of the propaganda machinery in the State Department rather than to reduce the appropriations for that service.

What is needed is that the masses of the people in Europe be given the opportunity of digesting the kind of information contained in Secretary Marshall's speech.

As a brilliant Italian statesman—a true democrat of the younger generation—said to me a few days ago, the great bulk of the Italian people have as yet had few chances to know such facts. They do not realize, for example, that the United States favored a just peace with Italy and that it was the Soviet Union that insisted on the present harsh and unfair terms, and demanded the severance from Italy of Trieste. They have not been told that many thousands of the Italians taken prisoner by the Russians were slaughtered in cold blood.

Only a few have learned of the humane and friendly treatment given Italian prisoners of war in the United States. Only a small percentage have ever heard of the contraband organization which the Communists set up along the frontier between Italy and Yugoslavia through which a large part of the wheat sent from the United States to feed the starving Italians was filtered into the Balkans to further the Soviet Union's policies in that area.

For lack of resources and for lack of a sufficient medium of information the democratic parties in Italy have been able to do little to make these facts known. As was recently demonstrated in Venice, when Prime Minister de Gasperi's efforts to speak at a great public demonstration were halted by Communist riot squads, the Communists will make every effort to prevent the democratic leaders from enlightening the people. For that reason statements such as that made by Secretary Marshall will be especially helpful if they can be made known to the people as a whole. Every facility available to the State Department should be used so that the facts contained in them may reach the European peoples this summer.

If the truth can be told to the man in the street, to the worker in the factory and to the peasant on the farm, the effects of Communist coercion and the Communist propaganda can be far more readily combatted.

Marketing of Hydroelectric Power Generated at Federally Owned Projects on Navigable Waters

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1947

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement I made before the Public Works Committee of the House:

Mr. Chairman and fellow members of the Committee on Public Works, I have heard all of the testimony presented to our committee on H. R. 3036 and, in my judgment, a case has not been made justifying the enactment of this bill into law and changing the existing policy of marketing hydroelectric power generated at federally owned projects on navigable waters. The two fundamental provisions of the bill are:

First, to shift the authority for the sale of electric power generated at reservoir projects under the control of the War Department from the Secretary of the Interior to the Secretary of War; and

Second, the requirement that all such power, with minor exceptions, shall be sold at the generating plant or bus-bar. This change, I believe, is of more importance.

Testimony clearly shows that by transferring the authority to sell the power from the Secretary of the Interior to the War Department duplication of controls will not be eliminated and efficiency and effectiveness in control will not be accomplished by reason of the fact that by making this shift there will be several agencies of the Government in the field of marketing power, whereas, at the present time, in the main, there is only one.

The provision to require power to be sold at the bus-bar would throw this great public industry back into the hands of private monopoly and would make it possible for one big holding company or utility to monopolize all of the power from a generating plant built and owned by the Federal Government, and put the consuming public at the mercy of the monopoly. This is what existed before the present policy of marketing power was established by the Congress. Under existing regulations such monopolies are prohibited and the power is made available to all public bodies such as cities, municipalities, rural electrification districts, and other organzations of a public character. It also provides for the sale to private utilities and does not in any sense deprive them of their property rights and the opportunity to serve the public. In fact, under present controls and privileges, their scope is augmented and in my area, the Columbia River Basin District, the private utilities are marketing Bonneville power and are in full accord, as I understand it, with this program. The Government itself does not retail the power. It merely provides backbone transmission facilities so that the power may reach market centers to be retailed there by private utilities or public bodies.

As a Member from a Western State, I wish to take the opportunity to make a few observations and give the viewpoints of the western sections of our country with respect to H. R. 3036. Initially I want to point out that I appreciate and respect the sincerity and objectives of the sponsors of H. R. 3036, but feel that the language of the bill should be amended so as not to do violence to long-established and accepted congressional policies and western institutions. These policies are understood and respected in the Western States where water resources constitute the foundation of our economy. Water power, developed as a by-product of multipurpose, Federal projects, is Government property under article 4, section 3 of the Federal Constitution. The Supreme Court has so held in all late decisions. Therefore, the public interest in the disposition of this type of property as well as all other types of property should be duly safeguarded. This has been sound Republican policy since President Lincoln enunciated this principle in connection with the first land laws. In his first annual message to the New York Legislature on January 7, 1907, Gov. Charles Evans Hughes restated this principle when he said, in effect, that water

powers are property of great value and "They should be preserved and held for the benefit of all the people and should not be surrendered to private interests." This viewpoint was held in the Supreme Court opinion in the Ashwander case, which was written by Chief Justice Charles E. Hughes.

Theodore Roosevelt restated the Hughes principle in his Rainy River power veto message of 1908. In this veto message he stated in effect that "It is unwise to give away the property of the people in flowing water."

He again restated this principle in the James River veto message of 1909. These two Roosevelt veto messages and the Taft veto message on the Coosa River Dam focused public attention on the outstanding importance of hydroelectric power. Theodore Roosevelt in the James River veto message stated, "I esteem it my duty to use every endeavor to prevent the growing monopoly (monopoly of federally owned power), the most threatening which has ever appeared, from being fastened upon the people of this Nation." These messages led up to the conservation movement which terminated in the Federal Water Power Act of 1920. This act provided in section 201 (f) that the provisions of part II (regulation) are not applicable to the United States, unless specifically provided in other statutes.

NAVIGABLE STREAMS

The Federal authority over navigable streams has long been established both by law and precedent, and stems from the commerce clause (art. 1, sec. 8) and the property clause (art. 4, sec. 3) of the Federal Constitution. In the first Supreme Court case of *Givvons* v. *Ogden*, Chief Justice Marshall laid down the principle that navigation is commerce under article 1, section 8, of the Constitution and that this jurisdiction is vested in Congress alone. The first congressional appropriations came for surveys of the tributaries of the Mississippi, which surveys were authorized by Congress in 1819, and surveys for canals, which were authorized initially in 1824.

In 1866 Congress recognized water rights on navigable streams and authorized acquisition of water rights by individuals for mining, agriculture, manufacturing, and other purposes. This was the first congressional enactment respecting western institutions. In the act of 1870 Congress declared that vested rights in public lands for irrigation canals would be effective against subsequent patentees. In 1891 and by amendment in 1895 Congress required the recording of claims of water rights on public lands. The first enactment that I can find covering water power was in the act of 1896 which authorized the Secretary of the Interior "to permit the use of right-of-way not exceeding 40 acres upon forest reservations, for the purpose of generating, manufacturing, and distributing electric power."

WESTERN INSTITUTIONS

Water is life to the people living west of the ninety-seventh meridian. Accordingly Congress, as members of the rivers and harbors section of this committee will well remember, made provision for protecting reclamation and other western rights when the last Rivers and Harbors Act was passed, that is, the act of March 2, 1945. In this act Congress, as the result of concerted western action, recognized the great importance of this matter and provided for coordination in sections 1, a, b, and c, and the provision affecting McNary and the lower Snake projects in this act.

Also the Pacific Northwest is a fuelless region, with natural compensation in the possession of the highest large-volume class hydropower on this continent. Consequently, western institutions have been built around these two life-giving needs.

Civilization received its start in Egypt when these people first learned and applied the lessons of cooperation in connection with the use of rare water. The West is thoroughly grounded through experience in the fundamentals of cooperation needed to protect their water resources and recognized the benefits resulting therefrom. To claim, as has been done in the testimony on this bill, that such cooperation is socialism is an insult to western institutions and shows unfamiliarity with western background and the advances of civilization.

Nature never standardizes its water courses or its water falls, and to attempt to do so legislatively, as in H. R. 3036, is certain to cause conflicts with the natural order. This is the western approach to such a bill as H. R. 3036. The pioneer instincts of westerners are to protect free enterprise, private initiative, and private investments, but they, in turn, demand that their natural resources also be protected for all the people. Therefore, when I differ sharply with some of the testimony given by witnesses unfamiliar with the West, I want it understood that I am not attacking free enterprise, but am only restating principles applying to western institutions, water and other natural resources, which have had long acceptance by Congress and the courts. Any good lawyer knows that the West operates under established water laws which are different from the common legal concepts of riparian rights which applies in humid regions. The people of the West respect the resource rights of other sections. For example, the people of my district do not expect that Michigan copper or Texas, California, Louisiana, or Arkansas oil be sold in Oregon at the same terms as exist at the source. Therefore, the West expects the same consideration in respect to its own resources.

The Nation needs western resources and western development. It was these resources that provided the tools of victory in the last war. Western resources provide pay roll in other sections, as western basic materials are used in eastern and southern satellite industries.

A great deal of western supplemental irrigation is provided by pumped water. Unless Federal power is accessible to pumps, this type of agriculture cannot be placed on a feasible basis. Bus-bar sales, therefore, will be a major obstacle to western agricultural development. Western farm organizations will strongly oppose bus-bar sales. The preference given to public bodies in lines 7 to 11 of page 2 of the bill is nothing more than an idle gesture and can give no hope to the West under bus-bar sales and is subject to the opinions of the Federal Power Commission. This is policy which should be settled by Congress and not left to the opinion of a body not versed in western traditions.

FLOOD-CONTROL LEGISLATION

This type of legislation is of recent origin. Congress enacted the first flood-control legislation as a part of the act of 1879, creating the Mississippi River Commission. The legislative history shows that the 1879 act clearly established the principle of Federal flood control, but the early Commission interpreted this act as applying only as a part of navigation and not as an independent concept. As a result of this early administrative attitude, flood-control policy developed very slowly. It was not until the act of March 1, 1917, that Congress adopted a flood-control program independent of navigation. Consequently there is not an accumulation of multipurpose flood-control projects as the evidence before this committee would lead us to believe. The impression has been created that the 1944 Flood Control Act took away from the Army engineers power-marketing authority which they formerly held. This is not factual and creates a wrong impression.

As far as I have been able to determine, the previous experience of the Army engineers in the power-marketing field was confined to early power sales at Muscle Shoals and Sault Sainte Marie, both navigation projects. At Muscle Shoals the Alabama Power Co. purchased power at the bus bar at 1.63 mills per kilowatt-hour and sold it to the farmers at the dam abutments for 10 cents per kilowatt, or a profit of over 5,000 percent. It was this bus-bar sale incident that led up to the TVA Act.

There is no finer body of men in the Government service than the Army engineers, but I am convinced that their best interests will be served by staying out of marketing, especially when they blanket the country with construction. Marketing conditions cannot physically be the same in any two areas. It seems to me that the best interests of the Government lies in using the outstanding talents of this splendid corps in engineering, but I agree that these qualifications enable them to report on the factual side of transmission feasibility, which should be included in their usual routine reporting so that Congress can develop over-all power development feasibility on a project basis. If this is done most of the reasons for H. R. 3036 will disappear. The West stands for sound financial policies, full reimbursability on power elements, and nonduplication of facilities. Their long experience with resource development is responsible for this position.

THE PRESIDENT'S KANSAS CITY SPEECH

On Saturday, June 7, 1947, President Truman addressed the Thirty-fifth Division Reunion at Kansas City on Resource and Defense Requirements. This speech was based on the Bonneville Act formula, and is along the lines that I covered in a speech on the floor in May 1940 when I pointed out the national resource needs for a sound defense program. The Bonneville Act, known as the McNary-Mansfield Act, was not a party enactment.

This Presidential speech confirmed my earlier judgment that H. R. 3036 could not be considered as conforming with the program of the President or any betterment program. I have seen no official reports from the Budget Bureau or departmental reports that indicated such conformity. Therefore, it is apparent that the testimony given before this committee is evidently based on a desire to expand the jurisdiction of the Federal Power Commission rather than a well-considered and approved plan to eliminate duplication of controls.

This approach does not make for good legislation. Fundamental congressional policy changes which would have far-reaching effects, should not be based on such considerations. Such handling makes for inefficiency. Instead of centralizing controls it divides them among several Government agencies.

With the heavy war debt which is on the backs of our people, every change should look toward bettering efficiency. Therefore, in view of the far-reaching effect of such a major change in policy as contained in H. R. 3036, I feel that this committee should have more complete facts bearing on the over-all plan. This committee needs to have more facts before it showing the necessity for such a change and that it would result in greater efficiency. Above all, we should have clear and convincing proof that this drastic change in policy would not return hydroelectric energy generated at these great Federal projects over to private monopolies for exploitation, resulting in higher costs to the consumers of power.

Policy rests with Congress alone, and when an attempt is made to change policy, we must know the effect of such a proposal on every section, every type of activity within the section, and how governmental procedure and efficiency is changed. Power policy needs to be clarified, simplified, made consistent, codified, and reduced to a fair business basis. In addition, there is need for a clear policy line of demarcation between Federal and State constitutional jurisdiction applied to

rates and marketing in order that prudent private investments made under State laws can be protected, and Federal expenditures kept within such limits and prevented from encroaching on private enterprise. H. R. 3036 does not accomplish these purposes, but leads to greater confusion and destroys long-established policies which have contributed to national development, the common welfare and national defense, and the prevention of private monopoly of Federal power. I feel certain that the West desires the betterment of development policies rather than a limitation on existing policies and institutions created under such a policy.

It has been only about 10 years since Congress established power marketing laws. This summer will mark the tenth anniversary of the Bonneville Act, and the experience to date under this act has been highly satisfactory. H. R. 3036 will nullify the beneficial policies which are a part of the Bonneville Act. H. R. 3036 divides management responsibility whereas the Bonneville Act concentrates responsibility, and in addition, places management close to the people affected. H. R. 3036 is a remote control set-up which places a brake on private initiative. It is bureaucracy in its worst form, leading to monopoly in Government. Congress has the constitutional authority to control monopoly in private business but should be extremely cautious in setting up any policy leading up to power monopoly as provided in this bill.

The Bonneville Act provides the answers to bus-bar sales. Under this act zone rates are permitted, but the application must be such as to prevent monopolization by limited groups. Industry, if it elects to locate close to a dam, can do so, but at the same time the channels are always kept open so that benefits can also be spread as widely as possible, particularly to rural consumers. This provision, therefore, gives the Federal Government more than one prospective purchaser, insuring a better pay-out return to the Federal Treasury. H. R. 3036, in specifying bus-bar sales, places the superior authority of the Federal Government at the mercy of one private bidder, and permits such bidder to siphon away benefits that belong to the farmers, irrigators, and small manufacturers. For this reason, H. R. 3036 works to the detriment of agriculture and is inconsistent with the policy governing REA enterprises. All friends of agriculture, if they realized the implications of the bus-bar sales limitation in H. R. 3036, would solidly oppose this proposal.

FEDERAL POWER COMMISSION

This is a quasi-judicial body, and as such, under our constitutional government philosophy, should be strictly kept out of the management field, and in addition, should not have policy matters placed in its hands. What is done in H. R. 3036 is tantamount to transferring activities from the executive to the judicial branch of the Government. If we mix judicial with management functions, as is attempted in H. R. 3036, we could, with the same logic, ask the United States Supreme Court to administer the United States Bureau of Prisons.

As a quasi-judicial organization, the Federal Power Commission should properly exercise rate, allocation, and "return" jurisdiction—all of which are judicial functions—as is provided in the Bonneville Act, but the West would feel happier if there were a more equitable division of membership on the Commission, as western resoruces, laws, customs, and traditions are entirely different from those of the rest of the country. The most recent appointments to the Federal Power Commission indicate that the administration has not given full recognition to the western section of our country.

REIMBURSABILITY

The West has long accepted the doctrine of reimbursability of Federal reclamation and power expenditures, and an examination of the long-time public-works expenditures will demonstrate that the West has paid its way more than any other section of the country. A survey of total Federal expenditures for public works since 1824, indicates that the 17 Western States have received less than one-third of the total Federal Works' expenditures. Excluding river and harbor and road work, all these western public-works appropriations have been on a reimbursable basis. The West offers no complaint on this long-established public-works precedent, but feels that since they are on a pay-out basis they should not be hampered by remote control nor kept in a colonial status by unworkable processes. Total public-works appropriations apply to water control of all kinds since 1824 totals close to $6,000,000,000 for the country as a whole. Of this amount, seven-eighths have been on a nonreimbursable basis, whereas the one-eighth of this total applying to the West has required payout. The total long-time expenditures on water-control projects in the 17 Western States totals about $1,800,000,000, of which eight hundred and fifty-one million have gone into rivers and harbors, flood control, roads, and the like, nonrepayable items. The nearly $1,000,000,000 which have been appropriated for western reclamation and power projects have been on a reimbursable basis, without creating a burden on the general taxpayers. Therefore, policies affecting nonreimbursable projects should not be made to apply to reimbursable items. When an attempt is made to include reimbursable and nonreimbursable projects in the same formula, unworkable results follow.

FURTHER ADVERSE EFFECTS OF H. R. 3036

The bus-bar limitation in H. R. 3036, as written, would tie the Government's hands in securing the best possible sale of governmental power as in most cases only one prospective purchaser has transmission lines in the vicinity of the project, and the bill does not permit building even a limited number of lines to reach other customers.

Most municipalities and rural public bodies have individual loads totaling only a few thousand kilowatts. Under such a circumstance, it is not financially feasible for the smaller public bodies to compete with a large private grid in reaching the power outlets, especially in the West. Most of the good western power sites are located long distances from load centers and most of the privately owned lines do not have capacity to handle such loads to focal points. Therefore, H. R. 3036 will limit rather than expand western markets.

Some of the exhibits shown before the committee created the impression that parallelism constitutes duplication. A garden hose could be placed parallel to a 48-inch water main but the condition of parallelism does not indicate that the garden hose could supply water to a city of 100,000 population. Generally, transmission lines throughout the country of all types of ownership are now overloaded and before any issue of duplication can be successfully raised, we must know the load and capability conditions on existing facilities. The experience of the Northwest has shown that grid operation is beneficial both to the public and private interests as long as the public interest is not subordinated to private gain. If a grid system is properly operated, no destruction of private investments will accrue. Of course, a grid system is not warranted unless generation is high. H. R. 3036 will result in increasing the number of Federal marketing agencies rather than reducing the number. For example, the Bureau of Reclamation has been designated as the marketing agency for the Missouri Basin projects. However, under this bill, we would set up duplicate marketing agencies in the same area. This would leave the door open for private interests to play one Government agency against the other. Congress should not legislate such a faulty set-up.

Repayment of western reclamation is possible because of revenues from the sale of power and returns from other western resources such as earnings from public lands and oil reserves. Western reclamation cannot be accomplished on an individual basis. It requires cooperation in the utilization of all resources, including power.

There is another angle which has not been discussed in connection with the pending bill and that is atomic energy. As is well known, the atomic bombs which fell on Japan were energized by Columbia River power transformed into a new metal called plutonium. It is not in order to discuss publicly the developments which are taking place in this field in the Columbia River Basin, but I can say it is my considered judgment that more of the Columbia River power will be used in the future for atomic conversion than has been used in the past. Therefore, we should be extremely careful in legislating about a subject matter that can hamper national defense. The Columbia River, as demonstrated in the last war, is more than a regional development. From what has taken place in the fields of light metals and atomic energy, the Columbia means more to the Nation than it does to the region. This short reference indicates again that H. R. 3036 should be given a good deal more attention than it has received from the standpoint of national defense.

Mr. Chairman, and members of the committee, for the reasons I have given and, based upon the testimony presented to the committee, I sincerely believe that approval of H. R. 3036 would not be in the public interest, but would return hydropower to private monopoly and rob the consuming public of the opportunity to secure this boon to modern industry, agriculture, and domestic use at a reasonable price.

Justice for Poland

EXTENSION OF REMARKS
OF
HON. WALTER G. ANDREWS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 9, 1947

Mr. ANDREWS of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

We, citizens of Polish extraction, residents of the Black Rock section of the city of Buffalo, having met for the annual observance of Poland's constitution of May 3, 1791, on this 4th day of May 1947, at the Post, No. 1041, American Legion hall, 930 Grant Street, in the city of Buffalo, county of Erie, and the State of New York, resolve the following:

We, as loyal citizens of the United States of America solemnly pledge our allegiance to the United States of America and we pledge our wholehearted support to all of our Nation's decisions with whatever sacrifice is asked of us to realize such decisions, and we pause to honor our sons and daughters who have demonstrated their allegiance to our country with the supreme sacrifice at the altar of the battlefield; and

Whereas our observance and manifestation today has the purpose of honoring the memory of the authors of Poland's constitution of May 3, 1791, which has become a pattern for all freedom-loving nations to model their systems of ruling their free peoples; and

Whereas today Poland, the land of the aforesaid authors, the land of many of our forefathers is ensnarled in the throngs of a

foreign occupation and has a system of life and government foreign to its way of life, history, and desires of the overwhelming majority of its citizenry forcibly wrought upon its populace; and

Whereas the great President, Franklin Delano Roosevelt, has unequivocally and unambiguously promised for all nations the freedoms enumerated in the Atlantic Charter; and

Whereas we feel that the United States of America resplendent with its high ideals of helping the needy, weak, and oppressed nations, is morally responsible for the present plight of the Polish nation which today is bearing the yoke of Communist oppression and of planned starvation; and

Whereas so many of Poland's most able and courageous citizens are scattered throughout the world under the classification of displaced persons who justly fear return to their native land of Poland because of the threat of ominous death or exile; and

Whereas the country of Poland was the first ally of the last World War and has lost almost one-half of her prewar territory in favor of a supposed ally-neighbor who has, in return, forced upon the remaining territory of Poland a government undesired and disliked by the majority of its peace-loving citizens; and

Whereas at the Yalta and Potsdam Conferences the Big Three have guaranteed the Polish nation free and unfettered elections to be conducted in accord with democratic ideals; and

Whereas these great men of the world have realized the wrong afflicted upon Poland, have met at conferences, and have sought a way to soothe the wrong perpetrated upon one of their allies, viz, Poland, gave her a boundary on the west on the Oder and Dnieper Rivers and on the north a greater access to the Baltic Sea; and

Whereas over 4,000,000 Poles have settled on these reacquired, historically old Polish lands, which were forcibly partitioned from Poland by the "Drang Nach Osten"; and

Whereas the Department of State, with George Marshall as the Secretary of State, has joined those who wish to take from Poland these historically old Polish nation lands on the argument that it is necessary to reestablish Germany economically because Germany was the prewar center of economic life of central Europe; and

Whereas we, as citizens of the United States, feel that the lot which has befallen Poland and the treatment afforded her has no parallel with the subtle treatment afforded by our Nation to our defeated enemies; and

Whereas the citizens of our sister republic, Poland, are suffering from untold deprivations, the gore of hunger, and from the fangs of oppression, and that these hungry and privated peoples of Poland and the displaced persons scattered all over the world look forward to us for help in their endless plight and suffering; and

Whereas the American relief for Poland, under the direction of Dean Francis X. Swietlik, is straining its efforts and facilities in bringing to the Polish nation the needed speedy relief:

Be it therefore determined and resolved as follows: That we hereby appeal and send copies of this resolution to our Representative in Congress, WALTER ANDREWS, Senators ROBERT WAGNER and IRVING IVES, Secretary of State George Marshall, and President Harry S. Truman, beseeching their aid and support in—

I. That international politics be set aside when questions of aid to the hungry peoples of Poland arise.

II. That attention be not paid to the communistic tendencies of the present Polish Government for the election that placed that Government in power was not free and unfettered and did not represent the majority opinion of the Polish citizens.

III. That Poland be not therefore classified as a Communist nation.

IV. That our representatives in Congress and in Senate try all reasonable means to hurriedly end debates and pass the bill presented by Congressman STRATTON, of Illinois, which provides for the entry of 100,000 displaced persons annually for a period of 4 years over and above the normal immigration quotas.

V. That loans be made possible and given to the Polish nation for rebuilding of their war-torn country.

VI. That other humanitarian aid be devised to assume the task of relief work heretofore done by the now nonexisting UNRRA.

VII. That instead of partitioning Poland for the fifth time in its history by taking from her the historically old Polish lands of East Prussia and Silesia on the pretense that said territories are necessary to rebuild Germany economically for Germany is the focal point of economic life of Central Europe, that our country together with other great powers rebuild Poland; let Poland be the center of economic life of the nations of Central Europe, for there is no danger of Poland commencing war for the Polish people are basically and traditionally peace-loving peoples; be it further

Resolved, That an appeal be made to all unbiased citizens of United States, to write letters and send resolutions and telegrams to our representatives in Washington, D. C., to create in them a sympathetic attitude and a friendly public opinion so that justice is done in matters pertaining to the prostrated nation of Poland; be it further

Resolved, That a vote of praise and thanks be given to Dean Francis X. Swietlik, chairman of the American Relief for Poland and to the members of his organization for their efforts of bringing humanitarian aid to the needy Polish peoples; be it lastly

Resolved, That an appeal be hereby made to all citizens of the United States of America to do their share in helping the American Relief for Poland by giving their contribution and used clothing. Let us all keep sending packages to our relatives in Poland for they need our help and they cannot expect that help from elsewhere.

Long live the United States of America.

Long live the land of our forefathers, free and independent Poland.

JOSEPH P. KUSZYNSKI,
President Council 92, P. N. A.
Chairman, Resolution Committee.
STANLEY STRZYZ,
President, Circuit No. 2,
Polish Roman Catholic Union.
JACOB KUKLA,
President, Colony No. 2,
Polish Union of America.
STEVEN DOMBROWSKI,
Chairman Program.
JOSEPH A. STAROSCIAK,
Secretary Observance Committee.

Problem of Churches Involved in Politics

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 9, 1947

Mr. CASE of South Dakota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence from the Washington Evening Star:

HOUSE HEARINGS SHOW PROBLEM OF CHURCHES INVOLVED IN POLITICS

(By David Lawrence)

The action of large church organizations in permitting their names to be used for or against pending legislation has its embarrassing moments. Printed copies of the recent hearings on the reciprocal trade and tariff issues before the House Ways and Means Committee, which have just become available, reveal an interesting colloquy between Charles P. Taft, president of the Federal Council of the Churches of Christ in America, and Representative REED, Republican, of New York.

Mr. Taft in his personal capacity is an expert on trade relations, having recently served very efficiently in the State Department. So far as his political and economic background is concerned he is perhaps as far toward the "left" as his brother, the Senator from Ohio, is to the "right."

Charles Taft testified first in his personal capacity and made an able witness, and this correspondent agrees with him on the views presented, so the point being made here has no reference to the merits of the subject under study by the Ways and Means Committee. It was when Mr. Taft testified as a representative of the Federal Council of the Churches of Christ in America, an organization of Protestant churches, that Mr. REED asked some searching questions.

ASKED ABOUT METHODISTS

He wanted to know how many members were in the organization. Mr. Taft said about 27,000,000 but stated he was not speaking for any such number. He was then asked if the Methodists were a part of the group and whether they had a temperance organization and whether, in endorsing the operation of the reciprocal-trade-agreements law, they were really familiar with what had been happening. The witness said he presumed they were not.

Mr. Taft said that the Federal Council, at its Seattle convention, passed a resolution about temperance activities, but he added: "The churches today in the Federal Council at least do not stand officially for prohibition." Thereupon Mr. REED inquired:

"However, did they take an interest in the trade agreements with Canada in 1936 and 1939 by which they lowered the duty on liquor—that is whisky—from $5 per gallon to $2.50?"

Mr. Taft replied that he did not think they took any steps. Mr. REED went on to say:

"Well, you are representing the churches here; I know you must be speaking for them here. Of course, it is a loss of revenue of almost $1,000,000 as a result of lowering these taxes. A very interesting thing to me is—I know the churches must have some interest—the fact that they have on the list, over there in Geneva, to lower still further the tax on whisky, brandy, gin, rum, and other distilled spirits; champagne, vermouth, and other wines, with certain exceptions; beer and ale and malt products. I can't tell to what extent. Of course, they had no particular referendum, with fine church organizations and the like, on this item."

Mr. Taft commented: "Their experience with prohibition has led them, to a very considerable degree, to the position that the promotion of temperance must be an educational process and it cannot be done by law—that is my conviction, sir."

Representative REED then inquired: "They are using this method of letting in more liquor to sort of educate people not to use it, is that the idea?"

SEEN AS "SOURCE OF DOLLARS"

Mr. Taft thought not and that it was merely a "source of dollars to the British" in world-trade exchange. Mr. REED promptly put into the RECORD a long list of figures

showing the recent imports of alcoholic beverages into the United States.

The incident illustrates how distrustful Members of Congress are of statements by committees purporting to represent the views of large church organizations. Thus, for instance, there are Members of Congress who do not believe that the recent statement issued by the social action department of the National Catholic Welfare Conference arguing for Presidential veto of the Taft-Hartley labor bill was ever submitted to any large group of Catholics to pass on but represented the view of a handful of "left wingers" who tried to use the name of a large and splendid organization to achieve a political action.

This is the kind of danger encountered when church units insist on dabbling in politics. Congress long ago recognized this trend when it passed a law which authorizes the Bureau of Internal Revenue to withdraw tax exemption from any church organization, religious body, charitable institution, or foundation which becomes active in attempting to influence legislation by propaganda or otherwise.

When a tax-exempt organization insists on the right to engage in political propaganda the fact that moral issues are involved does not immunize the organization from tax difficulties. Those individuals who contribute funds, moreover, run the risk of having deductibility on tax returns denied them because political contributions are not deductible for income-tax purposes.

There is no need to run these risks. For there are plenty of legitimate propaganda opportunities for clergymen, acting in their individual capacity, to take good care of the field of morality as it affects or is affected by Government policy on political and economic questions.

Manila Bears Worst War Scars; Squatters Use Ruins

EXTENSION OF REMARKS
OF
HON. GEORGE H. BENDER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. BENDER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include herewith an article by Mr. Ralph Donaldson, of the Cleveland Plain Dealer:

MANILA BEARS WORST WAR SCARS; SQUATTERS USE RUINS

Manila, once one of the world's most beautiful cities, still exhibits the ghastly scars of some of the most furious fighting that took place in the Pacific. It was badly damaged by Japanese bombing in the early days of the war, despite the fact that General MacArthur had proclaimed it an open city, but it took a terrific pounding in the fighting which preceded its capture by the American forces.

When the Americans entered Manila the Japs retreated across the Pasig River, blowing up the bridges behind them, and took refuge in the old walled city, the Government buildings and the palatial residences, apartments, and hotels in what was known as the American section of the city facing Manila Bay.

Heavy artillery was used to blast the Japs at point blank range, and few of the buildings in which they were hiding escaped destruction. Those which were not demolished were the scenes of hand to hand fighting, as the Americans went from room to room, smashing doors, hurling grenades and spraying the Japs with machine gun fire.

Only a few of the buildings have been repaired. Some are beyond repair and will have to be torn dawn. Squatters are living in the ruins wherever they can find a little shelter. Dewey and Taft Boulevards are mostly wastelands of rubble and destruction.

MANY BUILDINGS RAZED

It is not uncommon to see a flight of marble steps standing alone in a yard. The building to which they once led is no longer there. Dewey Boulevard has been also stripped of trees and utility poles. The Japs cut them down, so that they could use the roadway as a landing strip for fighter planes.

Piers and warehouses were smashed and the harbor was littered with sunken shipping. The Navy towed scores of sunken Jap ships out beyond the breakwater to get them out of the way and sunk them in a line so that they form an outer sea wall. Their masts, funnels and superstructures are visible.

The old walled city was completely demolished by bombing and point blank artillery fire. Heavy shells blasted huge gaps in the thick walls so that the American soldiers could go in and get at the Japs.

The contrast between what happened in Manila and Tokyo is startling. Tokyo had it worse, but the destruction there is not so apparent, because most of the Japanese buildings were consumed by raging fires and there is nothing left to mark the spot.

CORREGIDOR HIT HARDEST

But for complete destruction there is nothing to equal Corregidor, the turtle shaped island, surmounted by a huge rock, which guards the entrance to Manila Harbor.

Our party made a tour of Corregidor, which was one of the most impressive events of our far eastern tour. Our guide was Maj. Gen. George F. Moore, who commanded the ground forces on Corregidor at the time of the American surrender and who spent 4 years as a prisoner of the Japs.

The barracks, the hospital, and other buildings on Corregidor are mere shells. Jungle vines and trees are growing up around them and in time will hide their ugly scars. The golf course on Topside, the high land of the island, already has been reclaimed by the jungle. Only the old Spanish lighthouse survived the two invasions but it bears the marks of battle.

FAMED TUNNEL BATTERED

The famed Malinta tunnel through the huge rock on Corregidor was badly smashed when the Americans recaptured the island. The roof has started to cave in and it is not safe to walk through it. But General Moore conducted our party through it and pointed out the laterals where General MacArthur had his headquarters and where the late President Quezon of the Philippines lived during the early Japanese bombardment.

Many of the laterals were blown up and others were sealed off and became tombs for the trapped Japanese defenders.

Corregidor will never be fortified again. No attempt has been made to repair any of its facilities. Only a small detachment of troops is stationed there and their principal duties are to conduct parties of visitors around the island. Army FS (fast supply) boats provide transportation to permit soldiers and other sightseers to visit the island. As many as 400 make the trip on Sundays, with from 60 to 100 on weekdays.

MONUMENT IS PROPOSED

Eventually, Corregidor may become a joint American and Philippines battle monument. Every tourist will want to see it. President Manuel Roxas favors such a project.

One day our party was known to Baguio, the summer capital of the Philippines, for a visit with Ambassador Paul McNutt. The city of Baguio and Camp John Hay, an American rest area, were badly smashed in one of the last stands made by the Japanese forces in the Philippines. It was in the American High Commissioner's residence there, now the summer embassy, that the Japanese signed the surrender of the Philippines.

BAGUIO'S BEAUTY UNSURPASSED

Baguio, perched high in the mountains, with peaks all around it, is one of the most beautiful spots in the world and has a delightful climate the year round. It is now only a 50-minute flight from Manila. But when it was first discovered by William Howard Taft, the first High Commissioner to the Philippines, it could be reached only by traversing steep mountain trails on horseback.

The story is told that when Taft, who weighed around 300 pounds, first visited Baguio he sent a glowing cable to the then Secretary of War, Elihu Root, describing the wonderful climate and the marvelous scenery and telling how well he had withstood the gruelling trip on horseback.

"Glad you are fine," Root cabled back, "but how is the horse?"

A Conscientious Congress

EXTENSION OF REMARKS
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. GAVIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Harry Alan Sherman from the Keystone Republican for June 1947:

A CONSCIENTIOUS CONGRESS

(By Harry Alan Sherman)

Under the dynamic leadership of Speaker of the House JOE MARTIN, our Representatives in the lower Chamber of the National Congress have very definitely reassumed their constitutional prerogative as lawmakers.

The Republican majority in Congress has miraculously transformed that body in a few short months from a Chamber of vacant seats to a well-attended, conscientious agency of representative government.

For several lamentable years preceding the election revolt last November, the prestige of Congress had fallen to an unprecedented low in public esteem. Leading newspaper cartoonists habitually caricatured the Nation's Legislature as a weak "yes man" to the White House. Many an appointive administrative committee enjoyed far more legislative authority than did the elected constitutional Congress, under the whip of a powerful and unscrupulous political tyranny. Many a lawyer had long since scrapped his law books and had substituted political "fix" for precedent in adjustment of disputes involving legal interpretations.

The only way in which the former Members of Congress could avoid loss of political prestige or other embarrassment was to stay away from sessions. The busiest Members of either Chamber were the few delegated to drag enough others into session to constitute a quorum for the start of the day's routine rubber-stamping of White House bills. Even these latter stragglers soon found themselves uncomfortably ignorant of the meaning of the mass of "must" documents choked through on the day's calendar, and joined the others as Washington sightseers. So it was that in the Halls of Congress one often found a single Representative addressing hundreds of empty seats on a matter of

profound political interest to only his particular local constituency, for the purpose of having his historically inane remarks printed at public expense in the official RECORD and mailed to the voters back home.

All that is now a nightmarish memory. You cannot believe the writer unless you look in on your present Congress at any time of any day during a session. The transformation will positively amaze and delight you.

Our publisher, S. Percival Keyser, and the writer dropped in on the House and Senate on May 26 for a critical glance at the legislative branch of our Nation's Government at work. We had not the slightest hope of seeing all of the big names of those bodies actually at their desks, with their sleeves rolled up, earning their salaries; but there they were bright and early—all of the great statesmen of our day—teaming up with a polish and air of confidence that should inspire high hope and renewed faith in self-government.

The Republican leaders in both Houses of Congress are fortunate in having the most capable and distinguished assemblage of talented legislators which has graced the capitol in decades.

This Congress will make wonderful history. From its rolls the United States can draw great leaders for many years to come.

As Wilkinsburg's JOHN MCDOWELL pointed out to us the delegations of each of the 48 States we felt for the first time in a generation that our country's destiny was in good hands at last.

Incidentally Mr. MCDOWELL is an excellent example of the refreshing conscientiousness evident in Congress as a whole. Although not yet fully recovered from a slight breakdown from overworking on important assignments which took him across the Nation, and still unable to make a speech, he was in his seat at the drop of the Speaker's gavel. He loves Washington and is devoted to his duties, but, above all, he shares the burning desire of his constituents to regain the respect of the people of America and of the world for representative government.

We cannot too strongly urge a visit to Congress in session as an antidote for the blues.

If we sound enthusiastic, it is because the new Congress has made us feel just that way.

The Labor Bill

EXTENSION OF REMARKS
OF
HON. T. MILLET HAND
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 9, 1947

Mr. HAND. Mr. Speaker, a recent editorial on the labor bill published in the Millville (N. J.) Republican is herewith included in the CONGRESSIONAL RECORD for the information of the Members of the House:

The Taft-Hartley labor bill has become law over President Truman's veto. A substantial majority in both Houses of Congress affirmed belief in the new law as necessary for the public good.

Only some of the provisions take effect immediately, others in 60 days and in still other instances current contract requirements are unaffected. Labor unions have opposed the law since its framing. However, a majority of Congress believes it will ultimately result in greater industrial peace and improved employee-employer relations.

Like many laws, the new labor law will work no hardship on either unions or employers whose intentions are honorable and sincere. Although unions are made more responsible and can be held accountable for refusing to negotiate or for violating a contract, this is in the interest of the public welfare.

No relationship between two parties can long endure on a satisfactory basis unless the terms of their association are fair to each party. It is on this basis that the Taft-Hartley labor law is expected to bring about equitable relationship between unions and employers.

From a practical viewpoint there is nothing to prevent a continuation of amicable relations between those unions and industries where cordiality now exists. There are many more instances of harmonious relations between unions and employers than of bickering and fighting. However, it is a natural thing that only those cases of strikes and lockout and protracted negotiations with seemingly unsurmountable difference reach the printed page of newspapers.

The Government has the power to seek an 80-day court injunction against strikes or lockout endangering the national health or safety. If the public welfare is threatened, then there must be some protection for the innocent and majority of people whose lives may be in peril. Some idea of the seriousness of such a strike has been clearly demonstrated at least twice in the past few years in the rail and coal industries.

Under the new law employers are given the right to sue unions for breach of contract. Unions are prohibited from making outright contributions to political campaigns for Federal offices. Federal workers are denied the right to strike.

One of the main objections of unions has been that the labor law prevents the closed shop. On the other hand it does permit the union shop if a majority of the employees so desire it. Under the closed shop a person to be employed must be a member of the union. With a union shop a person employed has a stipulated time during which he must become a member but he does not have to be a union member to be employed originally. This is looked upon by the bill's supporters as provision for protecting the individual worker.

We believe, given a fair trial, the new law will soon reveal its weaknesses which can be corrected. We cannot subscribe to the thought that this is a perfect law. But we can expect that given time it will provide a sensible solution to what may have regarded as an intolerable situation which must be corrected if we hope to have better labor-industry relationships.

Modernize Our Presidential Election—III. The Unit Vote

EXTENSION OF REMARKS
OF
HON. CLARENCE F. LEA
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, July 8, 1947

Mr. LEA. Mr. Speaker, the unit vote, as all know, means that whoever receives a plurality vote in the State receives its whole electoral vote. The vote of those who vote for the minority candidate has no effect in the election as the votes are finally computed. The controlling majority is arrived at by counting only the totals of State electoral votes after minority votes in the State are eliminated from consideration.

Mr. J. A. Dougherty, who made a very able study of the method of electing our President, has made this statement:

The only instance of the use of the ballot in the United States in which the vote is shorn of its full significance, as a vote, from the moment of its deposit, or, in other words, becomes subject to some influence that may render it absolutely futile and lead to its elimination from the final count, arises under the Presidential electoral system.

In every State, at every Presidential election, owing to the intervention of the electoral college, the voter for electors unsuccessful in that State has never yet deposited a ballot that had the slightest influence in the ultimate aggregate of the count. This result is not commonly appreciated; certainly not be those who affirm that the electoral system, even if obsolete and archaic, is unimportant.

In the campaign of 1800 the intense question was as to whether Jefferson or an anti-Jefferson man should be elected. One or two of the Federalist States changed from the district to the unit vote system in order to prevent part of their votes going to Jefferson, and to secure the whole vote of their States for Adams.

At that time Madison arose in the Legislature of Virginia—he had always been opposed to a general ticket—and urged that Virginia adopt the general ticket, which was done. He declared Virginia was forced to adopt a general-ticket system, a unit vote, as a matter of defense and also as a just retribution.

In other words, if the opponents of Jefferson in other States are going to disfranchise Jefferson votes, then Virginia, as a matter of defense, is compelled to adopt the same course, the same plan of minority disfranchisement, and offset the Federalist vote. When Madison said that it was just retribution he recognized Virginia had almost twice the population of any other State; when Virginia disfranchised the minority it meant she could give a larger solid block of votes than any other State. She could punish more than she could be punished.

The temptation of dominating groups in various States to control the whole vote of their States to the exclusion of minority representation in the electoral count finally resulted in the acceptance of the general ticket system, the unit vote, all over the Nation.

This, as in Virginia, was a surrender to local political expediency at the expense of the national good. It was induced, however, by a situation for which there was no complete remedy except by amendment to the Constitution.

It is interesting to note why and under what conditions the State unit vote was introduced into our plan of electing a President. It is clear that the system was not introduced for the public good, but to enhance the power of political groups controlling the States where it was first adopted. Part of the definite plan was to prevent minorities from getting representation in the computation of the final vote that determined the election.

Innumerable statistics could be provided to show the incongruity of the unit vote, how it disfranchises minorities and gives the plurality candidate vast numbers of votes which he does not earn in the election. I will submit some typical instances to illustrate now the unit vote works.

In 1924 John W. Davis as candidate for President received 6,000,000 votes that brought him no electoral vote. Six million people went to the polls and cast a vote for Davis that did not mean a single vote in the electoral college.

Davis carried a limited number of States in which he received less than 2,000,000 votes, and for those 2,000,000 votes he received 136 electoral votes. In other words, 6,000,000 votes meant no electoral votes; 2,000,000 votes meant 136 electoral votes. It is apparent there is no mathematical accuracy in the plan.

In a close contest the result is subjected to chance, a turn of fortune. A large percentage of the uncertainty, to a large extent the result in the Nation, depends on whether or not one candidate will receive a larger percentage of the disfranchised votes cast for the minority than his opponent.

In other words we have the curious practice under which the result of the election depends almost as much on how much credit a candidate gets for votes cast against him as from votes cast in his favor.

Another way of indicating the effect of the unit vote is by a comparison of the number of votes represented by one electoral vote as received by different candidates. In 1912, Wilson's electoral votes, each one, represented 14,500 voters; but an electoral vote for Taft represented 435,000 votes—over 31 times as many people represented by 1 electoral vote for Taft as by 1 for Wilson.

In 1928, an electoral vote for Hoover represented 48,180 votes; an electoral vote for Smith represented 172,602 popular votes.

In 1932, an electoral vote for Hoover represented 267,149 votes, and for Roosevelt 48,351. In other words, an electoral vote for Hoover represented more than five times the number of people that an electoral vote for Roosevelt represented.

In the election of 1932 the votes of 39 out of every 100 persons who voted, were discarded and not considered when the vote was computed here in the Capitol. A system of computing election results that discards 39 percent of the votes before the final count begins cannot be said to be either just or accurate. Such a method of computing votes can hardly be creditable to any government, especially to the greatest popular government in the world.

In 1932 Hoover received 2,150,000 votes in States he carried and which gave him 59 electoral votes. In the single State of New York, Hoover received 1,938,000 votes and not a single electoral vote. His votes in that one State almost equaled all of his votes in the States he carried; and yet from those States he received 59 votes, and from New York nothing.

Hoover's vote in New York in the 1932 election equaled his total vote in 23 other States in the Union. Hoover received nearly 15,800,000 votes and over 13,600,000 of those votes brought him no electoral vote whatever. All of his electoral votes came from less than 2,200,000, and none from the 13,600,000.

As the votes were counted President Hoover's name was not mentioned in connection with the electoral votes represented by over 13,600,000 persons who voted for him.

Mr. Hoover received only the electoral votes brought to him by the votes of 5.3 percent of the voters of the Nation, who voted in the States he carried. He received no electoral votes from 34.2 percent of the voters of the Nation who voted for him in the States he did not carry. In other words, 34.2 percent of the votes of the Nation gave him no electoral votes and 5.3 percent gave him 59 votes.

In 1936 Roosevelt received 60 percent of the popular vote and 98 percent of the electoral vote. In 1940 he received 54 percent of the popular vote and 84 percent of the electoral vote.

Here was a discrepancy between the popular and electoral votes of 38 percent one year and 30 percent 4 years later.

In 1892 Cleveland received 46.2 percent of the popular vote and Harrison received 45.1 percent. Weaver, the Populist candidate, received 8.5 percent.

Cleveland, with 46.2 percent of the popular vote, received 277 of the 444 electoral votes in the Nation; Harrison received 145 electoral votes; and Weaver, 22.

On 1.1 percent of popular advantage in the vote, Cleveland received a majority of 132 electoral votes.

In 1876 Tilden had a national plurality of 250,807 and 50.9 percent of the popular vote. Hayes had 47.9 percent of the popular vote. Tilden lost the election by one electoral vote.

In 1888 Cleveland, with a popular plurality of 95,713, was defeated by Harrison by an electoral majority of 65.

In 1916 Wilson, with a national plurality of 591,000, gained the one electoral vote necessary to election by carrying the 13 electoral votes of California by a plurality of 3,806.

The statistics above cited will indicate conclusively how impossible it is for the unit-voting system to reflect accurately the popular vote of the country. It follows almost as a mathematical certainty that now and then at future times, if continued, it will in all probability inflict great injustice upon the country.

I call this means of taking votes from a minority as a disfranchisement. I realize that technically that term may mean to deprive a voter of his right to vote. In my mind, however, there is little distinction between taking away the right to vote and refusing to count a vote after it is cast.

It is a serious offense against any practical conception of a popular form of government to deny the voter the right to have his ballot counted for the candidate for whom cast.

It is doubly offensive when the vote is so manipulated as to be counted exactly contrary to the will of the voter; to take the vote away from the candidate for whom cast and add it to his opponent's vote.

Under the plan we propose every vote cast for President in the Nation, even by its humblest citizen, will be counted and credit given where it belongs.

When in the Course of Human Events

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 9, 1947

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Item for July 4, 1947:

WHEN IN THE COURSE OF HUMAN EVENTS

He's only Joe Doakes from around the corner, celebrating a great day with the missus and the youngsters after whatever fashion best pleases him. He doesn't have to ask anyone's permission or follow any set ritual. So maybe the Doakeses are going to the beach, the ballpark or to a fish fry along some bayou. Maybe they're having a wienie roast on the back lawn, where everything's homey and handy. Maybe they're just taking the old jaloppy out for an airing. Maybe they'll go hear some politician sound off about the day we celebrate.

And maybe his name isn't Doakes. Maybe it's Kindelburger or Brewster or Papapoulikos or Boudereaux or McMahon or Gomez or Adriatti or Cohen or Campbell or Svenson or Cabot. Instead of working at the filling station he might have a job at the supermarket. Maybe he's foreman of a ship repair crew, a college professor, a bank teller, a truck gardener, a civil service employee, a telephone lineman, an X-ray technician.

But whatever his name is in the city directory, whatever his job, and whatever he's doing to celebrate the glorious Fourth, he's also a lot of other people doing a lot of other things. He's young Tom Jefferson, slouched in an armchair in his second-floor-back at Williamsburg, dreaming up the Virginia statute of religious liberty. He's General Goethals driving a canal from ocean to ocean. He's Kit Carson, wading the icy Shoshone creeks to set his beaver traps. He's Horace Bixby piloting a gaudy steamboat down the Mississippi River. He's laying a railroad track across the continent, he's a soldier among the scarlet poppies of Chateau Thierry's fields, he's Ben Franklin establishing the first retail coffee store in his Philadelphia printshop, he's a Baratarian driving his pirogue across Coquille to join Jackson at Chalmette, he's Elias Howe perfecting a sewing machine.

He has preached a sermon, celebrated a mass, or read from the Torah, whichever he pleased. When monarchs, dictators, the bosses of political machines, or other would-be authoritarians suggested they might push him around some, he had a ready answer. When his name was Charles Pinckney he said to Talleyrand: "Millions for defense, sir, but not one cent for tribute!" And when he was just a guy named Joe he probably phrased it: "Oh yeah? You and who?" The wording didn't really matter. It all came to the same thing.

He's also Henry Ford tinkering with a horseless carriage, he drove a covered wagon across the wilderness, he helped dig New York's subway and raise Chicago's skyscrapers. He is young Tom Edison ticking away on a telegraph key, he drove a bulldozer ashore from an LST at Bougainville, he fished for cod off the Gloucester banks, he rode beside Custer at the Little Big Horn, he studied at Harvard in colonial Massachusetts or was graduated from a State university last week.

And he was the Wright brothers tinkering in a bicycle shop at Dayton, he was John

Howard Payne writing Home Sweet Home, he stormed the Halls of Montezuma and caroused in New Orleans with Winfield Scott, he built a cyclotron, he was Benjamin West at his easel, he designed Boulder Dam, he was Walter Reed liberating mankind from yellow fever, he was a Tinpan Alley tunesmith, he planted a Kansas field to wheat, wrote the deathless story of Huck Finn, and ran the length of the field to score a touchdown in a Sugar Bowl game.

He sat around a cracker barrel in a crossroads store cussing the Government, and he debated international issues in the United States Senate. He found gold at Sutter's Mill, signed the Atlantic Charter aboard a battleship, built a better mousetrap, taught the three R's in a one-room country school, explored the Antarctic, played the lead in a Hollywood movie, delivered an address at Gettysburg.

And he signed a certain declaration at Philadelphia 171 years ago today.

He did and was all those things because, whether his forebears landed at Jamestown or Ellis Island, all those things had a share in what he is and does today. They are part of the heritage men died to pass on to him; the same heritage which, if need be, he will give his life to pass on to those who come after him, the children of his children's children. In token thereof, this is the day we celebrate.

Voice of America

EXTENSION OF REMARKS
OF
HON. PETE JARMAN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1947

Mr. JARMAN. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following newspaper article:

UNITED STATES "VOICE" REDUCED TO A MERE WHISPER

WASHINGTON.—The House has passed South Dakota Republican KARL E. MUNDT'S bill authorizing the State Department to conduct the Voice of America broadcasts and other cultural relations programs to spread democracy in foreign countries. The bill will probably get through the Senate with some amending.

But even when signed by the President and made a law, the Mundt bill will be a good bit like a pardon to save the Voice's life in order to starve it to death later on. For House and Senate Appropriations Committees have hacked Assistant Secretary of State William Benton's Office of Information budget so heavily it has no chance to be effective, whether it ever was before or not.

What started out to be a $31,000,000 program was cut to $10,000,000, then eliminated altogether by the House. The Senate Appropriations Committee has now indicated it will raise the figure to thirteen million. But $1,500,000 of that is to half liquidate the outfit and bring back home from overseas all the experienced Foreign Service people who will have to be fired.

In all this monkeying around, one basic fact seems to have been ignored: In recent months the United States has been taking a terrible beating in the business of waging ideological warfare.

The throwing around of hundreds of millions of dollars' worth of relief and loans and military weapons is one, but it apparently isn't enough. The reason it isn't enough is that the Communists go around spreading lies about all the good deeds.

It isn't necessary to go out and tell lies about the Communists, to fight dirty just because they fight dirty, though that has been suggested. But it is necessary to counterattack with truth, just to keep the record straight.

That's why the congressional cuts of State Department information and cultural affairs budgets are suicidal. They are like refusing to pass ammunition in the Battle of the Bulge.

They take away the only weapons which the Government has to combat communism overseas, whether inexpertly used or not.

The reduced appropriation will make it necessary to close half the offic s now being operated in 77 foreign countries, the army of 2,600 trained specialists now fighting United States counterpropaganda warfare to a mere 600.

Editor, Pathfinder Magazine Urges Favorable Action on Mundt Bill To Establish United States Information Service Abroad

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1947

Mr. MUNDT. Mr. Speaker, reports drifting over from the other side of the Capitol indicate that the other body of Congress through its appropriate Committee on Foreign Relations is about to take up consideration of the House approved H. R. 3342 to establish a United States Information Service Abroad. This is indeed gratifying information in as much as the need for exporting the truth about America has never been greater or more urgent in the entire history of this Republic.

Under permission granted me by the House, Mr. Speaker, I would now like to call to the attention of the Congress the following editorial from the pen of Wheeler McMillen, the editor of Pathfinder magazine published here in Washington. This editorial carries a persuasive and pertinent endorsement of the House action in voting in favor of H. R. 3342:

ALONG THE AMERICAN WAY—TRUTH CAN DEFEND UNITED STATES

(By Wheeler McMillen)

The way to get rid of a bad law, it has been said, is to enforce it. Likewise one way to endanger a good idea is to make a mess of its execution.

International ignorance about the United States, we have belatedly realized, is phenomenal. Worse than that, falsehoods about our country are industriously circulated. That something ought to be done has been pretty generally agreed.

The President assigned funds to the State Department, which seemed the logical agency to do something, and William Benton, a successful former advertising man, now an Assistant Secretary of State, was told to do it. Perhaps some of his work was well done. Nevertheless, the radio Voice of America has received sharp criticism. The traveling art exhibit, made up of such stupid pictures as one of a circus fat lady, provoked ridicule. Certainly it did not tell foreigners what America really is like. Congress has come near to cutting off all funds for the purpose because a good idea was badly carried out.

Americans dare not forget that the United States is now the only rich and free spot in a perilous totalitarian world. Nor that exceedingly few people elsewhere have any true conception of freedom. They do not know how good it is. They do not know that America's productiveness is the result of freedom.

Russia, whose acts can only be understood to aim at world conquest by ideas or force, or both, persists in telling outrageous lies about the United States. Russian propaganda misrepresents facts, distorts motives, and challenges any inclination to believe in the good faith of this country. We are reported to be imperialists bent on enslaving and exploiting the rest of the world.

A friend lately back from Europe told of seeing canned goods with Russian labels being passed to hungry Italians as bounty from Russia. But on the bottoms in the tin were the initials "USA." This was UNRRA or other food from America on which the Russians had managed to lay hands before it reached those who needed it.

General Eisenhower told a House committee that Russian Army officers bragged about the quality and performance of their Russian-made jeeps. Their Government has not let them know that these were lend-lease jeeps from America.

The chances for a war against the United States are greater when people overseas believe only evil or error about this country.

Correct information about America can defend our peace on one of the front lines. Plenty of foreigners display great eagerness to know more about the United States. Observers report that wherever the American libraries have been opened people wait in line for a chance to enter and read.

The true story of the United States cannot be told abroad without telling some of the story of freedom. The facts about freedom supply a powerful antidote to the promises of communism.

Freedom has proved its case. Free people can produce enough to eat, wear, and enjoy. We know that.

Communism has not yet proved that it can do more than to distribute poverty.

Why should not freedom be "sold" to people everywhere just as aggressively as communism, a much inferior product, is being sold?

Objection has been made that if our Government promotes an educational program abroad it will engage in propaganda. So what? If propaganda is a weapon for self-defense, let's use it. Our propaganda needs to be only the truth.

It now looks as though the Senate may approve the Mundt bill or other steps to enable the truth about the United States to be spread overseas.

When the world-wide issues are freedom versus tyranny, productivity versus conquest, plenty versus poverty—when our own freedom and our own plenty are at stake—common sense demands that America tell its story in every practicable form. Could we afford not to tell it?

Common sense also requires that when money is so spent it be handled efficiently.

Dissolution of RFC Mortgage Company Presents Serious Threat to Veterans' Housing Program

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. KEFAUVER. Mr. Speaker, I wish to call attention to a situation which has caused me much concern in the past

week. The legislation recently passed which included the abolition of the RFC Mortgage Company has created a gigantic threat to our veterans housing program. The RFC Mortgage Company performed a great service for our veterans. In my district alone the benefits derived from this agency were tremendous, veterans housing was accelerated, and with the support of the RFC Mortgage Company many low-income veterans were given the opportunity of securing 100 percent financing of GI loans. It is now indicated that within a week's time discharged veterans in my district and throughout the country who are interested in homes up to $8,000 will have no real service available unless they can meet requirements of substantial cash down payments. I have had numerous letters and wires from real estate people, contractors, lending agencies, and veterans organizations in my district. The following letter is typical of the reaction to the elimination of the RFC Mortgage Company:

GENERAL MORTGAGE CO.,
Chattanooga, Tenn., July 7, 1947.

Re Veterans' Administration guaranteed mortgages, GI bill of rights.

Hon. ESTES KEFAUVER,
House of Representatives,
Washington, D. C.

DEAR ESTES: Following our conversation over the phone, we enclose at this time a list giving the actual names of the individual discharged servicemen and the amount of Veterans' Administration guaranteed loan desired in connection with their wish to purchase individual residences as a home.

You will notice that this list totals $392,700 and represents individual applications in process of approval by the Veterans' Administration for less than a 30-day period.

Since June 30, conservatively we have turned down applications totaling at least a minimum of $75,000.

The list represents loans to be made and closed for 100 percent of the GI appraisal and so far as we know or with the exception of the Prudential Insurance Co., whom we understand has restrictions relative to locations and age, there is no other institution who is in the market for the making of 100-percent GI loans.

From the list you will note that the average amount of the mortgage involved is only $5,610 and therefore without the support of the RFC Mortgage Company the 100-percent GI loans for the discharged veterans of small means for all practical purposes will be no longer available.

There are numbers of builders with whom our office is cooperating who have had the ability to build and are actually marketing new homes at less than $6,000. This type of construction is not attractive as of yet to the institutional investor and therefore the people who are actually making homes available up to $8,000 are also placed in a very difficult and dangerous situation in disposing of the homes they are building or have built.

The GI bill of rights for home ownership for the small family will in reality have been nullified unless the secondary market for GI loans through the RFC Mortgage Company is reinstated. Unless we can get some encouragement of the passage of House bill H. R. 4058, recommended by Congressman REDDEN, in the next few days, there will be nothing for us to do but turn down all pending applications of individual parties each of which involves the purchase of a home.

We assure you of our appreciation of your best efforts toward securing an early passage of the bill in question, which in our opinion is absolutely necessary, and we cannot conceive of how our own good home town can be much different than other localities.

With kindest regards, we are

Very truly yours,

WHITNEY COLBURN, *President.*

H. R. 4058 will do much to prevent the ruination of the veterans' housing program. This measure would amend the RFC Act so as to authorize the RFC to purchase home loans guaranteed or insured under the GI bill and it would provide a much needed and necessary outlet for veterans' loans. It is imperative that every effort be made to secure early passage of this measure if we are to maintain or hope to surpass our present level of producing homes for our veterans.

The Truth About the New Labor Law

EXTENSION OF REMARKS
OF
HON. RICHARD M. NIXON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1947

Mr. NIXON. Mr. Speaker, the most controversial piece of legislation passed by the Eightieth Congress is without much question the new Labor-Management Relations Act. Never has a pending bill been the subject of more misleading and in some cases deliberately false propaganda.

Among the picturesque labels smeared on it by its opponents were the scab labor bill, the death warrant for labor and the kill-union bill. Some claimed that its adoption was a long step on the road to fascism, others that it would deliver the country into the hands of Communists. It has been charged again and again that the new act denies the right to strike, legalizes the company union and the "yellow dog" contract, brings back the hated government by injunction and sets up a slave-labor system in the United States.

These are serious charges and they must be answered, because if any law injures the fundamental rights of working people as has been charged by opponents of this legislation, then the Congress has done the Nation a great disservice in passing that law. Therefore, without resorting to the name calling and smear tactics of the opponents of the legislation and making no extravagant claims of what the law will accomplish, let us consider the actual provisions of the law, and the reasons for its adoption.

THE NECESSITY FOR LEGISLATION

Why did Congress consider the passage of labor legislation necessary? One of the most commonly repeated charges against the new law is that it was passed solely because a few greedy monopoly capitalists in the National Association of Manufacturers decided that they wanted more money and therefore ordered their yes men in Congress to produce a bill which would allow them to wring the last dollar from the working men in this country.

But what are the facts? When the Congress met in January it looked back upon a period of unprecedented industrial strife. The Nation had lost $6,000,000,000 in its standard of living in the year after VJ-day due to strikes. Jurisdictional disputes, secondary boycotts, and other union abuses had been brought forcibly to the attention of the public. Union members found that they were subject, in some cases, to the irresponsible power of dictatorial leaders who controlled completely their right to make a living. The American people had come to realize how a few irresponsible leaders of labor could paralyze the entire country by ordering a strike by the stroke of a pen.

Consequently, when Congress met in January it was generally conceded that prompt action must be taken to remove some of the causes of industrial strife. During the lengthy hearings on proposed labor legislation witnesses before the Senate and the House Labor Committees offered diametrically opposed solutions. On the one extreme, the leaders of organized labor to a man demanded that no change whatever be made in labor-management legislation. They offered no solution to the labor problem except a continuation of conditions as they were. On the other extreme, some management witnesses demanded the outright repeal of the Wagner Act and the Norris-LaGuardia Act and advocated the abolition of all forms of union security.

The majority of the Members of Congress refused to accept either of these extremes. They adopted instead a middle ground. They felt it was essential to recognize and protect the good which unions did and to curb the bad practices which were harming the union movement itself. They also recognized their responsibility to protect the general public from the excesses of both unions and management. Let us see how the act carries out these objectives.

SOME THINGS THE ACT DOES NOT DO

First of all, it is essential that we recognize what the law does not do. Time and again opponents of the act have made completely false statements as to the effect of the proposed legislation in order to build up sentiment against it. These false charges can be nailed down once and for all by citing the actual provisions of the act itself.

It has been charged that the new law makes most strikes illegal. This is not true. The right to strike over wages, hours, working conditions, and other fundamental issues is recognized and protected in the law.

It has been charged that the new law in effect repeals the Norris-LaGuardia Act and authorizes the use of the injunction by private employers. This is not true. Private employers are still prohibited from using the injunction.

It has been said that the act legalizes the "yellow dog" contract. This is not true. It is an unfair labor practice under the act for an employer to interfere with an employee's right to join a union.

It has been charged that the act recognizes the company union. This is not true. The act specifically prohibits the employer to dominate or interfere with

the formation or administration of any labor organization.

It has been charged that the act destroys all forms of union security and requires the open shop. This is not true. The act specifically provides for the making of union-shop contracts where the majority of the employees in a plant vote for it.

These are typical of the many false charges which have been made. Others could be answered in the same manner if time permitted.

From this brief recital of things which the act does not do, we can see that from a positive standpoint the new law, just as did the Wagner Act, recognizes and protects the fundamental rights of labor—the right to organize, the right to join a union, the right to bargain collectively, and the right to strike.

Let us now consider the major new constructive provisions of the law and see whether they deserve the antilabor labels which have been given them.

NEW MACHINERY FOR ADMINISTERING THE WAGNER ACT

Often overlooked in considering the provisions of the new law is the fact that it sets up much-needed machinery for handling unfair labor-practice cases and union recognition problems. The procedure set up 12 years ago by the Wagner Act has long needed overhauling. The new act enlarges the National Labor Relations Board from three to five members. This should allow for more prompt handling of union recognition problems. In addition, the Board is relieved of its investigating and prosecuting functions which will now be handled by its general counsel. The Board, therefore, will be able to act in a judicial capacity in considering the merits of the cases before it.

Far from being antilabor, these provisions are definitely in the interests of developing and encouraging the growth of free trade-unionism in America.

IMPROVED PROCEDURES FOR SETTLEMENT OF DISPUTES

It has been charged that the new provisions for settlement of disputes restrict the rights of the working man and will lead to industrial strife. But again what are the facts? The new law accepts the basic premise of the Wagner Act, that collective bargaining will lead to peaceful settlement of disputes. It provides that where there is a contract between the parties 60 days notice must be given before its termination, during which time both the employer and the union have the duty to bargain in good faith before resorting to a lockout or a strike. Neither party, however, can be compelled to enter into a contract or to make any concession during these negotiations.

A separate and strengthened Federal mediation service is provided for to assist the parties in reaching a peaceful settlement of their disputes. Once the parties reach an agreement the act provides that it shall be incorporated into a written contract which will be binding on both parties.

Some criticism of the law has been made because unions are made responsible for their contracts, but the basis for industrial peace in any case is in the final analysis a contract and a contract is not worth the paper it is written on unless both parties to the contract are responsible for their actions under it. This provision of the act will greatly reduce wildcat strikes and other illegal actions which responsible labor leaders have always severely criticized. The law will insure that once a contract is made between a union and an employer neither party will have the right to break that contract without being responsible in the courts to the other party who has abided by its terms. In this connection it will be noted that the act protects individual employees by specifically providing that a judgment for damages against a union can be enforced only against union funds and not against individual members.

Here again a careful study of the provisions of the law reveals nothing to back up the charges of its opponents that the legitimate interests of the workingman will be harmed.

JURISDICTIONAL STRIKES AND SECONDARY BOYCOTTS

Among the provisions which have been severely criticized in some quarters are those which ban the jurisdictional strike and the secondary boycott. However, these provisions are definitely in the interests of union members and of the general public. For example, can there be any justification for men having to go out on strike in order to settle a dispute between two union leaders as to who is to receive the union dues they pay? Jurisdictional disputes can and must be settled without resorting to the strike weapon and the new law provides for the peaceful settlement of such disputes through the National Labor Relations Board.

There is considerable misunderstanding as to what a secondary boycott is. An illustration will best serve to bring this point home. Recently a milk distributor in California had a picket line thrown around his place of business, not because he had any dispute with his own employees, but because the union claimed that he was handling hot milk. It seems that the milk had come from cows which had been fed with hay which had been delivered on trucks driven by nonunion drivers. Certainly the Congress is justified in including provisions in the new law which will curb such practices as that.

These provisions are definitely in the interests of union members, because in effect what they do is to deprive a union leader of the power to compel members to go out on strike when they have no dispute whatever with their own employer but where what is involved is a dispute between two union leaders or between a union and some other employer.

FAIR RULES FOR UNION SECURITY

One of the most difficult and controversial problems considered by the Congress was that of providing for a fair form of union security. A majority of management witnesses objected to both the closed shop in which the employer must go to the union to obtain his employees and the union shop, in which the men the employer hires must join a union within a specified time after they go to work.

The new law bans the closed shop because a majority of the Congress felt the employer should be allowed to decide whom he should employ but it allows the union shop provided a majority of the employees vote by secret ballot for a union shop. This provision is definitely in the interest of the worker, because in effect it will mean that where the members vote against having a union shop that is a definite indication that the union is not properly representing the interests of the members. They should have a right to refuse to set up a union shop in such cases. Here again we find that despite charges to the contrary the act provides for union security and at the same time places primary emphasis upon the wishes and decisions of union members.

PROTECTION FOR UNION MEMBERS

The opponents of the new law generally have failed to point out that many of its provisions are designed to protect the fundamental rights of union members themselves.

For example, where a union shop contract is in effect in a plant, admission to the union must be made available to all employees on the same basis. The union cannot deny membership and thereby a livelihood to a prospective employee by adopting discriminatory rules as to membership or charging excessive initiation fees. In addition a man who works in a union shop cannot be forced out of his job for failure to belong to the union, if the union has expelled him for some reason other than nonpayment of dues. This will protect union members from losing their jobs simply because they have incurred the displeasure of some dictatorial union leader.

The requirement that unions furnish annual financial reports to their members is another one which is definitely in the interests of union members. Certainly members are entitled to know how their union dues are expended. Many unions now provide such financial reports to their members, and this provision will simply have the effect of requiring all unions to follow the good practices which some unions follow today.

Another requirement which union members should welcome is that which provides for proper administration of welfare funds where the employers make contributions to such funds. The law provides that these funds shall be held in trust solely for the employees and their families and that a joint committee of union and company representatives shall have the responsibility of seeing that the fund is properly administered. Welfare funds in some unions run into millions of dollars and certainly union members are entitled to every possible protection in the administration of these funds.

Another provision which is definitely in the interest of preserving free trade unionism in the United States is that which denies recognition to a union if one or more of its officers is a Communist or a follower of the Communist line. The law provides that every officer

must sign an affidavit stating that he is not a Communist before the union will be certified by the National Labor Relations Board.

In this regard there is one point that should be made particularly clear. The great majority of union members in America are anti-Communist. The great majority of union leaders are anti-Communist. But the Communists are making a tremendous effort to infiltrate key unions so that they may use those unions, not in the interests of union members, but for the purpose of following the Communist Party line as dictated from Russia. The Congress, by denying Government recognition to Communist-dominated unions, has struck an effective blow in behalf of the real American trade union leaders who are waging a courageous battle against Communist infiltration into unions. The only union leaders who can object to this provision are the Communist themselves, whose only interest in trade unions is to destroy them.

PROTECTION FOR THE PUBLIC

The most difficult problem which confronted the Congress was how to handle Nation-wide strikes which endanger the public health and interest. The act provides that when the President finds that a strike endangers the public health and safety he can instruct the Attorney General to obtain an injunction against the strike. The injunction remains in effect for approximately 80 days during which every possible step will be taken through fact-finding and mediation to reach a peaceful settlement of the strike. At the end of this period, if a settlement has not been reached, all the employees are given the opportunity to vote by secret ballot on whether they wish to accept the best offer of settlement made by the employer.

In this connection it is essential to recognize that the man who suffers most from strikes is not the employer or the public—but it is the worker himself who is forced to go out on strike. He can least afford to give up his entire wages during the period of the strike. Therefore, certainly he should make the final decision as to whether he wishes to accept the offer made by his employer. That decision should not be made for him by a union dictator who might be more interested in increasing his own power than in protecting the interests of the union members.

Significantly enough the major criticism of this provision of the law made by some of the so-called friends of labor has been that it does not absolutely guarantee that employees will continue to work in essential industries. That criticism points up the real strength of the provision from labor's standpoint. Because, despite public clamor for outright prohibitions on strikes affecting public health and safety the Congress refused to adopt any such drastic proposal as compulsory arbitration or the drafting of men into the armed services, but instead set up a procedure which postpones the strike for a limited time to allow negotiations for settlement. Here again, we see that the act recognizes and protects the right to strike and the basic interests of union members.

WILL THE LAW WORK?

This brief analysis of the major provisions of the Labor Management Act of 1947 has served to point up some fundamental conclusions. First, it must be recognized that the new labor law was passed overwhelmingly by the Senate and the House because there was a need for it and the general public recognized that need. Second, the new law represents a compromise between the two extremes offered by some union leaders and some leaders of management. It does not favor management over labor nor by the same token does it favor labor over management. In the real American tradition it is a law which recognizes the rights and responsibilities of both labor and management. It protects the rights of the public and what is most important, it recognizes and protects the fundamental rights of union members as well as union leaders.

The success of the new law in improving labor-management relationships will depend in great part on the ability and sincerity of those who administer it. The President has a great responsibility to the American people to appoint able men to serve as members of the National Labor Relations Board, as general counsel to the Board, and as head of the mediation service. He can thereby insure fair administration of the act to all parties concerned. The Congress has a continuing responsibility to study the operation of the law and to determine whether amendments are needed to make it effective. It is significant that the law itself sets up a committee made up of members of the Senate and the House to continue a study of labor-management problems, including means of improving the lot of workers throughout the country through the adoption of guaranteed annual wage plans and incentive and profit-sharing systems. If the President assumes his responsibility to administer the law fairly and if the Congress assumes the responsibility of working constantly toward improving the law where necessary, the success of the law in improving labor-management relationships will be assured.

The decision as to the effect of any piece of legislation must be based on fact. The facts definitely show that the new labor law, far from deserving the abuse which has been heaped upon it by some of its opponents, is a fair, equitable piece of legislation which properly administered, will promote the cause of industrial peace in America.

A Capitalist Looks at Labor

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Wednesday, July 9 (legislative day of Monday, July 7), 1947

Mr. MORSE. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a very scholarly and interesting article entitled "A Capitalist Looks at Labor," by one of the great industrialists of America, Cyrus Eaton.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A CAPITALIST LOOKS AT LABOR

(By Cyrus Eaton, Cleveland industrialist and banker with broad interests in the iron-ore, steel, coal, and railroad industries; director of the Chesapeake & Ohio Railway and the Sherwin-Williams Co.; trustee of the University of Chicago)

The one real threat to the capitalistic system in America today is the cleavage between capital and labor. Despite the wishful thinking of most of my fellow capitalists, labor alone is not to blame. An equal, if not a larger, share of responsibility rests on the shoulders of the capitalists themselves. Take last fall's coal controversy as a concrete illustration of my point.

All that the coal miners had been asking for was an opportunity to discuss their desire for somewhat shorter hours and other small adjustments in their working conditions. But the Government, fronting for the owners of the mines, declined to consider any changes as long as the mines continued in Federal possession. And the mine operators, hiding behind legal subterfuge and Federal possession prolonged beyond need, disclaimed any obligation to negotiate with the miners.

While publicly pretending a dispassionate aloofness, the mine owners, under cover, were working feverishly, night and day, to keep a torrent of abuse turned on the miners and their leaders, through every channel of publicity, and to urge all three branches of Government—executive, legislative, and judicial—to crack down on labor. Thus led to believe that the miners were out to destroy our economy, public opinion worked itself up into a dangerous state of hysteria.

The Nation was driven from one fit of madness to another by ranting oratory on the radio and by blazing headlines, inflammatory editorials, and brutal cartoons in the press, until civil war would have been inevitable, had it not been for the wisdom and the restraint of the miners' leader. Throughout the entire time, John L. Lewis never uttered a syllable of complaint and never issued a statement criticizing anybody.

The casualness with which we capitalists seem willing—nay, even eager—to invite the collapse of our economic system in almost every industrial dispute for the sole purpose of thwarting labor is utterly incomprehensible. Labor not only produces the goods and consumes a large part of them; labor also has the votes. In a democracy like ours, where the majority rules, therefore, capitalism cannot survive without the support of labor.

WILL LABOR AND THE FARMER UNITE AGAINST CAPITALISM?

The division that has existed in the ranks of labor itself has tempted many of our captains of industry to believe that it is safe to attack one union or group of unions without incurring the ill will of others. Here, again, the coal case is illustrative. Organized labor closed its ranks and expressed unanimous opposition to the short-sighted measures taken against the United Mine Workers last November and December.

There is an active movement under way now to translate that momentary unanimity into permanent solidarity. Whether or not these efforts are crowned with immediate success, eventual unity is practically a foregone conclusion, which cannot be dismissed lightly. The prospect of labor united should be sobering to even the most embittered and embattled capitalist.

I also believe we may ultimately see a strong alliance between labor and the farmer, accompanied by a tremendous expansion of the manufacturing and selling cooperatives. The effecting of such a formidable combination awaits only the magic touch of some dynamic personality. Then if capitalism has not already gone by the board its continued existence will be completely at the mercy of an estranged 95 percent of the electorate.

To avoid extinction, if for no loftier motive, we who are capitalists will have to make immediate and radical changes in our attitude toward labor and our methods of dealing with labor. We will have to begin by muzzling such organizations as the National Association of Manufacturers and by recognizing, and sincerely regretting, that there is bad feeling on both sides. For every corporation officer who characterizes a union official as a crook there is a labor leader willing to label an industrialist a bandit.

Our next step ought to be full and ungrudging acceptance of labor as human beings and as our partners who do the work. American management has exhibited the greatest genius in mass production and mass selling that the world has ever seen, but no automobile manufacturer ever thought of making denunciation of motorists the keynote of a sales campaign. On the other hand, many are the scathing statements that have been issued from the skyscrapers of Detroit against the United Automobile Workers.

IS THE PRESS MENACING ITS OWN FREEDOM?

Those statements and other antilabor propaganda have received far more attention from the press and the radio than news of labor's constructive activities, simply because the proprietors of our agencies of publicity are capitalists, forming a strong community of interest with their industrial brethren. Any labor dispute, however inconsequential, is fair game for a front-page article, with an indignant headline.

There is no greater news value in the minor and natural differences of opinion between employer and employee than there is in the ordinary disagreements within the family, the church, or any other human institution. The press devotes less space to the trifling infelicities of these other institutions perhaps because it is not out to destroy them. I am a firm believer in freedom of the press, but certainly freedom of the press becomes a downright menace to society when misused in this manner.

One of the worst sins committed by our corporations is entrusting the handling of labor relations to lawyers. The lawyer's whole outlook is colored by his constant searching of statutes and his intensive training in the artificialities of courtroom procedure. So far as I know, no appeal to the courts and no amount of flyspecking of statutes for technicalities to prove labor in the wrong ever settled a strike. Labor relations are human relations; they require the human, not the legal, approach.

SHOULD CAPITAL LOOK TO WASHINGTON FOR HELP?

For similar reasons, there can be nothing but criticism for the capitalists who have lately taken to running to Washington like crybabies for help from the politicians and the bureaucrats in suppressing labor. The whole story of governmental interference in business is foreign to free enterprise, and government, whether it be the executive branch, the legislative, or, of course, the judicial, is loaded with lawyers.

Last fall the Nation witnessed the spectacle of a few stubborn men in high places in the administration, puffed up by applause from the press and industry, preventing the settlement of the coal strike. The Secretary of Labor and his entire Department, incidentally, were excluded from any participation in the case, although they are the Government's specialists in the labor field.

The Supreme Court, after weeks of internal wirepulling and manipulation, finally managed, by the barest majority, to reach a decision against the miners that will be productive of untold evil in the whole field of labor relations. With only three of the Justices in accord on all of the issues involved in the coal case, and with the other six Justices embracing five other viewpoints, the Supreme Court has merely served to confound confusion.

It will take the Nation a long time to recover from the effects of official recklessness in dealing with the miners. When election time comes around again, moreover, the administration will feel the lack of the labor vote. Industry need not delude itself that it will often enjoy the support of the politicians. Politicians have to have votes to be returned to office and, as I have already pointed out, labor, not capital, has the votes.

One of our peculiar national traits is a pathetic eagerness to believe that passage of a law will solve any problem we have. Let no businessman be naive enough to believe, however, that restrictive legislation will be any more effective in bringing about industrial harmony than the Volstead Act was in discouraging drinking. Let it be recalled that the elaborate law that was passed to strengthen the transportation industry resulted in the establishment of the Interstate Commerce Commission, the biggest bureaucracy of them all, which has brought every known woe to the railroads. Bureaucracy in America is a failure; there are so many better opportunities in business and the professions that the regulatory agencies of the Government simply cannot compete for the best brains.

WHY NOT DEAL DIRECTLY WITH LABOR?

The only recourse we capitalists have, if we want to preserve our system, is to deal directly with labor ourselves. The mine owners, for instance, would find John L. Lewis the most constructive man in the coal industry if they would sit down and exchange ideas with him, instead of persistently refusing to let him play a more constructive role lest his influence increase.

Among my warm friends are a number of labor leaders. They are very able and attractive men. In common with the rest of humanity, they have ambition and pride. We capitalists are overlooking a great reservoir of talent by not inviting these men onto the boards of directors of our corporations and the boards of trustees of our universities an other public institutions.

It is true that the leaders of labor have risen from humble beginnings to their present positions of influence by hard work, but so have many of America's most eminent industrial leaders. And while the descendants of the industrial pioneers are disporting themselves at cocktail parties, the horny-handed sons of toil are hard at it to represent their union constituencies with first-class talent of every kind. Their corps of workers and thinkers include experts in law, economics, research, politics, and publicity. Philip Murray, the skilled leader of the CIO, has assembled an organization that compares favorably with the best that business can boast. The AFL and the railroad brotherhoods, likewise, are staffed with earnest and competent men.

This is not to say that labor is perfect, any more than management is. Labor is guilty of many abuses. The one that calls for the strongest criticism is the small production per man in some industries in comparison to the output that could be achieved. It is difficult to berate labor for demanding more pay for less work, however, while many corporation officials who devote half of their time to golf vote themselves enormous incentive bonuses at the expense of their stockholders.

WHAT EXAMPLE SHOULD CAPITAL SET FOR LABOR?

The classical example of managerial folly is found in one especially vain and strutting corporation head who some years ago announced that he would retire from business before he would let his plants be organized. He wasted $20,000,000 of his stockholders' money in a futile fight against a strike for union recognition. Having spearheaded the attack on labor, he expected his fellow industrialists to reward his company with more business, but found that they placed their orders with other concerns whose more dependable labor relations assured better delivery. Needless to say, he failed to keep his promise to retire, and, although business fell off, he and his fellow executives—none an owner of more than a nominal amount of stock—continued to pay themselves fancy salaries while giving the stockholders only a meager return on their investment. The only tangible result of his whole performance has been an occasional word of praise from Westbrook Pegler.

Such extreme cases are the exception, but they do capitalism untold harm. The men at the top may think that they are omniscient, and that their system is omnipotent in that, of itself, it can confer on humanity all of the material blessings. But both capitalism and the men in it have all the weaknesses and limitations that have racked every system, economic, political, and religious, devised by man during his millions of years of martyrdom. What counts in any system is the intelligence, self-control, conscience, and energy of the individual.

I prefer capitalism and democracy to all other economic and political forms. I believe they will only survive as long as their leaders set an example of hard work and restraint toward those who are less well off. It is the job of capital to convince labor of the dignity and glory of the strenuous life. Hard work appeals to me as the only sure way to happiness, health, and good morals, for rich and poor, high and low alike. There is no spiritual reward to equal the one that comes from a good day's work, well done.

Morals of Selling Liquor

EXTENSION OF REMARKS

OF

HON. ARTHUR CAPPER

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Wednesday, July 9 (legislative day of Monday, July 7), 1947

Mr. CAPPER. Mr. President, I send to the desk and ask unanimous consent to have printed in the Appendix of the RECORD an article from the July 1947 issue of Kiplinger magazine entitled "Morals of Selling Liquor."

I agree wholeheartedly with the article's contention that the liquor industry ducks public responsibility. I am, however, at variance with the writer's comment concerning the antiliquor advertising proposal, S. 265, in that I feel the proposed legislation, which is currently in the hands of the Senate Committee on Interstate and Foreign Commerce, should be enacted.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MORALS OF SELLING LIQUOR, THE INDUSTRY NETS HUGE PROFITS ON HIGH PRICES, BUT DUCKS PUBLIC RESPONSIBILITY

In most businesses, when a merchant sells a product and rings up the price his responsibilities end. The makers and sellers of distilled liquor differ from other businessmen particularly in the fact that they have new responsibilities after the customer takes the goods away.

These responsibilities they do not want, will not publicly accept and do precious little to meet. The measure of their general sense of public responsibility can be expressed with two specific facts:

The distilling industry—not including wholesalers and retailers—last year cleared more than $200,000,000 net, after taxes.

The industry, during a decade, has privately contributed less than $1,000,000 to scientific research on alcoholism problems, while publicly disclaiming any responsibility for alcoholism. At the same time it has been spending over $100,000,000 every year to advertise the joys of whisky drinking.

Fourteen years after repeal the industry, while cynically keeping prices at staggering heights in order to make these huge profits, has not even made a start at solving problems whose existence may wreck it along with the lives of a few hundred thousand Americans. One of these problems is that alcohol is a constant—some say increasing—factor in juvenile delinquency, divorce, crime, mental disease and traffic casualties.

This makes it inevitable that public groups should look at the $8,800,000,000 liquor industry and ask how it is organized, how well it functions and how much, if any, social decency it shows in making and selling its product.

Professional drys and drinkers are not the only people interested. Other groups—churches, courts, social agencies, editorial writers, State, city and Federal officials—are scrutinizing the liquor industry and trade. What do they see?

They see, first, a good record of industrial efficiency in the manufacturing end, dominated by four big distilling corporations—Schenley, National, Seagram, and Hiram Walker.

Industrial chemistry is turning whisky into a byproduct of the distillery, with the "spent stillage" (residue from fermenting vats) as a growing source of profits. It averages $40 per ton, enough to cover operating costs and yield a profit. The modern distillery is a huge grain-processing plant, turning out livestock feed rich in proteins and vitamins; corn oil, fusel oil, the vitamin B complex, penicillin, and dry ice. As such it is a boon to industry and to many farms.

This high degree of efficiency has been achieved by the Big Four partly through aggressive acquisition of smaller distilleries and buying into other branches of the liquor industry.

As a result, they have often been accused of a trend toward monopoly. The Big Four retort that few industries are as hotly competitive as theirs. The record indicates that the monopoly trends are temporarily, at least, coming to an end. The big firms have slackened off on the buying of smaller distilleries and brand names; some are reported ready to dispose of recently acquired distilleries and tight cooperage firms.

The industry's first delinquency appears in its price policies, through which distillers, wholesalers, and retailers alike have enthusiastically gouged the 50,000,000 Americans who drink.

"I hope we never see another year as good as 1946," said one spokesman. "It's a bad thing for the liquor business to make that much money."

Last year the United States Treasury received more than $2,000,000,000 from the beverage-distilling industry, and State and local treasuries received $464,000,000. Despite this enormous levy, very high profit margins enabled distillers to clear two hundred millions after taxes, of which the Big Four (who hold about 63 percent of all United States whisky stocks) got one hundred and fifty-five million.

Huge earnings are by no means limited to distillers, who say they take only about 10-percent profit. The wholesaler supposedly gets 15 percent, and the retailer 33⅓ percent. But there are usually higher margins in all three groups. And all these profit percentages are figured on gross cost, which includes, for whisky, the Federal tax of $21.60 per case.

In the buyer's eye, the retailer is particularly guilty. He gets his 33⅓-percent cut, which some retailers have jumped as high as 65 percent, merely for selling a bottle. He doesn't even have to worry about waste and spoilage.

But distillers and wholesalers take the customer just as ruthlessly as the retailer does. The last price rises for bottled-in-bond whisky are not seriously defended by anybody in the trade, and the United States price of Scotch has brought yelps of indignation from the Highlands.

One industry spokesman says an efficient United States distiller today can make whisky for about 12 cents per fifth. It is only after taxes, advertising, and other costs have been added that the pile-up of profit margins begins to build the retail price.

The consumer has no protection against high prices except to stop buying. But most drinkers won't do it. The Department of Commerce calculates that every time consumers' incomes rise 10 percent, liquor store sales rise 19 percent. Liquor consumers are not likely to get price relief unless production outruns demand or a recession cuts down buying.

In addition to price-gouging and monopoly practices, the industry has been criticized on two other counts: for maintaining retail outlets which breed crime and anti-social behavior, and for publicity which encourages more drinking.

Federal law forbids suppliers to have any connection with retail outlets. Wholesalers have been challenged to refuse to sell liquor to retailers who do not maintain proper standards. This is sheer twaddle. No industry will reach for such a responsibility, which would require a horde of private police anyway.

Nevertheless, the industry has a cash interest in the decency of outlets: When public indignation arises, local option elections dry up communities. So organizations like the Distilled Spirits Institute in Washington have taken such action as they thought they could. They have gingerly put pressure on State and local officials to enforce liquor laws. In Illinois, which has the laxest regulations of any State, they have asked State officials to sponsor tighter legislation. Elsewhere local officials have been quietly asked to close taverns which attract attention by serving drunks or minors or by other offenses.

But at the same time the industry pours its millions into advertising campaigns to induce more people to drink more liquor—always "moderately" of course.

Whisky is not a product likely to develop muscles, character, or intellect, and any attempts to present it as such would backfire. So the only publicity gambit is to glamorize the drinking by associating it with social prestige, wealth, pleasure and beauty.

The incongruity of a man of distinction hiring out as a model holding a highball doesn't bother the industry. But the cumulative effect of such advertising, constantly reiterated, on marginal drinkers and young people, bothers many observers besides professional drys.

The industry is sensitive to this attention. Before the war it ran a certain amount of advertising ostensibly designed to discourage excess drinking, drunken driving, etc., but it stopped this several years ago. It cannot use the radio (although beer and wine concerns can) and it avoids advertising in Sunday publications. But mass advertising of the big companies in daily newspapers, in magazines, and on billboards impresses the attractions of drinking on millions of people.

One reaction of this advertising splurge is the Capper bill now before Congress, which would ban all Nation-wide liquor advertising in newspapers, magazines, and radio. The Capper bill raises issues of press and business freedom for these and other reasons it probably is not a satisfactory answer. But it carries a threat of repressive legislation which the liquor people find most ominous.

The point where the industry is probably most sensitive to public opinion is chronic alcoholism. Liquor spokesmen disclaim all responsibility on the ground that chronic alcoholism is a psychiatric problem which afflicts only 1 percent of the drinking public. (Best hard estimates are 750,000 "chronic alcoholics"—of whom 13,000 are "alcoholic maniacs" and 3,000,000 "excessive drinkers.")

But it is on this account that individual distillers have given a half million dollars or more to scientific groups which are trying to improve the treatment of drunks.

Recently an industry group, Licensed Beverage Industries, Inc., of New York, engaged a sociologist named Dr. William Cherin to make a survey of the whole field of alcoholic research. LBI has chipped in $70,000 over and above the gifts of individual firms, and promises more.

Analysis of the industry's record in regard to monopoly, prices, and alcoholism reveals a not surprising secret: its behavior is an accurate reflection of the amount of pressure brought to bear on it. The Government has long kept suspicious eyes on the distillers, so they have been careful not to let monopoly trends go too far. But the industry has shown no restraint in its price policies. And even under pressure from many sectors of public opinion, it has made only a tiny and reluctant effort to grapple with antisocial conduct caused by its product.

So far these tactics have proved profitable without jeopardizing the industry's markets. But some observers think proposals like the Capper bill are straws in the wind.

A cut in consumer income, continued high prices, and increased antisocial behavior associated with alcohol may expose the industry to repressive legislation and increased State and local tax levies.

Already the prohibitionists, who never rest, have dried up about a quarter of this country. There can hardly be any doubt that the cynicism and excesses of the liquor industry have helped them do it. The industry needs to clean itself up for its own sake, even if it chooses to ignore its moral responsibility.

Venue in Actions Against Railroads

EXTENSION OF REMARKS

OF

HON. EDWARD J. DEVITT

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, July 9, 1947

Mr. DEVITT. Mr. Speaker, a very important matter is scheduled to be considered by the House the latter part of this week or early next week. The bill is H. R. 1639 which seeks to change the law with reference to the venue of lawsuits brought against interstate carriers by

railroad. The bill would limit the places where such lawsuits could be brought to only two jurisdictions.

This bill is reported from the House Committee on the Judiciary. The members of that committee are divided on the advisability of such a change.

A substantial number of the members of the committee have drafted and signed a minority report. This report recognizes full well that certain evils exist with reference to the trial of this class of lawsuits, but they feel that the proposals embodied in H. R. 1639 are too drastic and work an unfair discrimination against railroad employees. They also feel that H. R. 1639 will not wipe out the evils against which it is directed. We have proposed an alternative method of striking at the evil without at the same time working an injustice to the railroad worker.

A discussion of the inadequacies of H. R. 1639 to meet the problems presented together with a full discussion of the alternative plan is contained in the minority report, filed as part II of Report 613, which accompanies H. R. 1639. Because the matter involved is somewhat technical, it is thought advisable to make the contents of this report available to all of the Members of the House before the matter comes up for consideration in order that they might have an opportunity to give the contents of the minority report their study and consideration. I, therefore, include the minority report as a part of my remarks. The report follows:

VENUE IN ACTIONS AGAINST INTERSTATE CARRIERS BY RAILROAD ON ACCOUNT OF DEATH OR PERSONAL INJURIES

Mr. DEVITT, from the Committee on the Judiciary, submitted the following minority report:

We are opposed to the passage of H. R. 1639 for these reasons:

1. The bill, if enacted, would not wipe out the evils against which it is directed.

2. The bill is unfair in that it discriminates against one class of citizens, to wit, the railroad workers.

3. The bill restricts State courts in the administration of justice, deprives them of their prerogatives to require change of venue of lawsuits where necessary, and transcends the provisions of State laws governing the jurisdiction of State courts.

We are in favor of amending the bill so as to require the bringing of all lawsuits by all classes of people under the same venue statute. An amendment to effectuate this objective will be discussed later.

I

It is admitted that certain unethical attorneys solicit cases under the Federal Employers' Liability Act and transport them to far-distant places for trial and that such lawyers employ touts and runners to solicit business for them, all to the detriment of the legal profession, the railroad workers, the railroads, and the general public. The evidence presented at the hearings was clear that the legal business under this act is concentrated in the hands of a relatively small number of practicing attorneys in the United States and that such actions are customarily brought in a restricted number of communities in the country. It is admitted that some action must be taken to correct the situation.

We submit that requiring the bringing of these lawsuits in the district or county of the residence of the plaintiff, or in which the cause of action arose, will not wipe out the evil that exists. Unscrupulous lawyers will still ply their trade to the detriment of all concerned. Limiting the places where action may be brought will only mean that such lawyers will bring their causes of action in a less limited number of jurisdictions. But the racket will continue.

The basic responsibility for policing the legal profession rests with the legal profession itself, and with the courts, of which such lawyers are officers. It is appreciated that the taking of disciplinary action by bar associations and the courts is sometimes slow and cumbersome. But the fact that it is does not justify our enacting legislation which discriminates against a class of our citizens and which disrupts the fabric of our Federal and State laws.

II

In the event that the proposed course of action outlined in H. R. 1639 was not detrimental to any class of persons, it might be well to change the statute in the manner suggested in order to determine, by trial and error, how effective such a course would be, but to enact the proposals contained in this bill would work to the potential detriment of 2,000,000 railroad employees by inadvisedly and unreasonably limiting the places where they, or their legal representatives, could bring their causes for action against railroads. This would be patent discrimination.

We might as well ask ourselves: "Is not the injured railroad employee entitled to bring his cause of action against his employer under exactly the same circumstances as is the passenger who suffers injuries, or as is the owner of goods damaged in transit? Should not the railroad man suing his employer be entitled to the same privileges of venue as is the employee of any other corporation? There is no basis for distinction.

Why, then, are railroad people singled out and discriminated against in this fashion? It is true that in the bill as amended in committee another class of persons is included in the discrimination; thus a nonemployee who is injured at a crossing or while a passenger, is by the amendment, subjected to the same limitation of venue, but this is only a palliative added as an afterthought to the bill in order to make the discrimination less glaring. The discrimination is nonetheless real even though it may include a second class of persons.

The third objection which prompts our opposition to this bill is based on the effect its enactment would have in unnecessarily restricting the venue of lawsuits in both the Federal and State courts.

It must be appreciated that railroads operate their lines over extensive areas. Some railroads maintain their own hospitals where injured railroad employees are hospitalized. It is customary for the southern transcontinental railroads to maintain hospitals on the west coast, in Los Angeles and San Francisco. A railroad brakeman might live and be injured in the State of New Mexico and be hospitalized in San Francisco. Necessary medical witnesses to testify to his physical condition would live in the State of California. It would be a practical impossibility to get them to come to New Mexico to testify. Normally an experienced medical specialist cannot leave his practice. Taking his testimony by deposition is normally a very ineffective substitute. The provisions of H. R. 1639, in a case like this, would work to the prejudice of the injured railroad man. He could not obtain the necessary and all-important medical testimony. Other examples can be cited of cases where necessary witnesses (for instance, a passenger) would not be available either in the district where the plaintiff lived or where the accident took place. Under H. R. 1639 no discretion is vested in the courts to authorize a change of venue for the convenience of witnesses.

Testimony at the hearings was to the effect that in many communities a distinct prejudice exists in favor of railroads and against persons bringing lawsuits against common carriers by rail. Even in cases of this kind it would be necessary, under the present proposal, that the lawsuit be tried in that community regardless of the prejudice.

The venue statutes of most States in the Union normally provide that the lawsuit may be moved from the place where it is instituted to some other jurisdiction—

1. For the convenience of witnesses;
2. In order to serve the ends of justice; or
3. To insure an impartial trial.

This is the law in the State of Minnesota. (See Minnesota Statutes Annotated, sec. 542.11.) Substantially the same provisions are contained in the statutes of most States.

Under the terms of this bill it would not be possible to move a case of this kind to a different county within a State for the convenience of witnesses or for any other person. The bill lays the venue in the county where the cause of action arose or where the plaintiff resides. It permits no deviation. We might well ask the question: "Why should the injured railroad employee or the legal representative of a deceased worker be discriminated against in this fashion?"

The laws of the various States also provide for the places where foreign and domestic corporations, including railroad corporations, may be sued. The statutes vary in the different States. The present bill would change the law in every State of the Union so as to specifically lay the venue in only two counties, to wit: Where the cause of action arose or where the plaintiff lives. This is an undue restriction imposed on the State courts and is of doubtful constitutionality. Under the law as it is today, venue in the State courts is laid in accordance with the State statutes, and lawsuits may be moved around for the convenience of witnesses and for other purposes in accordance with the provisions of the State laws. Here, again, we ask: What is the basis for making the change?

It is admitted that an evil exists in the operation of the present law and that some action should be taken by the Congress to strike at that evil. What should the Congress do? Let us first look at the problem and see how the evil arose, then we should be in a position, without prejudice or bias, to prescribe the proper remedy.

The Federal Employers' Liability Act was first enacted in 1908. This act abolished the common-law defense of assumption of risk. It did away with the defense that an injured employee suffered injury or death as the result of negligence of a fellow servant, and abolished the defense of contributory negligence. Under the law, the negligence of the injured employee is considered only in mitigation of the damages that he or his estate otherwise might be awarded. By amendments to this act in 1910, the present venue provision of the act was enacted. It has remained the same for 37 years.

The trafficking in, and solicitation of, lawsuits under the act became a major problem after 1942. Why did it arise? The answer to this question is furnished us by a witness who testified, not as an opponent but as a proponent of H. R. 1639. The witness was Thomas P. Gay, Richmond, Va., attorney, president of the Virginia State Bar Association, and chairman of the committee on jurisprudence and law reform of the American Bar Association. (See p. 136 of the hearings.) When he appeared before the committee, he testified that traffic in these lawsuits arose after 1942 following the decisions of the United States Supreme Court in the *Kepner* (314 U. S. 57) and *Miles* (315 U. S. 698) cases. Those cases held that the doctrine of "forum non conviens" ("the court is not convenient") was not applicable to

cases under the Federal Employers' Liability Act. The doctrine of "forum non conveniens" is an old common-law principle and is customarily invoked by a court in refusing to assume jurisdiction of a lawsuit legally brought in its jurisdiction but where there is no legitimate reason for bringing it there. Thus in the event that a lawsuit is brought in the State of Florida when the cause of action arose in the State of Oregon, the parties and all the witnesses living in the State of Oregon, the court, by invoking the doctrine, may refuse to hear the case and leave the parties to bring it in the proper jurisdiction. The doctrine is sound, well established, and conducive to the proper administration of justice. (See Columbia Law Review, vol. 29, p. 1.)

Prior to the Kepner and Miles decisions this doctrine was applicable to cases brought under the Federal Employers' Liability Act. In the event an action was brought in some far-distant place having no relation to the locale of the cause of action, or the residence of the parties, or the convenience of witnesses, the railroad could apply for an injunction prohibiting the trial of the lawsuit in such far-distant places and require that it be brought in the proper forum. This principle was so well established that it was very seldom that lawsuits were brought in any jurisdiction other than where they properly belonged.

The Supreme Court's decisions in the Kepner and Miles cases, however, were followed by a flood of litigation instituted in far-away places, many times thousands of miles from where the accident occurred or where the railroad operated trains. Unscrupulous attorneys now concentrate the trial of their lawsuits in forums most convenient and advantageous to themselves. Other parties to the lawsuits suffer inconvenience, expense, and delay. The courts are unduly burdened, and the orderly administration of justice is adversely affected.

We can see that the present evil arose as a result of the Supreme Court's interpretation of section 56 of the Federal Employers' Liability Act. In order to rectify the evil, we should amend the law so as to again make the doctrine of "forum non conveniens" applicable to these cases as it was prior to the Supreme Court's decisions. This can be done by the simple device of requiring that these cases be brought under the same venue statute as are all other civil actions. It should be pointed out that actions brought under the general venue statute (sec. 112 of the Judicial Code) are subject to the doctrine of "forum non conveniens." This is now well established, especially in view of the recent United States Supreme Court decision in the Gulf Oil case (*Gulf Oil Company* v. *Gilbert*, October 1946 term, No. 93). A fair amendment to the present law could be worded as follows:

"*Be it enacted, etc.*, That the second paragraph of the act entitled 'An act relating to the liability of common carriers by railroads to their employees in certain cases,' approved April 22, 1908, as amended (U. S. C., 1940 ed., title 45, sec. 56), is amended to read as follows:

" 'Under this act an action may be brought in a district court of the United States *in accordance with the provisions of the General Venue Statute (U. S. C., 1940 ed., title 28, sec. 112, as amended) applicable to other civil suits, except that such actions must be brought in a Federal district where the plaintiff resides or where the interstate common carrier by railroad operates trains.* The jurisdiction of the courts of the United States under this chapter shall be concurrent with that of the courts of the several States, and no cases arising under this chapter and brought in any State court of competent jurisdiction shall be removed to any court of the United States.' "

Under such an amendment all litigants would be treated exactly the same. An injured railroad employee could bring his cause of action in any county where the railroad operated trains; or, in the event he lived in a county other than where the company operated, he could bring it in the county of his residence. The proviso "where the interstate common carrier by railroad operates trains" was included in the proposed amendment in order to curb the bringing of actions at some far-distant point where the railroad did not operate and where there was no reason for bringing it. The "forum non conveniens" doctrine would be applicable as a check against wanton bringing of lawsuits in improper jurisdictions but the ends of justice and the convenience of witnesses could be effectively served where necessary.

One of the additional advantages of bringing these cases within the general venue statute rests in the fact that we would thereby take advantage of the many well-settled judicial precedents decided under the general venue statute and thus prevent the onus of a long series of cases normally necessary in order to settle a new statute.

At the appropriate time it is proposed to offer a formal amendment to effectuate the objective outlined.

In this manner all litigants will be treated the same. No prejudice to any class of people would result. What could be fairer? It is urged that H. R. 1639 as introduced and as amended by the committee be defeated and that the statute be amended in the manner herein suggested.

Walter Chandler

EXTENSION OF REMARKS
OF
HON. TOM STEWART
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES

Wednesday, July 9 (legislative day of Monday, July 7), 1947

Mr. STEWART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most excellent address delivered by the Honorable Walter P. Armstrong, of the Memphis, Tenn., bar at a testimonial dinner at the Peabody Hotel in Memphis, Tenn., on September 30, 1946. This very fine address is printed in the Tennessee Law Review published in February 1947.

The address eulogizes the Honorable Walter Chandler, in whose honor the dinner was given, and is entitled "Walter Chandler: Citizen, Lawyer, Soldier, Public Servant."

Walter Chandler served for several years as a Representative in the United States Congress, and later served as mayor of Memphis. He was a prominent soldier in World War I, and has now retired to private life, and is practicing law in Memphis.

Mr. Chandler is especially well known among the lawyers and legislators for his fine work in the reformation of the bankruptcy laws while he was serving in the House of Representatives, as well as for many other notable laws which he aided in passing.

Mr. President, I commend the reading of the address to everyone. It is especially well delivered. Mr. Walter P. Armstrong, who delivered the address, was at one time president of the American Bar Association and is himself one of the outstanding lawyers of the country. He is a member of the Memphis bar.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WALTER CHANDLER: CITIZEN, LAWYER, SOLDIER, PUBLIC SERVANT

(By Walter P. Armstrong, of the Memphis bar)

This is a unique occasion in the history of Memphis as I have known it for the last four decades. In that period at least there has been no such honor accorded one who at the time held no office in church, State, or civic organization.

Mr. Chairman, this is more than an accolade to a worthy citizen. It is a credit to you and your associates who conceived the idea and sponsored and perfected the plan; it is a recognition of their responsibility by the newspapers which have vindicated their best tradition by demonstrating that it is a part of the function of a free press not only fearlessly to criticize but generously to commend when commendation is due. Finally, the people of Memphis, by their unanimous acclaim of your conception and by their overwhelming response to your efforts, have proved that they are mindful of the unliquidated debt they owe to a distinguished public servant.

Mine is a difficult task. What can I tell of Walter Chandler that you have not already read in the open book of his life? True, we have been intimate friends for 36 years. In many places we have spent many hours together and have talked of many things. If we have sometimes soared into the empyrean we have always been quickly brought to earth by the candid comments of two who sat close by and referred to us as "Your Walter" and "My Walter." But that door leads to the intimacies of friendship and it must remain unopened.

Embarrassment sometimes results from the fact that Walter and I are friends and have the same given name. In a weak moment I accepted an invitation to speak before the alumni Phi Beta Kappa chapter at Southwestern. The introducer, who was a Presbyterian minister, launched a laudation, and when he warmed up, pulled all the stops. As I sat, basking in his benignity, to my amazement he concluded: "The gentleman who so richly deserves the praise I have bestowed upon him will now address you—the Honorable Walter Chandler." Naturally I was a bit nonplussed, so I lamely began: "The gentleman who introduced me has known me for more than 40 years. We were at Bell Buckle together, under Sawney Webb. He knows perfectly well that I am not Walter Chandler. The truth is that while he was making all those extravagant statements he suddenly realized that he was risking his veracity in applying them to me. The only way he could salve his Calvinistic conscience was to indicate that it was not I he really had in mind, but Walter Chandler."

As familiar as you are with them, the facts of our guest's life could by a competent biographer be woven into a fascinating American success story. A skillful writer might point up the distinguishing characteristics of our State by picturing them in a typical Tennesseean. A self-reliant native son; his progress through her public schools and the bright years he spent at her university making friends and acquiring in liberal arts and law a sound education which remained unforgotten and which the study and experience of each passing year have broadened. A member at one time or another of each

house of her general assembly; a leader of her bar; a commander of her troops; one of her representatives in Congress; and finally, the mayor of her largest city. Of all the Tennesseans I have known, I can think of none who, by birth, inheritance, and achievements, better symbolizes his State; of none more aware of her traditions; of none more deeply versed in her history; of none who more fitly embodies those qualities we like to think of as hers.

There are many facets to his career and I shall not attempt to light them all. One of the Walter Chandlers I know best is the lawyer. We hear much about the number of lawyers in public life. Some think there are too many. There need be no fear on that score. There may be too many who hold law degrees or have been admitted to the bar, but there are not too many real lawyers. Walter Chandler is a real lawyer. I know. I have had the comfort of his support as an associate and have suffered at his hands as an opponent. He is thorough in preparation, sound in judgment, searching in cross-examination, and forceful and persuasive in advocacy. Yet he always plays fair, always lives by code. Of him it may be said, as was written of a great English barrister of another day—that stout fighter as he was, he always wielded the sword of the warrior and not the dagger of the assassin.

No wonder that his clients had a sense of personal loss when his public duties took him from the practice; no wonder—and in this we all rejoice—that they are now thronging back to him. They could have no safer adviser, no more trustworthy counselor, no more effective advocate.

The lawyer who looks on his profession only as the means of earning a livelihood and acquiring a competency has a low and false conception of his obligations. A part of that obligation is to devote some of his talent, training, time, and experience to the reform of the law and the improvement of the administration of justice. You would be surprised if I should tell you of the number of lawyers who, individually and as members of bar associations, engage in these disinterested undertakings, and of the results they accomplish. Their work is the genesis of most of the forward looking, nonpolitical legislation that eventually finds its way into the statute books.

For years Walter was an indefatigable worker in these ranks. Later, as president of the Bar Association of Tennessee and as a member of the governing body of the American Bar Association, he had a major part in securing the adoption of the reforms which he had helped initiate.

One of the pleasantest sides of the practice of law is the camaraderie of the bar. We "strive mightily but eat and drink as friends." Than Walter Chandler, no member of the bar was ever a better comrade. Chancellor Herron was speaking not only for himself but for hundreds of Tennessee lawyers when, in sending his contribution to the scholarship fund, he expressed his appreciation of the kindly greetings he had received during the many years Walter was secretary of the State association. But this feeling is not confined to Tennesseans. Few men have ever been so popular with members of the American Bar Association. One year, as a representative of the association, I traveled some 60,000 miles—from coast to coast—from border to border—from Bangor, Maine, in winter to Yosemite Valley in summer. Everywhere I went someone hastened to ask me about Walter Chandler. This was pleasant, but finally it became a bit monotonous. Toward the end I spent 2 days in Yankton, S. Dak. The first day went by and not a word about Walter Chandler. On the second day the sun passed the meridian and grateful silence still reigned. In the afternoon, with a sense of relief I boarded the train and lingered on the platform waving goodbye to my hosts. Just as we started there appeared, running at full speed, a dishevelled, red-faced lawyer. With what little breath he had left, he shouted: "Give my regards to my friend, Walter Chandler." I gave up.

The picture will be deceptively incomplete unless we turn for a moment to the old member of the crack Chickasaw Guards who proved that he was no mere summer soldier by taking his place as an enlisted man in World War I. He was in heavy fighting in the Troyon and Toul Sectors, at St. Mihiel, in the Meuse-Argonne Battle, and the Woevre Offensive. Cool, fearless, and efficient under fire, he earned a captaincy, was respected and admired by his men, and trusted implicity by his superior officers. One of his pronounced characteristics is that he has charity for all and malice toward none, not even toward those friendly but obdurate officials who rebuffed his persistent efforts to obtain a combat assignment in World War II.

The qualities of the lawyer-soldier—the experience he had gained and the capacity for leadership he had developed—admirably equipped him for the constructive work he undertook and accomplished in Congress. Many Americans have a misconception of Congress and especially of the House of Representatives. There is so much emphasis on partisan maneuverings and political legislation—so much prominence is given the foolish statements and demagogic appeals of a few of the headline hunters—that occasionally there is a feeling that some communities must send their Representatives to Washington merely to get them out of town. We are inclined to lose sight of the presence of a group of able, devoted, hard-working members who in an unspectacular way, from session to session, prepare, consider, and secure the enactment of a vast amount of significant remedial legislation. Walter Chandler belonged to this group. His standing as a lawyer secured for him a place upon the Judiciary Committee—a committee so important that it is "exclusive" in the sense that its members are not permitted to belong to any other committee. From knowledge I can testify that our Representative was one of the most efficient and probably the hardest-working member.

Chairman Hatton W. Sumners writes me: "During my service on the Judiciary Committee we never had a more useful member." Results speak for themselves. He sponsored and guided through the House that splendid revision of the bankruptcy law which is called after him the Chandler Act. Mr. Justice Douglas of the Supreme Court of the United States, who was Chairman of the Securities and Exchange Commission at the time, today telegraphs me that this was an outstanding legislative achievement and will long stand as a monument to its author. The first Municipal Bankruptcy Act was held unconstitutional. After being rewritten by the committee it was again presented to the House with a report prepared by Walter Chandler, and reenacted. This time the Supreme Court, in an opinion by Chief Justice Hughes which quoted from Walter's report, upheld the act. It is generally agreed that the most significant law reform of our time is the adoption of rules which modernize civil and criminal procedure in the United States courts. In each instance Walter Chandler was the key man of the committee and wrote its report dealing with the civil rules. At long last Congress passed a sorely needed statute which systematizes and introduces business methods into the administration of the Federal courts. Here again Walter Chandler represented the committee in handling the bill in hearings, on the floor, and in conference. One of the most important functions of the Judiciary Committee is to initiate impeachment proceedings against Federal judges. It is an open secret that the committee, under the chairmanship of Hatton Sumners, instead of waiting for complaints to be laid before it, adopted the practice of actively scrutinizing the work of the judges. A part of the secret is that the committee entrusted the supervision of this work to Walter Chandler. As a result of his efforts the gentleman from Tennessee acquired an enviable national reputation. He spoke before many trade organizations and bar associations in metropolitan cities and in distant States. He received from a leading publisher a tempting offer to write a book expounding the Chandler Act. He was named by the New York Times as one of the four most useful Members of the House.

Because you are all familiar with the way in which Walter has discharged his duties as mayor I shall refrain from details. We are all proud that Memphis has become one of the most progressive, one of the best-planned, best-financed, and best-governed cities in the country. Justifiably we boast that what was once the murder capital of the world is now a community which wins prizes for its safety record, and in which the law is stringently enforced.

These are substantial achievements, and there are many others. For them all much credit is due Walter Chandler. Now it can be told that the contacts Walter had made and the confidence he had gained among high officials in Washington were major factors in obtaining for Memphis the many extensive establishments which during the war the Government located here. I am not sure that all are conscious of the obstacles that had to be overcome to gain these ends. I know of no more difficult position for any public man than being mayor of Memphis, or any other comparable city, especially during the war years. At best it is a complicated task, which requires something of an Admirable Crichton—a financier, a legislator, and an executive. While he is titular head of the city government, when it comes to determining questions of policy he is but one of five coordinate commissioners. Unless he retains the support of his associates his best efforts will be reduced to impotency. Any man under such circumstances must at times adapt his methods and postpone his immediate objectives. Here is one, however, who never compromised his principles and never relinquished his ultimate goals. The physical and nervous strain of such a position is tremendous. A mayor's constituents are not a thousand miles away; they always surround him. His slightest mistake does not go undiscovered, for the spotlight is ever on him. He has little privacy and practically no undisturbed home life; there is always the public function to be attended, the gracious speech to be delivered, and he is a slave to that importunate master, the telephone. His compensation is far less than he would receive from his vocation, and the demands of his position such that he must encroach on any estate he has accumulated. For any man to leave such an office after 6 years and 8 months not only with a formidable record of accomplishment but with the good will of all of his associates and with the gratitude of the people he sought to serve, with his health unbroken and his good nature unimpaired, is, indeed, a rare achievement.

Acknowledgment and appreciation of Walter Chandler's capacity and work as mayor extended far beyond Memphis. He was vice president of the United States Conference of Mayors, and, except for his resignation, would unquestionably have been the next president of the conference. Col. Paul V. Betters, executive director, writes me that since the establishment of the conference there were few municipal officials who rendered a greater service to municipal government throughout the Nation than did Walter Chandler. Mayor W. Cooper Green, of Birmingham, adds: "In my nearly 7 years of holding the same job in Birmingham, Ala., that he has in your city, I have come to know Walter as one of the South's outstanding conscientious mayors of all times."

I have often pondered the reasons for this success. Character? Yes; this is the first essential. Genius? No; except that genius which consists in the capacity for taking infinite pains and engaging in unremitting labor. Uncommon common sense. Constant study of the science of government. The power of cogent and persuasive statement orally and in writing. A sunny disposition which attracts friends and will cause him to be written down as one who loved his fellow men. Unflagging devotion to duty. The gift of initiative which makes him a natural leader. Poise which leaves him unawed by opinion, unseduced by flattery, and undismayed by disaster.

These characteristics you have all observed. You may not, however, know the recognition he has received as a writer upon historical and biographical subjects. In one way or another this has frequently come to my attention. Recently, I wrote to the librarian of the Supreme Court of the United States for a bibliography of the biographies of the Justices. When it came I found that the library had included in its collection a sketch of one written by Walter Chandler.

One thing that has interested me has been the way in which Walter has grown with the responsibilities that he has assumed and the demands that have been made upon him. This is perfectly indexed by the increasing power of his informed, reasoned, dignified, and convincing utterance. I confess that I did not know the extent of this until I received certain information from an unimpeachable source. At a meeting of a poultry growers' association Walter was descanting in his usual appropriate and persuasive way upon the virtue of fecundity in hens. A fine specimen was on the table before him as exhibit A. As he swung into his peroration she was unable to restrain herself and laid an egg. Such is the power of oratory. William Jennings Bryan, seeking to demonstrate the superiority of Demosthenes to Cicero as an orator, declared: "When Cicero spoke the Romans said 'What a great orator is Cicero.' When Demosthenes spoke the Athenians said 'Let us go against Philip.'" To me it seems a more brillian exploit to persuade a hen to lay an egg than it does to convince the Athenians that they should go against Philip.

Of course, Walter has had some luck. Nearly all successful men do. Part of his good fortune was the inheritance and training he received from his devoted mother, whose presence here tonight must be a supreme satisfaction both to him and to her. One of his luckiest days was the one when he induced Dorothy to share his fortunes. Fate destined her to be the wife of a public man. Birth, temperament, education, environment bestowed upon her every qualification. I have been with her in Washington and elsewhere, among those whose names make news; I have seen her with those whom the newspapers notice only twice. Always she is the same gracious, interested, and unaffected person. As well as I know her, she has one secret that I have never been able to fathom—the source of her effervescing and inexhaustible energy.

Although Walter Chandler has, after performing as long a tour of public duty as could be expected of him, relinquished office, we shall not be deprived of his counsel nor lose the benefit of his efforts. As a private citizen his independent and disinterested views on public questions will be eagerly sought and will inevitably exert measurable influence. He will, of course, resume his place in the civic and religious organizations—many of them represented here tonight—of which so long he was an effective member. Indeed, one of the finest things about him is that in whatever work he enlists he is as enthusiastic and cheerful in the ranks as he is at the head of the column. Here I find in part the significance of his life. If our democracy is to function according to its design, each intelligent person must devote some study to the perplexing social questions and the intricate problems of government that are posed by modern life. Each must give some of his time to the attempt to ameliorate conditions not only by participating in the activities of private associations but by unselfishly performing the duties of citizenship. Without a sensitive civic conscience we may as well abandon hope.

There is other significance—perhaps more obvious. We hear much about the difficulty of attracting desirable men to public office. We need not be surprised. Many men feel a deep responsibility to their dependents; the pay is inconsiderable when contrasted with the prizes offered by business and the professions. There is much bitter, little constructive criticism and frequent ridicule. Someone has said that the first requirement for success in politics is a thick skin. Too frequently the merits of one who has done a fine job are unrecognized and he is summarily retired to private life. No wonder not a few top-flight men feel that the post of honor is a private station. There are, however, heartening signs. Compensation is being increased and retirement provisions being made. Even here we make a modest beginning in our attempt to appreciate a notable career. Everywhere the people are eager for wise, vigorous, and unselfish leadership.

While this is a memorable meeting there is about it no tinge of sadness—no sense of farewell—not even to an admired public official. We confidently predict that, after a well-earned respite, Walter Chandler will return to our service in a yet more exalted station. We believe this is merely a milestone in a useful life which has not yet reached its zenith.

Walter, it is to symbolize our thoughts which I have voiced that we have all participated in having fashioned for you, in spotless and enduring silver, these tokens. [Indicating a silver service which was being placed on the table.] I now present them to you, adding only that the words we have caused to be engraved upon them express the feeling that is in the heart of each of us: "Presented to the Honorable Walter Chandler by the people of Memphis, in grateful appreciation of his services as citizen, soldier, and public servant."

Circular Letter of A. F. Whitney, President of Brotherhood of Railroad Trainmen

EXTENSION OF REMARKS
OF
HON. THOMAS L. OWENS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1947

Mr. OWENS. Mr. Speaker, during the past month Mr. A. F. Whitney, president of the Brotherhood of Railroad Trainmen, sent a special circular to the delegates of the twenty-eighth convention of that organization, and with that circular sent ballots which were to be filled in and forwarded to President Whitney by Monday, July 21, 1947. A check-up of those who are registered as lobbyists under the act discloses the fact that Mr. Whitney and other persons, named in the circular as having participated in lobbying work, are not registered under the act. It clearly appears from a reading of the circular that Mr. Whitney is maintaining a lobby on Capitol Hill. In view of the fact that the Brotherhood of Railroad Trainmen registered six persons by virtue of the provisions of that section of the Reorganization Act which requires registration with the Secretary of the Senate and the Clerk of the House of any person who shall engage himself for pay or for any consideration for the purpose of attempting to influence the passage or defeat of any legislation by the Congress of the United States, Mr. Whitney knows that he should register all persons whom he employs for such purpose. He also knows that it is necessary to give much additional information regarding the scope of the activities of such lobbyists. Therefore, because I feel that those responsible for the proper functioning of the Legislative Reorganization Act of 1946 would be interested in reading the circular sent out by Mr. Whitney, I am setting forth the language of that document in full. It reads as follows:

SPECIAL CIRCULAR NO. W-161
GRAND LODGE, BROTHERHOOD
OF RAILROAD TRAINMEN,
OFFICE OF THE PRESIDENT,
Cleveland, Ohio, June 16, 1947.

Delegates, Twenty-eighth Convention, Brotherhood of Railroad Trainmen.

DEAR SIRS AND BROTHERS: In my opening address at the Brotherhood's twenty-eighth convention I called your attention to the need for an effective public-relations program, stating that the lack of such a program had adversely affected our wage-rules movement and had been partly responsible for our failure to successfully conclude that movement during the strike of May 1946. I also outlined how we had enlightened the public after the strike was over by running an advertisement in key newspapers throughout the country with heartening results.

I called your attention to the fact that, in order to be really effective, this program should be greatly expanded and with your approval a special public relations committee was appointed to study the matter and submit its recommendations. This committee submitted a detailed report outlining the need for a progressive and comprehensive public-relations program and presented a number of specific recommendations for such a program which, after thorough discussion, were adopted by the convention. In its report the committee said, in part:

"We are sure that accurate and timely information, given out in an intelligent and professional manner, will help mold public opinion in our favor and counteract the unfriendly public opinion created by the propaganda of our enemies.

"The vicious and unfair treatment labor is receiving from the daily press and from the radio is proof enough that broad action to promote understanding of our problems and good public relations must be taken promptly."

Anticipating that the Fascist interests in the United States would make an effort to bring about enactment of laws to retard the progress of labor, the committee said later in its report:

"This committee feels that labor's destiny is at the cross-roads. If we sit supinely by and let the newspapers, radio, demagogs, and labor-baiters fill the public ear without raising our voice in reply, we are leaving the door wide open for the destruction of our free trade unions."

Later on it said:

"As we look at it the problem is twofold. We must formulate new and effective means of keeping our large membership well informed and we must develop a coordinated system for releasing information to the public

to counteract adverse publicity and promote good public relations."

It then presented a number of specific recommendations including the following: That an information service be set up for the express purpose of promoting good public relations; that all up-to-date methods be used for getting our story across and defeating the propaganda of our enemies; that a weekly newspaper be published by the brotherhood, etc., and in its report recommended:

"That the proposed information service and all parts of its subsidiary activities, such as the proposed newspaper, be responsible to and operate under the supervision of the president's department of the Brotherhood of Railroad Trainmen."

In addition to this the committee on joint relations and jurisdictional matters submitted a report containing certain recommendations which tie in with our public relations program. In its report it outlined proposals which it had received in part, as follows: That the brotherhood exert every effort to obtain labor representation in the United Nations Organization; that the brotherhood cooperate with the National Citizens Political Action Committee on a national, State, and community basis. In connection with these proposals the committee recommended:

"That the president and grand lodge officers determine the proper time when the best interests of our membership can be served by giving consideration to the above proposals."

That recommendation and the following were adopted by the convention:

"That the President be authorized to cooperate with all bona fide labor organizations on matters of mutual interest when, in his opinion, the interests of our membership can best be served."

In addition, the convention reenacted general rules 27 and 36, making it "the duty of the president of the brotherhood to collect statistics * * *" that will be of benefit to our legislative boards in framing laws, "also upon any other matters that would be of benefit" to the United States and Canadian legislative departments.

We returned from the convention and took steps to carry out the program in compliance with its most plain and obvious meaning. The publication of the Trainman News was accomplished about February 1, 1947. Communications were written to lodges and members urging local action to assist the program, with gratifying response. Our information service made contacts with press and radio resulting in many opportunities to present our story to the public. Analyses of the various rules sought in the rules movement and written for the purpose of putting our side of the story across to the general public are now being published. Many other steps have been taken to implement this program.

Shortly after the November 1946 election it became readily apparent that the present reactionary Congress was determined to press down upon the brow of labor "a crown of thorns"; to destroy all of the gains made during the Roosevelt administration.

In January 1947, several Senators among our staunchest friends in the Senate, informed me that they were badly in need of assistance. They stated that when the Democrats were in the majority they were able to obtain help, but that privilege had been removed since the Republicans were now dominating the congressional committees.

Realizing the seriousness of the situation I spent several days in Washington during January and, with the National Legislative Representative, conferred with many Members of Congress and found them very friendly to the railroad brotherhoods, especially the Brotherhood of Railroad Trainmen. In the course of these meetings we concluded that it would be difficult to defeat the drastic proposed labor legislation in the House of Representatives and decided that our efforts should be largely centered in the Senate.

At that time we estimated that there were about 20 Democrats and 5 Republican Members of the Senate that labor could depend upon. This small but valiant band was exercising every effort to block the reactionary forces in the Senate, but was faced with the prospect of attempting to work on a wide range of issues without adequate assistance.

The Reorganization Act and the Republican upset in November deprived the progressive Democratic Senators of chairmanships of important committees and access to the expert services of committee staffs and other experts on loan from the executive agencies. Such expert assistance has always been available to the reactionary forces in the Congress. When they were in the minority such expert service was provided by the research staffs of big business and industrial organizations. Now that they are in the majority they practically monopolize the research facilities of the committees and our stanch friends in the minority find it exceedingly difficult to prepare material to be used in fighting the reactionary forces that are attempting to crucify labor.

I discussed with leaders of the brotherhood and of certain other labor organizations the advisability of establishing a research bureau in Washington, D. C., to be headed by a competent economist that would enable the brotherhood, working independently or jointly with other groups, to carry on a comprehensive research work to assist our national legislative staff and me as well as our friends in Congress. Research is an absolute necessity if an effective public-relations program is to be carried out.

Plans for this bureau, to be known as the Public Affairs Research Institute, envisioned that it would be set up as an independent, nonprofit organization financed by donations from a group of founders, including labor organizations and other liberal-minded citizens. Its objectives would be to provide essential data on matters about which public policy is to be made and to highlight the real policy issues and alternatives involved in the maze of political jockeying, by (1) servicing friendly Members of Congress, participating labor unions, progressive religious and other groups with basic background memoranda on pending legislation affecting labor; (2) sponsoring policy conferences on major issues in Washington and elsewhere between lawmakers, experts and public citizens, thus providing a "close to the firing line" forum for balanced discussion; (3) undertaking basic action research, incorporating the efforts of specialists throughout the country on vital international and domestic problems confronting the Government; (4) providing the raw materials for a public information drive through existing media of communications, field organizations, regional conferences, etc. to educate the general public on the real basic issues underlying the problems confronting labor.

This program was laid before the general secretary and treasurer and board of trustees, and I requested authority to spend up to $100,000 from the national legislative revolving fund to promote the program which also included expenses involved in contacting Members of the Congress, and contributions to one or two groups cooperating with us. At the time it was considered by the trustees, Brother B. J. Baumberger was absent. However, Trustees G. J. Giguere and E. C. Bassett approved my request, as did the general secretary and treasurer, and I continued to take steps to implement the plan.

Discussions were held with our general counsel, trusteeship papers were drawn up and a trustee tentatively appointed. I conferred with Mr. Philip Murray, president of the CIO, at Pittsburgh, Pa., February 6, 1947, who stated that he approved the program and that he believed that his board of directors would concur.

With President Murray's tentative assurance of cooperation, plans for the institute progressed to the point where it was determined that a budget of $40,000 would be sufficient to meet the expenses of the institute in 1947, and I arranged for the brotherhood to deposit $10,000 in a Washington, D. C., bank to get the institute started. In the meantime, due to the delay in getting it started, the national legislative representative and I agreed that it would be necessary to employ additional help to fill the immediate need for research and the preparation of materials necessary to offset the terrific pressure for passage of the Taft and Hartley slave labor bills. Dr. Dewey Anderson, an economist of exceptional ability, honored by the highest rating the United States Government could give, had been chosen by the sponsors of the institute to act as director when it was set up, and on February 17 I employed Dr. Anderson to work for the brotherhood in a similar capacity on a temporary basis at a salary of $1,000 a month, with the understanding that any salary and expense payments made to him would be deducted from the brotherhood's contribution to the institute when it was finally set up. I also authorized him to employ a stenographic assistant.

On February 25 I arrived in Washington with a check for $10,000 in my pocket, prepared to carry forward the arrangements which had been made and which had to that moment been approved. However, on the morning of that date I received a telegram from Trustee Bassett withdrawing his support of the $100,000 appropriation and later during the day I received a letter from him confirming his telegram. On the following day Trustee Baumberger wrote me in the same vein, advising that he concurred in the action taken by Trustee Bassett. This left the Brotherhood and its president in a very embarrassing position as I was forced to withdraw the Brotherhood's offer of support of the Research Institute after having agreed that it was necessary if our friends in the Congress were to have any help in their efforts to save even a part of the gains made by labor during the Roosevelt Administration.

Upon our withdrawal as a sponsor of the Research Institute the project collapsed. The $10,000 check was returned to the General Secretary and Treasurer, and I took steps to make such emergency arrangements as appeared to be necessary to tide the situation over and to enable the Brotherhood to throw its influence and weight against the vicious bills pending in the Congress.

Mr. Walter J. Munro, public relations expert, and a former top conciliator, United States Department of Labor, was employed on March 1, 1947, to represent the Brotherhood in the capacity of public relations expert in Washington.

On February 25, 1947, I testified before the House Committee on Education and Labor, and on March 13 I testified before the Senate Committee on Labor and Public Welfare. I also spent considerable time in Washington, contacting Members of the Congress.

On March 12 the Brotherhood gave a dinner to about 41 Republican Members of the Congress at the Mayflower Hotel, Washington, and on the following evening another dinner was given to approximately 35 Democratic Members of the Congress at the same hotel. Most of our guests were serving their first term in the Congress and they were delighted to have an opportunity to be informed upon the Brotherhood's program, and its attitude toward the labor bills pending in Congress.

These dinners were held with the able assistance of the national legislative representative, his assistant, and our Washington staff.

This action was a forward step of great value in our public-relations program.

After the unwarranted and tragic action of two members of the brotherhood's board of trustees was taken which, in my opinion,

gave indirect if not direct support to big business, which supported the infamous slave-labor legislation, I held a number of conferences with brotherhood people in authority, and on April 8 a conference was held with Brothers W. P. Kennedy, G. S. & T., William A. Endle, general counsel, and other members of our staff in Cleveland, and it was agreed that the mandate of the brotherhood's twenty-eighth convention had been violated by the action of Trustees Baumberger and Bassett, and that immediate steps should be taken to bridge this difficulty by progressing the aims and objects of the brotherhood's twenty-eighth convention as outlined in the report of the public-relations committee.

Accordingly I instructed Brother Byrl A. Whitney, a member of the grand lodge staff, to proceed to Washington and confer with the national legislative representative, his assistant, Brother G. W. Nelson, Dr. Dewey Anderson, our economist and research expert, Mr. Walter Munro, public-relations representative, and friendly Members of the Congress and ascertain the immediate needs of our Washington staff and friends in Congress in an effort to help them to defeat the unfriendly labor measure.

It was the unanimous opinion that a temporary research bureau should be set up in Washington by the brotherhood following the lines first outlined. Pursuant to this suggestion, I called the national legislative representative on April 21 regarding the employment of additional help to assist Dr. Anderson who had been attempting, with limited facilities, to undertake the necessary research and provide material to defeat at least some, if not all, of the vicious antilabor bills. Two additional expert economists and two stenographer-clerks were employed to complete the staff.

Our efforts, even though hampered by the action of Trustees Bassett and Baumberger, have defeated some of the most obnoxious provisions embodied in the Taft-Hartley bill. The prohibition of industry-wide bargaining and the closed shop and the more vicious sections providing for unlimited use of injunctive proceedings to prevent strikes were defeated. The small group of Senators responsible for the defeat of these provisions of the bill have relied on research and material supplied by our Washington staff. Every resource at our command was made available to them and the success of their efforts to weaken the bill in the Senate was largely attributable to the help given them by the brotherhood.

Our efforts continued while the bill was in the conference committee of the two Houses of Congress and now that the conference bill has been adopted and gone to the President our efforts are centered on defeating passage in the Senate over a possible Presidential veto. On June 9 the brotherhood ran a full-page advertisement in two Washington newspapers urging the President to veto the bill, and quoting excerpts from his veto message on the infamous but less drastic Case bill of last year.

Our temporary research staff will be continued until adjournment of the present session of Congress. It is, however, only a stop gap to fill our urgent and immediate needs. The proposed research institute would be more comprehensive in coverage on pertinent subject matters and would provide a year-round source of material for the brotherhood in its effort to better the lot of its membership, and in the long run less expensive, as our contribution would cover the entire expense to the brotherhood. It is expected that after its inception, our contributions will be substantially reduced as other labor organizations and liberal-minded citizens join in supporting it. The budget would run about $40,000 a year, or about 20 cents for each member of the brotherhood in the United States, even though no financial help is received from other organizations. In other words, the cost will not exceed the price of a package of cigarettes.

Trustee Bassett also objected to payments made to Mr. Charles Kramer, whom I retained for a 3-month period. Kramer was highly recommended by Senators HARLEY M. KILGORE, Democrat, West Virginia, and CLAUDE PEPPER, Democrat, Florida, and I was advised through other sources that he was a capable writer and research specialist. He was temporarily retained because of the fact that there was a delay in setting up the research laboratory. His services were terminated on February 28, 1947, due to Trustee Bassett's vehement protests. He prepared some very fine statements for the brotherhood, which I used to great advantage. Trustee Bassett's objection to Kramer's employment is an attempt to usurp the managerial prerogatives of the president of the brotherhood.

Another objection raised by Trustee Bassett was against a contribution of $1,000 to the Progressive Citizens of America. This organization is an amalgamation of the former National Citizens Political Action Committee and several other progressive organizations. The general secretary and treasurer and I had agreed that a donation of $1,000 would assist this organization in its efforts to help preserve the gains made by labor during the Roosevelt administration, thus implementing our own efforts.

Trustees Bassett and Baumberger also objected to reimbursing Mr. Walter Munro, our public-relations representative in Washington, for the cost of dining Members of Congress, press representatives and other influential persons connected with labor legislation. As early as January 6, 1947, I recognized that we would have to spend some money for this purpose in order to get our story across, and the board of trustees agreed that such expenditures are a necessary part of our public-relations program and authorized refund of moneys spent for this purpose by the president, national legislative representative and his assistant. Since the time of the national legislative representative was largely consumed at his office, he delegated Mr. Munro to make contacts for him, and under every rule of reason and decency Munro should be reimbursed for moneys spent in dining these Representatives.

Following is a table showing details of expense incurred at Washington and Cleveland in connection with our public-relations program, up to June 1, 1947:

Statement of expense, legislative and public relations program, Washington, D. C.

Dewey Anderson, economist: Service effective Feb. 18, 1947, at rate of $1,000 per month; salary paid Feb. 18–May 31, 1947		$3,451.50
Herman Edelsberg, assistant: Service effective Apr. 21, 1947, at rate $666 per month; salary paid Apr. 21–May 31, 1947		902.00
John Shott, assistant: Service effective Apr. 21, 1947, at rate $666 per month; salary paid Apr. 21–May 31, 1947		902.00
Carol M. Fuller, secretary: Service effective Mar. 6, 1947, at rate $316 per month; salary paid Mar. 6–May 31, 1947		902.85
Dorothy C. Mast, secretary-clerk: Service effective May 6, 1947, at rate $316 per month; salary paid May 6–31, 1947		270.86
L. M. Loebach, stenographer: Service effective May 23, 1947, at rate $300 per month; salary paid May 23–31, 1947		85.71
Total paid for above services Feb. 18–May 31, 1947		6,514.92
Walter J. Munro, public relations representative, B. of R. T.:		
Mar. 1–31, 1947:		
Salary	$672.20	
Per diem	342.20	
Rail fare	35.33	
Typewriting	13.40	
Telephone	5.07	
		$1,068.20
Apr. 1–30, 1947:		
Salary	672.20	
Per diem	354.00	
Typewriting	13.00	
Business cards	10.20	
		1,049.40
May 1–31, 1947:		
Salary	672.20	
Per diem	365.80	
Typewriting	13.25	
Telephone	1.25	
		1,052.50
Paid, salary and expenses Mar. 1–May 31, 1947		3,170.10
Charles Kramer, research writer: Services at $750 per month; December 1946 and January and February 1947		2,250.00
Dworkin and Day, attorneys: Services at $50 per day; consultation regarding testimony on proposed labor legislation		150.00
Miller & Hornbeck, Attorneys:		
Services, Jan. 14–Feb. 27, 1947:		
Services	$690.00	
Travel expense	298.59	
Phone calls	18.72	
		1,007.31
(Has reference to contacts made by Mr. Hornbeck with influential Republicans in the Congress urging them to proceed cautiously on the matter of adverse labor legislation. On Jan. 20, 21, and 22, Mr. Hornbeck was in Washington with me, and we called upon a number of Senators and Congressmen.)		
Entertainment, dinners, Mayflower Hotel:		
Feb. 26, business luncheon	11.15	
Mar. 12, dinner—Republican Members of Congress	246.50	
Mar. 13, dinner—Democratic Members of Congress	199.70	
May 21, press conference, rules movement	231.05	
		688.40
Harry See, national legislative representative:		
Expense incurred entertaining Congressmen and others at luncheons—Feb. 8–May 28, 1947:		
February	2.50	
March	3.00	
April	20.10	
May	3.95	
		29.55
Miscellaneous expense:		
Photographs distributed—Pictures taken at dinners Mar. 12 and 13		62.00

Miscellaneous expense—Con.	
B. of R. T. pencils given to Congressmen and others attending dinners	$17.00
Printing—Testimony of President Whitney before House Committee on Education and Labor	319.30
Printing—Testimony of President Whitney before U. S. Senate Committee on Labor Relations Program	417.15
Progressive Citizens of America—Donation	1,000.00
Total expenditures—Jan. 1–June 1, 1947	15,625.73

In addition to the items of expense listed above amounting to $15,625.73 and paid from grand lodge funds during period January 1, 1947–June 1, 1947, the following bills are outstanding, which, when paid, will increase the total expenditure since January 1, 1947, to $17,921.68.

Newspaper advertisement, Washington, D. C., June 9, 1947:	
The Washington Post	$1,049.20
The Washington Evening Star	1,108.80
Total	2,158.00

Bills not received to date (June 13). Payment not made.

Expense incurred by W. J. Munro entertaining Congressmen and others at luncheon and dinners, which Trustees Bassett and Baumberger refused to approve for payment:	
March expense	$45.90
April expense	35.55
May expense	56.50
Total	137.95

Payment not made.

When request was made for authority to spend up to $100,000 I did not know to what extent we would have to go insofar as the spending of money was concerned, but I did have the conviction that we should not "scotch" our funds and play into the hands of the NAM, the United States Chamber of Commerce, and the Association of American Railroads. I know that these associations, with the support of certain Fascist-minded individuals and corporations, are spending vast sums of money in the hope of destroying labor.

I also felt that it was the intention of the convention to have carried forward the public-relations program, for on the seventeenth day of the convention, while considering the report of the Public Relations Committee, an amendment to limit the expenditure of funds for this purpose to $125,000 annually was voted down. The fact that I requested authority to expend up to $100,000 did not necessarily mean that the entire amount would be spent.

Last year following the strike, I requested and received from the G. S. & T. and board of trustees, authority to expend up to $100,000 for public relations and we ran one advertisement in key newspapers throughout the country around the theme that strikes can be prevented. We spent $21,447.98 and the results were very beneficial.

On September 22, 1946, authority was granted the W. B. Doner Co. to proceed with preparation of radio spot announcements and newspaper advertising of educational political nature with total cost not to exceed estimated $30,000.

The cost covering radio preparation and announcements amounted to $24,622.02, and cost to Grand Lodge covering preparation of newspaper ads amounted to $2,514.11, making a total cost paid from Grand Lodge funds to the W. B. Doner Co.—$27,136.13. This amount was charged equally to protective fund and national legislative fund.

(NOTE.—In addition to the $27,136.13 paid from Grand Lodge funds, a cost of $9,746.49 for newspaper advertising was paid from various State legislative advance funds, making a total of $36,882.62 paid to the W. B. Doner Co.)

Our delegates to the twenty-eighth convention recognized the fact that reactionary forces throughout the jurisdiction of the brotherhood were girding themselves to cripple organized labor, and in their wisdom authorized the appointment of the joint relations and public relations committees, whose reports were timely and represented the sentiment of our membership. These reports were unanimously adopted by our twenty-eighth convention, and that action directed the president of the brotherhood and his staff of officers to execute it in the most practical and effective way.

This principle has been carried forward to the best of my ability, notwithstanding the lack of cooperation by Trustees Baumberger and Bassett. Since I have not had their support it was necessary for me, as the leader of 218,000 members, to find ways and means to see that the brotherhood was protected, and to that end I have worked.

I am laying the foregoing facts before you because you and the membership are entitled to know them. In other words, I do not want this brotherhood to lose its progressive and militant record because of the action of any officer or member, and if I have erred in my interpretation of the authority that you gave me at the twenty-eighth convention, you should frankly say so. If you approve of my action you should be equally as frank.

You now have the story, as well as the cost involved in carrying out our public-relations program as outlined above. The results accomplished by this program to date far outweigh the amount of money spent. I believe that I have carried out the mandate of the convention, and inasmuch as I have not received the cooperation of Trustees Baumberger and Bassett I have deemed it proper to place the facts before you. Your action in this matter will direct my future course.

You are therefore requested to fill in the enclosed ballot and forward it to the president of the brotherhood in the enclosed stamped addressed envelope, to reach my office not later than Monday, July 21, 1947.

Fraternally yours,

A. F. WHITNEY,
President.

Mr. Speaker, it is undoubtedly the duty of those responsible for the proper enforcement of the Reorganization Act to investigate promptly the question as to whether or not Mr. Whitney and certain of his employees named in the circular, who have participated in lobbying activities, other than two who are registered, are guilty of a violation of the law. While this is being done it might also be well for the committee to examine into the background of those same persons as some very interesting facts would undoubtedly be disclosed.

It is apparent from the reading of the circular sent out by Mr. Whitney that Trustees Baumberger and Bassett are to be congratulated upon the manner in which they have sought to protect the members of the Brotherhood of Railroad Trainmen and also to prevent a possible violation of the law. It is equally apparent that Mr. Whitney, as president of the Brotherhood of Railroad Trainmen, is attempting to use his position for the purpose of charging those trustees with lack of cooperation, when in truth and fact they are protecting the interests of the members of the brotherhood which Mr. Whitney was chosen to represent. It might be well for that organization to examine into his stewardship in view of the activities which he has admitted in his effort to obtain repayment of funds which appear to have been spent without proper authorization. It might also be interesting to see the complete break-down of the expenditures in question. Mr. Whitney should also explain why a sum of $25,000 or more should be expended in lobbying against legislation which specifically excludes any and all persons who are subject to the Railway Labor Act.

Favors Provisional Settlement With Germany

EXTENSION OF REMARKS
OF
HON. HOWARD H. BUFFETT
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, July 9, 1947

Mr. BUFFETT. Mr. Speaker, under leave to extend my remarks, I am enclosing the following letter to the editor printed in the June 1947 issue of Peace Action:

FAVORS PROVISIONAL SETTLEMENT WITH GERMANY

To the EDITOR OF PEACE ACTION:

You have asked for comment on Herbert Hoover's proposal that we make a settlement with Germany without waiting for Russia, in case the foreign ministers' conference next November fails to produce concrete results. There has been some criticism of Mr. Hoover's proposal on the ground that it would permanently cut Europe and Germany in two at the Elbe River and would deprive the Germans in the eastern zone of all hope of eventual liberation from Soviet totalitarianism.

I venture to think that what Mr. Hoover has in mind is not a definitive and final peace treaty but a provisional arrangement, a modus vivendi, that would permit the rapid rehabilitation of the western zones, free from the deadweight of Yalta, Potsdam, and the level-of-industry agreement, but without locking the door against the later unification of all Europe.

Such a settlement could and should accomplish the following ends:

1. Put an end to the legal state of war between Germany and the western Allies, and all its restrictive consequences.

2. Establish immediately a provisional government of the three western zones working under a provisional charter, but avoiding the drafting of a final constitution.

3. Immediate cessation of all the destructive aspects of the Potsdam policy, notably denazification, deindustrialization, and excessive decentralization.

4. Stopping all reparation shipments, subject to reconsideration when normal levels of industry in Germany have been attained.

5. Immediate reestablishment of normal conditions of unrestricted travel, trade, and communication; abolition of all censorship.

6. Immediate abolition of military government and the handing over of governmental functions to the provisional German Government of the western zones. Continuation of the occupation for purely police purposes, but with an Anglo-American-French control council to supervise the provisional

German Government in certain specific fields such as demilitarization.

7. Immediate reestablishment in Germany of full civil rights, especially immunity from arrest without warrant.

8. The claim to a unified Germany, including the Soviet and Polish occupied areas, should be maintained and constantly reaffirmed—it being clearly understood, however, that reconstruction in the West cannot wait until unification has been achieved.

It seems to me that this plan would make possible many of the measures now so urgently necessary for German and European reconstruction without handing the Soviets the potent propaganda weapon that they are the only champions of European and German unity.

Sincerely yours,

ALEXANDER BOEKER.

The Oil Shortage

EXTENSION OF REMARKS

OF

HON. EDWARD V. ROBERTSON

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Thursday, July 10, 1947

Mr. ROBERTSON of Wyoming. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement of Mr. H. J. Porter, president of the Texas Independent Producers and Royalty Owners Association, before the Senate Committee on Foreign Relations, during hearings on the Anglo-American oil treaty. The particular point of the statement which I should like to call to the attention of Senators is Mr. Porter's suggestion relative to the oil shortage, on which so much comment has appeared recently in the press.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

My name is H. J. Porter. I am an independent oil producer and reside in Houston, Tex. I am president of the Texas Independent Producers and Royalty Owners Association. I am also a member of the executive committee of the Independent Petroleum Association of America, a director of the Mid-Continent Oil & Gas Association, a member of the American Petroleum Institute, and a member of the National Petroleum Council.

I am also one of the uninformed with an ax to grind to whom Mr. Davies referred in his testimony, Wednesday morning, June 3. Having never held a position with any of the executive departments of the Government, I have not had an opportunity to become a great man, imbued with unusual wisdom and sagacity. I have never become sufficiently informed that I wanted to change the Constitution and the Bill of Rights of this the greatest of all nations. I hope that my son and my grandchildren never become so well informed that they will want to change the fundamental law of this land and substitute nationalization of industry for private enterprise. The protection of my business and our system of private enterprise is my private ax to grind in this controversy.

I offer for the record a resolution passed by the executive committee of our association last October and another resolution passed by the association membership on April 7, in Dallas, Tex., endorsing the action of the executive committee in opposing the ratification of this treaty.

I also wish to offer for the record resolutions opposing the ratification of the treaty by the following organizations: (1) Texas State Teachers Association; (2) Texas Association of School Administrators; (3) Texas County Judges and County Commissioners Association; (4) board of regents, State teachers colleges; (5) board of regents, University of Texas; (6) Texas State Board of Education; (7) Democratic State convention held in San Antonio last September.

In connection with the resolution of the Texas State Teachers Association, Mr. Davies seemed to think that this treaty was no concern of our school teachers. A large part of their salaries comes from taxes on oil and its products. Thanks to Mr. Davies and his ilk who were running the oil business during the war and until last August, those teachers have been underpaid. That regime of Federal regulations cost the State of Texas over $65,000,000 in taxes. As American citizens, I think the school teachers have just as much right to be concerned with the import of this treaty as Mr. Davies and his colleagues.

I am not an attorney but to my layman's mind it appears that there are two schools of thought supporting this treaty. First, I believe the support of most of the large companies that own foreign reserves of petroleum stems from their desire to escape the vigilance of the antitrust laws in their world-wide operations. Second, I am firmly convinced that the State and Interior Departments want the treaty for the sole and only purpose of obtaining Federal regulation and control of the production of oil and gas in the United States. As you have previously been told, the Interior Department, under Secretary Ickes, carried on a campaign to obtain Federal control and regulation of the domestic industry from shortly after he went into office until President Truman saw fit to dispense with his services.

This committee has been trying to find out during this hearing if there is some means of arriving at reservations or interpretations of the treaty which would meet the approval of the entire industry. In my opinion that goal cannot be reached. I believe that the entire industry, with a few exceptions, could be cemented in a bond in opposition to the treaty if the Congress would pass a simple act exempting the American companies that are engaged in international oil deals from the antitrust laws insofar as their foreign operations are concerned. I do not mean to recommend such a course. In fact it is my opinion that if the Congress saw fit to pursue such an undertaking that within 15 to 20 years the British would be over here asking for a large loan with which to repurchase their properties from the American companies so exempted.

It makes little difference whether the International Commission that would be set up under this treaty is advisory or has authority. Their prestige and influence will be built up to the point to where their advice will become orders. They would be in contact continuously with the companies operating foreign concessions and you may be certain they would be dominated by those companies. We have had experience before with agencies and commissions that were set up with and without authority and in each instance they have continually expanded their authority. The most recent example being the Federal Power Commission which has so flagrantly exceeded the original authority given them by the Congress that bills are now pending in both the Senate and the House to curb that authority. Any treaty, no matter how it is written, will be just an entering wedge to obtain monopolized international regulation of the oil industry and direct Federal control and regulation of the domestic industry. If our State Department and the entire executive branch of the Government will back up our nationals in foreign operations and announce to the world that this Government expects and demands fair treatment of its nationals by other governments then we do not need any treaty for oil or any other commodity. It is sad but true that that has not been the policy of our Government. The British became the world's greatest international traders because they pursued that policy. For generations the most potent and effective instrument of foreign policy the world has ever known was the British Navy.

It is utterly absurd to talk about orderly development of petroleum resources and the marketing thereof on a world-wide scale and at the same time say that it will not affect the domestic production of oil and gas and the domestic marketing of the products thereof. It is utterly impossible to control the development and marketing of crude oil and its products on a world-wide basis and at the same time ignore, the market which consumes approximately 65 percent of the world's production and the nation which produces approximately 64 percent of the world's crude oil at the present time. During this hearing we have heard considerable about world-wide distribution of petroleum products to both the "have" and "have not" nations and that this treaty will facilitate the proper and equitable distribution of petroleum and its products on a world-wide basis. The quesion arises in my mind as to who will finance the purchase by the "have-not" nations of these products.

If I had been a member of the board of directors of the American Petroleum Institute and had voted for the ratification of this treaty with the so-called API reservations or interpretations, I would have been deeply chagrined at the testimony of Secretary Acheson. He made it very clear that he recommended ratification of the treaty without reservations. Apparently he would not have mentioned the API reservations or interpretations if it had not been for some expert dental work on the part of a member of this committee in pulling it out of him that such reservations had been proposed and accepted by the State Department. To my mind the attitude of Secretary Acheson and Mr. Charles Rayner of the State Department during the testimony showed conclusively that they do not seriously consider the API reservations or interpretations and would utterly ignore them in the event the treaty was ratified.

During the questioning of Mr. Rayner as to whom he had consulted concerning the treaty, he made the statement that he had consulted with the American Petroleum Institute and that, in his opinion, this was the most representative group within the industry. For the information of this committee, I wish to state that there are several companies who contribute more than $100,000 per year to the American Petroleum Institute. I contribute $12.50 per year to them. I am willing to leave it to the judgment of this committee as to who determines the policies of the American Petroleum Institute, the large contributors or the several hundred small contributors from among the ranks of the independents like myself. Mr. Rayner stated he had also consulted a number of independent producers regarding the treaty. Mr. Rayner was truthful. He consulted the membership of the Independent Petroleum Association of America in annual convention at Fort Worth last October and after their consultation with him and due consideration of the presently called API reservations or interpretations, they promptly voted their opposition to the treaty with or without reservations.

My friend and neighbor, Mr. George A. Hill, of Houston, was asked when he appeared before this committee about the Independent Petroleum Association of America having approved this treaty in 1945 and then reversing

itself and voting opposition to the treaty in 1946. Mr. Hill and Mr. Ralph Zook, both members of the advisory committee, in the negotiation of the treaty, went to the Tulsa convention of that association in the fall of 1945 and told them that Secretary Ickes was determined to have a treaty but that the industry members of the advisory committee had out-traded Mr. Ickes and given him a treaty that was meaningless. They told them that Secretary Ickes was not only determined to have a treaty but would get a treaty. At that time copies of the treaty had not been generally distributed. I think Mr. Hill sincerely believed what he told them. Mr. Zook supported the first treaty and was for any kind of a treaty. After copies of the treaty became available generally to the oil industry more and more oil men began to question Mr. Hill's interpretation and then came the broadcast. After that Mr. Hill realized that there was a question as to who had outtraded whom. He then came up with the reservations which bear the label of the API. At the Fort Worth convention of that association in October 1946, these reservations were discussed in committee and on the floor of the convention for 3 days. After hearing the discussion and after having heard Mr. Rayner explain the broadcast and explain the treaty, that convention promptly voted by a big majority a resolution against the treaty with or without reservations. Some of those who voted for Mr. Hill's resolution and the treaty told me afterwards that they did it on account of personal friendship for George Hill.

It has been stated that one purpose of the treaty is to protect the titles of American and British nationals to foreign concessions. Undoubtedly they were talking about concessions in the Middle East. Who is going to enforce the protection of those titles. The British or the Americans? The British have notified the world that they are getting out of the Mediterranean area and movin; to South Africa. It may be that the British will protect Kuwait. Although it has an estimated reserve of 9,000,000,000 barrels, one-third of the estimated reserves for the entire Middle East, I understand that the British did not include this protectorate in the list of British possessions that would come within the scope of the treaty. I understand that Burma was also excluded. Is it possible that the British wish to engage in some private enterprise outside the jurisdiction of the treaty?

There has been a great deal said about the conservation of our oil and gas for national defense. The only sensible and practical way to make this country self-sufficient in oil and gas in time of peace or war is by the continued expansion and development of our domestic oil industry, supplemented by a synthetic petroleum products industry. That program has been recommended by the O'Mahoney committee. Until the synthetic industry can be developed, we should have an import policy.

At this time I wish to offer an import policy recommended by our association:

"The domestic oil industry for many years has furnished the American consuming public with an ample supply of continuously improved petroleum products at reasonable prices. The public is entitled to this service and the industry is obligated to render it. The only way this can be accomplished is through an aggressive, healthy, and dynamic domestic oil industry, operating in a free economy. Importation of foreign produced crude oil into this country should be limited to amounts sufficient to supplement the domestic production to the extent that domestic production is not available in sufficient quantities to supply the American consumptive demand for petroleum products at reasonable prices. Such imports, if required under the statement above, should continue only so long as they are supplementary and do not produce a harmful effect upon the domestic oil industry. This policy should be observed voluntarily and should be free of any Government regulation or implementation. If one or more refiners or marketers should commence importing foreign produced crude oil or petroleum products in excess of the amounts stipulated above, then their activities should be restricted by the imposition of sufficient import duties."

There are several things we can do to increase petroleum and natural gas reserve in this country:

First, increase the supply of tubular goods to the independent producers. This can be done by reducing exports of steel products for the development of foreign reserves.

Second, the Government should sell at a series of sales, to the highest bidders, every foot of the some 15,000,000 acres of land it has acquired by various means in the last 15 years, reserving only the lands necessary for the use of the Army and Navy and other essential governmental activities. The minerals should go with the sale of the land as the record shows that the average American citizen is more competent to handle minerals than the Department of the Interior or any other executive department of the Government. I believe there will not be a better market in the foreseeable future for these lands than there is now. The Government can take in a lot of cash and reduce the public pay roll some.

If you should wish to further increase reserves, the Interior Department should be required to offer for lease for oil exploration any of the public domain upon the request of any citizen, same to be sold to the highest bidder within a reasonable length of time after the request. There should be reasonable restrictions as to the size of the block or area to be leased so that independent producers, as well as major companies, will be able to purchase the leases. The rate of discovery on the public domain is little better if any than the rate of discovery in nations in which the State owns the minerals.

If the Senate will reject this treaty and make it plain to the State and Interior Departments that the Congress does not intend to permit executive branches of the Government to obtain control and regulation of this great and vital industry, they will enable oil men to devote their energies to finding new reserves and to an expansion of this great industry. Oil is where you find it. A diligent search for new reserves means millions of dollars in lease bonuses and rentals to the landowners of this Nation, as well as royalty payments to the landowners under whose land oil is found. Lease bonuses and rentals did more to carry the people of Texas through the depression than any other kind of business.

I received a copy of the letter dated May 30, 1947, which Mr. Ickes sent to each Member of the Congress. In the letter, after practically taking individual credit for winning the war, he criticizes everybody, advocates Federal control and regulation of the oil business, and winds up by endorsing this treaty. Mr. Ickes evidently thinks he will be back in the Government eventually as Secretary of the Interior or else he would not have advocated Federal regulation and control of the oil industry for I am confident that the great man does not consider anyone but himself as competent to run such a vast undertaking.

In conclusion, I wish to say to this committee that it is my firm conviction that the people of Texas do not want regimentation of the oil industry or any other industry and they are opposed to this treaty and anything else that carries the brand of Harold L. Ickes. I do not believe that the American people want an industry regimented that from year to year has furnished them a continuously improved product at lower prices. Gasoline today is selling for less than it did in 1920, even though a good part of the present price is in taxes. This achievement was only possible because of our system of private enterprise and ever-present fierce competition within the industry.

Statehood for Hawaii

EXTENSION OF REMARKS

OF

HON. WILLIAM F. KNOWLAND

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Thursday, July 10, 1947

Mr. KNOWLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Baltimore Sun, one from the Washington Star, and one from the Philadelphia Inquirer, relating to statehood for Hawaii.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Baltimore Sun of July 1, 1947]

SHOULD HAWAII BECOME OUR FORTY-NINTH STATE?

Congress has begun debate on the question of admitting Hawaii as the forty-ninth state of the United States. The same proposal has been introduced repeatedly since 1920, but this time the Republican leaders predict that the bill will pass in short order. Any congressional action at this time will be bound to be influenced by political considerations, because speedy enactment of the legislation will give Hawaii, with a population of more than 500,000, a chance to vote in next year's presidential election. Hawaii voted Republican in its last territorial election.

Hawaii has been a territory of this country since 1900. As such, the eight islands in the Hawaiian group have been represented in Congress by a popularly elected delegate who may take part in debates and introduce legislation, but may not vote, the Governor of Hawaii, together with the Territorial Secretary and judiciary, are appointed by the President of the United States. But Hawaii has its own Senate and House of Representatives for the enactment of Territorial legislation, and the Governor's veto of any legislation may be overruled by a two-thirds vote of each house.

Unlike the inhabitants of Guam and Samoa, Hawaiians already enjoy American citizenship. Statehood would give them the right to elect their own governor, to vote for President and to have voting members of the United States Senate and House. At present, the islanders pay taxes to this country without having a vote in the manner in which those taxes are levied or spent. A congressional subcommittee held hearings in Hawaii last year and unanimously agreed that the islands were ready for statehood. The issue was placed before the Hawaiians themselves in 1940, and 67 per cent of the voters were in favor of statehood.

Opposition to the proposal is expected to arise principally on the fundamental policy of granting Statehood to a group of islands approximately 2,500 miles offshore. It is one thing to grant independence to a Territory, as was done in the case of the Philippines, and quite another thing to try to incorporate a distant group of citizens as an integral part of the national legislative system. We must weigh the primary question of whether or not it is actually feasible to bring a remote territory into our complicated system of interstate regulations. And if Hawaii is given statehood, the issue immediately

will arise as to future status of Alaska, Puerto Rico, the Virgin Islands, Guam, and Samoa.

Therefore, Congress should not push the Hawaiian question for purely political reasons. But if a precedent is needed to add weight to the Hawaiians demand for Statehood, the recent action of France along these same lines is worthy of note. France has recently given the status of "departments" (roughly analogous to our States) to Guadeloupe, Martinique, Réunion, and French Guiana. The move is the first step toward the complete assimilation of France's oldest overseas territories. So it might be argued in the case of Hawaii that France has already established a trend toward the admittance of territories as full-fledged member states of a nation. On the other hand, it is conceivable that 50,000,000 Frenchmen can be wrong.

[From the Washington Evening Star of July 2, 1947]

CALL FOR SENATE ACTION

The House of Representatives having voted to admit Hawaii to the Union, it is to be hoped that the Senate will find time and opportunity to welcome the forty-ninth State before adjournment. No reason now exists why this action should be postponed. Statehood was promised to the Hawaiian people half a century ago; they have qualified for it in the greatest war in history; simple justice dictates that the pledge should be kept to a people abundantly deserving of the full privileges and obligations of citizenship.

The notion that the Hawaiian Islands are overly distant from the mainland no longer is tenable. In terms of hours of travel they are nearer to Washington today than Maine and Florida were when they were granted admission. Similarly, it is useless to argue that because of their polyracial character the people of Hawaii should be kept in a dependent status. Their loyalty, their patriotism, their capacity for working together have been demonstrated under conditions of the most exacting nature.

But admission to the Union will not be a one-sided affair. The Nation as a whole will be advantaged by the closer adherence of Hawaii. Both in the eyes of the world at large and in the islands the fulfillment of the promise of 1898 will be regarded as a proof of good faith.

Senate consideration of the bill which has been approved by the House depends upon the leadership of Senator HUGH BUTLER, of Nebraska, as chairman of the Public Lands Committee. If he will call that body together promptly, the necessary action may be taken without further delay. No extensive hearings are required. Admission of Hawaii to the Union has been endorsed by the Interior Department, is accepted by the War and the Navy Departments, has been urged by President Truman, is advocated by both the Republican and the Democratic Parties, is recommended by 93 percent of the press of the country and by 60 percent of the voters consulted in recent national polls. It was requested by the people of the islands in a plebiscite taken in 1940.

[From the Philadelphia Inquirer of July 2, 1947]

FOR HAWAIIAN STATEHOOD

The House vote to make Hawaii the forty-ninth State was well taken, even though, granting favorable Senate action, it will be 12 or 18 months before the new State can enter the Union.

Congress has been perhaps too hesitant in making this step. As the Hawaiian Delegate, JOSEPH R. FARRINGTON, pointed out, the people of the islands have been seeking statehood since 1900. That is a long time.

But originally there seemed reason to move slowly. Hawaii, like Alaska, is so far from the rest of the Union as to have seemed isolated before the recent great advances in aviation. Its population is preponderantly oriental, with a very large proportion of Japanese.

Opponents of the measure have held that these are factors which would make the move a precedent for world imperialism and the conquest of all manner of alien peoples. The truth is, of course, that distance has lost the importance it once had; the Hawaiians have clearly expressed their desire to join the Union; and the Japanese groups among them have proved their loyalty to all, except hopeless victims of race prejudice.

Other objections seem as poorly founded. One is that we ought not to admit as a State an area supposedly held in iron control by the so-called Big Five sugar factors, the idea being that its representatives in Congress would be merely agents of the big companies. The opposite extreme is that it would send two CIO Senators to Congress.

In short, objections to the measure are flimsy. National security demands the move, and there is every reason of justice to the Hawaiians to give them statehood.

Reenact Tax Relief

EXTENSION OF REMARKS
OF
HON. ALVIN F. WEICHEL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. WEICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including the following timely editorial suggesting tax relief to the suffering taxpayers of America by Dudlay A. White, publisher of Sandusky Newspapers, Inc.:

REENACT TAX RELIEF

Whether or not you realize it you, as an average citizen, are working 14 weeks a year to support government.

This fact clearly shows that there is no quicker way for the Truman administration to reduce the cost of living than by reducing the cost of government.

Besides lowering the cost of living for every American family, the substantial reduction of Government expenses, together with a reasonable cut in taxes, would strengthen the national economy.

Excessive taxation is a bloodsucker of the kind of trade activity and business development that produces more and better jobs; a bloodsucker of financing for new enterprises, better tools, and new employment opportunities.

Congress, therefore, should not permit Mr. Truman's resistance, highlighted by his recent veto of the tax-relief bill, to prevent them from making another effort to cut taxes in the present session.

Truman has opposed congressional measures to eliminate waste and extravagance. Nevertheless, much has been accomplished in this direction. Meanwhile, administration leaders miserably understimated 1947 revenue available for Government expenses and debt reduction. The fact that the responsibility for these policies rests squarely in the lap of the President, is no reason why the Republican Congress should forego further efforts to overcome his opposition and attempt to enact a new tax-relief measure at the earliest possible moment.

John Paul Jones

EXTENSION OF REMARKS
OF
HON. CHARLES B. DEANE
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1947

Mr. DEANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following address by Fleet Adm. Chester W. Nimitz, United States Navy, Chief of Naval Operations, delivered at the Cavalcade of Freedom Celebration, Monument Grounds, Washington, D. C., on July 4, 1947:

It is particularly appropriate that today we celebrate not only the one hundred seventy-first anniversary of our Nation's independence, but also the two hundredth anniversary of the birth of a man who contributed so much to making possible that independence—John Paul Jones.

Born in southwestern Scotland on July 6, 1747, of poor parents, John Paul as he was then called, had none of the advantages associated with wealth and position. At the age of 12 he became an apprentice in the service of a shipowner engaged in the American trade. His first voyage was to Fredericksburg, Va., where his elder brother was established as a tailor.

From this time until the outbreak of the American Revolution John Paul made many voyages to this country. By unremitting energy and study he improved his status in the maritime profession, and by 1772, when he was 25 years of age, he was sailing as master of the *Betsy* of London. It was during the period just before the Revolution that he added the surname Jones, the reason for which seems lost in obscurity.

At the outbreak of the Revolution he was one of the first to offer his services in the newly organized Continental Navy and in December 1775 he was accepted for service. His commission as lieutenant bore the date December 7, a date that was to have great significance to the United States Navy many years later.

From that time on his career is known to every schoolboy and needs no repetition here. His courage and determination is exemplified in his famous reply to Captain Pearson of the *Serapis*: "I have not yet begun to fight," when asked if the *Bon Homme Richard* had struck her colors.

The memory of John Paul Jones has always been an inspiration to the men of the United States Navy. His ringing words and heroic deeds have evoked a Navy spirit which has never accepted defeat and has always produced a will which has assured victory. On this Independence Day which falls so closely to the bicentennial of his birth, the Navy is proud to join the Nation in homage to this hero.

Behind his daring spirit and mastery seamanship was a strong and sincere patriotism. It was not a mere patriotism of geography, but a genuine passion for the freedom and justice for which our young Republic stood.

During the Revolutionary War, Jones told the King of France, "* * * I drew my sword in support of the violated dignity and rights of human nature." Here he expressed the spirit of the American fighting man. Here, also, is an expression of real American democracy. We are always opposed to those who would place lesser value upon the dignity of the individual and infringe upon his personal freedom.

John Paul Jones' belief in the dignity of the individual man was the philosophy of

our founding fathers and remains the guiding light for all who would keep America the "land of the free."

There is, and always should be, room in our Republic for men who hold conflicting ideas of politics, economics, and religion. We have no sympathy, however, for those who would place themselves, or their theories, above the individual liberties of all the people. Our war with the Fascist bullies of Hitler arose basically from their lack of respect for the dignity of man. This same principle caused our forefathers to do battle with the mercenaries of King George.

No one can say with assurance what the great figures of our history might do if they were alive today. There have been too many changes in every external phase of life to make just comparisons possible. Yet the basic ideals by which we Americans live remain fundamentally unchanged. And I believe that John Paul Jones would eternally maintain his firm belief in the intrinsic liberties of the individual. It is conceivable that he would caution us against anyone, regardless of political label, who would ask the people to surrender their basic liberties for the sake of a promised but dubious Utopia.

That is why I feel the story of Jones' spirited life has a special significance for all Americans today. Though he lived two centuries ago, his message is still most pertinent. Through the retelling of his story we can find encouragement and renewed vigor in our search for the solutions to today's pressing problems.

It has been said that he honored the generation in which he lived. Our generation, and those of the future, can best return that honor by living up to his bold example of action and justice.

The Last Hope of Human Liberty

EXTENSION OF REMARKS
OF
HON. HENRY C. DWORSHAK
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Thursday, July 10, 1947

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me to 250,000 persons attending America's Cavalcade of Freedom program on the Monument Grounds in the Nation's Capital on July 4, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE LAST HOPE OF HUMAN LIBERTY

Fellow Americans, I am happy to participate in this patriotic demonstration as you celebrate the one hundred and seventy-first anniversary of the independence of our great Republic. For the historic Declaration adopted on that summer's day long ago is truly the nucleus upon which was founded the United States of America. It is, naturally, an occasion for an impressive observance such as this to remind us of its significance—attested daily by our personal freedom, the equal of which is unknown throughout the rest of the world.

On this birthday of our Nation, it is proper that the National Capital should stage the largest celebration throughout the land. For almost a century and a half, this city has been the seat of our Federal Government. Here, this towering shaft has been erected to the memory of the Father of our Country, who devoted a lifetime to the service of his countrymen. Nearby are many memorials and statues commemorating the loyalty and the heroism of others who dedicated their lives to making possible enjoyment of the heritage of freedom by future generations. Thousands of patriotic Americans, in peace and war, have given their fullest measure of devotion to the preservation of constitutional government.

On July 4, 1776, when the Declaration of Independence was adopted by the Continental Congress in Philadelphia, a theretofore-unheard-of concept of government was inaugurated by stalwart men who were bold in thinking and bold in action. What was this concept of government, termed by European statesmen of those days as absolute proof of the mental aberration of American revolutionaries? Why, Americans had been guaranteed life, liberty, and the pursuit of happiness. We Americans today consider this guaranty the fundamental basis of our Government, but in 1776 it was the rankest heresy. Ever since, this concept has remained the inspiration and the objective of all peoples who would be free.

Frequently, in the history of this Republic, constitutional government has been jeopardized. Whenever a foreign enemy has assailed the Republic, our Nation has been blessed with victory. It is noteworthy that in time of war our citizens submerge their personal fortunes to promote the national welfare. War, with its spectacular appeals, has inspired men to fight and die in defense of human rights.

In the United States our Constitution recognizes that the people are supreme—the source of all political and economic authority. Notwithstanding the terrific burdens of waging war, we have always maintained our system of free enterprise. Constitutional guaranties have been preserved.

Americans are justly proud of their rich heritage, although too frequently some citizens overlook the fact that governments endure only so long as people make sacrifices to sustain them. Washington and Jefferson gave us our freedom; Lincoln preserved our Union; patriotic Americans of other generations have responded in many ways to keep America the exemplar of constitutional government.

Our Nation honors the men and women in uniform who achieved victory over the Axis Powers. But we have not yet reestablished peace, and many difficult problems remain to be resolved before peace treaties are consummated.

In wartime our Nation was united; in peacetime it is disunited. The solidarity and unity which characterized our wartime activity have been supplanted by bickering and disagreements in almost every field of human endeavor. It is not essential to eliminate all friction and controversy, but it is imperative for all Americans to recognize that they cannot relax their constant vigilance over the Nation's welfare.

Too many people have the obsession that the President, the Congress, and other public officials can solve their problems. Pressure groups are extremely active in seeking special privileges or gratuities from their Government. Instead of contributing something to the national welfare, many groups and organizations make unreasonable demands because they erroneously believe that paternalism is the rightful function of government. The people are sovereign and must accept their responsibility in helping to chart our national destiny.

It is fallacious to believe that the people need only to look to Washington for bigger gratuities and subsidies, and that the Government can maintain itself. The badge of an American does not entitle a person to "ride on a free ticket." It merely accords him the inalienable right to support to the best of his ability an ideology which imposes obligations as well as provides personal advantages and safeguards.

Throughout the world today, free government is in jeopardy. Dictators seek to thwart self-determination and to make the power of the state superior to the right of the individual. Millions of men, women, and children are the victims of tyranny and oppression. In Europe today human beings are still being interned in concentration camps. Starvation and disease menace their welfare; despair mortgages their future. These tragic conditions clearly show the distinction between the old-world and the new-world concept of government. Dictators can neither bribe nor coerce people to surrender their rights without the inevitable destruction of their security.

The United States is endeavoring to relieve distress and to restore order in countries devastated by war. Billions of our national wealth have been provided freely to bulwark Europe's economic strength and thus prevent political collapse. Notwithstanding false insinuations by those who would obstruct Europe's recovery, Americans are actuated solely by the desire to stabilize conditions so that peace may become a reality.

The history of mankind reflects almost constant travail and frustration in every generation. In colonial days liberty was more highly evaluated because its denial by the British crown obstructed the attainment of those rights which had inspired the migration of God-fearing, liberty-loving people to this continent. Yorktown did not bring security after the Revolutionary War. Hazards and dangers continued within the new Nation, as well as threats from imperialistic rulers abroad. Thirty-five years after he had written the immortal Declaration of Independence, Thomas Jefferson declared: "The last hope of human liberty in this world rests on us. We ought, for so dear a stake, to sacrifice every attachment and every enmity."

Throughout this land are millions of Americans who recognize that "the last hope of human liberty in this world rests on us" today as in past generations. It is our responsibility to prove that representative government can function as effectually in meeting postwar challenges as in helping to win military victories over totalitarian powers. Our Nation is facing many crucial tests, and success is contingent upon an inspired citizenry. We cannot be strong so long as dissension and strife are rampant.

Jefferson and his associates in the Continental Congress were fully aware of the portent of their actions in absolving all allegiance to the British Crown. They were defying the world's most powerful maritime nation, and they knew that reprisals could be expected. Yet they mutually pledged to each other their lives, their fortunes, and their sacred honor.

They were willing to sacrifice everything for their country's welfare. Will Americans of our age emulate this patriotic devotion? Their course will decide the destiny of our Republic.

Explanation of the Proposed Bill on Alien War-Service Seamen

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1947

Mr. CELLER. Mr. Speaker, section 325 of the Nationality Act of 1940 provides that persons with 5 years' service in the American merchant marine shall be eligible for naturalization and waives the normal residence requirements.

The proposed bill amends this section to provide that 3 years of "maritime wartime service" shall be accepted in lieu of 5 years of peacetime service. "Maritime wartime service" is strictly defined to include only service after Pearl Harbor and before March 2, 1946, only service aboard ships under the direct control of the Army Transportation Corps or the War Shipping Administration, and only service in waters subject to enemy activity as defined by the Maritime War Emergency Board. As a result of these stringent requirements only the few hundred alien war-service seamen who made the most outstanding contribution to our war effort will benefit.

The proposed bill also provides for the granting of a certificate of arrival to any person with 1 year of "maritime wartime service."

United States Human Mission to India

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 10, 1947

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to offer the dispatch by my friend, D. F. Karaka, correspondent of the Bombay Chronicle, and former war correspondent. He has some very illuminating things to state regarding the exchange of students between India and the United States.

The dispatch follows:

UNITED STATES HUMAN MISSION TO INDIA

(By D. F. Karaka)

Due to arrive here in the third week of June is the first United States Ambassador to India, Mr. Henry F. Grady. Carefully chosen for the delicate job of representing the United States in this country, which is in the midst of great political and constitutional changes, Mr. Grady has an impressive background both in his own country and in the east. In 1941 he was President Roosevelt's personal representative and made an economic survey of those far eastern countries which supplied strategic defense materials. In the following year Mr. Grady came to India as head of the American Technical Commission. During 1945 and 1946 he served as the national chairman of the board of directors of American relief for India.

Sixty-five years of age, the United States Ambassador is a family man with a wife and four grown-up children. He is distinguished looking, tall and heavily set with grey hair and blue eyes. He is described as "a man who has no outstanding hobbies, but spends his spare time in scholarly pursuits—he wears glasses."

From the official standpoint and from the diplomatic, Mr. Grady satisfies all the requirements of an ambassador and of a man whose job is to promote goodwill, better understanding and friendship between the country he represents and that to which he is sent as Ambassador.

It seems to me that it is not enough to achieve these objects that a liaison between the two peoples should be effected only at high levels. I have no doubt that in time Mr. Grady will be on the most friendly and easy terms with our representatives and leaders in the capital city of New Delhi. I have no doubt also that he will even understand the intricate political situation which now faces us and that he will be able to grasp the complexities of the Indian national or the binational character. The chances are, however, that the Indian and the American people will still remain as far apart as ever.

LIAISON BETWEEN COMMON PEOPLE

I maintain that liaison among the people of two countries must take place at lower levels than that of ambassadors. The common people of one country must send their own representatives to the common people of another country, unhampered by diplomatic conventions and protocols and all such encumbrances.

There is today a definite world trend which encourages this idea. The creations of the UNESCO is entitled to foster this end. The preamble of the constitution drafted at the London conference of UNESCO expressed high purposes and basic principles. The governments of the states who were parties to this constitution solemnly declared:

"That ignorance of each other's ways and lives has been a common cause throughout the history of mankind, of that suspicion and mistrust between the peoples of the world through their differences have all too often broken into war";

"That the great and terrible war which has now ended was a war made possible by the denial of the democratic principles of the dignity, equality, and mutual respect of men, and by the propagation, in their place, through ignorance and prejudice, of the doctrine of the inequality of men and races."

The object which UNESCO has in mind is to promote a free flow of ideas and information on the popular as well as the scholarly level through the media of the radio, motion pictures, and the printed page. UNESCO will further encourage the exchange of students and the reciprocal visits of such individuals as scientists, teachers, and artists. It will encourage the association across national boundaries of creative writers, artists, and musicians.

It is my belief that these objects and ideals can right now be achieved by sending to this country a half dozen representative young Americans, picked from the complex pattern of American democracy and charged with no other idea than that they should come here to India, look around for themselves, and take back whatever impressions they gather. A similar team which from the British universities before the war on a talking tour of India was, I remember, a tremendous success.

MISSIONARIES OF ONE WORLD

What would be a representative cross section of such Americans, culled from the colleges of the United States and including today many veterans of World War II who have seen the broad canvas of the world in the theaters of war in which they have operated and who have fought for that one world of which the late Mr. Wendell Willkie spoke? As I see it from this distance, I would pick the men somewhat as follows:

1. I would take a boy from an up-State New York village, who is studying business administration at Cornell or Syracuse and probably was a fighter pilot during the war.

2. I would take a Harvard law student from an old back-bay Boston family.

3. I would take a Negro student of medicine from the Howard University, probably a veteran of the Ledo Road and the CBI theater, whose home is in the deep South.

4. I would take an ex-major now studying journalism in the University of Columbia, who speaks with a broad Brooklyn accent and whose name could be Goldstein.

5. I would take a young man studying agriculture and learning to become a farmer in the University of Iowa.

6. I would take a political-science student from Stanford University, a Californian who has served with the OSS in Burma.

These are six young men haphazardly chosen who satisfy two requirements. First they must be typical Americans, secondly they must, if it is possible at the same time, be also citizens of the world.

If these young men could come out here to India this cold weather, they would, I am sure, create the sort of good will which we want created between the United States and India, and they would, I am also sure, take back with them a picture of this country different from that distorted picture of casts, communal strife, poverty, and squalor, which is so often painted of us in the United States.

If the Government of the United States and the State Department cannot act on this until the Munn bill passes Congress, it would be a glorious idea for some of the individual organizations to sponsor.

Groups like the American Friends of India, the Rockefeller and Carnegie Foundations, the larger universities who are interested in international relations, such as Harvard, Yale, Columbia, and Syracuse; business firms like the International Business Machines; and a great many philanthropic individuals, could sponsor this idea of a human mission to India.

Military Conscription Is Contrary to the Spirit and Practice of the American People

EXTENSION OF REMARKS

OF

HON. HAROLD D. COOLEY

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 10, 1947

Mr. COOLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony by Josephus Daniels, editor of the News and Observer, of Raleigh, N. C., who was Secretary of the Navy from 1913 to 1921:

Mr. Chairman and gentlemen of the committee, as an American citizen who believes in preparedness and who directed the forces of the Navy during World War I, I wish to give expression to my sincere conviction that the proposed conscription of all American youths over 18 is a dangerous departure from the sound and settled policy of America from its foundation. Except in times of war, conscription violates fundamental Americanism, and confers upon the military the duties of the home and the school. If half of the cost of the proposed universal conscription was appropriated to the public schools the youth would be far better trained than in any system conducted with the chief emphasis upon training for war. More than that, from civilian institutions there would come as volunteers all the men needed for making the most efficient Army, Navy, and Marine Corps, and the strengthening of civilian objectives in making government more responsive to the noblest needs of the country.

Mr. Chairman and gentlemen of the committee, the propaganda for compulsory military service for American youth is based upon three false premises:

First. Fear, and I hold with Franklin Roosevelt that "fear is the only thing to fear." As I read or listen to the pleas to Hitlerize America, and see how the advocates of compulsion tremble, I am reminded of the old nursery rhyme: "Run, little fear, or big fear will get you."

Second. Cynicism, the disbelief in the ability of our civilization to rise out of savagery and so order the affairs of a civilized age as to make war an anachronism. The unbelief is based on the silly credo: "There have

always been wars and there always will be wars."

Third. Imperialism, the desire that Uncle Sam shall abandon democracy, the right of all men to govern themselves, and follow the example of the Israelites of old who, tired of God's guidance, wished a king so they would be like neighbor nations that lived by the sword. It was this jealousy of John Bull's exploitation of weak peoples that caused us to go into the colonial business when we obtained rule of the Philippines by conquest and purchase, and held onto them under the pious profession of benevolent assimilation. Happily, we have come to ourselves and redeemed the solemn pledge to return sovereignty to the Filipinos.

Mr. Chairman and gentlemen of the committee, let me hasten to avow that I belong to the school of thought which holds with Washington, "In time of peace prepare for war." I also am a Wilsonian and Rooseveltian who believes equally in the maxim, "In time of war prepare for peace." One is the corollary of the other. As long as there are men and nations that live by the sword there is the certainty that nations lacking the means of defense will die by the sword. As long as there are robbers and marauders, cities must maintain a vigilant and adequate police force to protect life and property, the size being regulated by the danger of being despoiled. I believe everything in the Bible "from kivver to kivver" except "The meek shall inherit the earth." That makes me a heretic unless this prophecy was intended for some far off century. Up to our day the meek have not only not inherited the earth but have been the victims of the strong and greedy whose creed is that the earth belongs to those who have the power and are able to go up and take it.

Our country for decades was so favorably situated between the two great oceans, it had little fear of invasion. That was in the days when communication and transportation were so slow that Andrew Jackson could be winning the Battle of New Orleans days after the treaty of peace had been signed between the two fighting nations at Ghent. That protection was lessened when submarines could stealthily enter our harbors before their presence was discovered and hurl deadly torpedoes to destroy our cities. It was lost when bombers in a few hours could fly from Tokio and work havoc on the American fleet anchored in Pearl Harbor, or the "airy navies of the central blue" were capable of taking off before breakfast from Berlin and blasting Boston before the setting sun. Protected by the narrow channel separating it from the continent, the tight little island of England was safe from invasion in all former wars, but was dangerously near destruction when flying robots wiped out thickly populated sections of London and made life a nightmare to millions. Only the supremacy in air, aided by sea and land forces, prevented its annihilation.

The whole military strategy was changed when the atomic bombs blasted Hiroshima. Infantry in the years to come will give way to scientific weapons, and the suggestion of universal drilling is to fail to appreciate the lessons taught by the new warfare in World War II. Indeed, the day may not be far distant when the foot soldiers will follow the Cavalry into innocuous desuetude.

The outstanding lesson taught by World War II is that the nation which commands the air is the nation that can rule the world. This is not to say that wars can be fought and enemy countries brought under subjection and punished alone by this new weapon sending its bombs hurtling on crowded cities, industrial plants, and railway stations. No complete victory can be won and garnered, as this war proves, except by aerial warfare, with hand-to-hand fighting to follow the devastation from the air. It is too soon to assess the relative value of the forces of land, sea, and air, or to plan for wise preparedness in a world that is still bleeding from the wounds of war. There must be time for the adoption of the best plan after all the lessons have been made known.

The first sound that fell upon my infant ears was from the shelling by Federal gunboats of a small southern town in which I was born. I have lived through three major wars, having been privileged to direct naval operations of the United States in World War I. Study and experience have convinced me that until we can replace war with effective international agreement as a safe substitute our country must be well prepared against attack. In 1914, when the European war broke out and there was danger the contagion might reach us, the Wilson administration made plans, and in 1915 secured authorization for the creation of the most powerful Navy in the world. I am testifying today from my experience of 8 years as Secretary of the Navy, covering the period of World War I, and from my strong belief in efficient modern preparedness. No man believes more in having a gun well primed than I do. But I put emphasis on the sort of preparedness this war has taught will win victories, and not on the discredited broken stick of universal compulsory conscription.

That is archaic in an era that has pushed foot soldiers to third or fourth place in modern warfare. It is scientists, electricians, engineers, men with new ideas trained in making and using atomic and other bombs and new weapons, who are the main dependence of any country threatened by war.

Before we entered the war in 1917 naval statesmen did not foresee that the enemy would employ the U-boat as its chief offensive. We did not provide adequately for such warfare. We had placed chief emphasis on dreadnaughts while the craft most needed were destroyers, submarines, chasers, and Eagle boats. There was better preparedness against the submarine in this war, but military experts here and abroad had not foreseen that Nazi victories over Europe and the expulsion of the British from the Continent would come from superiority in the air and mechanized weapons on the land. The tide of war did not turn until allied air superiority blasted Nazi cities and fortresses and factories and railroads and war materials. The imperative preparedness of tomorrow is that which will give conquest of the skies. Without that mastery all the mighty leviathans and the thundering artillery and the serried ranks of infantry will be compelled in any future war to say, "One thing thou lackest yet"—and the first and most potent offensive weapon.

We were forehanded in antiquated cavalry in 1940, we were strong in powerful dreadnaughts which may soon be outmoded, we had efficient drill masters and artillerymen, but in 1940 all our belated preparedness lacked the most important essential for modern warfare—modern aircraft carriers and ships in the upper air that could drop down their deadly missiles and destroy whatever they elected to annihilate.

When the time comes to prepare for preparedness, the first step will be to unlearn the methods of the past and discard the archaic drilling, put all cavalry horses to plowing, shut down munition plants making out-of-date weapons, discard the ancient tactics and strategy long taught in military schools, and look mainly toward the perfection of weapons of the skies. The "airy navies of the central blue" will win the first battles of the future. The chief ship of the surface navy will be the aircraft carriers, and the chief function of the land forces to follow up, mop up, and occupy. And Uncle Sam will be astounded at the number of young men who will volunteer—more than needed—to see the sky darkened by the dreadnaught planes raining down their ghastly dew.

My first introduction to compulsory service, and my revulsion from it, came in 1914, a few months before the outbreak of World War I. A very good friend, General Estoppinall, Member of Congress from Louisiana and member of the Naval Affairs Committee, called to see me on his return from France, where he had been on a visit to his sister. "I am glad to get back," he said, "to a free country where youth are not conscripted for military service and where we do not live daily in fear of war. When I arrived in France I found my sister in deep distress because her sons must leave home and school and be called to military service (the law required service up to 45 years of age). She hated the separation—her boys being taken from her and from school to march and drill and drill and march and march, for which they had no taste." General Estoppinall said the French hated the system but tolerated it because of the fear that Germany would again try to possess their country. That fear was well founded, for in less than 6 months after that conversation German soldiers rushed through Belgium and threatened France. It was not till America threw its might into the struggle that the Germans were driven back. The French fought bravely against great odds, not because of the compulsory military service but in spite of it. By 1918 they were war-weary and could not have carried on without the help of British and American soldiers, who, lacking the nightmare of compulsory service, fought with at least as high efficiency as their allies whose sons had been conscripted to serve in the army since 1872.

The draft under French law provided for a 27-year period of military service. The proportion of the youth drafted varied from 65 to 85 percent. In World War I and World War II our American soldiers, who had never in time of peace been conscripted, went overseas with only a few months wartime training and, fighting side by side with the French, demonstrated that long, compulsory training did not make better soldiers. This is particularly true in mechanized warfare, where familiarity with automobiles, tractors, and like machinery makes it comparatively easy to go from peactime to war without a long period of goose-stepping.

The example of France, which in 1939 boasted the greatest and best-trained regular army, with long training under a compulsory law, certainly offers no good argument to adopt a system which did not save that army from rout and defeat in this war. French soldiers, without the blight of compulsion, would have given a better account of themselves. The draft system was tried and found wanting.

The advocates of a compulsory law point to the early victories of the Nazis as an example America should follow. The first thing Hitler did when he became dictator of Germany was to tighten up and enforce military conscription. All German males between 18 and 45 were drafted and forced into active duty for a period of 10 years. The system called for the training of the entire youth of the nation. There was basic preinduction service, discipline and hardening of young boys in the schools. They were indoctrinated into the fake of being the superior race. Germany was made one vast military camp and all life was based on preparedness for war. This by order of the Fuehrer. The Nazis became brutally efficient and for a time ran roughshod over most of Europe. They believed their military caste and universal military service would make Germany the master of the world. It would be futile to deny that the German military force won important victories and imposed their will from the Atlantic Ocean and the British Channel to the steppes of Russia. Their victories were made possible more by early supremacy in the air and the utilization of mechanized implements of war more than by compulsory goose-stepping. And

the time came when the drafted Nazi soldiers, with long years of compulsory military service, came up against mighty armies from countries which had practiced no peacetime compulsion. The result is history. The citizen soldiers, quickly mastering the lessons of war in combat, came off victors over those who believed no soldier could fight unless from boyhood he had been compelled to make militarism the grind of his daily life.

The claim has often been made that Switzerland was not invaded, because she had universal military training. Is it historically correct to maintain that a small Swiss Army trained with rifles and other small weapons presented an important military threat to the highly mechanized Germany?

There were important reasons like the following which kept Switzerland from being invaded by other nations in the past world war:

First. Swiss topography: The report of the President's Commission on Universal Training speaks of "the limited access to armies through mountain passes and the high cost in time, men, and equipment of waging war across the rugged Swiss terrain" as militating "against invasions of that country."

Second. Economic reasons: Swiss trade with other countries, both Allied and Axis, was quite profitable to the Axis powers as well as to Switzerlnad. This trade would have been cut off if Switzerland had gone to war.

Third. A third reason is mentioned in the report of the President's Commission on Universal Training: "The St. Gothard and the Simplon tunnels, through which four-fifths of the traffic between Germany and Italy passed, were mined." The Germans and Italians knew that an invasion of Swiss territory would injure and perhaps permanently prevent the indispensable traffic between Germany and Italy.

If universal military training kept Switzerland out of war, why did it fail to save France, Belgium, Holland, and Poland?

Certainly an examination of the results of compulsory service in France and Germany give no sufficient reason why the United States should abandon its century-old Americanism and adopt European imperialism, which now in its rout finds none so poor to render it obeisance. Weighed in the balance—in the acid test of war—that much-vaunted system was found wanting. Its epitaph—this is true of Italy, too, and will be of Japan: Mene mene, tekel upharsin.

Up to date nobody advocating spending billions and billions of dollars for compulsory military services has even guessed at how much money will be required to put that juggernaut in motion and keep it going, and in what sort of war these draftees will be trained to fight to get best results.

The only guess at the immense cost is that the cost in the first year would approach $2,000,000,000. But that would be only a beginning of the immense burden compulsory service would saddle on the backs of the taxpayers.

The only suggestions of training have been land bases, barracks, and tents galore, and the sort of drilling that was in fashion a generation ago. Most of such training is as out of date as the triremes of Romes. It has not been suggested that there is need for drafting men for the Navy. It can obtain all it may need by volunteers who are ambitious to go down to the sea in ships. Aviation will attract more men of their own volition than there are planes in which they can try their wings. There remains, therefore, as the only possible argument for compulsory training the drafting of men to make up the land forces. At the most there will be need only for a small, compact land force. Every man that can be wisely placed can be obtained by volunteer enlistment if there is adequate pay with certain advancement from the ranks to those who show ability in actual service.

Let me illustrate: When I became Secretary of the Navy in March 1913 Congress had authorized an enlistment of 40,000 men. I found that the strenuous effort to attract enough youths to the number authorized lagged. This in the face of propaganda by Navy bands and solicitation to enlistment by the promise, "Join the Navy and see the world." I resolved to find why the response to appeals to enlist did not secure enough seamen. I found it was due to three reasons: 1. The pay was inadequate. 2. The training, except in gunnery and engineering, was lacking. 3. A caste system denied the equality that is synonymous with Americanism—the door to promotion was barred.

A new policy was adopted of a school on every ship, better vocational and elementary instruction, opportunity for advancement and promotion to commissioned officer rank—not enough—and training in navigation by voyages that enabled all sailors to see the world, beginning with a voyage to Rome. What was the result? In piping times of peace the full strength was enlisted and the next Congress authorized all the sailors needed to man the ships in commission and the new ships to be constructed.

What does this history teach? Beyond dispute that if the pay is adequate, the dignity of youth respected, education provided, and the door to promotion opened, there will be no lack of voluntary enlistments. If these American rights and opportunities are made a part of military life, there will be so many American youths volunteering that no branch of military service will need to conscript men.

The call is not compulsory service—as un-American is nazism or fascism—but the practice of that American democracy in the military branches which prevails in civilian life. The first step is promotion of the capable privates to officer rank, and the utter exclusion of that snobbery which sometimes creates a chasm between the officers and enlisted men.

A beginning has been made in introducing enlisted personnel as members of court martials. It should be followed by public hearings and the adoption of more rules and practices which prevail in civilian courts of justice.

We are told that the cure for democracy is more democracy. The cure for lack of full enlistments is to introduce democracy and more democracy.

Not long ago I chanced to be in a company of civilian officials and officers of the Navy and Army when the discussion turned on the subject of compulsory military service. One civilian, who had come to Washington from patriotic motives to serve in an important post, brought up the subject your committee is now considering, and expressed the strong belief that our country should at once enact the legislation which is now under consideration. He said it was the only guaranty of protection. He advanced the view that every youth should be fitted for war by military training in peace. As he proceeded with the old familiar argument first advanced by Bismarck, and later be-praised by Hitler, a wise admiral who had not forgotten his Americanism and who still has his feet on the ground, interrupted by asking: "How much would it cost to give this universal compulsory military training?" As the discussion proceeded, and the advocates brought forth argument after argument for compulsion, they were all confounded when the quiet admiral halted every argument brought forth with the disconcerting question: "How many billion dollars will it cost?" He has had no answer to his question yet because the advocates shy away from that phase of their proposal. One of those present did say: "No matter what the cost, it will be cheaper than the two wars in which we have been engaged." The admiral asked: "Did compulsory military service in France stop Hitler in 1940? And did it guarantee the peace you think that un-American system would insure for us when a war lord is bent on military domination?" That question remains unanswered.

This wise admiral, whose practical devotion to true preparedness is a matter of record, commented: "I have not forgotten the fundamentals of democracy I learned as a boy. Compulsory military service in peacetimes is contrary to those principles. Let us stick to our Americanism and we have nothing to fear."

After the discussion had proceeded for some time, the civilian who was most vocal for compulsion, turned to the officers present and said: "Unless we get it now, we will never get it. The time to strike is when the iron is hot."

You may ask me, "If you do not believe in compulsory military service, what would you propose in lieu of it for preparedness against any possible foe?" That would be a proper question. No one ought to be against a proposed remedy unless prepared to offer a better one. If and until a League of Nations, or a like international organization has demonstrated its ability to prevent war, our country owes it to itself to be prepared against the possibility of attack.

What is the best protection? My answer is the same one I made to the Naval Affairs Committee while Wilson was in Paris negotiating for a world organization of a substitute for war. Unless and until such an agency could work satisfactorily, I urged the most powerful navy in the world. The naval emphasis then was on surface ships. Today I would place the main emphasis upon atomic bombs and like modern weapons by both arms of the military service, a navy that flies, with adequate military strength on land and sea. Aviation has passed its infancy, but has not reached its stride. I would take leave to be strong in the air. If our country dominates the sky, no enemy can land on any part of our terrain.

We should make a study of the lessons taught by war before determining the character or quantity of military strength or how our armed forces are to be recruited.

It would be the height of unwisdom to plunge into the expenditure of billions to set up a mighty system which would invade every home at the behest of militarist or cynic. I have heard no reason or excuse for compulsory military service except from those who doubt the effectiveness of any world peace agency or those who wish Uncle Sam to become a colonial nation holding the weaker people in chains.

The apparent sentiment for departing from American preparedness does not exist in the hinterland of America, among the men who reap and sow, of those who fashion implements and tools and machines in our factories, or in our schools and colleges. Most of it is pumped up. Outside of Washington and official and military circles there is little demand for this radical departure from a system of government that has been our sound foundation in all our history.

We will never dominate in war by dependence upon the draft. All we need to do is to provide the craft and accessories and young Americans will hasten to enlist, and the number of voluntary aviators will exceed the ability to furnish them wings. Certainly, we ought not to put all our eggs in one basket. We now have land and sea and air forces larger than we will ever need. Enough should be retained of all to guarantee national defense until time has demonstrated the size of each force that is necessary for our own protection and thus to contribute our share to an international police force to use against any who would threaten the peace of the world.

It is too soon to determine the character and size of the military strength in men and munitions.

And to these should be added what World War II proved necessary: A joinder of the Army and Navy under one head. War

taught that unity of command of Army and Navy forces was essential to victory. If essential in war, one single direction should govern training and preparedness in time of peace as well as in war.

The plea that military instruction for all youths is better than all-round education in the schools of civilian teachers is an unjust reflection upon the schools and colleges of the country. A military camp or school is the best place to train men to fight, but not the best instruction for the duties and responsibilities of citizenship. Compulsory military training elevates the soldier above the citizen. The genius of our Government makes the military the executive of the civilian officials. When we change our system for compulsory military training we are headed to all the costs and imperialism inherent in the rule of the men on horseback, as seen in France in the days of Napoleon and in Germany in the days of the Kaiser and of Hitler.

America Must Readjust to Peace

EXTENSION OF REMARKS
OF

HON. MARION T. BENNETT

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 10, 1947

Mr. BENNETT of Missouri. Mr. Speaker, under permission to extend my remarks in the RECORD, I include the following significant address of the Speaker of the United States House of Representatives, Hon. JOSEPH W. MARTIN, JR., over the National Broadcasting Co. network from Washington, D. C., Wednesday, July 9, 1947:

Fellow Americans, I take this occasion to speak to you concerning tax reduction, because I believe it is one of the most essential things to be done in this first session of the Eightieth Congress.

Two vitally important issues are involved in this tax bill. The first issue is the maintenance and protection of the respective functions of the different branches of the Government. Only once before in the history of this country has a Chief Executive ever attempted to invade the constitutional function and right of Congress to levy taxes. It was not successful then and it should not be successful now. Congress must continue to be the dominating force in the determination of how the American people shall be taxed.

The strength of the House of Representatives and of the whole Congress has always been in its control of the purse strings. It is necessary for the Eightieth Congress to protect this prerogative so the checks and balances in government may be maintained, as they were intended by the founding fathers to be maintained under our Constitution.

The second issue is that the people of this country simply cannot support a Government which is spending as we have spent during the war and since. The people bore their stupendous tax burdens with great fortitude during the war, but any attempt to continue those tax burdens far into the future will be bound to result in disaster. The people cannot carry the tax burdens that are now laid upon them, pay the high prices now prevailing, and in which taxes enter materially, and at the same time save something for a rainy day.

It is, of course, characteristic of governments to grow and expand. Usually, the cause is war. Government tends to remain expanded. Every bureau which comes into existence to meet a temporary need wants always to remain as a permanent part of the Government.

This has proved to be true since the end of hostilities in this Second World War just as it proved true after the end of hostilities in the First World War. You may recall the disclosure a few months ago of a temporary agency which was organized in 1918 to help fight the First World War was still fighting it after June 1946. It was the United States Spruce Production Corporation created to provide material for wood frame airplanes. I believe it was granted something like $13,000 last year to persuade it finally to go out of business.

It simply is not to be expected that governmental bureaus and agencies will voluntarily put themselves out of business. Quite to the contrary, they will struggle so long as they can struggle not only to maintain themselves in power, but to expand their powers, enlarge their controls and their expenditures of the public funds.

Previous to the elections last November, it was clear the country wanted the cost of Government cut down; the size of the Government cut down; the activities of the Government cut down; and the tax rates reduced.

With the assembling of the Eightieth Congress, it was perfectly obvious if we were going to get America readjusted to peace, progress, and prosperity, we would have to reduce drastically the squandering of public funds by a bureaucracy which had become overswollen, arrogant, and wasteful. The bureaucracy of today is no different than any of the bureaucracies of the past. It is inherent in all bureaucracies, the longer they stay in existence, to become more and more arrogant, more and more wasteful. They set up all sorts of alleged or make-believe public services in order to create a popular demand for their continuance when the Appropriations Committees of the Congress start to apply the pruning knife to their expenditures.

We knew when the Eightieth Congress assembled we must achieve a balanced budget, which we have not had for a good many years. We knew we must start paying off the national debt. We knew we must give tax relief to the 49,000,000 people who had so uncomplainingly borne the enormous tax burdens to bring about victory in the war.

The Congress is the people's special instrument of control over their Government and their public administrators. The House of Representatives has always been recognized as being sensitive to the demands of people because of the fact a new list of Representatives is elected or reelected every 2 years.

For the past 14 years there has been a concerted drive to break down the authority of the legislative branch of the Government over the expenditure of public funds.

There has also been a concerted drive during all that time to destroy public confidence in the Congress.

The subversionists and political self-seekers continually strive to drive a wedge between the people of this Nation and their Congress. If that could be accomplished those subversionists could succeed in wresting control of the Government from the people. They would vest it in bureaus strongly entrenched in the executive department of the Government.

Those are the home grounds of the political termites. This danger really exists.

The people have declared they want their Congress to take back to itself the powers which were too freely granted the Chief Executive or to various independent agencies of the Government in years past.

The Eightieth Congress was on notice it would have to move in this direction.

Because of these facts it becomes an event of very great significance when the Chief Executive undertakes to tell a considerable majority of each House of the Congress whether they should or should not pass tax legislation.

It became necessary, because of conditions which arose in the disagreement over the tax bill between the legislative and the executive branches of the Government, for the House of Representatives to reenact its tax bill, setting the date for the reduction in rates forward from July 1, 1947, to January 1, 1948.

This necessity of passing the same legislation a second time was an extraordinary one. The condition of the country is such as to make it wise for the Congress to do this very thing.

We cannot forget there is a very strong and continuous drive in this country as well as in other parts of the world against free government and our American way of life.

Neither dare we forget that the subversionists in this country will, if possible, try to create resentment through heavy taxation and high prices. They would then charge the Government under the Constitution with failing to carry out its duties of protecting the people against heavy taxation and high prices. These subversionists hope by such tactics to stand a chance, in event of a sharp recession in business, or a depression, of overturning our form of government and stepping in with some sort of a dictatorship.

We cannot ignore the facts of history. From the pinnacle of oppressive taxes, many a government has toppled to destruction, and many a monarch has fallen from his throne.

There are three vital facts which I believe we must always keep before us in a situation such as confronts us in the United States today.

The first is: The tendency of all governments, as I pointed out a moment ago, to continue endless expansion of spending until the point of ruin is reached.

The second fact is: All taxes must come from the labor, the sweat, the privations and the thrift of all the people.

The third fact is one which has always affected governments and always will: The people finally become weary of intolerable tax burdens. When this happens business withers away. Production slows down. Individual initiative is discouraged. Frustration replaces confidence and hope. The government finally goes down to destruction before the onslaughts of demagogues who find in chaos their chance for temporary power and loot.

For a hundred years and more, our American way of life has been progressing to the point where its invulnerable stability was taken for granted. We almost forgot vigilance is still the price of liberty. We became indifferent to encroachments upon our form of government. We have been most tolerant people in the world of new ideas, even when those ideas were antagonistic to our own way of government and of life.

New and terrible stresses have been brought to bear upon our American system of government, and our American way of life, by changes which have occurred in other parts of the world.

After the people last November registered in such an emphatic way their demand that governmental costs be cut and the tax burdens lightened, it was determined the Eightieth Congress must respond to the demand forthwith, and the effort is being made.

We have balanced the budget. We have curtailed governmental spending. We shall be able to make a substantial payment on the debt. All now needed to complete this well-coordinated program demanded by the people last November is to give the 49,000,000

American people a break in tax rates. This reduction of taxes is absolutely essential if we are to safeguard our economic prosperity.

The House of Representatives has performed a magnificent job of carrying out the mandate received from the American people last November in cutting out the wasteful, extravagant, don't-count-the-cost practices of bureaucratic spending.

The program which is presented to the Congress and the people is a straightforward, honest, open program. No trick economics and no false promises are to be found in it.

It is poor service to the country or to any political party for anybody to try to confuse the issue of lower tax rates and defeat the bill by substitute proposals. The American people do not want excuses; they want tax reductions.

The Appropriations Committee of the House has done its work well. Reductions of governmental spending have been made on a sound basis, even though against terrific pressures of hostile propaganda, well organized and directed from high places, apparently, in the Government.

The task of the Eightieth Congress is to restore the finances of the United States Government to a sane and sound basis. Our problem is to preserve the solvency of the Government. We must assure the safety of the people's assets in bonds, savings, and insurance policies. These tasks the Congress is succeeding in performing, and performing well. I want to say the House of Representatives merits the gratitude and the support of everyone who loves America and wants to see our way of life perpetuated.

The taxicab driver, the cook, the housemaid, the millions of school teachers, policemen, firemen, factory and office workers, people in the lower-salary brackets everywhere, will rejoice in the extra take-home pay which will be theirs with the passage of the tax bill.

The people cannot be expected to continue in peacetime the lush spending of a wartime struggle. The citizens must not now be required by their Government to support an inflated wartime tax structure. There is not the slightest excuse for refusing to provide our people with this relief from the excessively burdensome wartime taxes.

The measure now pending before the Congress gives the greatest relief to those least able to pay.

The pending bill would save from paying any taxes at all nearly a million of our poorest people—I refer to those over 65 years of age whose individual incomes are under $1,000 a year. The advantage given them under the bill may well mean that margin of food adequate to maintain health and happiness.

I want to say here and now—that I do not agree with the doctrine advanced by some who claim it is unwise for the American people to be given tax reductions because they already have too much money to spend. I believe the more money in the hands of the people, the higher will be the standard of living. The contention is, if the people have money in their pockets, they will bid against each other for goods in the market place until they drive prices skyhigh. That is not true insofar as production is stepped down.

As I have said on many other occasions, the answer to our main problem in the United States of America is production, and more production, and still more production.

There are several ways in which to increase income. Some methods may increase the income of only a segment of the people, such as an increase in wages, or some special increase in the price of farm products. There are two ways—I might say three ways in which the income of every man, woman, and child in the United States can be increased. The first way is in a reduction of prices. The second way is an increase in quality without an increase in prices. The third way is by tax reductions which leave the people a greater share of their own earnings which they themselves may spend for their own needs and desires.

No contented, prosperous people ever revolted against any Government. A contented, prosperous people necessarily must be a free people. The Eightieth Congress is striving to adopt one method of increasing everybody's income by reducing tax rates. A reduction in tax rates will also help to bring about a reduction in prices, because taxes are embraced in prices.

One of the most prolific sources of taxation is the excise rates—which bear directly, absolutely, and completely upon consumers. If the Government spends too much money, then the Government must either go into too much debt, or it must collect too much money from the taxpayers. In either case, it is the people who are hurt. In the end it is the people who will be ruined.

If the Government does not spend too much money, then the Government does not have to go into too much debt, and it does not have to raise too much money by taxation, either through excise taxes, taxes hidden in the prices of goods and services, or taxes levied directly on income, inheritance, and profits.

It is the belief and the hope of most of us in the Congress that we can, through reduction of taxation and reduction of Government spending, point the way to more production. More production will, in turn, bring down prices through the age-old means of competition in the market place, which is the best way in the world for prices to be reduced to a proper level.

I may say to you in passing there is now a newly signed act for a survey of Government functions and operations. You can readily understand the need for such a survey. Whenever and wherever the Federal Government takes over from a State government, from a county or from a municipality, or from some private business or the citizens, functions which are then embraced in the Federal activities, it is obvious a new bureau or commission or department must be created to perform the functions. Such functions do not perform themselves.

Just the minute you get a new bureau or a new commission or a new department put to work performing a new function, you get a new group of administrators bent on two things: Spending the people's money and interfering with the people's business. Therefore, it is of first importance that we survey the vast number of functions the Federal Government has taken to itself in the past 14 or 15 years. We must begin to return to the States, the counties and the cities, and to private business, those functions which can best be performed at those levels. When we are able to do that, the Appropriations Committees of the House and the Senate can with accuracy reduce appropriations and cut the Government down to peacetime size.

This is going to be a painful process. There will be loud, long, and numerous cries of anguish from the bureaucrats who get cut out of their good salaries and soft jobs. Nevertheless the operation must be performed on the Federal Government for the benefit of the financial health of the American people, and the safety of the economic structure of the United States.

So then we are carrying forward the cause of the people on three fronts. Let me recapitulate:

First. The Eightieth Congress is driving for tax reduction, governmental spending reductions, and a substantial payment on the debt.

Second. The Eightieth Congress is driving for increased production of goods and services and increased qualities thereof without increase in prices.

Third. The Eightieth Congress is driving for a survey of the Federal Government's activities and functions for the express purpose of returning to the States, counties, municipalities, private business, and the individual citizens those functions which they can best perform for themselves but which have been assumed or usurped by the Federal Government at some time in the past 14 or 15 years.

With the tremendous problems confronting our country in the necessity for our aid and leadership in world affairs, it is an imperative necessity to put our American Government, economy, and society on the most stable possible base. These three lines of endeavor are calculated to do just that.

Yesterday afternoon by the emphatic vote of 302 to 112 the House reflected the desires of the American people and reenacted the tax reduction bill. The Senate is soon to act. It is to be hoped the vote in the Senate will be equally decisive.

I hope you will let your Members of Congress on both sides of the Capitol know how you feel about this necessity for putting our domestic affairs on a sound basis. Let them understand we are getting ready for a new level of prosperity in our own beloved country, behind an adequate, modern defense, in a world being persuaded back to peace and sanity by the example and leadership of America.

God grant it to be so.

I thank you.

Fascism in Action

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 10, 1947

Mr. PATMAN. Mr. Speaker, the resolution, House Resolution 277, introduced by me on yesterday, providing for the printing of 100,000 copies of the booklet entitled "Fascism in Action," was inadvertently labeled a House resolution when it should have been a House concurrent resolution, the reason being that the House cannot provide for an expenditure of the amount of money that is necessary to print the 100,000 additional copies without the consent of the Senate. Therefore, today I have introduced House Concurrent Resolution 69, providing for the printing of the 100,000 additional copies.

This resolution is referred to the Committee on House Administration. It is hoped that the committee will very promptly act upon the resolution favorably, in view of the fact that if the extra copies are authorized and are printed at the time of the original printing, there will be a considerable saving of expense.

The Government Printing Office will doubtless soon go to press for the purpose of printing the copies necessary for distribution required under the law relating to all House documents, also for the purpose of printing a supply for sale through the Superintendent of Documents through the Government Printing Office. If the 100,000 additional copies are printed at the same time, instead of later, it will save a substantial amount.

I desire to urge the Committee on House Administration to give this resolution early consideration for that reason. In addition, Members of Congress will be

asked for copies of this booklet. Unless copies are made available for them, it will be necessary for a Member or his constituents to purchase the booklet from the Government Printing Office.

The booklet, Communism in Action, has been made available for free distribution. The booklet, Fascism in Action, should also be made available for free distribution.

NOT AVAILABLE NOW

There were 26 copies of the manuscript Fascism in Action mimeographed. Each member of the Committee on House Administration was furnished a copy and one for my use. These are the only copies in existence. My copy is now with the Legislative Reference Service of the Library of Congress being checked carefully before delivery to the Government Printing Office for printing. It will probably be delivered for printing Monday or Tuesday of next week.

When the booklet is put into type the Public Printer will fix the price that will be charged for individual copies.

Czechoslovakia Accepts Invitation to Paris Conference

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1947

Mr. SABATH. Mr. Speaker, I am very happy indeed to learn that Czechoslovakia has accepted the invitation of the French and British Governments to attend the Paris Conference for further consideration of American proposals for economic aid in the recovery of Europe. I have often pointed out that, more than any other country in Europe, Czechs are close to Americans in temperament and in economic and political attitudes. The announcement that Czechoslovakia will participate in the Paris discussions brings inevitably to mind two sage admonitions of Thomas Jefferson to America.

In 1786 Jefferson wrote to Dumas the Elder: "Peace and friendship with all mankind is our wisest policy." More than 10 years later, not long before he himself became President, Jefferson wrote to another friend an even stronger statement: "Commerce with all nations, alliance with none, should be our motto," he declared.

CZECH GOVERNMENT PROTESTS MISREPRESENTATIONS

Mr. Speaker, my attention has been called to action taken by the National Front of Czechs and Slovaks as factually reported in the official news agency of the Czechoslovakian Republic, "Prague News Letter," dated June 25, 1947. It appears from this report that all factions and parties of the Czechoslovakian Republic have joined in denying vigorously that Czechoslovakia has departed from its domestic form of government or has succumbed in any way to Communist domination.

After the First World War Czechoslovakia was the very first of the liberated countries oppressed by the Austro-Hungary monarchy to establish a free democratic government. Czechoslovakia adopted a constitution based on the American pattern and even strengthening our own great document of fundamental law wherever possible.

Consequently, I am pleased to insert, under leave, this official statement for the benefit of those in this country who make reckless and unfounded charges against Czechoslovakia and libel the fair name of that liberty-loving country:

[Prague News Letter, written by the editorial staff of the Bulletin and the Czechoslovak Weekly. Prague II, Narodni Trida 10, June 25, 1947]

NATIONAL FRONT UNITY MAINTAINED—FOREIGN LIBEL OF CZECHOSLOVAKIA REJECTED

After its last meeting, the National Front of Czechs and Slovaks issued the following statement:

All parties of the National Front of Czechs and Slovaks have discussed various problems which have recently developed, mainly in Slovakia, in all their aspects, and after a friendly and open discussion the following unanimous resolution was passed:

1. All parties are firmly resolved to continue the policy of realistic agreement and democratic cooperation of all fractions of the National Front, and to fulfill by joint effort all the political and economic tasks on which they have previously agreed in the Government program, one of them being to prepare as early as possible an agreement of all the parties on a constitutional solution of Czech-Slovak relations in the spirit of state unity, founded on the brotherly solidarity and equality of the Czech and Slovak nations.

2. Stimulated by this creative effort all parties agree that it is necessary to prosecute by all legal means all reactionary, Fascist, and subversive elements which have remained as a heritage of the separatist movement and which are trying to undermine the reconstruction of Slovakia and of the republic by spreading unrest and irresponsible propaganda at home and abroad. It is therefore necessary to support economically, politically, culturally, and socially all uniting elements and forces so that the people's democratic régime in Czechoslovakia may be made secure for the benefit of the Slovak and Czech people, and in the interest of the international position of the republic.

3. All parties emphatically reject the libelous campaign of certain foreign newspapers which have been trying to create the impression that forcible changes of the present régime in Czechoslovakia have been prepared. Czechoslovak democracy is solving and will go on solving all problems and difficulties in her own Czechoslovak way through the cooperation of the National Front, and will never allow Czechoslovakia to become the arena of international intrigue or disrupting intervention of foreign and hostile circles. The parties of the National Front ask the public not to allow itself to be disturbed by false foreign informations and inventions whose aim it is to cause civil strife.

4. The parties of the National Front have elected a commission in which all of them are represented, which will investigate the problems discussed in today's session, and will make proposals to the Government concerning a thorough national purge which will strengthen national unity, and ensure a happy development of the brotherly relations between Czechs and Slovaks.

NO SLAV FEDERATION FOR CZECHOSLOVAKIA

I am also including several additional paragraphs from the same issue of Prague News Letter because they are very relevant to misstatements and distortions made by some of the supernationalists in this country, and call particular attention to Prime Minister Gottwald's statement that Czechoslovakia is not interested in the rumored Slav Federation:

NO SLAV FEDERATION, SAYS GOTTWALD

During an interview with the Prague correspondent of the Greek paper Risospastis, Prime Minister Gottwald answered the question "What do you think about the rumors of a Slav Federation?" as follows:

"'Czechoslovakia does not need any federation. The Slav nations are satisfied with the present system of alliances against a possible German aggression. The rumors about a Slav federation, which in fact would amount to a limitation of the sovereignty of the Slav countries, are spread by those who, while shouting 'hold the thief,' are themselves trying to limit the independence and state sovereignty of other nations."

WAR LOSSES ENORMOUS

The devastation caused by the Nazi occupation was terrible. The same destruction in the United States, in proportion to our own wealth and population, would have caused the perpetual weepers to believe that the end of the world has come, as shown by this paragraph:

WAR DAMAGES 780,000,000,000 PREWAR CROWNS

The final balance of war damages inflicted on Czechoslovakia surpasses by far the estimates of the Czechoslovak Government during its exile. According to latest statistical data available war losses amount to approximately 429,700,000 crowns. This sum, however, does not include losses of 296,590,000,000 crowns inflicted upon individuals and 57,000,000,000 as a result of the destruction of buildings, etc. The total of losses thus amount to 780,000,000,000 prewar crowns. The national debt of 52,000,000,000 crowns increased during the occupation by nearly 100,000,000,000, and other financial losses amount to 135,470,000,000 crowns. The reorganization of the Czechoslovak finances enforced by the Germans resulted in damages of 64,000,000,000 crowns, the reorganization and exploitation of industries caused a loss of 38,000,000,000, and damages inflicted upon agriculture are estimated at 44,500,000,000 crowns.

ECONOMIC RECOVERY RAPID

In spite of the terrible destruction wrought by the Nazi despoilers, Czechoslovakia, with undaunted courage, is recovering rapidly, as shown by the following official figures on the 2-year economic recovery plan and by the increase in bread allowance and shoe production:

TWO-YEAR PLAN IN MAY

Industrial targets set out for May were fulfilled by 98.8 percent. A review of the figures for the first 5 months of the 2-year plan shows an upward trend in the timber, power, and chemical industries, whereas the metal industry has caused some disappointment by fulfilling the plan only by 90.1 percent. Other figures of the fulfillment of the plan are: Motorcars and motorcycles 41.6 percent, sewing machines 77.1 percent, telephones 82.5 percent, electric bulbs 75.8 percent, artificial silk 98 percent, artificial yarn 119.8 percent, brick production 64.3 percent (slight improvement), and textile goods are 10 and more percent above plan. The figures of the leather industry show that there will be enough shoes to go around. In May, 1,600 tons of butter, 3,000 tons of margarine, and 800,000 hectoliters of beer were produced.

The 2-year plan—the first 5 months

	Total	April	May
Total industrial production	104.9	101.7	98.8
Mining industry	104.9	101.8	100.5
Regenerating plants	97.4	98.8	104.4
Foundries	112.0	108.3	102.6
Iron and metal industries	106.5	97.7	90.1
Chemical industry	78.6	91.1	92.5
Glass industry	93.4	87.1	90.5
Ceramic and stoneworking industry	90.7	85.4	87.1
Paper mills	106.2	116.5	115.8
Timber industry	99.5	102.2	110.5
Textile and clothing industry	106.2	101.7	97.0
Rubber and leatherworking industry	124.0	124.3	106.6

MORE BREAD

The Czechoslovak Minister of Food, Mr. Václav Majer, reported in the last session of the Government that UNRRA had fulfilled its program to Czechoslovakia by 96 percent. The Government also approved the Food Minister's proposals to raise the white-bread ration from 2 kilograms to 4 kilograms as from August 1, 1947.

THREE PAIRS OF FOOTWEAR A YEAR IN 1948

As announced by the Czechoslovak leather industry, more than 36,000,000 pairs of shoes will be produced in 1948 for home consumption alone. Apart from that, the industry will turn out enough export footwear to pay for the import of necessary raw materials.

In 1937, when Czechoslovakia's population was 14,500,000 people, only 34,000,000 pairs of footwear were produced for home consumption, whilst the 36,000,000 pairs to be produced in 1948 will be supplied to the present number of 12,000,000 inhabitants.

TWO HUNDRED THOUSAND PAIRS OF SHOES TO VIENNA

As reported in Prace, trade union daily, Czechoslovakia will send 200,000 pairs of ladies' footwear to Austria in the near future.

To Retain Trained Men in FBI

EXTENSION OF REMARKS
OF
HON. HAROLD C. HAGEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1947

Mr. HAGEN. Mr. Speaker, throughout the United States newspapers have taken cognizance of the situation which prevails in our Department of Justice where we are losing valuable agents of the Federal Bureau of Investigation to private industry, and these newspapers are lending their support to legislation which we believe will correct this by improving retirement security for G-men.

An act, which it was my privilege to assist in sponsoring, is now on the President's desk and the unanimous vote by which both Houses of Congress passed the measure is an indication of our determination to keep the FBI the strong and powerful law-enforcing body as it is known at the present time.

While the standards for employment in this division are of the highest nature, yet special additional training is required to qualify these agents for this specialized and technical work. We cannot afford to train them and then lose them to private industry because we do not afford them adequate retirement security.

The Washington Evening Star has capably presented the situation editorially in its issue of July 7, and I feel the comments are worthy of the attention of readers of the RECORD.

The editorial follows:

TO RETAIN TRAINED MEN

It is hard to credit reports that President Truman may veto the bill to liberalize retirement benefits for special agents of the Federal Bureau of Investigation. This bill passed the House and Senate unanimously after its merits had been fully explored by appropriate committees. Attorney General Clark and FBI Director Hoover consider the measure urgently necessary to stem the exodus of experienced investigators into more lucrative fields of endeavor.

One of the serious problems of the FBI since the war has been the continuing loss of veteran agents to private employers. A number of these agents, upon being interviewed prior to leaving have indicated they would have remained with the Bureau had they been assured of better security for themselves and their families in later years. The life of a special agent is a hard one and the pace often is too much for the older men. The result has been that some of the most valuable men, still in their prime as investigators, have resigned to accept jobs which will enable them to save for the future. The FBI so far has had no difficulty in securing replacements, but the new men must be trained at great length and they lack the fund of information which the departing men carry with them.

Enactment of the FBI retirement bill would have a marked stabilizing effect, officials believe. By making special agents eligible for retirement at 50 an inducement is offered veteran investigators to remain in the service until retirement benefits are realized. All of this was explained to Congress, with persuasive effect. Yet there have been published rumors of an impending veto, presumably on the ground that no provision is contained in the measure for similar benefits for other Federal investigators, including the Secret Service. While there is some merit to the contention that certain other Government agents should be similarly favored, it is too late now to amend the bill. It is to be hoped that the President will sign the FBI bill. He might well, at the same time, suggest that consideration be given to new legislation covering any other Federal agency faced by a situation like that hampering the operations of the FBI.

New Coal Contract

EXTENSION OF REMARKS
OF
HON. THOMAS E. MORGAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1947

Mr. MORGAN. Mr. Speaker, coal is our basic industry and is essential to all production. Everything produced in this country depends upon the production of coal. The new contract that was completed and signed this week is a godsend to the miners, the coal operators, and the entire country. Unknown to most people of this great Nation of ours, coal mining was rapidly becoming a sick industry. The number of miners has decreased from 600,000 to 400,000 in the past 10 years. The average miner is above 50 years of age. This came about because the younger men were taken out of the industry during the war years and they are not returning because the industry is too hazardous and working conditions are far below par with other industries. Thus, with the new contract, the coal operators will be able to entice the younger men to return to the mines. Unless this does happen, we will be facing the same situation in a few years that England experienced last winter. The miner of today is not just a pick-and-shovel man, but he must be a skilled specialist able to operate expensive mechanical coal-mining machinery. Thus, mechanization of the mines has labeled the future miner as a skilled employee who will require training, which will result in higher wages and better working conditions. For a complete description of why the great Republican industrialists were eager to sign the recent coal pact, I wish to insert in the Appendix of the RECORD an article by Mr. George E. Sokolsky which appeared in the Times-Herald on July 9, 1947. The article follows:

(By George E. Sokolsky)

Some months ago, I was discussing the mining situation with friends who are in the steel industry. I had assumed that they would be cursing John L. Lewis and the miners up and down the road. Surprisingly one of the strongest men in steel put the position in these words:

"We cannot get down to where the British are. Their miners are underpaid and work under the most unfavorable conditions. I do not understand why any man would want to work in a British mine.

"The result is that coal is not being mined there and their industry—the whole of British industry—is in a terrible condition. They have adopted socialism because they do not know how to get production except by force and they get none that way."

Then he went on to say:

"The steel industry must have coal. We have to make coal mining attractive if we are to have coal. We have to make it attractive to young men so that they will go into this industry. They won't go into coal mining today and I don't blame them."

I recalled this conversation to this steel man, of the so-called Little Steel group, when the recent settlement for a new agreement was reached with John L. Lewis and the United Mine Workers. He was pleased that the new contract called for an increase of double the average for other labor.

The steel group, he told me, had determined in advance that there would be no quarrel with Lewis over wages.

This does not at all mean that another general increase in wages is in sight. The miners are a special case. They were among the most poorly paid workers and the conditions of employment were always most unsatisfactory.

The theory upon which this extremely intelligent management reasoned is that coal mining must be brought up to the level of any other industry. It must not be permitted to remain so unattractive by lagging behind the general standards of heavy industry.

The miners should be in a preferred class because otherwise young men, particularly in periods of labor shortage, will go into other industries. Last winter, when I visited the anthracite coal regions in Pennsylvania, I was astonished to find that young veterans preferred joblessness to mining, particularly as those to whom I spoke came of families in which mining had been a tradition.

It is not too often that management displays this type of intelligence and it is comforting that even in the period of wild propagandistic statements on all sides over the Taft-Hartley bill, this new contract, containing such attractive terms for the miners,

should have been negotiated in so short a time.

No one company and no one man was responsible for this; it was the general consensus in the industry.

What it means is that American production, which has been faltering because of strikes, has been given a strong tonic. If this country can be 1 year without any major strikes in its crucial industries, it will be strong enough to meet any situation that it may be called upon to face.

A coal strike means lessened steel production which means lessened automobile production. This applies to practically all basic industries.

For instance, up here in the Berkshires, we have been waiting for about 5 years for some rural electrification.

We are now told that we shall have to wait longer because the electric-light people lack wire. They lack wire because of coal and steel strikes a year ago. The effects of strikes are not immediate; their worst effects appear very much later in the lag in production.

If, after all the excitement over the Taft-Hartley bill, management and labor could do so well over coal, there is no reason why all problems in this field cannot be settled by peaceful negotiations.

As a matter of fact, one of the immediate effects of the Taft-Hartley bill will surely be that the NLRB will be bypassed and that there will be a restoration of collective bargaining which practically disappeared under the operations of the Wagner Act. Perhaps a better day dawns than we have known these many years.

American Veterans' Committee

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 10, 1947

Mr. JAVITS. Mr. Speaker, under leave to extend my remarks, I include in the RECORD an article from the Milwaukee Journal on the second annual convention of the American Veterans' Committee—AVC—at Milwaukee, Wis., from June 19–22. The AVC has been the subject of much discussion among veterans and people generally, and this objective report of its second annual convention is, therefore, of great interest. The organization has had quite a fight on its hands with elements who would use it for party-line purposes. The ability, patriotism, and diligence of these veterans of World War II, who are waging this fight, entitle them to a full opportunity for the growth and development of the organization of their choice.

AVC COULD SPELL OUT ARDENT, VIRILE CITIZENS

(By Frank Sinclair)

Milwaukee never before had a convention like that of the American Veterans Committee and probably never will again—unless the AVC returns some day.

For the AVC is a different kind of an organization. It is virile young manhood—and womanhood, for girls belong, also—that has seen war and the disruption to life at home. And they don't want it to happen again.

But the AVC doesn't dream the hope of permanent peace. It meets, caucuses, argues and then moves to do something about it, not by mere "resolution" but by adopting deeply thought-out platforms and seeking means to carry them into actuality.

More than 1,500 youths have been spending 4 days—and nights, often most of the night—hammering out their ideas of what must be done during this coming year to bring America closer to a more satisfying life and how to make the world find peace.

INDIVIDUAL SEEN AS KEY

Audacious? Yes. But these young people have vision, courage, energy and intense fire. They feel that the world can be improved only if the individual's lot becomes better—and that needs liberal thought, progressive action within the scope of American democracy, and not the present ideology of Moscow.

Stalinites dwell within the AVC. So do fellow travelers. They are in the minority, but they are cleverly active.

Determined to remain free from those intolerances nurtured by traditional disrespect of race, color, or creed, the Negro, the Jew, the Catholic, and the Protestant walk with locked arms in AVC—actually and openly—as one flesh.

There is an intentness to the organization to carry its slogan "citizens first, veterans second," into practical application.

An observer's thoughts generated by watching the AVC for 4 days in Milwaukee last week and at Des Moines, Iowa, last year, bring out these reactions:

The group has a vitality of spirit that makes it unafraid to tackle any problem, digging far into it and detesting superficiality.

NO CHANCE TO "RAILROAD"

The bulk of the delegates are brilliant in debate, smart in perception.

There is exceptional, sharp knowledge of parliamentary procedure that belies any attempt at railroading.

The convention has shown no regard for hours. A job that had to be done had to be finished if it took all night. And it did—until 8 the next morning—in drawing up the domestic-affairs platform.

What noise there has been at the convention has been in the tenseness of debate, not on the street in hilarity. There has been no horseplay. Even when, on Friday night, the Milwaukee convention committee put on a gay nineties party at the auditorium with beer and a real German lunch with alleged comedians and music, delegates listened to the entertainment briefly then gathered into knots to talk about Greece, or aid to starving nations, the veto of the labor bill, opposition to the bonus. They gathered the same way on street corners downtown.

Typical was the fellow from Duluth, Minn., whose Whitefish Bay brother has not had a peek at him although they haven't seen each other in over a year. That AVCer was too busy at the convention to hop a cab to make a visit or grab a phone to say hello. It was nothing to hear of delegates so busy that an hour's sleep a night was sufficient, after which they were at it hammer and tongs once more.

THEY LIKE A GOOD FIGHT

When not putting on fights on committee floors, delegates were putting on dog fights over prospective candidates for high AVC officers. And a lot of them became angry when caucuses interfered with convention sessions. Others were aroused when one caucus session of the AVC's present administration was held in secret and charges of "bossism" were heard.

Drinking? A bit of it. Up to Sunday, however, not a single person was noted under the influence of liquor.

Wide variety of station in life has been shown. There are youths so short of funds they hitchhiked across the country and looked for rooms at 75 cents a night when they got here. There are lads of wealth—one with a suite of three rooms, one who had easy entry for golf at Milwaukee's best clubs, one (disabled) who came with a valet (pardon, a companion) to help him around. Sons of big industrialists are here declaring that in the AVC they see a better way of life for the Nation, discussing issues with fellows from New York's melting pot, or Hollywood's fairyland, or the Middle West's farmlands.

Fifty American States—Why Not?

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, July 10, 1947

Mr. MANSFIELD of Montana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Great Falls Tribune of July 7, 1947:

FIFTY AMERICAN STATES—WHY NOT?

The first Hawaiian statehood bill was introduced in the Congress more than 25 years ago. The measure is now up again in this year 1947 and has passed the House.

There is no good reason for further delay. The islands helped us in the war. The United States never did believe in the development of a colonial empire. Otherwise we would have been for keeping the Philippines. Now we have clearly taken on the leadership of democratic governments around the world. Congressman MANSFIELD is correct—statehood for Hawaii is one way to drive a last spike into the charge that America is trying to add dependent territory. Hawaii would be the forty-ninth State.

And while we are at it, Alaska would fittingly round out the half hundred count. It would be a good and profitable policy if we right away make Alaska a State and have 50 stars adorn the American flag. There would be immediate resulting advantages to both Canada and the United States.

It has just about been proven in the last year or so that the Alaska Highway is a valuable international asset. There will soon be comfortable automobile and truck transport from Mexico City to Fairbanks. Nearby business relations are increasing between Montana and the Province of Alberta. There are improvements needed across Montana and Alberta needs to build from Edmonton to Dawson Creek.

We are getting along. Montana would like to put on a celebration welcoming Alaska to statehood.

European Reactions to the Marshall Plan

EXTENSION OF REMARKS

OF

HON. JOSEPH C. O'MAHONEY

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Thursday, July 10, 1947

Mr. O'MAHONEY. Mr. President, in the Washington Post of Tuesday, July 8, there appeared the second of two most important articles by the able Barnet Nover, commenting upon European reactions to the Marshall plan.

There is much to sustain the opinion expressed by Mr. Nover that in the consideration of this American program Soviet diplomacy has suffered a serious defeat, and that the future of world

peace now depends upon what the United States and the countries of Western Europe do.

I ask unanimous consent that Mr. Nover's article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GREAT DIVIDE—A TURNING POINT IN HISTORY

(By Barnet Nover)

In a previous column I said that at Paris, early this month, Soviet diplomacy suffered its most serious defeat in a long time.

The fact must be noted that it was a self-inflicted defeat, deliberately self-inflicted. Neither Great Britain nor France sought to bring it about. Neither is happy over it.

The two western powers would greatly prefer to have Russia and her satellites join with them and other nations in planning and carrying out a continent-wide program of European recovery.

Russia said no. She did so with her eyes wide open and with no lack of awareness of the possible consequences.

The men in the Kremlin must have known full well, when they ordered Viacheslav Molotov to break up the Paris Conference, that Great Britain and France were prepared to go ahead without Russia if Russia balked.

They must also have realized that in taking the stand they did on the Marshall plan, Russia left herself open to the charge of being indifferent to European recovery and of splitting Europe in two.

These considerations did not deter them. They preferred to risk a diplomatic defeat rather than, by Russia's cooperation, to help advance Europe's recovery.

Why?

One important reason for the Russian stand at Paris lies in the circumstance that Europe's economic recovery, in the form it would take if the original Anglo-French-American plans were carried out, would, in the eyes of the Kremlin, be injurious to Russia's political interests.

A continent-wide program of mutual aid would inevitably re-create the old and powerful ties that bound eastern Europe to western Europe. That would inevitably mean a lessening of eastern Europe's present and forced dependence on Russia.

An even more powerful motive for Russia's refusal to join with Great Britain and France in carrying out the Marshall plan is to be found in the Russian attitude toward the United States.

The men in the Kremlin are beyond everything power worshipers.

They have only contempt for small and weak nations. They regard Great Britain and France as nations that have passed their zenith, and are now on the down grade.

Russia's only rival, as they see it, is the United States whose power and whose resources they do not and cannot discount. They are firmly convinced, however, that the United States is headed for an economic tailspin.

When that happens, all Europe and a large part of the rest of the world will be wide open to Russian penetration. They are determined to do nothing that would postpone such a development. And they regard the Marshall plan as a frantic move by the United States to avert impending economic disaster by building up the economy of European nations which, in consequence, would then be tied to Uncle Sam's chariot.

What we now have in Europe is a tug of war.

We can be sure that Russia will employ every form of direct political pressure and fifth-column tactics to prevent the Marshall plan from being successfully carried out.

First of all, Russia has set an example of abstention which her satellites are under pressure to imitate, regardless of their economic needs.

Secondly, we can expect that all through western Europe, and particularly France and Italy, the Communist parties will now seek to sabotage the recovery efforts of their respective governments. There is an offsetting possibility that in doing so the Communist parties will be split wide open.

It is significant, in this connection, that Palmiro Togliatti, the Italian Communist leader, has thus far avoided a frontal, all-out attack on the Marshall plan. The Italians are fully aware that while Russia has been milking their country through reparations, aid can only come from the west.

In the third place, Russia can be expected to use its present harvest, believed to be a very good one, to provide its satellites with food.

All these stratagems will not work, however, unless the western powers, and particularly the United States, fall down on their job.

This country has a great opportunity to reverse the tide that has been flowing in Europe, an opportunity not likely to recur again.

Russia's greatest lever of opposition to the Marshall plan is the fear that Congress will not vote the funds necessary to put that plan into effect.

If that proves true, the battle of Europe will be lost to the Russians and the diplomatic defeat she suffered at Paris during the first week of July will be transformed into a decisive political triumph.

If, on the other hand, our actions prove equal to our intentions, we shall have checkmated Russia's ambitions in Europe and put that continent on the road to real recovery and real peace.

This country's responsibilities are tremendous. The opportunities now within our grasp are equally great. We are at a great turning point in history. We can either advance or retreat. There is no standing still.

War Damage Insurance Program of the Government

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, July 10, 1947

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. John D. Goodloe, Chairman of the Reconstruction Finance Corporation and President of War Damage Corporation, at a dinner of insurance company executives held at the Waldorf-Astoria Hotel, New York City, on the evening of June 25, 1947.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I understand this dinner, attended by executives of insurance companies which participated as fiduciary agents in administering the war-damage insurance program of the United States Government, is designed to serve two purposes, either of which would, in my opinion, warrant a real celebration. First, it is to commemorate the extremely successful war-damage insurance program of the United States Government and the insurance industry's part in it. Second, it is to afford an opportunity to bestow upon Frank A. Christensen an industry-wide testimonial of respect and admiration for the outstanding job he did in the war-damage program. Under his brilliant leadership coupled with his well-known ability and untiring industry, the almost innumerable problems and obstacles we encountered were overcome with a minimum of delay and the program was brought to a conclusion which entitles the insurance industry to great credit for its part in this phase of the war effort.

I deem it a great privilege, therefore, to attend this dinner and to participate with the industry in the fulfillment of both of the dinner's objectives.

Since, with the exception of numerous and indeed almost continuous appearances before various congressional committees during the past 10 weeks, this is my first public appearance since becoming Chairman of the RFC, I cannot resist the temptation to speak briefly about that organization, past, present, and future.

The RFC was originally established in 1932 when we were balanced precariously on the brink of national bankruptcy and many well-informed people thought the complete destruction of our great American economy was inevitable. The RFC quickly became one of the most important of the several forces responsible for pulling the country out of that terrible depression. Acting through the RFC the Government provided billions of dollars to banks, insurance companies, railroads, and other business enterprises. This not only provided for the continued operation of those enterprises but more importantly from the standpoint of public interest involved protected and preserved the investment therein of the millions of depositors, investors, and policyholders. During those grim depression days in the early thirties, as well as during the critical war years period, the RFC and industry were able to work together successfully without any ill effect on our free economy or any substantial diminution of the rights and liberties of the individual citizens. We are proud of that record of cooperation and mutual understanding.

When the clouds of World War II first began to appear on the horizon Congress, in order to expedite our national-defense program, gave the RFC extremely broad powers and tremendous financial resources with which to meet the impending emergency. This demonstrated the great confidence the Congress had in the ability and integrity of the Honorable Jesse H. Jones and the organization he had headed since 1933.

I am sure you are all familiar with the tremendous and important role RFC, under the able and inspiring leadership of Mr. Jones, played in our war effort. Many people think of this as consisting primarily of the purchase of hundreds of critical and strategic materials and the construction and operation of thousands of defense plants for the production of airplanes, tanks, guns, ammunition, etc. The war-damage insurance program, administered through the War Damage Corporation, however, was also an important phase of our wartime activities. The success of this as of most other wartime activities was largely attributable to the degree of cooperation and assistance RFC obtained from private industry. I believe that high degree of cooperation and assistance was due in a large measure to RFC's recognition of the desirability, indeed the necessity, of utilizing the personnel, experience, facilities, and know-how of private industry, as well as the belief of RFC in the willingness of industry to work with the Government on a friendly and fair basis. We are also proud of the wartime record of our relations with industry.

The wartime activities of the RFC are rapidly being liquidated and brought to a final conclusion. Few of them, however, can be concluded as early or as successfully as that of the War Damage Corporation.

As to the future of RFC, that is a matter which must shortly be determined by the Congress. Legislation to extend the life and functions of RFC beyond June 30 has passed both the Senate and House and is now pending in conference. The Senate bill provides for a 1-year extension on the basis of the present law and the House bill provides for a 2-year extension on the basis of a completely new law which is a revision and condensation of the present laws affecting RFC and restricts and more clearly defines its powers. As I have testified before both those committees, I think the RFC should be extended because regardless of whether the recession which some say is imminent comes as predicted, we cannot at this time afford to take the chance that the tools with which to combat another emergency may not be at hand when they are needed most. I also believe, however, that the RFC should not be permitted to retain its present emergency powers. They are too broad and are designed for wartime, not peacetime. Whatever the Congress decides should be the future powers of the RFC, you may be sure it will be the purpose of the RFC, in the field of credit, to continue its policy of assisting and augmenting the credit facilities provided by private credit institutions. It has not in the past and will not in the future compete with private credit institutions. The Congress is expected to continue and strengthen the statement of basic lending policy as originally written into the RFC Act, namely, that no loan should be made by RFC unless the credit is one which cannot be obtained from private sources on reasonable terms and unless the loan is one that will be so secured as to reasonably assure repayment.

With respect to the area within which RFC is to make loans, Congress has long recognized that it is in the public interest for credit to be made available beyond that which private sources can be expected to provide. Indeed, I think it is a fair statement that the loans which RFC makes result in the establishment of new businesses and the preservation of old businesses thus creating, ultimately, a sound market for the services of private financing institutions.

The illiquidity of the banks in the early and middle thirties prevented them from making many loans which in the national interests should have been made. It also forced the liquidation of loans which in the national interest should have been extended. In those circumstances the gap which RFC was intended to fill was relatively large. Today, in contrast, the proportion of deserving borrowers who cannot obtain credit from private sources is smaller and the proper area for RFC operation is correspondingly smaller than in the thirties.

Whether the present period of full employment, high production, and favorable markets and prices will continue indefinitely is not for me to say. So long as we not only can maintain a free competitive economy but also can enjoy conditions which will provide individuals with the maximum opportunity to engage in competition on a fair basis, I am confident we need have no fear for our country's future.

The Government's war-damage insurance program was initiated by a press release issued by the Honorable Jesse H. Jones, then Secretary of Commerce, with the approval of the President, on December 13, 1941, just 6 days after Pearl Harbor. That press release initiated the so-called free war-damage insurance program with respect to which the insurance industry's contribution and participation were largely limited to the use of its personnel and facilities for adjusting losses. The premium war-damage insurance program likewise handled by War Damage Corporation came later. By the act of March 27, 1942, Congress authorized RFC to supply War Damage Corporation with funds up to $1,000,000,000 for the purpose of providing through a premium insurance program reasonable protection against loss or damage to property located in the United States, its Territories or possessions, including the Philippine Islands, resulting from enemy attack or from the action of the military, naval, or air forces of the United States in resisting enemy attack.

With the invaluable assistance of many leaders of the insurance industry, and under the active leadership and direction of Frank A. Christensen and his able and personable associate, Vic Herd, the insurance program was launched on July 1, 1942. Under this program, War Damage Corporation has operated through approximately 1,450 established, policy-issuing offices. It has operated smoothly and without major controversies or difficulties of any sort.

The Government's war-damage insurance program was made possible by the cooperation and assistance of some 546 companies and some 150,000 agents and brokers throughout the United States, its Territories, and possessions. The insurance companies had a 10-percent interest in the operating profits or losses subject to a limit of $20,000,000.

The initial program provided only for insurance on certain real estate and tangible personal property, but effective December 21, 1942, the Corporation made available insurance on money and securities through the facilities of 88 casualty and surety insurance companies, likewise acting as fiduciary agents of War Damage Corporation. The participating companies had a similar 10-percent interest in the operating profits or losses, subject to a limit of $5,000,000.

Although the Corporation has issued more than 5,000,000 policies of insurance, the aggregate premiums collected have amounted to nearly $250,000,000. The maximum contingent liability assumed by the Corporation at any one time was about $140,000,000,000. Without the full cooperation and assistance of the insurance industry, the participating companies, and the agents and brokers, it would not, in my opinion, have been possible for the RFC or any other agency of the Government to have handled and administered a program of this size, nature, and complexity. Indeed, if it could have been done at all, it would have involved a substantial delay, a tremendous expense, and a Government staff of literally thousands.

Policies of insurance were continued in effect for a period of 2 years on the basis of annual premiums. Before the end of the second year of the insurance program, announcement was made that all War Damage Corporation insurance in effect on March 31, 1944, would be automatically extended, without additional charge. Such extension was for 12 months, beginning with the date of expiration specified in the policy or renewal certificate. A similar announcement was made a year later, thus extending all insurance that was in effect on March 31, 1944, for two additicnal years without payment of additional premiums.

By the terms of the Philippine Rehabilitation Act of 1946, War Damage Corporation was relieved of responsibility for war losses in the Philippine Islands. At the same time, Philippine War Damage Commission was created for the purpose of making compensation for such losses, public and private. Such co pensation was authorized to an amount in excess of $500,000,000. Upon passage of this act, War Damage Corporation, through Fire Companies' Adjustment Bureau, Inc., transmitted to Philippine War Damage Commission all claims that had been filed for Philippine losses, together with the report of our adjusters covering such information as was found available in the United States in verification of such losses.

On March 15, 1946 (hostilities having ended and public demand for policies of insurance having ceased), War Damage Corporation ceased to issue, renew, or extend policies of insurance.

On March 31, 1947, all contingent liability of the Corporation under its policies of insurance terminated.

By the terms of its charter, the corporate powe: of War Damage Corporation expired on January 22, 1947, except for purposes of liquidation.

As a result of transfer to Philippine War Damage Commission of responsibility for losses in the only area within United States Territories and possessions in which there was wide-spread devastation, losses paid by War Damage Corporation have aggregated less than $700,000. Substantially all such losses have been adjusted through the facilities and personnel of Fire Companies' Adjustment Bureau, Inc., Western Adjustment & Inspection Co., and Underwriters Adjusting Co.

In addition, Fire Companies' Adjustment Bureau has supplied, from its own organization and otherwise, the personnel for a most able general survey of war damage in the Philippine Islands. The report of that survey, prepared by Mr. F. E. Vincent, Mr. Ralph R. Moe, and Mr. K. H. C. Dunbar, has been widely used and relied upon by governmental representatives and congressional committees in laying the groundwork for Philippine relief.

While an occasion such as this dinner, which is a testimonial of the respect and admiration we all have for Frank Christensen as well as to commemorate the Government's war damage insurance program and the industry's part in it, is a happy one, nevertheless those of us who have known and worked with Frank Christensen, Vic Herd, and many others in the insurance industry, cannot but feel some regret by the termination of those pleasant relationships. Few men who were called upon to give all or part of their time to the Government during the war so quickly commanded the universal respect and indeed affection of the Government officials with whom they worked as did Frank Christensen. His reputation and standing in Government circles are second only to his reputation and standing in the insurance industry, which has been his life work.

On June 2, 1947, the Directors of War Damage Corporation, in anticipation of the termination of that Corporation on June 30, unanimously adopted certain resolutions. An engraved certificate of one of these resolutions will shortly be sent to each insurance company that acted as a fiduciary agent of War Damage Corporation in order to make a permanent record of the patriotic service those companies rendered to the Nation in the war damage insurance program and the appreciation therefor of the Directors of War Damage Corporation. That resolution is as follows:

"The War Damage Corporation, an agency of the United States Government, entered into an agreement with and appointed _____ _____ a fiduciary agent of War Damage Corporation to assist in carrying out the Corporation's program of insurance against loss of or damage to property, real and personal, which may result from enemy attack.

"The members of the Board of Directors desire to express and record their appreciation of the patriotic service rendered to the Nation through the company's activities in connection with this important war work of War Damage Corporation.

"In testimony whereof, the Corporation has caused its official seal hereunto to be affixed and attested by its secretary this 2d day of June 1947."

Another resolution unanimously adopted by the directors of War Damage Corporation on June 2, 1947, is as follows:

"Whereas Frank A Christensen, has served the War Damage Corporation in a consulting and advisory capacity to June 3, 1942, and as Executive Vice President from June 3, 1942; and

"Whereas War Damage Corporation shall not have succession beyond June 30, 1947: Now, therefore, be it

"*Resolved*, That the members of the board of directors express to Mr. Christensen their regret that his pleasant association with them will formally terminate on June 30, 1947, and that they express to him their appreciation of the conspicuous service he has rendered the War Damage Corporation during a period of national emergency. He discharged the important duties entrusted to him with signal ability and fidelity to the public interest, and in a way characteristic of the highest traditions of the public service, which merits the respect of his associates; be it further

"*Resolved*, That these resolutions be spread on the minutes of the Corporation on the 2d day of June 1947, and that an engrossed copy thereof, signed by members of the board, be transmitted by the President, under the corporate seal, to Mr. Christensen, with the best wishes and high esteem of the members of the board of War Damage Corporation and entire staff of the Reconstruction Finance Corporation."

In accordance with the instructions of the directors of War Damage Corporation and in keeping with the spirit of this occasion, it is now my great pleasure to present to Frank Christensen a certified copy of that resolution, appropriately engraved on a scroll, signed by the President and each of the directors of War Damage Corporation, under the seal of said Corporation, and attested by its Secretary.

Tax Reduction

EXTENSION OF REMARKS
OF
HON. GEORGE W. GILLIE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 10, 1947

Mr. GILLIE. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I would like to include the following editorial, Let's Have Tax Reduction, from the Fort Wayne (Ind.) Journal-Gazette of July 9, 1947:

LET'S HAVE TAX REDUCTION

The National House of Representatives has passed the bill reducing personal income taxes by a vote of 302 to 112. This is 26 more votes than the two-thirds necessary to override a Presidential veto.

The bill now goes to the Senate where it is certain to receive a majority. If President Truman should veto the measure, the question then is whether the Senate can muster enough votes to override the veto.

The present bill is identical with the one President Truman did veto a short time ago, except that it would take effect January 1, 1948, instead of July 1, 1947.

We supported the first bill and naturally favor this one. We believe that the President should sign it into law.

It would mean a reduction of $4,000,000,000 in which 49,000,000 taxpayers would participate.

We cannot see any justification for a veto. It is the primary function of Congress to write tax legislation and few Presidents have seen fit to interfere with that function.

The taxpayers are entitled to relief after the most expensive war in the Nation's history. There must be a definite start to curb the extravagant governmental habits which were contracted during the war. And there is no time like the present. Public officials have become accustomed to operating on inflated budgets and it is hard for them to break their old habits.

If the money comes in, it is likely to be spent and perhaps not too carefully or too wisely.

Those who oppose tax reduction on January 1 should remember that even with the proposed cut the Treasury will receive copious revenues, for the national income is very high because business is booming and the country is enjoying full employment.

Even with the proposed tax cut a well-managed Government will be able to meet all of its legitimate expenses and still begin the retirement of the Federal debt.

There is another factor which President Truman should take into consideration when the tax measure comes to his desk. He has asked for bipartisan support for his foreign policy and he has been receiving a large measure of cooperation from the Republicans in Congress. If he continues to oppose Congress on a matter in which it has primary responsibility he may break up the present solidarity of foreign policy. Of course, no one should reverse his stand on foreign policy for such a reason. But human nature is human nature and the risk is one which Mr. Truman ought not to take.

Air Crashes

EXTENSION OF REMARKS
OF
HON. RAYMOND S. SPRINGER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, July 3, 1947

Mr. SPRINGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Joseph Leib:

DEBUNKING A HIGHLY TOOTED ALIBI FOR CAUSE OF AIR CRASHES

(By J. H. Leib)

Less than 2 weeks ago Gen. H. H. Arnold, former chief of the Army Air Forces, writing in the Sonoma (California) Index-Tribune, attempted to place full responsibility for the alarming number of recent air crashes upon the shoulders of dead pilots and other personnel. This story was sent throughout the Nation by the United Press, appearing in the Washington Post on June 28, 1947. And last Sunday the Washington Star carried a similar story by-lined by the general and syndicated through the North American Newspaper Alliance.

Here is what the wartime AAF chief had to say, in part:

"Personnel failures rather than faulty C–54's were to blame. * * * If we are going to stop accidents we cannot whitewash personnel who make mistakes just because someone's feelings might be hurt."

Right here it is worthy to note that the C–54's are the same as the DC–4's—manufactured by none other than General Arnold's son's father-in-law.

Furthermore, there is a definite resemblance between the general's present-day assertions and the stand that he took during the war relative to service crashes. Then, as now, there was a deliberate tendency to blame the pilot and other personnel, rather than the plane itself. General Arnold was able to effectively spread this viewpoint before congressional committees and to force the legislators to swallow this bunk without question. Now he appears willing to smear the young men who have died flying our commercial airships. Equally beguiling is his apparent hope of protecting the Douglas interests—the producers of the DC–4's that have figured in many crashes, including the LaGuardia Field crack-up on May 29 and the one that hit the mountainside near Leesburg, Va.

Until we are absolutely positive as to the cause of these and other crashes, I believe that it is only fair that we give the dead pilots the benefit of all doubt. No one knows exactly what took place inside these planes as they crashed. There could be 101 reasons. Any contention given would be based on assumption or circumstantial evidence, and not entirely conclusive. Certainly pilots and other personnel have their faults, but let's give them a break just once in awhile.

Knowing the background of these planes—and the facts that I am about to relate—I believe that every objective person should be on the side of the underdog—who in these cases certainly are the unlucky personnel involved.

We know that anything can go wrong with a plane in flight.

Donald Douglas, the airplane manufacturer, dislikes flying in his own ships.

Glenn L. Martin once said: "I like to fly, but my bankers won't let me."

The same thing is true of the rest of them.

As I have said many times—dead pilots can't talk back—so they get the blame for the many factors that can cause a crash. Again I make reference to defective motors and my statement appearing in the Appendix of the CONGRESSIONAL RECORD, A3187.

Now I would like to cite some illuminating facts on how General Arnold used his high office to whitewash one of the greatest scandals of the last war—one that ended the careers of thousands of American boys and wasted untold millions of dollars that the citizens of this Nation must now pay back in heavy taxes.

Early in the war this writer brought about an investigation of service air crashes by the Senate Military Affairs Committee under the direction of Senator KILGORE. Months later on October 12, 1942 General Arnold was called before that body to answer my charges that certain corporations were producing defective aircraft for the armed forces.

But the Chief of the AAF emphatically denied the allegations.

Based on his assurance that no such condition existed in the Nations war plants—the Senate Military Affairs Committee issued a public statement whitewashing the entire matter.

Immediately War Department publicity men rushed out with statistical reports and factory-inspired propaganda attempting to prove that the startling number of service crashes were due to human failures—not the airships. In addition yours truly was taken to task for causing such a commotion between the Congress and the War Department. (I shall have more to say about this particular point later.)

Undeterred, I went to members of the Senate War Investigating Committee—then headed by Harry S. Truman—and after further agitation was able to induce that group to look into the situation.

Nine months later—on July 11, 1943—the Senate Truman committee released its sensational report (S. Rept. 10), charging that the Curtiss-Wright Corp. at Lockland, Ohio, was delivering defective airplane engines to the Army and Navy and that this concern was guilty of gross negligence about inspection practices designed for the safety of our airmen.

Following this—on July 26, 1945—2 years after that blast, this same committee—but then headed by Senator Mead—issued Senate Report 110—asserting that both the Curtiss-Wright plant at Buffalo, N. Y., and the Army Air Forces—headed by General Arnold—were responsible for faulty inspection that was causing dangerous and defective aircraft to

reach our boys on the battlefields throughout the world.

Let me repeat that the Senate Military Affairs Committee permitted General Arnold to bulldoze them to ignore and overlook what might be called legalized sabotage, only to have another committee of the Senate force the lid open twice on a war scandal that disgraced the Nation from end to end.

These amazing senatorial reports show what actually took place here on the home front while our boys were dying on foreign soil in behalf of their country.

Shame on General Arnold, who turned his face to protect a number of airplane manufacturers; shame on every public official who permitted such selfish, disloyal, and un-American conditions to exist at a time when this Nation was fighting for its very life and future.

Before I end this story I desire to include the shocking truth that the Douglas Aircraft Co., owned by the father-in-law of General Arnold's son, was making huge profits at the expense of this Nation's security.

The files in the State Department in Washington bulge with photostatic copies of secret letters seized by the United States Government showing how the Douglas Co. had sold experimental DC-3's or C-47's and DC-4's or C-54's to the Japs—after Hitler had invaded Poland—thus plunging the world into another war.

The Japs were at that time fighting China, and preparing for war against the United States.

In fact, on October 30, 1939, Jap General Terauchi and a group of his aircraft technicians visited the Douglas factory at Santa Monica, Calif., at the very time that the company was under contract to produce secret plane equipment for the United States Air Corps.

Cordell Hull was then the Secretary of State and he repeatedly issued requests to all United States plane manufacturers not to sell war implements or technical information to the Japs—a potential enemy—but his pleas were totally ignored and disregarded. It is said that this situation continued up until the day of Pearl Harbor.

When war came our boys had to fight against equipment that was designed and produced by the Douglas factories.

On May 17, 1945, I had placed in the CONGRESSIONAL RECORD (pp. 4696-4697) an affidavit from a soldier who had spent 29 months in a forward Fifth Air Force command depot who witnessed the disheartening effects of defective aircraft production upon the morale of our fighting men.

Upon receiving a medical discharge, and after a few months of hospitalization, he secured a job at the Douglas aircraft plant at Park Ridge, Ill., basically to diagnose the causes of certain defects that he had found in planes shipped to the front lines.

This boy became an aircraft inspector, final assembly, but in a short time resigned in protest because he could not conscientiously approve defective aircraft that the company was producing.

This in brief is part of the history of the company that produces the DC-4's—now involved in most of the commercial aircraft accidents.

Yes, blame the personnel—not the planes—it is the easiest way out and life is awfully cheap and plentiful here in the good old United States of America.

In conclusion the news story referred to above follows and it certainly speaks for itself:

"[From the Washington Post of June 28, 1947]

"ARNOLD BLAMES PERSONNEL

"SONOMA, CALIF., June 27.—Gen. H. H. (Hap) Arnold, wartime chief of the Army Air Forces, suggested today that personnel failures rather than faulty C-54's were to blame for the recent crash of commercial air-line disasters.

"The general, who retired more than a year ago to his ranch here in the Valley of the Moon, expressed his biting views in an article for the Sonoma Index-Tribune, to which he regularly contributes.

"He referred especially to two recent crashes that took a toll of 93 lives—the crack-up of a United Airlines DC-4 that killed 43 persons as it took off from LaGuardia Field May 29, and the Pennsylvania Central Airliner, also a DC-4, that crumpled against a mountainside near Leesburg, Va., with a toll of 50 killed. The DC-4 is the C-54 used by the Army Air Transport Command during the war.

" 'In both of those cases there must have been personnel error somewhere along the line,' General Arnold said. 'If we are going to stop accidents we cannot whitewash personnel who make mistakes just because some one's feelings might be hurt.' "

Trade Has Long Been a National Issue

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Thursday, July 10, 1947

Mr. JENKINS of Ohio. Mr. Speaker, a few days ago I was honored by an invitation to address a large group of very intelligent men and women at the American University here in Washington, and during the summer the great and progressive university gives special courses for teachers and others taking post-graduate work. As a part of these courses a discussion of important public questions is had on special stated times. On July 8, I spoke to this distinguished and learned group. A part of what I had to say on that occasion I am including in this further extension of my remarks, as follows:

Mr. Chairman, I appreciate very much this opportunity to appear before this learned group. I hope that all of us working together can make this an interesting and a profitable hour.

As I understand it, most of you are teachers and are active in the field of education. I can give you this word of encouragement, or sympathy if you think it more appropriate, for I, too, have been a teacher and a high school teacher and have in my work as a legislator been very solcitous for the best interest of the teaching profession and of the schools in general.

While I am now on my twenty-third year as a Congressman, I ofttimes feel that my most worth-while work in my 25 years of legislative work in the State Senate of Ohio and here in Washington was done when I sponsored and put through the State legislature in Ohio a bill that committed the State to a program of giving financial aid to the schools in the poorer sections of the State. This legislation equalized schooling opportunities so that those who lived in what we call the poorer counties were better able to educate their children. I took the position then that education was an obligation of the State and that we should educate the children where we found them and tax wealth where it was located. The State of Ohio has continued the program which was laid down in my bill with a result that Ohio today has a State school system that is, I believe, on a par with any other State of the Union.

As I understand it, our subject for discussion today is reciprocal trade agreements. You will notice that I say "our subject" and not "my subject." By this language I mean that before we close this discussion you will be cordially invited to ask questions and we can thereby discuss this important matter together.

I have brought with me an expert on reciprocal trade agreements and all kindred tariff matters. His name is Mr. Serge Benson. He was employed by the Tariff Commission for years and is now an employee of the Ways and Means Committee of the House of Representatives.

We have had many national issues, both political and economic, that have claimed the attention of our people from the days of the Pilgrim Fathers and the days of the Jamestown settlers. We have had very few public issues that have been with us from the beginning down to now.

For instance, in the early days, we had much trouble with the Indians, and what to do with the Indians was a matter of great public interest and brought this issue sharply before the people. We decided that problem early in our national life. Likewise, the Tories and the Continentals, in the days of the Revolution, made a sharp issue of the measure of loyalty which each owed to the British Government. The War of the Revolution and the War of 1812 put those issues behind us.

Likewise, the Civil War put the issue of slavery behind us.

I do not know of any issue that has been with us from the beginning down to now except one issue of national unity and another issue of national protection for American industries. If you know of any other issues that have been with us from the establishment of the early Colonies, I should like to have your views as we go along.

The desire and the determination of our people from the beginning to set up a free country and to make an issue with any people, force or influence that might tend to work to their disadvantage was so strong and firm that we might consider it a national issue.

They determined to defend and protect themselves against the world. When the Pilgrim fathers came to this land, they came to stay and they did stay. They successfully resisted every effort to deter them from their purpose to set up a new government in a new land. They fought the Indians and they also fought the economic tyrants that sought to tax their every activity.

They evolved a system whereby everybody worked. The recognized the right of property. They realized that religion, morality, and education were necessary to a firm, political, and economic government. As a result of their determination in this respect, they established a church soon after they landed. This church was to be a new institution without any connection or adherence to any other church. In order that the church might be independent they organized a church and called it the Congregational Church.

They also, as proof of their belief in the importance of education, established in Massachusetts the first free public school ever set up in the world, and they maintained the same by public taxation. While the Massachusetts colony was carrying on its program, Capt. John Smith had laid down the rule that "He who would not work should not eat." The determination of these early settlers to build a new nation was so positive that an issue developed immediately when any group or any nation engaged in any practice that would tend to hinder the growth and development of America.

From the determination of these people to establish a free country and from their bravery in maintaining this determination

the new world has been called the land of the free and the home of the brave.

It would be easy to appreciate that these early settlers would soon find themselves without any articles and commodities which they must have in order to endure the hardships of their undertaking. They would need clothes, shoes, tools, shelter, and many other commodities that they could not produce in the new land.

In other words, they were solely dependent on Great Britain for many of the necessities of life. They could produce food, fish, and raw materials—and that was about all. For 100 years after the Pilgrim Fathers landed, it took the time of 90 percent of the people to furnish food for themselves and the other 10 percent. The early settlers realized that if they were to be a prosperous country they must learn to make as many of their needed commodities as possible. They could have remained a pastoral or agricultural colony even to this day if they had been satisfied to send their surplus food and their raw materials to Great Britain in return for the other commodities which they would need. They determined early, however, that they would not be satisfied with this kind of arrangement. They determined to be self-sustaining. From that determination has come the reciprocal trade-agreement laws of today. Let us trace together the growth of this idea from that early day to now.

Gradually artisans and craftsmen began to come to the Colonies in greater number and gradually the Colonies were able to manufacture for themselves many of the commodities which they had theretofore been compelled to import. From that early beginning there were many who opposed the plan of seeking to become self-sustaining and they preferred that the American Colonies should remain as colonies to supply the mother country with raw materials. These groups gradually divided themselves into Tories and into Continentals. The policy over which they disagreed has been the subject of national disagreement ever since.

As the American colonies progressed, even as they progressed in their lines of manufacturing, they were still very dependent upon Great Britain for many commodities. Great Britain, realizing this fact, never missed an opportunity to levy taxes and charges against the colonists. As time went along and as the country developed, the feeling to be self-sustaining grew stronger and stronger. It finally manifested itself in the Boston Tea Party, and in the incidents of Concord and Lexington and Bunker Hill, all of which developed into the great Revolution. The Revolution was not as much a political revolution as it was an economic and social revolution. The Colonist resented maintaining a government in which they had no representation. The principal connections between the colonists and Great Britain at that time were the connections that came about through exchange of goods.

They did not know what to do to get the ultimate advantage from the great victory which they had won with the termination of the war. During the war they were cohesive and coordinate because they were engaged in a common cause. With the determination of this cause, they found themselves completely disorganized. This, to my mind, was the most critical period in the history of our country. The Colonies began to compete with each other in their dealings with Great Britain and had commenced to build up trade privileges among themselves. So keen had become this competition between the Colonies that it was clear that all the advantages gained by the Revolution might be lost unless something could be done to again bind the Colonies closely together. They were already bound under the Articles of the Confederation, but these were only voluntary organizations and had no compelling power.

These trade tariffs and agreements which these Colonies had built up against each other had become so bad that Washington, Hamilton, Franklin, Madison, and many of the other leaders from the various Colonies decided that something must be done to coordinate and bind the Colonies together. They decided to call a convention of delegates from all the Colonies. This convention met and George Washington was elected the chairman. From this convention came the Constitution which is the cornerstone upon which this great country has been built. I have tried to impress upon you the powerful influence that trade has had in the growth and development of our country. I know of no other such powerful influence except the determination of our early forefathers to maintain freedom and liberty at any price.

From the early settlements down to the adoption of the Constitution, there were many who would be glad to see America free herself from Great Britain but were afraid that she could not maintain herself economically.

Washington and his associates knew that it was absolutely imperative that the Colonies should stand together. The framers of the Constitution gave expression to this feeling in language more eloquent and more compelling than any that I could use when they wrote the preamble to the Constitution:

"We the people of the United States, in order to form a more perfect Union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

The framers of the Constitution gave much consideration to interstate and international trade. They were determined that no colony should without the consent of Congress have the right to charge a duty on goods passing from one colony to another.

They were also determined that no State should have the right to levy a duty on goods imported from that State to any foreign country. They were also determined that none of the seaports should be given any preference over others in reference to imports or exports.

The framers of the Constitution considered this matter of the movement of commodities of such importance that they devoted three separate paragraphs to this subject. These paragraphs are as follows:

"No tax or duty shall be laid on articles exported from any State.

"No preference shall be given by any regulation of commerce or revenue to the ports of one State over those of another; nor shall vessels bound to, or from, one State, be obliged to enter, clear, or pay duties in another.

"No State shall, without the consent of the Congress, lay any impost or duties on imports or exports, except what may be absolutely necessary for executing its inspection laws; and the net produce of all duties and imposts, laid by any State on imports or exports, shall be for the use of the Treasury of the United States; and all such laws shall be subject to the revision and control of the Congress."

With the adoption of the Constitution, trade, both domestic and international, increased rapidly. The industrial States were naturally more interested in industrial development than were the agricultural States, but on the other hand the prosperity of the industrial sections guaranteed a measure of prosperity for the agricultural sections. The statesmen of that day early recognized that the best method of financing the new Government was through the levying of duties on imported commodities. The first tariff laws passed were passed for the express purpose of securing revenue with which to operate the Government. At that time they did not know anything about income taxes and excise taxes. They not only levied duties on articles that were in competition with articles manufactured in the Colonies, but they levied such duties on all commodities as they thought the commodities could carry. Tariff for revenue only was the tariff of that day.

From these tariff laws the Government soon had plenty of money. In that respect the statesmen of those days were much smarter than the statesmen of these days.

Because of the heavy duties which the Colonies laid on imported articles, practically all of which came from Great Britain, that country, with her powerful navy, proceeded to compel a reduction in those duties by driving from the sea what little shipping the Colonies controlled. Because of this action Great Britain was soon in a war with the Colonies. The War of 1812 was practically a trade war. Up to that time Great Britain had claimed control over the seas. As a result of the War of 1812 the doctrine of the freedom of the seas was established and made applicable to all the countries of the world. This result amply justified the war.

It is clear, therefore, that for the 200 years from the landing of the Pilgrim Fathers up to the close of the War of 1812 the principal issues that ran through all the activities of the people were the issues that rose naturally from trade and commerce.

The American people immediately appreciated the trade advantages which they had gained by reason of the War of 1812 and they came to realize that the possibilities of the new Nation to become a great manufacturing country were very bright. At this time Alexander Hamilton put out his great work, known as Hamilton's Report on Manufactures. This document did much to establish America on a firm commercial basis. I would recommend to any student of trade and commerce that he read this document above all others relating to American trade and commerce. In this document, Hamilton advocated that America to be great must protect her industries as well as her agriculture. Not long after the issuance of this great document, Congress passed the Tariff Act of 1816. This is one of the great events in the history of the development of the tariff policy of our country. There were many who opposed this legislation for the same reasons which I have heretofore set forth, but the public sentiment was overwhelmingly in favor of a program that would establish industries and manufacturing plants in our country.

The law of 1816 was a great improvement in many ways over any previous action dealing with trade. Under this law, commodities were divided into classes and duties were levied according to classes. Commodities were divided into three groups. First, commodities which could be manufactured in ample quantities in America. Imports of this class of goods carried a high rate of duty. The second class of goods were those which could be partially supplied in America. These carried a lower duty. The third group of commodities were those which were not produced in this country. These carried a very light rate of duty in order to encourage their importation.

This law was the first tariff law that gave any considerable consideration to the setting up of a free list. By this I mean a list of commodities that would be permitted to enter free of any duty. Ever since that time this free list has been gradually increased until today more than 65 percent of all imports come in free of any duty. To those who are clamoring for more free trade under proposed reciprocal trade agreements must not forget that now two-thirds of all imports are already coming free of any duty.

From this legislation that early Congress set a pattern which has been rather closely followed from that day to this.

The act of 1816 was not perfect, but the Congress was ready to correct defects by proper amendments.

The agricultural States complained against the provisions of the act of 1816 because they felt that they were selling their commodities in the buyers' market and buying what they needed in a seller's market.

From that time down to now, this has been a forceful argument which the agricultural States have made. There is no denying that it is a good argument. However, if we had continued in the program that was advocated by the agricultural States, we would not today be the powerful Nation that we are.

From 1816 to the time of the Civil War the tariff question was a very important one. Several tariff laws were passed in that time and with each new law the matter of levying duties became a more scientific task.

In every Presidential election during that time the tariff was a lively issue. During that time two great Americans increased their prominence by reason of their participation in matters in which the tariff was the principal issue. When some of the States were dissatisfied with the tariff laws and threatened nullification and secession. Andrew Jackson came to the front in a way so positive as to have won for him a place among the greatest of great Americans. Henry Clay—the great pacificator—came into prominence at that time because of his great work in the strengthening and in making the tariff policies more general in their application and more general in their acceptation.

This was a great era marked with great progress in the field of domestic and international trade and at the same time marked with some serious national financial depressions.

During the Civil War period a number of agricultural States withdrew from the Union and the industrial states for that reason, and for the further reason that the country was at war, increased the tariff rates greatly in order to secure revenue with which to carry on the war and to operate the Government

But the tenacity of this doctrine that I have tried to trace for you from the foundation of our Government down to the Civil War manifested itself again with the return of the Southern States with even more force than it had ever had before. The advancement of the industrial States as a result of protective tariff proved its efficacy. On the other hand, the persistency of the agricultural States had not diminished.

In 1876 Rutherford B. Hayes was elected to the Presidency. Immediately after his election he began to give the tariff question a complete study. He called to his assistance a young Congressman with whom he had fought in the War Between the States. To this Congressman—William McKinley—he gave the assignment of giving to the tariff problem a thorough study. As a result of his study on this subject this young Congressman advanced in power and influence, and in 1890 he was the author of the McKinley tariff law. This law was the result of much study by McKinley and also by the other statesmen of that time. In that law a new principle was announced. I refer to the principle of reciprocity in trade agreements.

Mr. McKinley's reciprocity formula was that, in tariffs for protection, the duty should be sufficient to balance the difference between the cost of production in the foreign country as against the cost of production in America, plus a reasonable profit. Mr. McKinley also advocated that true reciprocity could be extended only through agreements made with individual nations. For in that way he fixed individual responsibility.

Since that time a new innovation came into the tariff laws of our country. I refer to what is known as the favored-nations clause. This is a plan which has now gotten to be so broad as the world. It is a provision that when a concession is granted to one country it is generalized so that every other country should have the same concessions. Before the war we saw situations where Japan got the benefit of all the concessions that we had given to any other country. There are many who feel this provision should be repealed.

The McKinley tariff law proved to be very popular. By virtue of this law a very large number of commodities were added to the free list. This tended to remove many objections that had theretofore been leveled against tariff rates. It also marked the gradual transition from tariffs for revenue only to tariffs for protection.

By reason of his efforts as chairman of the Ways and Means Committee of the House of Representatives, McKinley was able to do for his country a work which was in my opinion the most important work of his career. It was because of this legislation and his reputation as a statesman that he was elevated to the Presidency.

Since the days of McKinley, the tariff continued to be a great public issue, of varying degrees of intensity. I will not take the time to trace this development in detail.

The next great and important change in the tariff laws was a new provision that was included in the Fordney-McCumber Act, which was passed in 1922. This provision to which I refer was known as the flexible-tariff provision. Under this provision the President was authorized to increase or decrease rates by not more than 50 percent, and to do so only after a thorough investigation by the Tariff Commission of the differences between the cost of production in the foreign country as against the cost of production in the United States.

This law also provided that additional duties could be added and total exclusion might be added in case of unfair competition on the part of any foreign country.

Under this law the President could act only after the facts had been found by the Tariff Commission. And he could act only within the measurement of a yardstick specifically laid down by Congress. Congress did not grant to him any legislative powers.

It must be remembered that under the Constitution all authority to levy duties is given exclusively to the Congress. The President has no authority over the levying of any duties of any kind. But the President has a right under the Constitution to collect duties that have been levied according to laws passed by the Congress. Under the Flexible Tariff Act, to which I have just referred, the Congress laid down a yardstick by which the duties were levied, and gave the President the responsibility of collecting the duties thus levied.

From 1922 to 1930 no drastic changes were made in the tariff laws. In 1930 the Smoot-Hawley tariff law was passed. Many Members of Congress and others have claimed that this law was responsible for many ills against which they complained. It is passing strange, however, when we remember that those who have made most of the complaints against this law, although they have been in power for 15 years, have never attempted to repeal the law.

This brings us now to the so-called reciprocal trade agreements act. This word "reciprocal" was applied to this Tariff Act for the purpose of attempting to tie it in with the McKinley doctrine of reciprocity.

In 1933 President Roosevelt favored and forced the passage of the NIRA. To enforce this law there was set up an organization known as the NRA. This was an attempt to control the business and trade of the Nation. Most of us remember this experiment and most of us know that the Supreme Court declared the whole thing to be unconstitutional.

President Roosevelt in a message which he sent to Congress in 1934 requested that the Congress pass legislation to authorize the Executive to enter into executive commercial agreements with foreign nations. He further stated in that message that his request was an emergency and that he expected early action. Congress acceded to the demands of the President and his State Department and passed a law which was signed by the President on June 12, 1934. This law gave the President the power to negotiate reciprocal trade agreements with foreign countries, and provided that public notice of the intention to negotiate such agreements should be given to interested persons so that they might have an opportuniy to present their views. The law further provided that the President before concluding these agreements should consult with the Tariff Commission and also with the Departments of State, Agriculture, and Commerce.

Much complaint has been lodged by hundreds of business people in the United States against the manner in which this law has been executed. Many aggrieved companies and individuals have appeared before the Ways and Means Committee and have complained bitterly against the treatment they have received by the Department before whom they have made their complaints. Their principal complaint was that they were never given any direct explanation as to why their complaints were rejected and that none of them have ever known what persons or group of persons have passed upon their complaints and rejected the same. The unfairness of this procedure has been proven by the fact that in not one single instance has the tariff rates been increased but in every instance the rates have been decreased.

In the administration of this law, great injustices have been brazenly and defiantly done. The law has been so written that no aggrieved person has been able to get into any court in which he might seek redress. By the passage of this law, Congress abdicated the duties and responsibilities placed upon it by the Constitution of the United States. It is a well-recognized proposition of constitutional law that Congress cannot surrender and assign its constitutional duties to be performed by any other department of the Government.

The Republicans have maintained that this reciprocal trade-agreement law is an abdication of constitutional authority and that its administration has been unfair, unreasonable, and unjust.

The New Dealers maintain that the Congress had a right to pass this law by reason of its similarity to the flexible tariff provision of the law passed in 1922.

It is unfortunate that not one of the many aggrieved Americans has been able to test the constitutionality of this law.

Logically, we now come to a discussion of the Geneva Conference, which is now in progress. Immediately after the termination of hostilities in the recent war, the State Department, under its policy of giving America away, started negotiations by which it expected to establish a one-world economy. They realized that much more than half of all of the business of the world done in normal times was done in the United States. Not more than 10 percent of our business is done with foreign countries. They realized that the American markets were the prize markets of the world. And yet they sought to enter into agreements with all the countries of the world by which they gave to these countries the advantages of the American markets. A conference of a large number of the most important nations of the world was called to meet in London in 1945. At this conference it was decided that another conference would be called in April of 1946. This conference was not held until April 1947. The reason assigned was that the Tariff Commission had not been able to make the neces-

sary studies. Immediately following the election of 1946, the State Department hurriedly decided to make an effort to get ready for the conference in April of 1947. This was done regardless of the fact that the Tariff Commission had not been able to make the necessary studies.

In April 1947, Mr. Clayton of the State Department with a retinue of 150 or more assistants, went to Geneva where this conference was to be held. Before going to Geneva Mr. Clayton appeared before the Ways and Means Committee and in substance stated that the purpose of going to Geneva was not so much to enter into trade agreements, as it was to set up a special world-wide organization to control the trade and the business of the whole world and to be known as the International Trade Organization.

The Geneva Conference has now been in session for nearly 3 months. Either because of inefficiency or because of secrecy little is known as to what is going on in Geneva. Recently a short report was put out by the State Department. In that report is a paragraph which reads as follows:

"The present schedule calls for completion of discussions on chapters IV through VII by mid-July. Chapters I, II, and VIII on purposes, membership, and organization are scheduled for later consideration."

From this it is evident that the Geneva Conference is having hard sledding. So far no good has come from it. I am not as much interested in any good that may come from it, for I am afraid of the evil that will come from it.

Every country in the world is anxious to trade with the United States of America upon most any terms that might be granted.

Trade agreements already made have already seriously injured many industries in the United States. I shall cite you a few:

Practically all watches sold in America are foreign made.

The glass industry has been seriously impaired.

Likewise the pottery and china industry is terribly worried.

The same is true as to textiles.

When these great basic industries of the Nation complain they are told that the policy is the policy enunciated by Henry A. Wallace before the Ways and Means Committee a few years ago when he said that any industry that cannot compete with the cheap labor of foreign countries is inefficient and should be permitted to die.

The policy by which the United States grew to be the most powerful Nation of the world from the standpoint of production and commerce is being abandoned for a give away policy and no one knows what the outcome will be.

Foolish To Suppose 100,000 Refugees Would Reduce Jobs

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, July 8, 1947

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by John W. Love in the Cleveland Press, June 27, 1947:

TODAY'S BUSINESS

(By John W. Love)

FOOLISH TO SUPPOSE 100,000 REFUGEES WOULD REDUCE JOBS

The clubwomen in their national convention this week had the bad luck to be hooked on one of the oldest of economic fallacies. This is the belief there is just so much work to be done at any one time, and that to increase the number of workers deprives some of them of jobs. It is known as the lump-of-work fallacy.

In ordinary conditions the General Federation of Women's Clubs would have been only one of many organizations to pick up the ancient error. This time the circumstances are deeply regrettable.
